This is one of the tube undertakings controlled by the Underground Electric Railways of London. The half-yearly report does not contain details of the progress made, but in the six months to June 30 the expenditure on capital account was £436,402, so we may take it that a lot of work was done. This brings the total outlay to date to £4,370,879, against receipts of £3,479,562, so that the capital account is overdrawn £891,317. Of this the contractors' retention fund represents £200,000 and £687,258 has been advanced by the Underground Electrics. In the current six months the company expects to spend £600,000 and subsequently £797,121, a total of £1,397,121, making the aggregate outlay £5,768,000 for rather more than eight miles.

Port Talbot Railway and Docks Company.

For the half-year ended June 30 the gross receipts were £56,934, increase £5,627, and the working expenses £29,558, decrease £1,910; ratio between expenditure and income, 52.09 per cent., against 54.08 per cent. The percentage of expenditure to receipts on dock and shipping for the half-year was 47.41 per cent., and that on the railway 57.80 per cent., after allocating to each department its due proportion of the general expenditure. Traffic carried over the railways during the half-year amounted to 1,142,575 tons, of which 1,057,739 tons consisted of coal and coke, 767,125 tons being shipped at the company's docks. Imports and exports at the docks were 857,287 tons. The company's mineral traffic increased by £1,729, and the shipping and dock receipts by over £3,000, but passengers gave rather less. All important expenditure items were larger, but there were no striking movements. Nett revenue was £27,276, or £3,717 more, and rents increased £380 to £1,719, but the credit brought forward was down £863 at £402. A moderate increase took place in fixed charges, but there was no deduction for special renewals against £1,060, so that the sum available for dividend was £19,044 against £15,550. The directors are therefore able to provide the full preference, and a first distribution at 1 per cent. per annum on the ordinary shares, carrying forward the increased balance of £3,924. Capital expenditure in the six months was only £11,414, and it is proposed to spend £20,000 in the current half-year. Present debit to the account is insignificant at £2,227.

Liverpool Overhead Railway.

Last half-year was another poor one for this company, which again saw an all-round decline in its business. Gross receipts amounted to £37,456, a decrease of £2,358, but there was a saving of £1,449 in the expenditure, so the loss in nett revenue was £909 at £7,156. Receipts from passenger traffic fell from £39,191 to £36,695, the number carried being 5,445,100 against 5,558,113, and though a larger number of workmen patronised it, it looks as if the popularity of the line is on the wane. There was even a drop of £20 in parcels and of £8 in transfer fees, rents alone showing an increase of £168 at £697. Interest on debentures and on calls paid in advance required £300 more at £4,329, the balance available for dividend, with practically a similar sum brought in, being £6,797, compared with £7,883. Out of this the dividend is paid on the 5 per cent. 1892 preference shares, but nothing is paid on the 1900 issue, and, of course, the ordinary shares are again left out in the cold, the balance carried forward being £539 less at £3,797. By differential and cheaper fares the company has sought to attract business, but these inducements have been quite impotent in face of the growing tramways, and the improved service of the Lancashire and Yorkshire railway. A through service between Southport and Dingle was inaugurated in February and extended in June and the directors are hoping this will bring more traffic. Nevertheless the outlook is dark. The balance at the debit of capital account has increased from £15,806 to £24,809.

Dublin and Lucan Electric Railway Company.

There was a falling off in the revenue of this small railway company in the half-year ending June 30, gross receipts amounting only to £2,878 compared with £3,040, each department of traffic contributing to this decline, particularly the passenger, which lost £250. This was accompanied by a heavy increase in the expenditure, which went up from £1,691 to £1,957, so the nett revenue was only £921 compared with £1,349. After providing for debenture interest, which again takes £375, the available balance is £374 lower at £875, inclusive of an extra £55 brought in at £330. Out of this the directors distribute the half-yearly dividend on the 5 per cent. preference shares, pay £100 to the contractors on account of the principal sum remaining due to them for electrical equipment; write £100 off working stock account, and carry forward £200. The amount spent in the six months on working stock was £428, but no estimate is given for the current half.

Brecon and Merthyr Tydfil Junction Railway.

In the half-year ending June 30 the gross receipts amounted to £55,625, an increase of £2,630, whilst the working expenditure advanced by £1,857 to £34,536, so the gain in the net revenue was £773 at £21,089. Adding sundry credits amounting to £1,478, the total available was £22,567 against £20,941. After meeting the whole of the fixed charges this will admit of a dividend of 4 per cent. per annum on the first preference stock and leave £650 to be carried forward. Increases are shown under all heads of traffic. On the expenditure side there was a saving of £1,200 in maintenance of way, and rates and taxes were nearly £1,000 less. The capital expenditure in the six months amounted to £1,910, and for the current half the estimate is £6,669. There is a balance of £70,200 at the credit of capital account.

Calumet and Hecla Mining Company.

In its year ended April 30 last this company did a splendid business, selling no less than 101,052,000 lbs. of refined copper at prices ranging from 15¼ to 19 cents. per lb. The directors were, therefore, easily able to pay a dividend of 200 per cent. on the share capital, being $50 per $25 share. As the capital amounts to $2,500,000 it follows that $5,000,000 or a good round £1,000,000 was distributed in dividends, and the prosperity, barring fluctuation in price, seems likely to continue for an indefinite period, since the directors are continually extending their mining areas, investing in subsidiaries, during the year organising amongst other enterprises the Manitou Mining Company, of which it holds nine-tenths of the stock. This company controls territory for mining purposes to the extent of 38,693 acres. The Calumet and Hecla also organised the Frontenac Copper Company, in order to hold mineral and other lands purchased from the Central Mining Company, such territory covering 22,268 acres, and it holds the whole stock of that company, having paid for the lands of the two $704,946. Also the board holds options on a variety of other enterprises which we have not space to detail. If it exercises its options for the purchase of the New Jersey, Nonesuch, and control of the Superior, Caldwell, La Salle, Gratiot, and others, there will remain to be paid $1,555,000. The purchase of some of these properties has given the company a large supply of timber, and the directors hope to find producing mines in times which may materially add to the company's output. For these purchases and their

development they have laid aside as a development fund the sum of $2,000,000, which has been increased by $750,000 since the company's year closed, and all this work, all expansion of every kind, has been accomplished without any increase in capital. The company has no fixed or floating debt, and the balance of its assets over its liabilities was on April 30 last $10,629,819, having risen from $6,557,000, which was the total on April 30, 1903. The only thing that looks feeble about the whole exhibit is the $4,906 set down to the credit of the employés' aid fund. Surely the employés might get a little larger share of the company's unrivalled prosperity than such figures imply.

Page and Overton's Brewery, Limited.

During the 12 months ended June 30 this Croydon brewery business almost recovered the small setback in profits shown during the previous year. Including £7 for transfer fees, the total revenue was £34,863 or £804 more, and after allowing the slightly larger sum of £8,429 for repairs, insurance, and depreciation, the nett balance is £26,434 compared with £26,435. On this occasion, however, £1,007 has to be provided under the Licensing Compensation Act, and directors', trustees' and auditors' fees advanced by £200 to £925. Ordinary interest account, too, was slightly heavier at £644, so that with the debenture interest £10,687, preference dividend £7,125, and income-tax £1,090 provided, the credit still left is only £6,165 including £1,210 brought in from the previous account. The directors, however, keep the ordinary dividend at 5 per cent., write £1,338 off preliminary expenses account, and carry forward £504. The balance-sheet is not a good one, and never can be while the important item of estates, goodwill, and fixed plants £466,170, is left unprotected by a reserve of any kind. The absence of accumulations is the more important because the debenture debt of £250,000 is somewhat heavy compared with the share capital of £241,000. There are also mortgages to the amount of £9,796 and preliminary expenses still stand in the balance-sheet at £2,500. Trade creditors, loans and deposits, including interest, reach £26,880, and the book debts, rents, and loans receivable are not very much larger at £29,579. Creditors' cash balance amounts to £4,884, cash and investments in hands of trustees for the debenture stockholders is £5,282, and £625 worth of the company's own debenture stock has been bought and entered at par. Consumable stock at cost is valued at £14,097 and casks, horses, drays, and effects appear at £12,250.

John Lovibond and Sons, Limited.

An increase in the profits of this brewery business for the year ended March 31 is accompanied by a drop in the dividend, a state of affairs not unexpected by those who have carefully studied the company's history. There was no justification at all for the maintenance of the dividend at 10 per cent. a year ago, and we are by no means sure that even the 7½ per cent. now proposed should be paid. Trading profit reached £25,526, including £5 for transfer fees, a recovery of about £600 compared with the previous 12 months, but £757 less at £8,707 was allowed for repairs and depreciation, and various fees, salaries, and commissions increased a little to £3,349. Debenture interest next takes £4,959, leaving £8,510, an advance of £1,284. Sum brought in, however, was only £902 compared with £2,538, making £9,413, so that after meeting the preference dividend the directors reduce the ordinary dividend by 2½ per cent. to 7½, placing £1,000 to reserve, writing off £747 from leaseholds account, and allowing £700 as a contingency for bad debts. The sum carried forward is further reduced to £351. A year ago the reserve stood at £16,000, but £3,000 has been transferred from this account to a special leasehold properties depreciation fund, so that with the £1,000 now added the reserve reaches £14,000. This goes against a property account of £180,417, including nett additions for the year of £2,949. There is also a reserve to meet bad debts and losses in stocks amounting to £4,335. Plant, machinery, utensils, fittings, and rolling stocks were increased by £1,775 and depreciated by £3,578, leaving them at £46,692, and against creditors of £27,693 stocks are entered at £38,557, debtors owe £11,227, and cash reaches £3,237.

Gaiety Theatre Co., Limited.

The first thing that strikes one on receiving the report of this company is that the directors have issued it considerably earlier than usual—about three months earlier—so shareholders must have been greatly surprised to receive it. The plays produced in the 12 months were more popular and successful—at any rate, more remunerative—than the immediately preceding productions, judged solely by receipts. The main item of income, however, is such a mixture and includes so many sources of revenue, not only from the London representation, but from provincial towns and even from the sales of drinks, that it is impossible to say whence the greater success has come. Gross receipts, inclusive of interest on deposit and transfer fees, advanced from £81,350 to £93,637, but the expenses were £10,941 heavier at £84,440, so the nett profit was only £1,346 higher at £9,197. As the sum brought in was considerably less at £905, there is no possibility of an increase in the dividend, which dropped by 5 per cent. to 15 per cent. in 1904-5. It is, however, only fair to the directors to say that the increase in expenditure is due mainly to the much larger allowance for depreciation—£8,000 against £1,800. The reserve fund is, however, still stationary at £12,017, invested in the business. After paying the 15 per cent. dividend the amount carried forward is £1,102. It cannot be said that the financial position is strong, as debtors and cash only just exceed the sum owing to sundry creditors, especially as £6,000 out of the £6,722 will be required to pay the final dividend. Cost of new building, furniture, fittings, fixtures, decorations, &c., still figure at £97,889 in the balance-sheet, but the book value of stage properties has been reduced from £23,763 to £15,763.

Gloucester Railway Carriage and Wagon Co., Limited.

During the 12 months ended June 30 this company received £58,632 for wagon rents and balance of profit and loss, besides £335 for interest and transfer fees, making £58,967. From this debenture interest absorbs £13,657, and a sum of £8,585 is allowed for depreciation, and directors' and auditors' remuneration reaches £1,650. Sum still left is £35,075, which is increased to £45,635 by the credit brought in. An interim dividend at 5 per cent. per annum has been already paid, and the directors now propose a payment at 10 per cent. per annum, making 7½ per cent. for the year, adding £5,000 to reserve, contributing £2,000 to the superannuation fund, and carrying forward £11,043. The company now repair and maintain 21,778 wagons, including those directly owned, and we find that the land, buildings, and machinery have a balance-sheet value of £227,431, while the wagons lent on simple hire are entered at £110,585, and the rolling stock let on deferred purchase is put in at £363,159. Stock-in-trade and work in progress amount to £129,914 and debtors owe £94,732, against creditors £35,624, including £4,073 due to bankers, but cash is very small at £1,736. The reserve fund is £116,152, a substantial amount, but all locked up in the business.

J. P. Restaurants, Limited.

When Mr. John Pearce, founder of the British Tea Table Company and of Pearce and Plenty was not given the chance he desired to pull the first-named out of its serious difficulties he proceeded to form a new company, and this is how the J. P. Restaurants came into existence in August of last year. It has a capital of £40,000, of which £10,000 is in 6 per cent. cumulative preference shares, and the rest in ordinary shares, both of £1 each, but only 20,000 ordinary are issued. The accounts cover ten months from September 1 to June 30 last. Gross profits, after deducting unspecified outgoings in the shape of rents, wages, managing directors' and managers' salaries, repairs and general working charges, amounted to £1,512, interest and transfer fees raising it to £1,523, on which the nett profit is £728. This is sufficient to pay a first dividend of 5 per cent. and to leave £108 to be carried forward. Since its inception the company has opened ten branches. No depreciation has been written off furniture and fittings, but the directors promise to attend to this in the future. The directors are now offering for subscription the unissued preference and ordinary shares.

National Boiler and General Insurance Company.

In the 12 months to June 30 the premium income advanced from £59,035 to £63,868, sales of plugs, tester taps, &c., realised £14,228, and interest gave a little more at £3,660, or a total income of £81,757 compared with £75,603. On the other side salaries, agents' commission, travelling expenses and claims absorbed £3,300 more at £51,372, office and general expenses required £8,312, rent, taxes, and insurance £2,454, and directors' and auditors' fees £1,305, leaving a nett balance of £18,313, a gain of £2,180. Add £7,583 brought in and the total credit is £25,896, out of which an interim dividend of 6s. per share has already been paid. The directors propose a final distribution of a like amount, making 12s. in all, as in the previous year, but the bonus is doubled at 2s. per share; £5,000 is again added to the current risk and reserve fund, £500 is written off furniture, fittings, &c., and £4,101 is allowed for depreciation on investments, so the forward balance is reduced from £7,583 to £5,795. The reserve fund will be raised to £68,000, which with the capital of £52,500 is represented by investments costing £115,740. Debts owing to the company greatly exceed the contra liabilities, and cash is £8,843.

Spratt's Patent (America), Limited.

Steady progress appears to have been made by this company, and in spite of a small loss incurred through opening depôts at Cleveland, Ohio, and Montreal, the trading profits for the year ended May 31 amounted to £9,053. With £1,083 brought in and £7 from transfer fees the total available was £10,143, of which debenture interest took £1,457, and after providing for directors' fees, writing off £165 for bad debts and £1,500 for depreciation, the nett balance was £6,614. Out of this two dividends, making 1s. 7d. per share, are paid against 1s. 6d. for the previous year, and £1,500 is put to reserve, leaving £1,341 to be carried forward. Property account was increased by £7,301, mainly owing to the purchase of two freehold properties adjoining the works at Newark for £6,145, and after allowing for depreciation the item stands in the balance-sheet at £82,651. This purchase has apparently been met out of a temporary loan of £6,000 from the bankers, but the directors propose to provide for this and for additional working capital required through the expansion of the business by offering to the shareholders *pro rata* 6,330 new £1 shares at the price of 22s. 6d. per share, bringing the total paid-up capital to £54,000. Sundry creditors amount to £2,036 against £4,781 due from sundry debtors and £1,559 in cash, while stocks, &c., are valued at £10,488, and with the new money to be brought in the position should be comfortable enough.

New Tivoli, Limited.

The directors' hopes of improvement expressed a year ago have so far been borne out that the takings for the twelve months

to June 30 were £9,556 larger at £51,078. With miscellaneous receipts the total income was brought up to £52,566 or £10,388 more, and after meeting expenses, including debenture and other interest and £458 written off for depreciation of investments, the nett balance was £9,388 up at £13,003. To this was added £1,149 brought forward, giving £14,151 against £5,349 available for distribution, out of which the dividend is increased from 6 per cent. to 10 per cent., and in view of the reduction a year ago the directors have decided to pay in addition a bonus of 4s. per share or 14 per cent. in all. Then £3,000 is put to reserve to make up for nothing being added last time and £1,351 is carried to the new account. Nothing has yet been done in the way of writing down the item of property and goodwill, which stands at £181,494, but fixtures, &c., have been reduced by £487 to £2,400, while the reserve now amounts to £10,000 and is represented by Consols and L.C.C. stock valued at £9,327. Liabilities to sundry creditors are moderate enough at £2,753, and against these there are £1,406 to come in from sundry debtors and £10,729 in cash.

Prudential Mortgage Co., Limited.

A year ago the balance-sheet of this concern showed deposits and loans separately, but on this occasion the directors have chosen to lump them together, the combined items showing an increase of £13,023 at £121,939. On the other hand, advances on mortgages of freehold and leasehold properties have risen by £15,778 to £103,417, but the freehold and leasehold properties have been reduced by £4,074 to £106,901. For the twelve months ended March 31 the revenue from all sources was slightly lower at £11,691, but £1,511 more at £2,857 was brought forward, and the total income was £1,402 up at £14,548. Interest charges, however, required £4,360 or £864 more, and management charges were £97 up at £2,083, so that in spite of nothing being written off preliminary expenses against £243 last year, and only £165 or £300 less being allowed for sinking fund charges on short leaseholds, the disposable balance was only £985 up at £7,941. No attempt has been made to increase the reserve fund, which stands at the miserably small figure of £1,558, and after paying the usual dividend of 4 per cent. and bonus of 1 per cent. £3,842 is carried forward.

Bank of New Zealand.

At the end of the 12 months closed March 31 the profits of this bank amounted to £330,330, after providing for all expenses of management, bad and doubtful debts, &c., but this includes £253,930 brought in, so that the nett earnings of the year were seemingly but £76,000. Interest on the guaranteed stock takes £40,000, £15,500 is written off premises, and £501 off furniture. Out of the remaining balance £50,000 goes in the statutory payment to the Assets Realisation Board, 5 per cent. is paid on both preference and ordinary capital, and the surplus of £174,329 is paid to the Realisation Board in terms of the Bank of New Zealand Act, 1903, inclusive of £3,482 on account of income-tax on debentures. Deposits total £12,420,276, bills payable in circulation £1,552,361, and notes in circulation £876,253. On the other side cash amounts to £2,225,881, bullion in hand and in transit to £153,818, money at call £3,396,047, bills receivable £1,228,644, investments in the colonies £924,540, bills discounted £2,514,113, other advances £5,513,994, and Assets Realisation Board debentures £1,025,000.

Yorkshire Electric Power Company.

In submitting their report for the half-year to June 30 the directors gladly state that though the progress of the company has not been so rapid as they anticipated, it has been steady and continuous. New consumers are being connected and further negotiations are in progress for supplying large amounts of power. At the end of June consumers were on the mains whose total horse-power was about 1,880. Further agreements now made will, when the consumers are connected to the company's mains, bring the total requirements to approximately 2,450 horse-power. The plant installed at the Thornhill generating station is capable, after allowing for ample spare and reserve, of supplying energy to about 10,000 horse-power. Revenue from the sale of energy during the half-year was sufficient to meet practically all the costs of generation of energy at the Thornhill station and of its distribution throughout that portion of the area in which mains are now laid, but it has not yet sufficed to cover the expenses incidental to developing and managing the company's business. In order to facilitate the work of the staff it has been decided to remove the central offices of the company to Thornhill. Capital expenditure in the half-year amounted to £25,792, making £272,740 to date, but £27,250 was received, including a mortgage loan of £20,000, leaving a credit to capital account of £4,010. Administration expenses, including directors' fees, amounted to £4,160 against sundry receipts for £2,475, which raises the debit outlay to £10,043. The cash balance amounts to £4,875 and debtors owe £1,826, creditors appearing for £17,476.

Liverpool United Gas Light Company.

There was some falling off in this company's revenue for the year to June 30 against the previous 12 months. Sales of gas, including public lighting, produced £492,498, or £12,025 less, residual products gave £87,228 only compared with £90,721, and a special credit of £15,000 for renewals a year ago is now absent, so that despite a small increase from rents of meters and stoves the total income is less by £29,967 at £594,830. Against this the expenditure was £4,762 larger at £487,555, increases occurring under distribution, management, rates and taxes, and contributions to superannuation fund, etc., against a small saving in manufacture of gas. Balance of nett revenue was, therefore, down by the very important sum of £34,729 to £107,275. From this interim dividends on the "A" and "B" stocks have already been paid, leaving £65,975, including the balance brought forward. The directors now propose further dividends of 5 per cent. on the ordinary "A" stock and 3½ per cent. on the "B" stock, making 10 and 7 per cent. respectively for the complete 12 months. The reserve fund was credited with £3,110 for interest, making the total of the account £123,051, no contribution coming from revenue. This reserve is invested in high-class securities, and there is a credit to capital account of £37,139, so that the position generally is pretty good.

Milford Docks Company.

There was a slight decline in the business done by this company in the half-year to June 30, the tonnage of vessels entering the docks amounting to 383,860, against 384,830 in the corresponding half of 1905. Thus the revenue from dues, wharfage charges, rates, rents, &c., fell from £11,653 to £11,073, and after providing for all outgoings, including interest on special mortgages, the nett profit is £4,422, an improvement of £289. Adding £7 brought in, the sum available is £4,429, which provides interest on the debenture "A" stock at the rate of 22s. for the half-year, against 20s. 6d., warrants for which were posted on the 14th inst. The moratorium applying to interest on the debenture stocks was to have expired in 1907, but the company's Bill for extending the period and the time for the construction of the pier received the Royal Assent on May 29 last. The Act requires the holders of the debenture stocks to send in their certificates for endorsement, and those holders of debenture stock "A" who have not already done this are reminded that this endorsement is necessary to enable them to receive their warrants for the interest due.

TRADE AND PRODUCE.

Wheat.—The week has been quiet and business restricted, and prices have dropped all round. English wheat has been, as usual, in limited supply, but the price has fallen, and is 6d. to 1s., whites being quoted at from 29s. 6d. to 31s., reds at 29s. to 31s. Foreign has ruled steadier, but also dull. A little more inquiry towards the end of the week checked the downward tendency in spot parcels, but even so there was little disposition to operate. Farmers' deliveries for the week amounted to 6,924 qrs., averaging 30s. 5d., against 8,184 averaging 30s. 5d. in the same week last year. Our imports for the week were 537,623 qrs., against 510,067 in the same week of 1905, and the wheat and flour on passage are estimated at a little less this week, 2,590,000 against 2,635,000 last. American markets have been weak also, declining generally on good crop news, and the increase shown in Bradstreet's visible supply figures, 44,394,000 bushels being estimated as in sight east of the Rockies, against 41,211,000 last week.

Wool.—Not much movement is expected in the trade till the holiday season is definitely ended, but though operations are few, and buyers are trying to enforce quotations, there is little or no decline. Topmakers are not anxious to force sales, as next month they hope for better terms again, though nowhere is it expected that the highest points will again be reached this year. Crossbreds are more likely to recover than merinos, and as to home-grown wools, they are held so stiffly by country dealers as to be let alone by those of the centres. Spinners seem to be actively employed, through the export branch has slowed down a little. In the piece trade nothing will be doing till autumn demands commence.

Linen.—Reports received this week on the flax crop, says the *Linen Market*, are all of a favourable character. A large yield is looked for in Belgium, though as regards fine flax this year's proportion is likely to prove disappointing. Russian crops are making good progress in the different districts, and at home pulling is now general in Ulster, and steeping has begun under favourable circumstances. The market for yarns has been firm and well developed during the week. Weft lines in medium and fine counts are very strong, and buyers do not seem able to satisfy their wants quickly enough. In brown linens, &c., manufacturers report that hand-looms keep very scarce, and much below requirements. Union goods are in request at full current prices, the irregularities of cotton not seeming to affect them so far, and dress goods are as usual promising. Home and foreign trade in bleached and finished linens is good all round, the Board of Trade returns for the seven months of the year showing a considerable increase of exports of linens to America, Mexico, Argentina, East and West Indies, and Germany. On the other hand, France, Cuba, Australia, and New Zealand show a decrease.

Cotton (from our Manchester correspondent).—Our market during the past week has been generally quiet in tone. Few transactions of weight have been entered in either cloth or yarn. The raw material in Liverpool has continued to decline, and we are now on the lowest level of values of the year. The outlook for the American crop is healthy, and, should the weather continue favourable, there is every likelihood of a large and substantial yield. The weather during the next few weeks will considerably affect the ultimate output. In cloth for export buyers for the most part have looked on. Advices from our different markets are healthy on the whole, but shippers are not stimulated at the moment to purchase freely. Offers, speaking generally, do not come up to the requirements of manufacturers. Exporters to India have only bought small lots in a miscellaneous class of goods. Reports from Calcutta continue discouraging. For China the turnover has not been at all im-

portant. The smaller markets of the Continent have continued healthy, but inactive. The South American markets have only bought odd lots to a small extent. Buyers of cloth have expected lower prices than manufacturers are able to accept. Owing to the stiffness of yarns producers of cloth cannot reduce quotations in accordance with the decline in the raw material. Burnley printing cloths have moved slowly, and the production of the looms has not been sold. T-cloths and Mexicans are fairly steady, but order lists are running down. Coloured woven goods and sateens have been in a little better demand in some quarters. Shirtings have been generally quiet, with no particular fresh feature. Dhootie makers have experienced a quiet market, offers being impracticable. In home trade goods the orders have again been small, the active buying for the autumn trade not having yet commenced. In home trade American yarns spinners have continued in a strong position, and hold for prices which will leave a satisfactory margin of profit. Users for the most part have held aloof. For early delivery extreme rates can be obtained. Twist is decidedly strong, and no weakness is showing itself in weft. The coarser numbers of weft are doing better than a short time ago. In export bundles a fair business has transpired for the Far East, but the Continental demand has not been important. Doubled wefts of Egyptian yarns have also been in request. Bolton spinnings continue to move slowly. The finer numbers are healthy, but the commoner kinds are not doing so well.

The cotton market in New York opened with a steady tendency, which afterwards developed into irregularity, and then into weakness, owing mainly to "bear" pressure. A partial rally ensued under better advices from Manchester and a little bidding, but at the close the tone is not very strong.

Coal.—Lancashire trade is in a stagnant state, and elsewhere, when it is a case of house coal, the same may be said. But the steam trade flourishes apace. The weight taken to Hull during July amounted to 44,408 tons as compared with 332,256 tons in July, 1905, or 2,000 tons above the "record" July of 1901. Farther north gas and coking coals are also active; best gas is up to 11s. 3d. and coking to 11s. Furnace coke has advanced to 17s. 6d., foundry to 19s., f.o.b., and best steams have risen to 11s. Shipping at the Scottish ports has been larger than usual, the present week, it appears, being the greatest on record, amounting to 326,014 tons, an increase of 50,000 tons over the previous week, exports being chiefly to the Continent. Holiday influences still linger in Wales, but trade for all that is considered fairly satisfactory and prices likely to go higher. Cardiff quotations this week at 15s. 3d. to 15s. 6d. best steams; 14s. 6d. to 15s. seconds. Swansea anthracite also shows an improvement.

Copper.—It is said that the consumption of this metal is unprecedented, and the Amalgamated Company has sold its entire production for August, and for the greater part of September. Many consumers have yet to provide requirements for this month and next, and other large producers besides the big American trust, have nothing to spare before November. The demand comes from all quarters, India, America, and the leading railway companies and locomotive works. The market commenced the week with a moderate amount of activity, American advices being firm, and offerings restricted. Covering operations were in progress in a small way, but there was no special demand, and prices were disposed to drag. They continued dull until near the end, owing to the absence of important speculative demand, but finished rather firmer, with little movement on balance, quotations being £83 12s 6d cash and £82 10s. for three months. The statistical position has not changed appreciably during the past two weeks, but the price has shown a substantial advance. Stocks in England and France have been reduced by 123 tons, and the quantities advised from Australia are less by 150 tons, those from Chili being unaltered at 1,750 tons. The visible supply is therefore lower by 273 tons at a total of 12,355 tons. Deliveries for the two weeks were 16,45- tons. and the supplies 16,184 tons, the principal amounts again coming from North America.

Tin.—The commencement of the canning season is causing an increased demand in America, and as the metal is passing into stronger hands, and supplies are small, prices are expected to further advance, taking the long view. Strong Eastern advices caused a sharp initial rise, an improvement of £2 being quickly established, but this led to profit-taking and although the offerings were well taken, values gave way. Selling continued for a time, and all the early gain was lost, but then sellers became much more reserved, and a quick recovery ensued. Bear selling was next in evidence, bringing about another drop, and a steady sag left prices near the lowest at the close, quotations being £180 15s. cash and £181 5s. for three months. Shipments for the first half of this month were 2,100 tons.

Iron and Steel.—Activity continues to characterise the various branches of the iron and steel markets, and the outlook is considered to be as good as if not better than it has been at any time this year. One cause of uncertainty has been put an end to, that is fears are being removed that the best of the American demand has been seen. Stocks of Cleveland iron have been apreciably reduced since the early part of the year, and the reduction promises to continue for some months to come. Consumers have taken advantage of the recent reaction to place fresh orders. Ironmasters in the Midlands say that more inquiries have been received than at any time during the past two months. Sellers of pig-iron are so convinced of the revival and the hopeful outlook that they are not disposed to keep recent offers open any longer, and buyers have had to close at once or lose supplies. So prices are advancing, and some brands are off the market. It is a point worth notifying that the exports of iron and steel during July were the greatest in the history of the British iron industry, and it is a practical certainty that the output of pig-iron and steel will exceed that of any preceding year.

Tea.—Accumulations of a fortnight resulted in the largest auctions of Indian teas held this season, but the quantity offered, 27,634 packages, was not received with any enthusiasm. Few buyers were in the market, and these were apathetic, the poorness of quality probably having something to do with it, for very attractive teas met with keen competition and high prices. Medium were irregular, and commonest descriptions remained at the late low basis. Some Darjeelings realised fancy prices—as Goomtee (broken Orange Pekoe and Pekoe) 4s. 3¾d., and Castleton 2s. 4¾d. The week's average for the 21,220 packages disposed of amounted to 7.70d., against 8.27d. for 27,900 packages a year ago. Ceylon offerings of 37,255 packages, the heaviest since January, 1901, met with a fair competition, and prices were maintained for all but the commonest. Grades suitable for export were keenly bid for by shippers, and the total average for the week came to 6.42d. against 7.22d. in 1905, the highest for any special tea being Henfold 10d. Java sales also were comparatively heavy after the interval, and totalled 4,739 packages, the fine teas among them meeting with good attention. Others irregular. 216 packages pure Goalpara averaged 10¾d. per lb.

Sugar.—America refused all further offers of beet at higher prices, says Mr. Czarnikow's circular, which quietened the market, and caused a decline in old crop of 1½d. to 1¾d. per cwt., new crop giving way about ½d. only, after which there was a slight recovery. The decline was stopped partly by favourable figures, the German July consumption being larger than ever before at 124,000 tons; in Europe, with 70,000 tons increase in consumption, and 65,000 tons more shipment elsewhere, stocks compare 147,000 tons more favourably, while the world, with fully 50,000 tons decrease in Cuba, 110,000 tons less increase afloat, shows only 277,000 tons more visibles now instead of 583,000 tons last month. The European excess in stocks will be further reduced in August and September by increased consumption, more shipments to the United States and elsewhere; therefore with possible American requirements for October-December, the present level of values does not seem too high. Refiners trade has been dull, and some 88 per cent. was bought at 9s. to 9s. 0¾d., fair seconds at 7s. 6d. Tate's cubes declined from 19s. 3d. to 19s. 1½d.; standard granulated 17s. 11½d. to 17s.; Lyle's No. 2 unchanged at 16s. 10½d.; yellow crystallised 16s. 1½d. New York market has been steady at 3.87 cents for 96 per cent. Centrifugals, 3.37 cents for 89 per cent. Muscovadoes, and 4.75 cents for granulated.

RHODESIAN MINING RETURNS.

We have another "record" output from Rhodesia! And this achievement has synchronised with a rise in the market, a marvellous coincidence, which, however, has but an academic interest for shareholders and others, who find themselves not a penny the richer for all this untold wealth. The total for July was 48,485 ozs., in comparison with 47,664 ozs. for June, an increase of 821 ozs., but there was really retrogression, for the daily average fell from 1,589 ozs. to 1,564 ozs. Though it is boasted of as a record, it is not identical with progress.

MINING RETURNS.

Abosso.—Crushed 3,821 tons, 2,039 ozs.; cyanide 2,784 tons tailings, 648 ozs.; total, 2,687 ozs.

Alaska Mexican.—Crushed 19,882 tons ore, value $32,038; saved 369 tons sulphurets, value $31,095.

Alaska Treadwell.—Crushed 84,924 tons ore, value $77,682; saved 1,311 tons sulphurets, value $53,256.

Alaska United.—Crushed 19,130 tons ore, value $22,466; saved 387 tons sulphurets, value $12,461.

Ankobra.—No. 1 Dredger, 194 ozs.; No. 2 Dredger, 38 ozs.

Angelo.—Milled 22,000 tons, 7,044 ozs.; sands 11,682 tons, 2,746 ozs.; slimes 10,164 tons, 1,734 ozs.; total, 11,524 ozs.

Antenior.—Crushed 1,230 tons, 551 ozs.; cyanide 700 tons, 112 ozs.

Associated Queensland.—Crushed 675 tons, 528 ozs.

Ayrshire.—Crushed 7,238 tons, 1,090 ozs.; cyanided 5,940 tons, 961 ozs.

British Broken Hill Proprietary.—2,518 tons crude ore produced 432 tons concentrates containing 264 tons lead and 10,664 ozs. silver.

Cape Copper.—870 tons of 20 per cent., equal to 174 tons of fine copper. Nababeep.—4,185 tons of 4 per cent., equal to 167 tons of fine copper.

Carrington's Lien.—Crushed 300 tons for £360.

Cason.—Milled 32,800 tons, 9,525 ozs.; sands, 17,669 tons, 3,484 ozs.; slimes, 14,304 tons, 2,821 ozs.; total, 15,830 ozs.

Chinese Engineering.—Output of coal, 19,000 tons; sales, 17,000 tons; consumption, 1,100 tons.

Consolidated Gold Fields of New Zealand.—Crushed 4,754 tons, yielding £8,225.

Copiapo.—Production 580 tons copper ores averaging 11 per cent.

Croydon Consols.—Marshall's Queen, 700 tons for £2,500; Golden Alexandra, 250 tons for £1,781, and 661 tons for 1,048 ozs.

De Lamar.—Crushed 635 tons, yielding $5,350.

Dolcoath.—Crushed 7,495 tons, 131 tons black tin sold, 9 tons slimes.

Driefontien.—Milled 18,900 tons, 3,401 ozs.; 13,327 tons sands, 2,381 ozs.; 4,445 tons of slimes, 670 ozs.; total, 6,452 ozs.

Durban-Roodepoort.—Milled 10,280 tons quartz, 3,360 ozs.; 6,935 tons tailings for 835 ozs.; 3,040 tons slimes for 198 ozs.: total, 4,393 ozs.

Durham Prospect.—Mill crushed 806 tons, 400 ozs.

East Gwanda.—East Gwanda—Crushed 5,751 tons, 2,601 ozs.; 208 tons concentrates, 559 ozs. Geelong—Cyanide, 3,600 tons, 276 ozs.; total, 3,436 ozs.

El Oro.—Crushed 22,378 tons ore, value $180,490.

Forbes Rhodesia.—Crushed 571 tons, 290 ozs. Dumbleton—Treated 1,240 tons tailings, 209 ozs. Broken Luck—Crushed 518 tons, 392 ozs.

Globe and Phœnix.—Crushed 6,598 tons of ore, 3,057 ozs., equal to 9·26 dwt. per ton; tailings, average assay value per ton, 3·26 dwt.; 4,400 tons cyanide, 570 ozs. bullion, equal to 2·18 dwt. per ton; total, 3,627 ozs.

Great Boulder Perseverance.—Sulphide plant, 15,165 tons for 7,794 fine ozs. gold and 1,059 fine ozs. silver.

Ida H.—Crushed 1,420 tons, 916 ozs.

Jubilee.—1,197 ozs. from 5,659 tons crushed; cyanide 540 ozs. from 4,062 tons.

Jumbo.—Crushed 1,650 tons, 1,020 ozs.; 800 tons by cyanide, 339 ozs.

Kelantan.—No. 3 dredge 49 ozs.

Knights Deep.—28,870 tons, 9,888 ozs.

Lancelot Freehold Tin and Copper.—140 tons Lancelot tin stone crushed, producing six tons of 65 per cent. tin bismuth ore; seven tons shipped.

Langlaagte Estate.—Ore crushed 28,990 tons, 5,275 ozs. Concentrates—Cyanide: 560 tons, 787 ozs. Tailings—Cyanide: 18,900 tons, 1,885 ozs. Slimes: 13,901 tons, 1,308 ozs.; total 9,255 ozs.

Le Roi.—Shipments 12,000 tons, containing 4,220 ozs. gold, 5,470 ozs. silver, 238,500 lbs. copper.

Matabele Reefs.—Blanket 1,983 tons, 750 ozs. Alice 633 tons crushed, 265 ozs.

Mill's Day Dawn United.—Crushed 1,850 tons, value including residues, £10,705.

Myalls and Peak Hill.—3,800 tons crushed, 445 ozs.

New Comet.—Milled 19,400 tons, 3,625 ozs.; sands 13,429 tons, 2,910 ozs.; slimes 5 830 tons, 887 ozs.; total, 7,422 ozs.

New Heriot.—Crushed 9,500 tons, 3,889 ozs.

New Hillgrove Proprietary.—Crushed 166 tons, including 33 tons of screenings from the sorting floor, yielding 392 ozs. of bullion and 2 tons of concentrates, value 8 ozs.; value of tailings is 2 dwts. 19 gr. per ton.

New Queen.—Crushed 357 tons, 297 ozs.; concentrates, £165; public crushing, £275.

Nigel Deep.—9,152 tons, 1,450 ozs.

No. 2 South Great Eastern.—Crushed 5,230 tons, 1,806 ozs.

North Broken Hill.—Treated 1,905 tons of crude ore, producing 332 tons concentrates, containing 231 tons 1½ cwt. lead and 4,847 ozs. silver.

North Randfontein.—Crushed 14,813 tons ore, 3,643 ozs.: concentrates, cyanide, 1,410 tons, 417 ozs.; tailings, cyanide, 8,819 tons, 1,577 ozs.; slimes, 4,456 tons, 499 ozs.; total, 6,136 ozs.

Porges Randfontein.—Crushed 14,073 tons ore, 4,102 ozs.; concentrates, cyanide, 1,302 tons, 549 ozs.; tailings, cyanide, 8,820 tons, 1,244 ozs.; slimes, 4,226 tons, 362 ozs.; total, 6,257 ozs.

Raub Australian.—Crushed 5,690 tons, 910 ozs.

Red Hill, Westralia.—Crushed 1,706 tons, 705 ozs.

Rhodesia Goldfields.—Bell's Reef.—Crushed 1,560 tons, 261 ozs.; cyanide 880 tons, 300 ozs.

Rice Hamilton—Sabiwa.—Crushed 5,900 tons, 632 ozs.; by cyanide, 3,302 tons, 612 ozs.; slimes, 2,659 tons stored for future treatment; value, 3 dwts.

Robinson Deep.—31,734 tons, 15,677 ozs.

Robinson Randfontein.—Crushed 15,355 tons, 3,356 ozs.; concentrates, cyanide, 1,150 tons, 402 ozs.; tailings, cyanide, 8,610 tons, 1,525 ozs.; slimes, 5,276 tons, 502 ozs.; total, 5,785 ozs.

Salisbury.—Crushed 5,300 tons, 1,560 ozs.

Sansu.—Crushed 650 tons crushed; output 257 ozs.

Simmer and Jack.—57,050 tons, 21,109 ozs.

Simmer and Jack East.—28,477 tons, 8,450 ozs.

South Randfontein.—Ore crushed 14,768 tons, 3,739 ozs.; concentrates, cyanide, 1,260 tons, 374 ozs.; tailings, cyanide, 8,650 tons, 1,342 ozs.; slimes 4,474 tons, 424 ozs.; total, 5,879 ozs.

Stratton's Independence.—£3,000 from 1,559 tons shipping ore, averaging 2 ozs. 8 dwts. to the ton.

Surprise.—Output for July: Crushed 2,976 tons, 1,069 ozs., equivalent to 7·18 dwts. per ton; cyanide, 543 ozs., from 3,440 tons.

Tasmanian Copper.—Treated 3,852 tons ore, fluxes, &c., producing 242 tons matte, assaying 60 per cent. copper.

Theta.—Crushed 1,470 tons, 988 ozs.; 472 tons cyanide, 136 ozs.; total, 1,124 ozs.

Victoria Proprietary (1903).—Crushed 480 tons, 130 ozs.

West Rand Central.—Ore milled 2,425 tons, 570 ozs.; tailings 1,920 tons, 472 ozs.; total, 1,042 ozs.

Westralia Mount Morgans.—Crushed 5,300 tons, 757 ozs.; cyanided 3,075 tons, 444 ozs.; slimes 1,590 tons, 292 ozs.

INDIAN GOLD MINES.

The returns from the mines of the Colar gold field continue very poor and disappointing. For July they aggregated 46,094 ozs. only against 46,633 ozs. for June, a drop of 409 ozs. This falling off is still due to the lower quality of the ore crushed from the Mysore and Champion Reef mines. July, too, was a month longer by one day, which makes the showing poorer still.

Name of Company.	April. Tons.	April. Ozs.	May Tons.	May Ozs.	June. Tons.	June. Ozs.	July. Tons.	July. Ozs.

Answers to Correspondents.

E. J. T.—You might hold on longer, as we fancy the cause of the weakness is that mentioned under "Mining Notes and News." There is a fall in the quality of the ore, but this may be temporary. Anyway, it would hardly be prudent to sell on a falling market. Besides, the price is recovering.

Oxo.—No, we cannot advise a purchase of these shares, as we have no confidence in the company nor its prospects.

L. T.—It would hardly be correct to describe this as a good security because the company's business is still comparatively small, but it serves a growing district and may be considered very fair. (2) Not these shares. The 10 per cent. shares have paid 8 per cent. for some time, and the 7 per cent., of which the new issue forms a part, have paid £5 12s. per cent. Formerly the distributions were 7 per cent. and £4 18s. respectively. (3) We have never heard anything to the contrary, and are therefore entitled to assume that it is. (4) Not in London, and this is one of the drawbacks of a company like this. They might be more easily dealt in locally.

T. M. L.—Speculation may carry the stock up within the time you name, and you ought not to sell just at present, as a rise seems probable.

B. W. J.—Unfortunately nothing is known of this company. It has a guarantee of dividend from the contractors, but this expires in four years' time, and after that we do not know what will happen. Best left alone.

G. W.—(1) We do not think you need become alarmed. No official information is available, but the Company should not experience difficulty in maintaining its position. (2) There has been talk of opposition, which a little time ago sent the shares down sharply, but they have rallied since, and the alarm seems to have subsided. We should not sell. No. 3 will be answered next week.

COMPANY MEETINGS.

LONDON ROAD CAR CO., LIMITED.

The half-yearly general meeting of the London Road-Car Co., Limited, was held on Tuesday at Cannon Street Hotel, E.C., Mr. John Howard Moore, J.P. (the chairman) presiding.

The Secretary (Mr. John C. Mitchell, F.C.I.S.) read the notice convening the meeting and the auditors' report.

The Chairman moved the adoption of the report and accounts, and went on to say that the directors were forced by circumstances to the adoption of a policy which they had not in the first instance contemplated—namely, the acceleration of the substitution of mechanical power for horse traction. After detailing 'the many difficulties that had to be encountered and overcome, he went on to say: That the motor omnibus has come to stay there can be no question at all, but we wish the evolution had been allowed to be a more gradual one, to admit of defects which became manifest in working being rectified and improvements effected, before so many of the motors had been put upon the road. That during the six months ended June 30 last this company's "Union Jack" motors have carried a number of passengers considerably in excess of the whole population of the metropolitan area is proof of their popularity with the travelling public, and it is entirely owing to our motors that the total number of passengers we have carried during the half-year—numbering nearly 38¼ millions—shows an increase over the corresponding period of 1904 and 1905. Compared with the total we had two years ago, only 1,034 horses have yet been disposed of, which proves how comparatively gradual the substitution has as yet been with us. As, however, the number of our motors—and of others in London, from all accounts—will be very largely increased during the next few months, and as the horse cars could not be profitably employed, especially during the winter months, on roads which will be largely in possession of motors, the horses will be disposed of more rapidly than heretofore. Unfortunately, we have for some 12 months or more been paying increased prices for feeding stuffs. The cost of feeding in consequence has been 1s. 1d. per horse per week more than in the first half of 1904, which, on the number of horses we had in stock during the half-year, was equal to an additional cost of £6,000, by which amount the profits of the half-year would have been increased had prices been what they were two years ago. You will probably consider the item under the heading of "car and motor repairs and renewals" (which includes renewal of tyres) a very heavy one, as it undoubtedly is, but you must bear in mind that very largely our motors are in the hands of men who unavoidably are, strictly speaking, drivers and not mechanics, and that until the whole of the service has been substituted and all our men have had experience this item is likely to be considerable. You would doubtless like to have the results of the working of the horse cars and of the motor-cars shown separately, but, for reasons which must be manifest to you, we do not think it advisable that we should publish them in this manner. Suffice it to say that since the prospectuses of the first motor company were issued this company and the London General Omnibus Company have disclosed our accounts four times, whilst the companies in question have not done so once. We therefore deal with the profit on the half-year's working of both horse and motor cars combined, which, with the addition of the amount brought forward from last account, the profit on sale of investments, and the amount realised by sale of horses, &c. (not replaced), is £25,655 6s. 9d., from which has to be deducted six months' interest on debenture stock, contribution to leases and building renewal fund, depreciation of plant, machinery, and office furniture, and the amount realised by horses, &c., sold and not replaced, which has been transferred to the credit of the "substitution suspense account," leaving an available balance of £17,905 13s. 6d. From this the directors propose to take £3,000 and add to "reserve for the depreciation and renewal of motor chassis," making that reserve £4,000; to transfer £2,500 to the credit of the "substitution suspense account," in addition to £3,664, the amount realised by the sale of horses not replaced; making a total credit for the half-year to that account of £6,164. This will enable us to pay a dividend on the 5 per cent. cumulative preference shares from the date of payment of instalments, amounting to £141 16s., and to recommend a dividend of 2s. 6d. per share on the ordinary shares, being at the rate of £4 3s. 4d. per cent. per annum, leaving to be carried to the credit of next half-year £3,013.

The motion for the adoption of the report and accounts was seconded by Lieut.-Col. C. F. Colvile, and carried unanimously.

A vote of thanks to the chairman and directors closed the meeting.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Canadian Pacific.—3 per cent. for half-year ended June 30 on the common stock.

Cleator and Workington Junction.—For half-year ended June 30 at the rate of 3½ per cent. per annum, carrying forward £493.

BREWERIES.

Bent's.—Interim of 3 per cent.

Boddingtons.—Interim on the ordinary shares at the rate of 6 per cent. per annum for half-year ended June 30.

MINES.

No. 2 South Great Eastern.—6d. per share.

Salisbury Gold.—No. 23 of 10 per cent. (2s. per share).

MISCELLANEOUS.

Bolckow, Vaughan, and Co.—At the rate of 6 per cent. per annum for year ended June 30, less interim dividend paid in March, carrying forward £80,952.

Bournemouth Gas and Water.—For half-year ended June 30 at the rate of 6, 7, and 14 per cent. per annum on the preference, "B" ordinary, and original shares of the company, carrying £5,417 forward.

Bradford Dyers'.—On the ordinary shares for half-year ended June 30 at the rate of 7 per cent. per annum.

Bristol Water Works.—Intermediate dividends for half-year to June 30 at the rate of £7 10s. per cent. per annum on the ordinary shares, and at the rate of £5 5s. per cent. per annum on the 7 per cent. maximum consolidated ordinary stock.

David Richmond and Co.—7½ per cent. on the ordinary shares for year ended June 30.

Dixon and Cardus.—5 per cent. and a bonus of 1 per cent. for year ended June 30, carrying £4,451 forward.

Hadfield's Steel Foundry.—Interim on the ordinary shares of 1s. per share, being at the rate of 10 per cent. per annum for half-year ended June 30.

Hannans Land.—Second interim for 1906 of 2½ per cent., payable Sept. 5.

Herne Bay Water Works.—Usual at the rate of 5½ per cent. per annum for half-year ended June 30.

Horbury Junction Iron.—7½ per cent. for year ended June 30, placing £1,000 to reserve, and carrying £2,062 forward.

Lancashire Wagon.—At the rate of 7½ per cent. per annum on the ordinary shares for the half-year ended June 30, carrying £3,378 forward.

Maidstone Gas.—Further of £3 16s. 3d. per cent., making £7 12s. 6d. per cent. for the year, carrying forward £7,914.

Maple and Co.—Interim at the rate of 10 per cent. per annum on the ordinary shares.

Nottingham and Grantham Railway and Canal.—Usual half-yearly of £2 0s. 6d. per cent.

Oldham, Ashton, and Hyde Electric Tramway.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

Pim and Co.—Interim on the ordinary shares at the rate of 5 per cent. per annum for the half-year ended July 31.

Preston Gas.—For half-year at the rate of 5 per cent. per annum on the preference stock, 10 per cent. on stock "A," and 7 per cent. on stock "B."

Robart Addie and Sons Collieries.—12s. 7·2d. per share on the 6 per cent. cumulative preference shares, being arrears of dividend to Nov. 30, 1904, for year ended May 31, carrying £6,458 forward.

Shrewsbury Gas Light.—Final of 3 per cent., making 5½ per cent. for past year, carrying £1,804 forward.

Steel Company of Scotland.—7½ per cent., placing £25,000 to reserve, and carrying forward £8,000.

Switzer and Co.—Interim at the rate of 6 per cent. per annum on the preference shares and at the rate of 8 per cent. on the ordinary shares for half-year ended July 31.

United Carlo Gatti Stevenson and Slaters.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

Wigan Coal and Iron.—Interim for six months ended June 30, being an instalment and in anticipation of the dividend for the current year, at the rate of 3 per cent. per annum.

Wilson Bros. Bobbin Co.—8 per cent., placing £5,000 to reserve and carrying forward £2,147.

NEXT WEEK'S MEETINGS.

Monday, August 20.

Delahaye and Co.—Winchester House, 11.30 a.m.

Fleetwood Gas.—Fleetwood, 2 p.m.

United Indigo and Chemical Co.—Manchester, 2 p.m.

Tuesday, August 21.

Daira Sanieh Sugar.—57½, Old Broad Street, noon.

Liverpool United Gas Light.—Liverpool, 12.30 p.m.

Russian Collieries.—Winchester House, 2.30 p.m.

Wednesday, August 22.

Axminster and Lyme Regis Light Railway.—Waterloo Station, 2 p.m.

Maryport and Carlisle Railway.—Maryport, noon.

Thursday, August 23.

Blackpool and Fleetwood Tramroad.—Fleetwood, 2 p.m.

Hill (Richard).—Hotel Metropole, 11.30 a.m.

Nicaragua Development.—Salisbury House, noon.

Southgate and District Gas.—5, Great Winchester Street, 3.15 p.m.

Friday, August 24.

Alliance Motor Bus.—Winchester House, noon.

Leopold Schwabacher.—Winchester House, 3 p.m.

United Railways of the Havana.—Winchester House, 2.30 p.m.

Saturday, August 25.

Espuela Land.—Cannon Street Hotel, 11 a.m.

NEW ISSUE.

BRITISH GUIANA
£4 PER CENT. IMMIGRATION LOAN.

ISSUE OF £70,000.

Authorised by the Consolidated Immigration Loan Ordinance, 1864, and the Immigration (Financial Provisions) Amendment Ordinance, 1895.

Minimum Price of Issue £100 per cent.

£5 per cent. on application, and so much on the 27th of August as will leave £70 per cent. payable as under:—

£35 per cent. on the 17th of September.

£35 per cent. on the 10th of October.

THE CROWN AGENTS FOR THE COLONIES, on behalf of the Consolidated Immigration Loan Commissioners of British Guiana, appointed under Ordinance No. 24 of 1864, hereby invite tenders for the above Loan of £70,000.

The Loan is secured on all the Colonial Revenues of the Government of British Guiana not specially appropriated by any Ordinance in force prior to the 2nd of September, 1864, and will be raised on Debentures representing £1,000, £500, and £100 respectively, bearing interest from the 15th of August, at the rate of 4 per cent. per annum, payable half-yearly on the 15th of February and 15th of August in each year, the first half-year's interest being due on the 15th of February, 1907.

The Principal will be repayable at par on the 15th August, 1916. Interest and Principal will be payable at the Office of the Crown Agents for the Colonies, London.

Tenders will be received on or before Monday, the 20th of August, up to 12.30 p.m. at No. 1, Tokenhouse Buildings, and 1 p.m. at Whitehall Gardens.

The allotments will be made to the highest bidders, provided the rates offered are not below £100 in money for every £100 in Debentures.

In the event of the receipt of tenders in excess of the amount to be allotted at or above the minimum price, the tenders at the lowest price accepted will be subjected to a pro rata diminution.

If no allotment be made, the amount forwarded with the tender will be returned in full, and if a portion only of the amount applied for be allotted, the surplus will be appropriated towards the payment of the second instalment.

Tenders must be for even hundreds of Debentures, and those at a fraction of a shilling other than sixpence will not be preferentially accepted.

The first payment must accompany the tender, and the subsequent payments are to be made at No. 1, Tokenhouse Buildings, E.C., not later than the dates above mentioned.

Payments may be made in full on the 27th of August, or on any subsequent date prior to the 10th of October, under discount of 3 per cent. per annum.

In the case of default in the payment of any instalment at its due date, the deposit and instalments previously paid will be liable to forfeiture.

After payment by the allottees of the instalment due on allotment, they will receive at the Crown Agents' Transfer Office, No. 1, Tokenhouse Buildings, E.C., in exchange for the letter of allotment and receipt, Scrip Certificates, representing the Debentures to which they will become entitled. These Certificates will be ready for delivery on and after the 14th of September.

Forms of Tender, and a Statistical Statement relative to the Public Debt, Revenue, Expenditure, and Trade of the Colony from 1895-6 to 1905-6 may be obtained by applying at the Offices of the Crown Agents for the Colonies in Whitehall Gardens, S.W., and at No. 1, Tokenhouse Buildings, E.C.; at that of Messrs. Mullens, Marshall & Co., 13, George Street, Mansion House, E.C.; and that of Messrs. J. & A. Scrimgeour, South Sea House, Threadneedle Street, E.C.; and at the Colonial Bank, 13, Bishopsgate Street Within, E.C.; and copies of the Ordinances may be seen on application at the Office of the Crown Agents in Whitehall Gardens.

Office of the Crown Agents for the Colonies,
Whitehall Gardens, London,
16th August, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 451. SATURDAY, AUGUST 25, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new sts of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Banking Risks and Reserves.

As usual Mr. Harry W. Birks, of 62, Threadneedle-street, is to the fore with his valuable analysis of joint-stock and private bank accounts for the half-year ended June 30 last. In all he deals with the figures of 22 banks, but only ten of these systematically issue accounts every half-year. They form a powerful group, however, whose aggregate liabilities on deposits amounted at the date given to £248,653,000, and whose total working resources came to almost £296,000,000. Add in the twelve banks whose balance-sheets are published only once a year, or which as private institutions only issue restricted statements at any time, and we reach an aggregate of £488,723,000 as the liabilities of the whole 22 institutions on deposits alone. Including buildings, their total assets amount to £568,506,000. The total deposit liabilities of the whole of the banks of the United Kingdom as set forth in the Banking Supplement of the *Economist* published on May 19 last was only about £840,000,000 at or about the end of last year. Therefore the banks whose head offices are in London have incurred nearly two-thirds of the entire deposit liabilities of banks in the three kingdoms.

What is done with all this mighty potentiality in credit? It appears to be fairly distributed among the risks banks are accustomed to run. One cannot say in looking at the figures that any of the ten great banks whose half-yearly accounts admit of systematic analysis are trading recklessly. Their figures are so great that it might be difficult to discern whether they were doing so or not, but there is uniformity about the subdivision of the assets which argues prudence in conducting the business systematically and always on well-recognised lines. Of the total available resources of these ten banks £39,616,000 is in the form of cash in hand and at the Bank of England, or an average of fully 15 per cent. of the liabilities on deposits and acceptances together. Call money figures for another £40,355,000 or 15.30 per cent. of these liabilities. Investments come to £44,009,000 or to 137.78 per cent. of the paid-up capital and the reserve funds taken together. Taking the cash, the money floating in the open market and the investments all in one, 50 per cent. of the liabilities of the banks to their customers are utilised in these various ways—safe ways, we must presume, if not all readily convertible. Then come bills discounted, loans, and other securities to an aggregate of £166,840,000. How much of all this banking credit or "money" can be turned into cash at a moment's notice? Not very much, it is to be feared, and the one abiding weakness in the position of our joint-stock banks is the liability they are under to refund their deposits on call. They get this money from their customers, and distribute it in advances over an indefinite variety of securities, some considerable proportion of which tend to become fixed; that is to say, loans once granted cannot be called in in large amounts without disturbing the whole mechanism of the market if on any supposition. It may be that the whole of the deposit liabilities could not be demanded in cash; the probability, indeed, is that no small portion of these liabilities are to some extent a creation of the banks themselves. They grant credits which figure per contra as deposits, and have the customer who has got the credit entirely in their

custody, as it were, so long as his debt is not paid off. True as this may be, the fact remains that some hundreds of millions, if we include the whole 22 banks, are in the possession of these credit institutions, which they might be called upon at any moment to refund in cash and in bulk.

The most important question of all, therefore, is: What reserves in cash do the banks possess against this permanent liability with great risks attached to it? The accounts before us furnish no answer to this question. Very few of the banks publish their cash in hand separate from cash in the Bank of England, which is not really cash at all, but credit more or less in use. The Union of London and Smiths does so, and one or two of the smaller banks, but it is not the rule, and without this separation we can form no idea of the extent to which these banks are providing reserves in gold against a credit emergency. That there is much uneasiness felt about their position in this respect has lately been once more demonstrated by the agitation set on foot to impel the Government to intervene and provide a big gold reserve for the whole money market. Mr. Holden, of the London City and Midland Bank, has been diligent in this direction, and others have followed his lead, putting forward projects of various kinds, prominent amongst which is the emission of £1 notes against gold, repayments in gold by the Treasury of the old Government debt of £11,000,000 due by the Government to the Bank of England, and so on, nostrums for the most part conceived with a view to thrust upon another a duty that may very well be one's own.

Much of the writing about this question of cash reserves seems to us to have been vitiated by confusion of ideas. We do not want a large cash reserve in the Bank of England, a reserve commensurate with the enormous liabilities of the banks whether in London or throughout the country. Such a reserve when we do occasionally see it has only one effect. It depresses the value of banking credit in the open money market to an extent which exposes us to withdrawals of gold by foreign countries, stimulates speculation at home to an unhealthy degree in all directions, and sooner or later brings about a violent reaction. A gold reserve, moreover, built up by means of £1 or other notes forced into circulation would be no real reserve at all, and the attempt to treat it as such would be using money twice over after a fashion wholly vicious. As long as the commerce of the country is healthy and conducted with prudence, purchases and sales of commodities may be trusted to offset each other, and require very little intervention in the way of gold movements out or in. As long also as we do not overcommit the credit of the country in foreign enterprises, in loans to foreign States and colonies, or in other ways cause the credit position to become lopsided, to turn international banking exchanges against us, we have little real use for a large stock of gold, for any stock beyond what is dictated by our position as the one open bullion market in the world, and by the ebb and flow of our internal commerce, or the varying fortunes of our foreign trade. The gold reserve question so far as these great joint-stock banks are concerned is therefore in our opinion one for their individual care and consideration. It is the duty of every bank to provide for its own liabilities, and we can only regard it as a sign of weakness when any one of these banks begins through its representative spokesmen to cry out for Government help in accumulating a gold reserve which would not be its own, which it might be unable to avail itself of when need arose. Among the risks of banking is the danger of a panic. Thanks to the prudence with which banking business as a whole is conducted in this country, the danger may be (usually is) a remote one; but it exists, and we contend that it is the duty of each individual bank to put aside out of its earnings gradually and steadily such a reserve in sovereigns laid up in its own vaults as will enable it promptly and out of its own resources to meet the first symptoms of public distrust without going either to the Bank of England or to the Government to demand help. The amount of this emergency or crisis reserve should be considerable, and it should be accumulated out of surplus profits. Once possessed of such a reserve in adequate amount, there will be less occasion for nervousness, less necessity to watch in fear and trembling the periodic ebbs of the national gold reserve in the Bank of England. Are any of the great joint-stock banks carefully gathering together private gold reserves of this kind? We hope so, but cannot be sure.

The Situation in San Francisco.

II.

Another most important feature of the situation is the position of the Savings Banks. Savings Banks in this country are much more important institutions than they are in England, where, if I am not mistaken, the maximum received from any one depositor is £200, while here it is $5,000, and generally a still larger amount can be deposited by special arrangement. One Savings Bank alone in San Francisco has 80,000 depositors. Government has again stepped in, and requires these banks to invest the great bulk of their deposits in real estate. Most countries have learned, and generally through much tribulation, that if there is one form in which a bank should not hold its assets it is real estate, and have legislated accordingly; but we are a very self-sufficient people, and refuse to learn anything from the experience of other people. We must learn from our own experience, and it generally takes a good many lessons before we admit that we were wrong. It ought not to take a great deal of intelligence to see that a bank should keep its assets in the most liquid possible form, as it can never tell what its requirements may be. To protect these banks, however, Government has enacted that no depositor can require the bank to repay his deposit, unless he gives six months' notice of withdrawal. In good times money passes into these banks, and there is, therefore, a keen competition among them for mortgages, which does not, as a rule, have the effect of reducing the rate of interest, but of increasing the amount they are willing to advance on the property. In this way the banks themselves create an inflation in the price of land, the one thing of all others they should try to prevent. In no other way can we explain the extraordinary phenomenon so remarkable in the 10 or 15 years preceding the panic of 1893, when the price of all descriptions of agricultural produce kept on declining, while the value of all agricultural lands kept on rising. In that year, however, these banks had a very severe lesson, and since then they have been very chary of advancing on country property, but they have lent enormous amounts on city property, and one bank alone in San Francisco has some $35,000,000 loaned on mortgage very largely in that city. These institutions are very rich, and I do not desire to raise any question as to their solvency, which, I believe, is unquestioned; but it may very well happen that the system on which they work may prove most disastrous to their depositors, and through them to San Francisco. A great deal is being said in the papers, &c., about their strength, and especially about the fact that their deposits have increased instead of diminishing since they reopened after the fire, but nothing could be more natural, as the insurance companies are paying out a good deal of money, contractors and workmen are making money, and many people who never thought of having a bank account before are depositing their money with them for safety, while there is very little use for money at present, as the inhabitants of San Francisco have not yet seriously started to rebuild their town, or re-establish their different businesses. So far, no notice of withdrawal has been required by the Savings Banks, and so probably few, if any, depositors have thought it necessary to give any such notice. It is by no means certain, however, that this state of things will continue. The depositors are likely to want their savings to rebuild their homes, or to re-establish themselves in business, and but a small part

of this money can find its way back to the Savings Banks for a long time to come. And while it is true that they can require six months' notice of withdrawal from their depositors, it is likewise true that they cannot foreclose under a year. No doubt they will receive the insurance, but probably in most cases this will not cover the amount of the mortgages, and, in many cases, the mortgagers who have lost everything but their land may not be able to continue the payments of interest. Much must depend on whether the prices of real estate can be maintained at anything like their recent level. If they cannot, and the depositors want their money, these banks may have to foreclose largely under their mortgages, which would still further add to the fall.

The real estate market is, however, the most important factor in the whole situation. The value of real estate has been rising very rapidly in San Francisco for some years past, as much as $5,000, $6,000, and even more per front foot being paid for good sites in the business part of the town. San Francisco is not built on an island, but on a peninsula, and the further back one goes the more land there is. There seems, therefore, no very good reason for these very high prices and the equivalently high rents, unless it be that the different districts were too crowded. When San Francisco was laid out, or laid itself out, some 56 years ago, no one could have anticipated the rapid growth it has had, and the city was, therefore, laid out on too small a scale, and the different districts became too crowded to contain either the rapidly increasing population or business. Hence the high value of real estate, the excessive rents, and the modern skyscraper. Now that we have practically a clean slate there is no possible reason why the different districts of the city should be rebuilt within their present limits, and there is every reason to suppose they will not be. It is only necessary to move the line of the business part of the town a few streets higher up into what was the lower part of the area which contained the large retail shops, hotels, apartment houses, &c., and there would be room enough for this district to expand for many years to come, without either high rents or skyscrapers. And the same with all the other districts. This is the more certain to happen, as all the large shops, hotels, &c., are now situated about a mile above their former sites on a very handsome street on the edge of the unburnt district, and which was formerly the most fashionable residential street in the city. It is now the principal shopping street, and, as the city will be rebuilt from this point, perhaps, more rapidly than in any other quarter, it will leave an abundance of room for a great extension of the present limits of the other districts. With more room to expand in, the values of real estate and rents must fall, and, in my opinion, this must also cause a great redistribution of values. To me, this appears inevitable. We cannot escape the consequences of such a stupendous loss as we have suffered. The population of the city before the fire was about 500,000, to-day it is probably not much over 250,000, or perhaps 300,000, and of this number some 40,000 are being supported by public charity. What is to become of the tradesmen, &c., who lived by supplying all this population which has disappeared? Shops employing formerly four and five hundred hands are to-day running with barely a tenth of that number, the others with those dependent on them have disappeared or are living in great distress if they are not being supported. Many of the richest people have rented their houses, and have departed to more cheerful surroundings. It is well to be hopeful and encouraging, but it is a mistake to swagger. It deceives no one in the end. San Francisco has been bluffing with one side of her mouth and begging with the other. To read the daily papers one would almost have supposed that the city was already rebuilt almost before the fires were out, but it was not difficult to read between the lines of many of these articles and interviews that they were prompted by the desire to see the value of real estate in the business part of the town, all of which is owned by the richest men in the community, maintained at its former level. There have been few, if any, sales of property in this district of any importance, but the papers are full of marvellous offers which are invariably refused. It appears from these that there are people who, with taxation doubled, much increased insurance rates, and in a town with only about half its former population, are willing to give as much for a bare lot as they had previously offered for the same lot with a good building on it. In the unburnt part of the town both values and rents have risen rapidly owing to the demand for residence and shop property, and this property is likely to remain much higher than it was, though the extreme rates now asked will be reduced as building advances.

Although I can see nothing but hard times and not a little suffering ahead of us in the immediate future for a large part of the population, there is also a more cheerful side to the picture. Though it may take more years than we anticipate to rebuild the city, the great future of San Francisco cannot be doubted. She is the greatest port on the North Pacific Coast, and practically the only port, excepting Seattle, nearly 1,000 miles further north. Only a few years ago she exported little else than wheat from her own State, now she is the centre of a great and rapidly increasing trade with the Orient. Within a few months another, the fourth great transcontinental railway, of which San Francisco is the terminus, will be completed. The population has increased within the last five or six years from 25 to 30 per cent., and I firmly believe will reach a million by 1920. Above all, and it is a point in which English cities, both home and colonial, would do well to imitate us in, we have no debt worth speaking of. Our city is destroyed, but we have still our great and rapidly increasing trade, and the richest State in the union behind us, so a very few years should see San Francisco rebuilt and more prosperous than she was before this great disaster.

Economic and Financial Notes and Correspondence.

War Stores Scandals.

We shall never get to the bottom of them, but the Blue Book issued this week, containing extracts from the contractors' correspondence, affords some vivid flashes of insight into the system of bribery and corruption which prevailed. It is the barefaced candour with which the matter is discussed between the contractors and their agents that is the most significant feature of these revelations. For instance, in a letter dated Bloemfontein March 5, 1903, to Meyer, Limited, we find:—"Our *bête-noir* here now is Major Hammett, who is very bitter to us, saying openly that it is a disgrace the terms of the contract, and also that he will do his best to get the contract annulled. I have received a communication this morning from him complaining of the quality of the oats issued. From 'friends at court' I learnt what regiment had complained, and have seen the adjutant, and no more complaints are likely to be made. (N.B.—Some of the oats are dam bad.)" Again, take the following:—"I am delayed in sending statements for January, owing to officer (supply) refusing to sign. My firm opinion is that this officer is making himself obnoxious in order to obtain a little palm oil. N.B.—He will not refuse it." And here is another gem:—"I managed to see the President of the Board before the other members arrived, and managed him beautifully; besides this, Lieut. —— is back again, and having him on my hand, I was successful in getting every bale passed." The story is equally nauseating and humiliating, and the net result is that Meyer, Limited, starting with a merely nominal capital, made a profit of £147,970 in the year 1903. The auditors who make these disclosures also state that Meyers bought goods lying in military depôts, and sold them back to the Director of Supplies at a profit of £69,265, without even going to the trouble of moving them! But why is it that the people responsible for such

abominable corruption are not put in the dock, so that we might have some chance of learning definitely how far the system extended. The auditors say that it is evident that all the letters which passed were not produced to them, and we may be perfectly certain that it is the most important links which are missing. If such compromising letters as those now unearthed were kept in the ordinary course of business, what would probably be the nature of those which it was considered necessary to conceal or destroy? It is impossible to furnish a satisfactory answer to that question, but the suspicion is intensified to conviction that we are only allowed to learn about the minor culprits who may serve as convenient scapegoats, while the big people, really to blame, are carefully kept out of sight. Apparently, the public conscience has become blunted by these repeated disclosures; otherwise, the people would arise in their wrath and demand the whole naked truth. And they would doubtless get it if they were really in earnest.

The Valparaiso Disaster.

Although the earthquake which seems to have nearly destroyed the principal business centre of Chili occurred last Thursday week, reliable details of the disaster are still very meagre. Estimates of the loss of life differ enormously, and those with regard to the extent of the damage to property are equally at variance. But there can be very little doubt that nearly the whole of Valparaiso has been wiped out, that Santiago has suffered severely, and that many of the surrounding villages have been practically destroyed. Moreover, the railways in the vicinity have been seriously damaged, and the actual destruction of capital in one form or another must run into many millions sterling. This aspect of the matter has been studiously ignored by the markets, but the actual monetary loss, following so closely on the terrible calamity at San Francisco, must create an enormous gap which it will take a long time to fill up. Fortunately, so far as immediate effects are concerned, our insurance companies will not be heavy losers apparently. All their policies contain a very stringent clause exempting them from liability in the case of fire "caused by, or through, or resulting from earthquake." Not only so, but in several of the forms of policy the onus of proving that the fire was not the result of earthquake is thrown on the insured. Of course, there will probably be some loss through reinsurances, but it will not be of sufficient magnitude to affect any British office seriously. The discussion of this subject has brought out the fact, not generally known hitherto, that in the case of the San Francisco disaster, 97 per cent. of the policies contained no mention whatever of earthquakes. They relied on a clause to the effect that "if a building or any part falls from any cause other than fire the insurance ceases." With regard to the other 3 per cent., it is alleged that the word earthquake was introduced by subterfuge, and it is extremely doubtful whether it will help the companies to escape liability. However that may be, most of the buildings which were burnt out probably took fire before they fell, and the offices have recognised the futility of fighting the question.

London General Omnibus.

The most disturbing point about the half-yearly report of this undertaking made up to June 30 last is that the introduction of a considerable number of motors in place of the horse-drawn vehicle has failed to increase its business. We do not know how many motors were placed on the road, but the number must have been considerable, because the directors say that 65 new motor omnibus bodies were built at the company's coach factory in the half-year, and a drop in the number of horses owned of 1,767 to 15,617 points to the displacement of a good deal of old stock. In fact, the average number of 'buses running was only 17 less at 1,397, and when we remember the immensely larger carrying capacity of the motor compared with the horse vehicle it is not at all pleasant to find that the average receipts from passengers per omnibus per day fell by 1s. 4½d. to £2 6s. 2¼d. The total number of miles run was actually increased 167,962 to 16,652,150, but notwithstanding this the passengers declined over 600,000 to 108,341,451. All this points to a real shrinkage in business, and is in striking contrast to the experience of the company's most powerful rival, the Road Car Company, which reported an increase in the passengers carried and in the gross receipts. The London General returns a total revenue from ordinary omnibus traffic and private hire of £579,671, a falling off of £26,294, and manure gave £32 less, but there was an improvement of £844 in the advertising revenue, so that from all sources the income was smaller by £25,482 at £601,348. But if the company did worse than the Road Car so far as actual business handled was concerned, it has a better story to tell on the expenditure side of the account. Under general administration there was a small increase, and traffic outlay was rather more than £6,000 larger, owing chiefly to the new charge of £4,739 for fuel and lubricating. Drivers' and conductors' wages, and superintendence and ticket service, each increased, but there was a fair saving in compensation. Yard expenses were down just on £2,000, entirely in horsekeepers' wages, because 'bus washing and superintendence drew away heavier sums. The next item, maintenance, shows a big drop. The total charge was £227,651 compared with £246,441, and in horse stock alone the cost was lower by £16,361 at £27,576. Charge for provender, however, was only down by £1,492, despite the big drop in the number of horses, and we gather that the average cost of feeding and bedding each stud of horses in the half-year was £136 against £132 in 1905 and £133 in 1904. Bedding expenses were a matter of £500 less, and the decline of £444 in the shoeing and veterinary service was not so much as might have been expected. The big saving in maintenance was, however, to a large extent offset by a rise in the general expenditure. This item is not given in the detail we should like, because it clearly includes the upkeep of the motors, and we want to know what that runs away with. The entry reads, omnibuses, harness, yard stock, and fixtures £52,681, say £15,000 less, and for stables, offices, and tenements the charge was £3,262 against £5,644. Under all heads, therefore, the expenditure was £579,258 against £580,721, so that the profit on working for the half-year was £22,140 or a shrinkage of £24,019. We say profit on working because all 'bus revenue is taken into account, but strictly speaking the actual position between passenger receipts and expenditure is that practically no profit at all was made. A sum of £22,140 was produced, as just shown, but towards that advertising and sales of manure contributed no less than £21,727. Revenue from interest and dividends was £10,390, an increase of £361, but the credit brought in was less by £3,090 at £8,207, so that the total nett balance adds up to £40,737 against £67,485. Debenture interest takes £5,700 as usual, but there is a fresh charge of £1,007 for preference dividend, and one which, be it noted, will increase to £12,500 each six months when the issue is fully paid up, as it soon will be. The company, however, may be considered fortunate to get the entire number of shares placed. For the corresponding period of 1905 the motor fund received £20,000, but nothing can be put aside now, and still the sum available for distribution is £7,815 smaller at £33,970. So the dividend on the capital stock has to come down from 8 to 6 per cent. per annum, with a small increase in the carry forward to £9,602. No reserve of any kind gets a contribution, the general fund remaining at £135,000, and the horse stock reserve at £10,000, apart from the capital reserve of £100,000. Instead of increases we note that premiums account, which a year ago stood at £45,149, now amounts to £33,029 only, all the difference being accounted for by the cost of issue of preference shares, surely a heavy sum. The motor fund, too, has been reduced from £33,192 to £22,524, owing to the expenditure on garages, &c. At the date of the balance-sheet the amount paid up on the preference shares was £125,172, a large part of

which was still held in cash, the balances at bankers and in hand being £133,986 against £47,913. Freeholds and leaseholds stand at £660,890 or £6,882 less, and stock of omnibuses, including motors, horses, harness, and yard stock shows an increase of about £21,000 to £523,794. Plant and stores are nearly £10,000 larger at £74,275, and provender at depôts and granaries has increased £11,409, but whereas a year ago the company had horses in training valued at £9,214 there are none at the present time. Sundry creditors reach £75,004 against debtors £23,744, each showing a moderate increase, and the investments, still showing a tidy depreciation, remain at £160,228. On the surface a better position than might have been expected, but we want to get beneath the surface, because old omnibuses and horses cannot be disposed of without loss, and a fear is created that no provision against these has yet been made. The Road Car Company carries the deficiency straight to a suspense account to be written off out of future profits. What does the London General intend to do?

Guest, Keen and Nettlefolds.

Words almost fail us in our effort to express admiration for this magnificent business. There can hardly be a finer enterprise in the kingdom, and it is more in sorrow than in anger that we sometimes listen to Mr. Arthur Keen, the company's chairman, when his mind goes astray over tariffs. Does he really believe that a protectionist policy would help a company like this, and, if so, why the eagerness to buy up any dumped iron at a cheap price when such falls its way? It is as well to be logical, even though misguided. Perhaps all the directors are not of the same way of thinking. Anyhow, with the country's business paralysed by free trade, the company last year managed to scrape together a profit of £427,156 or £19,599 more than in the previous twelve months, and since no less than £142,808 was brought forward, the sum at the directors' disposal is £569,965. Debenture stock charges remain at £70,319, and the preference dividend at £86,000, but notwithstanding the increased profit, the directors still restrict the ordinary dividend to 10 per cent., adding another £150,000 to reserve and carrying forward £24,338 more at £167,146. The reserve fund will now be £900,000, and while the balance-sheet is not quite so full as we should like to see, there is no doubt at all that the financial position is exceedingly powerful. We know that the investments of £1,987,976, or the greater part of them, consist of high-class securities, and the existence of this great quantity of liquid assets renders the company so strong that it could face a period of adversity, should one ever occur, with the utmost equanimity. Sundry debtors £419,255 are £129,390 in excess of creditors, and the final dividends could be paid almost three times over with the splendid cash balance of £221,255. Stock of finished and unfinished goods is valued at £534,074 against £560,267, and the freehold and leasehold land, buildings, collieries, and blast furnaces, rolling stock, and plant remain at the usual figure of £2,821,200. No additions made are ever credited, and no direct depreciation is allowed, but we may be sure that the condition of the works is little short of perfection.

Carn Brea and Tincroft Mines.

In accordance with long custom, the report of the Carn Brea and Tincroft mines has been issued within a day or two of the report of the Dolcoath Mines, both reports covering the first six months of the present year. The experiences of each concern have been much alike, but this was only to be expected, as both companies have profited considerably from the high price of tin. Readers will recall that the profit earned by Dolcoath in the half-year to June 30 was by far the largest since it discarded the cost-book system, and became a limited liability undertaking, and it is not surprising, therefore, to learn that the profit of the amalgamated Carn Brea and Tincroft was also its highest figure. But the financial positions of these well known Cornish tin companies were very dissimilar, for whereas that of the Dolcoath was strong and comfortable, the Carn Brea was burdened with an accumulation of debits. Thus the Dolcoath was able to treble its dividend, and to carry forward a very large credit, while the earnings of the neighbouring concern have to be devoted to wiping out past losses. Though a dividend is not possible, it has made a distribution more probable in the future by removing obstacles, and the improvement is to be heartily welcomed. It has greatly improved the prospects of the company, but the duration of the improvement will depend upon the duration of the strength of the tin market. In the past month or two the price has fluctuated greatly, not solely in response to natural supply and demand, but as the effect of speculative manipulation. If we look solely at the possibilities of supply and demand the outlook is promising. At any rate, this is the opinion of most experts, who see that the demand is likely to be strenuous and well sustained for some years to come. The supply does not threaten to overtake it yet awhile, inasmuch as no new and prolific sources are probable, hence the revival in the Cornish tin mining industry, the activity in opening up abandoned mines, the comparative ease with which capital is being subscribed for new ventures, and the hope that prosperous times are coming again.

As already stated, the larger profit earned by the Carn Brea was due entirely to the rise in the price of the metal, for the actual mining results showed a decline compared with the preceding half-year. A greater quantity of ore was treated—400 tons more—but there was a falling off in the production of black tin, and the working costs increased simultaneously. In all 30,055 tons of tin stuff were crushed, and 402 tons of black tin were sold, the average value per ton of stuff being £1 5s. 5d. against 18s. 11d. twelve months ago. The average price obtained per ton of tin sold, including slime tin, was £94 18s. 4d. compared with £73 8s. 7d. for the first half of 1905, with the result that a total sum of £38,200 was realised. Gross receipts came to £44,442, and the working costs to £34,280, so the profit was £10,162, which reduces the debit balance from £11,800 to £1,638. The manager gives the opinion that the high prices of all the minerals sold have told greatly in the mine's favour, a fact that is self-evident. He also reports that the new concentrating plant and machinery recently completed at the dressing floors are working satisfactorily, and tailings are now being treated which formerly could not be dealt with. This will help the company greatly in the future, even should there be a fall in the price of tin, and the directors are carrying out a very wise policy in taking advantage of their opportunities to improve the machinery.

Mather and Platt, Limited.

This excellently managed company was able during the year ended June 30 to make up some of the leeway it lost in the previous 12 months, and the nett profits, after providing for depreciation, showed a recovery of £8,331 at £103,868. With a larger balance of £21,239 brought forward, the amount available for distribution was £13,868 up at £125,109, but, as usual, the directors prefer to divide little more than half this amount, and repeat the dividend and bonus of 10 per cent. paid on the ordinary shares for the two previous years. Then £40,000 is transferred to reserve against £30,000 and £50,000 respectively, and the sum carried to the new account is further increased to £25,107. Capital expenditure for the year seems to have again been large, as the total, after deducting the allowance for depreciation, has risen by £19,202 to £638,645. This figure, however, is far from being excessive, when we consider the extent of the business, and as the reserve fund is now up to £270,000, or fully 42½ per cent., the provision for contingencies is decidedly ample. Only £58,408 of the reserve is invested outside the business, but that is evidently because the company has to allow long credit to its customers, and the remainder of the

fund is profitably employed. Liabilities to sundry creditors are £52,540 higher, but even so only amount to £136,507, or less than the stocks on hand, which show an increase of £25,314 at £154,119, while the amount to come in from sundry debtors is £65,205 up at £369,267. Cash and bills have fallen £22,743 to £49,176, but the drop is fully accounted for by the larger stocks held, and altogether we can only reiterate our satisfaction with the company's position. The directors have decided that it will be more convenient in future to carry out the annual stocktaking in December instead of June, and the next balance-sheet will accordingly be made up to December 31.

Extra-Hazardous Fire Insurance.

In the Financial Supplement of the *Times* this week there was a most instructive article on the conditions under which the business of fire insurance is carried on in the United States. First of all, there is the "conflagration" risk, and when it is mentioned that the destruction under this heading has amounted to £66,000,000 since the present century opened, it will be readily realised that the matter is one of vital importance to insurance offices. The total includes £50,000,000 for San Francisco, although some authorities estimate the loss at double that figure; but it does not take into account several big fires, such as that at Rochester, New York, in 1904, which in any other country would be classed as "conflagrations." The fact is that the ordinary fire loss ratio per head in the United States is at least four times that of any other highly civilised country, and the result can perhaps be best appreciated by a study of the following figures. The total premiums paid in the United States for the 10 years to December 31 last amounted to £322,176,000. Out of this the losses actually paid absorbed £180,906,000, and after paying expenses and allowing for unexpired risks, the net profit remaining was only £7,020,000. These figures include the results of 35 foreign companies, of which 19 were British. With regard to the British offices, it is stated that four lost money and 15 made a profit by their operations. But the San Francisco disaster has changed the complexion even of this not very brilliant showing, and it is safe to assert that for the past 10 years no British office has made a single penny of profit in the United States, but has lost money there more or less heavily. And it is estimated that it will take more than 20 years' probable profits in the case of some of the offices to recoup their San Francisco losses, without reckoning the probability that there will be several "conflagrations" in the meantime to upset the balance.

These excessive "natural" risks, however, are by no means the only obstacles to profitable business in the United States. Each State makes its own insurance laws, and, speaking generally, they are by no means favourable to foreign companies. It requires a large octavo volume of 362 pages merely to recite what is demanded of the companies under penalty. Then the insurance superintendent or commissioner has wide powers, and his periodical examinations, in many cases, are merely a thinly-disguised species of blackmail. Very often he can compel the companies to advertise their statements in papers of his own choosing, and the slightest breach of the law furnishes an excuse for demanding an additional fee or fine. But perhaps the worst restriction of all is the law adopted by very many of the States making it an offence, punishable by abrogation of licence and expulsion, for an insurance company to take any action in which it may be interested to the Federal Courts. As the judges of the State Courts have to stand for re-election from time to time, and local sympathy does not usually lean towards a foreign corporation involved in a lawsuit, the quality of justice they dispense leaves a good deal to be desired. Under such conditions it is scarcely conceivable that foreign companies with a respectable and substantial business at home would care to seek any connection whatever in the United States. Yet we find that the Liverpool, London, and Globe and the London and Lancashire draw about half their income from the other side of the Atlantic, while the Royal and Commercial Union take about one-third and one-fourth respectively from the same source. Moreover, owing to legislative enactments in various States, the Liverpool, London, and Globe has £1,867,000 of its assets absolutely locked up on the other side, the Royal £1,496,000, the London and Lancashire £1,000,000, the North British and Mercantile £813,000, the Scottish Union £736,000, and the Commercial Union £683,000. These figures supply a curious commentary on the bulk of the expert evidence recently submitted to the Lords' Committee deprecating the proposal to compel foreign offices (chiefly American) to maintain sufficient assets here to cover their British liabilities. That, however, is a minor digression which need not detain us. But the facts cited above certainly suggest the question why some of our most important offices submit to the risks and harassments of doing business in the United States. Taking the average of the past decade it has been an absolute dead loss to them, and under the most favourable circumstances it will be many years before they can square accounts, while another Chicago or Boston conflagration would cripple even the best of them very seriously. The only explanation we can think of is that it is due to the absurd craze for big business and bloated balance-sheets. The larger the overturn the more scope there is for concealing losses and "cooking" the figures generally. But it is an evil system, and both shareholders and policyholders here have to suffer because directors have not the courage to face the falling off in business which withdrawal from the United States would entail. That would probably be the wisest course, however, and pressure ought to be brought to bear on the various companies concerned to cut their United States connections. The process would necessarily be a gradual one, but if it is not adopted voluntarily it is quite conceivable that it may be forced on them by the hard logic of irreparable losses. And then it will be too late, in many cases, to repair the mischief.

American Business Notes.

When we see the total of loans and discounts shrinking in the return of averages made by the New York Associated Banks, concurrently with a furious energy in driving prices up, it is reasonable to infer that trouble cannot be far off. Last week the deposit average went down $9,148,000 as against a decrease of $5,176,000 only in loans, and doubtless the west is continuing to draw away credits from New York, forcing the banks there to call in loans. But they cannot continue doing this at the same time that gambling for the rise is hourly adding to the credit necessities of the money market. We, therefore, look for the transfer of a sensible portion of the liabilities now being contracted on Wall Street to Europe, chiefly to the London market. This will raise the price of banking credits here without smoothing the way much for the Associated or other American banks. Already the surplus legal reserve of these Associated banks is down to $7,092,000, a decrease of $1,182,000 on the week, and that is ominous at this time of year. Credit may not be played with for ever, or debt be liquidated by creating yet more debt, not even in New York.

Among the defalcations for varying amounts recently reported in the United States the most important is the looting of over $700,000 from the Milwaukee Avenue State Bank of Chicago by the cashier and assistant cashier, the president being apparently an accessory. The bank held some $4,000,000 in deposit for 22,000 persons, mostly of moderate means, but the management seems to have been negligent to the last degree, for the greater part of the funds that have been stolen are represented by forged and worthless notes. The two inculpated officials have disappeared, and the official examiners report a serious state of affairs in the bank's accounts. The money appears to have been wasted in social extravagance, horse-rac-

ing, and automobiling. There is said also to have been wild cat speculation in real estate, and on the Stock Exchange. The president of the bank has been arrested, and the State Bank Examiner is blamed for lax inspection.

Under a judicial decision rendered at Montreal, Canada, the Delaware and Hudson Railroad Company can now complete the extension of its line into Canada to South Quebec on the St. Lawrence, and, it is reported, has entered into negotiations to acquire the charter of the North-Eastern Railway Company, which was incorporated at Quebec at the last session of the provincial Legislature.

According to sworn statements filed by fire insurance companies doing business in the State of New York, the actual losses suffered through the San Francisco earthquake and fire amounted to $132,823,066, or an increase of $19,381,471 over the estimated loss which they reported to the State Insurance Department soon after the disaster. The losses were, distributed among the New York State companies, $23,138,090, increase $4,194,090; companies of other States, $51,983,111, increase $7,155,612; and foreign offices having branches in the United States, $57,701,865, increase $8,031,769. The gross risks involved amounted to $222,836,307, of which $65,246,771 was recovered by reinsurance. The salvage is estimated at $33,814,468. The combined capital of all the companies participating in the losses was on December 31, 1905, $83,145,996, and the combined surplus to policy-holders $209,918,434.

In the distribution of favours among the National Banks in the United States in connection with the issue of the Panama Canal loan, two banks received $3,900,000 of Government deposits; three received $300,000 each; one received $250,000; six $200,000 each; three $150,000 each; 21 $100,000 each; four $75,000 each; 50 $50,000 each; and 13 $25,000 each. The aggregate amounts to $11,925,000, and is in addition to $15,000,000 previously deposited, the total amount representing deposits against the sale of Panama Canal bonds.

The United States Steel Corporation has just completed and entered on the books of the County Recorder its purchase of 2,793.58 acres for the site of the coming industrial city of Gary, in the State of Indiana. The purchase price is $1,926,065, the largest sum ever paid for a piece of real estate in the State. Four years ago the same property was assessed at only $243,950. It is intended to spend some $75,000,000 during the next few years in the erection of the steel making plant, and the residential buildings for the staff and workmen who will be employed by the company.

It is reported from Pottsville in the State of Pennsylvania that a vein of red ash coal 14 feet in width had been discovered by prospectors of the Philadelphia-Reading Coal and Coke Company, at Taylorsville, in the Heckscherville Valley. The discovery is said to be worth at least 20 millions of dollars to the company as the quality is of the very best of the anthracite varieties.

One of the results of the Pan-American Conference, and materially the most important for the moment, is the impetus it will give to the promotion of the Pan-American railway, which is to bring New York into direct communication by land with Rio Janeiro and Buenos Ayres. The total distance to be traversed between New York and the capital of the Argentine is 10,400 miles, of which all but 3,700 miles may be said to be provided for, the estimated expenditure on which, reported by a committee of which Mr. A. J. Cassatt was chairman, would be $185,000,000. Mr. Carnegie is said to have suggested that the United States Government should contribute $100,000,000 toward this amount. The gaps in the continuity of the line north of Panama are being filled in so far as Mexico is concerned, and when completed will connect with the Guatemalan road, to be built to the city of Guatemala. The construction through Salvador and Honduras will then be required to bring the northern line into connection with the Nicaraguan, which will connect with the Costa Rican system, and eventually with the part to be built through Panama. From there the line will be carried through Colombia, Ecuador, Peru, and Bolivia, to connect with the Argentine railway, which is being extended from the south. Conjointly with this great trunk line, a number of lateral extensions are under consideration, which involve the early and continuous development of the most gigantic railway system the world will have yet seen. The actual mileage provided for in the different countries interested is: Peru, 1,200 miles; Ecuador, 450; Colombia, 845; and Panama and Central America, 1,200 miles.

On August 8, at Chicago, the Standard Oil as a corporation, and not in the persons of its responsible officials, was indicted by the Federal Grand Jury for having accepted rebates in the form of remitted storage charges from the Lake Shore and Michigan Southern Railroad Company contrary to the Elkins law. The number of counts in the indictment are 19, and the aggregate of the rebates $8,501.72, in sums varying from $316 to $564, each of the sums constituting a separate offence. The company had to furnish a bond for $25,000 to appear and defend the action. For each offence the penalty is a fine of from $1,000 to $20,000. Had the indictments been under the Sherman anti-trust law, which makes the individual responsible, the violations of the law would have involved both fine and imprisonment, and Mr. John D. Rockefeller, Mr. H. H. Rogers, Mr. Archbold and others could be consigned to prison. As the New York *American*, commenting on the indictment of the corporation only, says, this means nothing.

The enormous cost of the municipal administration of New York, with inadequate results, is beginning to attract the attention of a good many of its citizens. It is four times that of Chicago, with only double the population. The city service in every sphere is inefficient, the pavements except of a few show streets are poor, and the streets badly lighted. Life and property are unsafe while the police are occupied looking after the morals of the immoral, and in preventing fools losing their money at gambling. As the New York *Sun* says:—"The city is conducted on lines of extravagance that would bankrupt a private concern, and the constant tendency is toward higher relative expenditures, rather than lower." Complaint is made that the accounts of the various departments are so intricate that no one can tell whether the expenditure is waste or not, the reports of the heads of the departments are not enlightening, and a clear and concise statement of their operations is never made. All that the audit seems to show is that the sums disbursed have been drawn from the bank in accordance with the provision of the law, but whether they went to pay for needed improvements or services, or were simply thrown away, there is nothing to show. There is really no intelligent or scientific system of book-keeping from which to enable the tax-payers to know how their money is being used; but salaries and officials are fat, and the average citizen apparently quite indifferent.

Mr. Emory McClintock, vice-president of the Mutual Life Insurance Company, who returned to New York the other day, after an absence in Europe, stated that the affairs of the company in all the countries of Europe except France and England were in good shape again. In England the company had been hit, he said, very hard, and it had been decided to withdraw from France. The Equitable, on the other hand, will continue doing business in France, having found it expedient to conform to the French laws regulating foreign insurance companies.

An attachment for $61,000 against the Transatlantic Fire Insurance Company, a German corporation with an agency in New York, was issued in that city on August 8, in favour of a sufferer by the San Francisco fire. The writ was served on two trustees of the company, on a bank, and also on a banking firm, where it was said that the company had money on deposit.

A despatch from Rio de Janeiro in New York papers stated that the Mexican delegates at the Pan-American Congress proposed that the Pan-American railway

scheme should be definitely stated, so as to place the different sections under independent control. The first would include Mexico and Central America, the second the United States, Panama, and Colombia; the third Argentina, Peru, Ecuador, and Bolivia. The matter was referred to separate committees of delegates taken from the countries allotted to each section.

Trouble appears to have broken out in the International Policy-holders Committee formed to combat the official ticket in the forthcoming Mutual company's elections. The causes are somewhat obscure, but the fact that Mr. Seymour Eaton, the secretary of the committee, found himself under the necessity of sending in his resignation to Mr. Olney, the chairman, on the ground that his first impression that the movement started by Mr. Untermyer was "righteous, unselfish, public-spirited, and in the best interest of the great body of policy-holders" has proved to be erroneous, seems to justify reports current in New York that Mr. Field's characterisation of Mr. Untermyer as "Pecksniff" were not without reason. An interview between Mr. Untermyer and Mr. Peabody, president of the Mutual, took place on August 9 at the office of the Mutual, but what took place was unknown, though it was inferred from Mr. Untermyer's manner when he emerged from it, and from a circular issued soon after from the Mutual Office, that he had failed in his object, whatever it was. The ways of the Mutual, however, have been, to say the least, so dubious that it is not safe to draw conclusions one way or the other, but the latest developments in the contest begun by Mr. Untermyer have not been favourable to that gentleman personally, however just may have been the principle that actuated the formation of his International Committee, and attracted men of character to become members of it.

In consequence of the fraudulent substitution of coffee beans grown in other countries for the article grown in Porto Rico in the American market, it has been decided by the United States Porto Rican authorities that in future a certificate must accompany every bag of Porto Rico coffee exported. Hitherto low-grade Mexican, Nicaraguan, and Venezuelan have all been sold as high-grade Porto Rican to the prejudice of the exporters of the island grown article, the sale of which was about the only thing that enabled the poorer inhabitants to pay their taxes and live.

An incident at Chicago brings the food question again to the front. The wholesale grocers of that city made a request to the health officials to allow them to "process" and market 42,000 cans of food products that had been condemned, and were refused. The report, however, does not mention that the condemned stuff had been destroyed, so that in view of the laxity in the execution of the law in the past, it is an open question whether the offal, put through a renovating process, may not find its way into the market after all.

A matter which may result in an international difficulty is reported from Raleigh in the State of North Carolina. The trial of eight Italians who went from New York to work on the South and Western R.R., near a place called Marion, upon the charge of conspiracy to kill a foreman, has ended in the acquittal of all except two of the men. The trial brought out the fact of great hatred of foreigners, these being the first ever employed in that section, which is very wild and the inhabitants equally so, and the evidence showed that some of the *posse* who were sent after the Italians fired on them out of pure love of killing. Two of the men so stated, and seemed to think that the killing of two Italians, or "Dagos," as they are commonly called, was a matter of no importance at all. The Italians now want to leave the country and return to New York, but the company for which they were working has refused to allow them to go, and the matter is to be taken up both by the State and Federal authorities, as the Italian Government has lately been calling the attention of the United States State Department to the killing and ill-treatment of its subjects in different parts of the country which has been common of late. It is a fact that but for the mass of Italian and Slavonian labour, the latter mostly from Hungary, much of the railway building and work demanding unskilled labour could not be carried on. The question at bottom becomes an economic one.

After having some time ago declared that no "servile" or indentured Chinese labour was to be employed on the Panama Canal, but only American labour at American wages, with American hours, the chairman of the Canal Commission has announced that the Government intends engaging as many Chinese as may be found necessary to carry out the work. This is in violation of the law which excludes Chinese labourers and coolies from the United States or any of its possessions, and as the Canal zone is American territory, the American Federation of Labour has protested very emphatically against the Government's decision, besides accusing the president of the Canal Commission of thereby violating a pledge given the president of the Labour Federation on the subject. It is said that the British West Indian negroes who have hitherto done most of the work have been found intractable, and that a sufficient number of Spaniards cannot be obtained, and that, therefore, recourse must be had to China, or the completion of the canal will be indefinitely delayed. Parties in Wall Street are said to be already engaged in financing the arrangements for the supply of Chinese. Mr. Shonts, the president of the Commission, holds that as the law prohibiting the employment of Chinese on American soil was passed before the acquisition of Panama, and that, as Congress has not extended the operation of the law to the newly acquired territory, the protest of the Labour Federation has no force. The reply of the president of the Labour Federation is that it will show its force in votes at the coming elections.

In consequence of reports having been put about that the railway companies, headed by the Pennsylvania, were working to defeat the intentions and contest the validity of the new Interstate Commerce Act, the Pennsylvania Railroad Company published, on August 11, the following statement:—

> The Pennsylvania Railroad Co. is not seeking to contest the validity of the new law, either on its own behalf or in conjunction with other railroads. An exhaustive study of the measure is being made by both its legal and traffic departments for the purpose of clearly understanding its scope and requirements, in order that they may be properly complied with.
>
> As is well known, the Pennsylvania Railroad Co. many years ago took a very firm stand, which it has maintained, in opposition to freight rate rebating, and the policy of the company has been to favour any measure which would entirely eliminate such practices from American railroading. In so far as it understands the purpose of the new law, therefore, it is this company's purpose to co-operate with the Interstate Commerce Commission in carrying it out, with the confident expectation that the law will be administered fairly and intelligently.

A despatch received in New York from Chefoo, China, dated August 11, stated that a Japanese official had passed through there on his way to Pekin, to obtain the consent of the Chinese Government to a loan on the security of the five hundred miles of railway now operated by the Japanese in Southern Manchuria. It is proposed that the loan shall be included in one of $150,000,000, to be floated through the agency of Mr. Jacob H. Schiff, of Kuhn, Loeb, and Company, of New York, and formerly of the Equitable Life Insurance Company.

In addition to the looting of the Milwaukee Avenue Bank in Chicago, which it now seems likely will turn out to be nearer two than one million dollars, the paying teller of the First National Bank of Birmingham, Alabama, was arrested on August 13 for the embezzlement of $100,000, mostly gone in stock speculations; and at Pittsburg a bookkeeper and the teller of the Union Trust Company are in jail awaiting trial, also for embezzlement. The former's defalcations are some $150,000, while those of the latter are not yet fully known. The frequency of such cases of late, and the way in which the money stolen is spent, indicate that the unbridled luxury and extravagance prevailing in the United States is sapping all sense of honour among those entrusted with the custody and handling of the money of the public. Almost every day's issue of the

American papers contains reports of such cases, varying in the amounts stolen from a few hundreds to hundreds of thousands of dollars. In many the crime would not be possible did the responsible Government inspectors and examiners perform their duty.

The president of the Greene Consolidated Copper Company of Cananea, Mexico, issued a statement immediately after his arrivel in New York from Mexico, on August 13, accusing a certain person or persons (unnamed) in Wall Street of having furnished the money to promote the recent trouble at the company's mines. The charges are vague, and no mention is made of the United States Vice-Consul, who was in such haste to bring American troops and filibusterers into the country, having resigned from his post. Some interesting revelations are promised.

Passing Events.

In our last issue we commented upon the triumph of the directors of the Goldfields of Matabeleland in getting the reconstruction proposals passed by poll, they having been rejected by a show of hands at the meeting. It is seriously to be hoped that their triumph will be short-lived, and if the shareholders possess ordinary common-sense they will see to it that the victory is but transient. The resolutions have yet to be confirmed, and much can be done before the confirmatory meeting is held. Mr. Percy Lindley is resolved to do his utmost to make the scheme abortive, to which end he is inviting proxies to oppose reconstruction. Let us hope he will not invite in vain, but one never knows, shareholders are so apathetic in looking after their own interests. What is urgently needed is a thorough investigation into the affairs of this company, for it would be more than interesting to learn where all the money has actually gone. It is almost hopeless to expect this, however—as hopeless, say, as are the company's prospects. Many inquisitive persons would also like much to know why the directors sprang this reconstruction scheme in Bank Holiday week. Did they think it the most convenient time in all the sad Rhodesian year?

Ever since Spassky copper shares were introduced on the market, over a year ago, there have been sudden fluctuations in the shares of a somewhat violent character. Not that this is in the least surprising, but these market spasms should be a sufficient warning to outsiders and others that the shares are somewhat risky, if not dangerous things to meddle with. The price has developed considerable strength in the past week or two, but why we do not exactly know, except it be for a similar object for which Banket shares are pushed up. However, there may be some impulse in the fact that two of the principal South African houses have sent out a representative to report upon the property as a preliminary to their taking an interest in the company and furnishing the money necessary to equip and develop the mines on a large scale. Prospects are regarded as encouraging, and opinions declare that the property is a valuable one. But this is no justification for rigging the shares. Would it not be wiser to wait to let the property speak for itself, and not rely upon vague report and rumour? This is the attitude the prudent would adopt.

We learn that the Committee of the Transvaal Chamber of Mines has for some months past been engaged in exhaustively investigating the administration of the Witwatersrand Native Labour Association, and we are rather surprised to hear it. It would have been better to have heard of it some time ago, and not after the Government has announced its policy. But it would have been better still and more beneficial to the mining industry if some such investigations had been carried out before the importation of Chinese. According to the Johannesburg correspondent of the *Financial Times*, the following recommendations are made by the Chamber:—The Association to discontinue recruiting in the Cape, the Transvaal, and Orangia, in consequence of the relatively excessive expenditure incurred. The various groups to be free to recruit indefinitely in such territories, subject to an agreement as to wages and recruiting fees, so as to avoid outbidding each other. The Association to continue its operations in Portuguese territory. "Public opinion, as well as the attitude of the Robinson group, have been contributing factors in the formation of the policy." Quite so, and the action of the Chamber deserves no commendation. It is not so virtuous as it looks, and is the effect of necessity. And speaking of the Robinson group, the Portuguese colonial authorities have granted to it the labour recruiting licence on the same conditions as those issued to the Labour Association.

The exceedingly optimistic telegram from Mexico, sent a few days ago, is likely to raise greater hopes than ever amongst some people that the gold mining industry of the Republic may turn out to be a very profitable one, and that promoters may find the British public disposed to venture some capital in it. The wording of the cable was as follows:—"Rich strike San Rafael vein, El Oro, fully confirmed, rendering value entire district considerably greater. After several years' diligent search, El Oro mines struck exceedingly rich sulphides, same Esperanza substantiating deep levels. Both companies Esperanza output this month will be largest, most valuable ever produced. Whole district very jubilant." Those who sent the cable—it is admitted to be unofficial—must have been in a terrific, well nigh breathless, hurry, or they might have made it a little more explicit, clear, and comprehensible to the uninformed, lay mind. The sender would have one believe that by striking rich sulphides in the El Oro mines it has placed beyond a doubt that rich ore in this famous district extends to great depths. We hope it does substantiate such an opinion, but, for all that, the jubilation may be a little premature. However, it naturally makes one expectant of more news from more responsible quarters.

The official news one gets from the Mysore Government is never up to date, but is always considerably musty and fusty. Thus at this time of day we learn that the royalties due to the Government for the year 1904 amounted to £174,246 as compared with £173,135 for 1903, an increase of £1,111. The number of prosecutions instituted for breach of the provisions of the mining regulations, and rules thereunder in the same period was thirty, resulting in the conviction of 23 persons, compared with 24 and 18 respectively in the two preceding years. As regards thefts of mining materials, there were 212 cases involving 286 persons, of whom 201 were convicted, the corresponding figures of the three previous years being 285, 403, and 288. The value of stolen property recovered in the year was £600, against £1,064 in 1903. A larger area was surveyed and mapped than in any previous year. Under the Government's rules for the grant of mining leases and prospecting and exploring licences, 5 mining leases, 18 prospecting and 4 exploring licences were granted during 1904-5. Out of 183 persons examined, 177 passed and obtained certificates as blasters; and out of 770 examined 717 passed out as maistries. The number of mining companies at work at the end of the year was 11, against 13 in June, 1904, the decrease being due to the cessation of work on the Road Block and Nine Reefs properties. Of the working companies seven paid dividends compared with five in the preceding year.

Now there is every likelihood of the Cornish tin mining industry entering upon a new lease of life, it is only a natural development of this that the Cornish Press should be agitating vigorously for some reform in the levying of royalties which will assist the industry. This is the revival of a very old agitation, but as the lords are ordinary human beings it is hardly likely that they will be more generous in the future than in the past, especially if they see a possibility of sharing in the good harvest that seems so promising. Justice would say: "No profits, no royalties," but the average lord would be inclined to shake his head

at this ideal conception of right, when his personal might is so great. Mr. J. H. Collins, one of our leading experts and authorities on Cornish tin mining, is foremost in this campaign. He has traced the custom from the primitive times when alluvial tin gravels existed in Cornwall, and when the tinner exercised the right to enter on any unenclosed land, mark out his "bounds," work the sett in his own way, and hand over one-eighth of the produce in kind to the lord of the manor. But whether profits be earned or not, the lords of to-day will insist upon their dues, for they are not self-sacrificing philanthropists.

It is almost a cheery message that is written in the annual report of the Chargé d'Affaires of our Legation at Guatemala. "With another year of peace," says he, "Guatemala has made further considerable strides as regards financial recuperation, and 1905 was marked by another large increase in the general volume of trade." Since these words were penned the peace has been disturbed by another revolution, but happily it was very quickly ended, and the interference of the United States gives promise of much quieter times. In 1905 the trade of the country advanced from £2,519,000 to £3,017,000, equal to a 20 per cent. increase, the shipments of coffee expanding from £1,295,300 to £1,459,500. In the import trade the United States takes first rank with 36 per cent., Great Britain coming second with 19 per cent., and Germany third with 16 per cent. Steady progress is being made with the extension of the railway system, and it is anticipated that in about two years through intercommunication will be established with the States. This, of course, will give an impetus to the country's development.

A Blue Book has been published this week containing the report to the Board of Trade on the accidents upon the railways of the United Kingdom in the past twelve months—that is, in 1905. From this it appears that no less than 1,099 persons were killed and 6,459 injured by accidents. As regards fatalities, these figures make an unfavourable comparison with those of the preceding year, the deaths being 26 more, though the injured were 430 less. In fact, the results both in the aggregate and in their character are worse than in any year since 1889. This is due very largely to the disaster at Hall-road, on the Lancashire and Yorkshire line, in which 21 passengers were killed, and by the Wittam accident on the Great Eastern Railway, in which 10 met their deaths. Compared, however, with a much longer period, a decline is shown in the average fatalities.

According to the official returns in regard to exports of petroleum from Roumania, the quantity sent out of the country in the first six months of the present year amounted to 151,316 tons, which is nearly double that of the corresponding period of 1905, when 85,835 tons were exported. France was much the largest buyer of the oil, Great Britain making a rather poor second, with Germany third and Italy fourth. Compared, however, with the first half of the previous year, there was a considerable decline in the exports to France—from 65½ per cent. of the total to 33 per cent. —whereas those to Great Britain increased from 7½ per cent. to 20 per cent. It appears that an agreement has been arrived at between the German interests (Disconto Gesellschaft and S. Bleichröder) on the one hand and an Italian group on the other in regard to the Telega Oil Company, Limited. This is to become a Roumanian company, with a reduction in the capital, and money is to be spent fairly liberally on boring operations. This may not be very welcome news to Russian companies, which would rather see a curtailment of competition than an increase.

Statistics of Japanese exports during the past six months show a considerable and most welcome expansion in this department of the country's trade, and also gratifying evidence that Japan is recovering from the effects of the war. In the return just published by the Consulate-General the total shipments for the June half-year were £17,646,000, an advance of no less than £3,388,000 compared with the corresponding period of 1905, when, of course, the war was still in progress. Manufactured goods contributed £1,361,000 to this advance, the balance being in raw or semi-manufactured material. An interesting item amongst the return is an increase of £414,000 in copper—mainly attributable to the great rise in the price of the metal—whilst silk went up by £568,000. Simultaneously with this growth in the export trade imports declined £6,343,000, and the balance of trade against the country has been reduced from £14,370,000 to £4,637,000. The nett import of bullion had a value of £1,618,000 in comparison with £2,907,000. This improvement has been accompanied by considerable activity in the shipping trade, thus testifying to the general nature of the recovery.

The Midland Railway intends to make an electrification experiment. Up to the present the directors have been content with watching and waiting, but they think the time for action has come, and have therefore decided to electrify part of the line from Lancaster to Heysham and Morecambe. It was only experimental, said Sir Ernest Paget at the half-yearly meeting of Friday of last week, and even if the new line should have to be "scrapped" it would not prove a heavy burden on the shareholders. But judging from the success of the North Eastern and Lancashire and Yorkshire electrifications it is at least improbable that this "scrapping" business will become necessary.

Company registration was fairly active during 1905, the total number put on the records at Somerset House, and the equivalent in Edinburgh and Dublin, being 4,358 compared with 3,831 in 1904, and 4,075 in 1903, an indication perhaps that the depression in the company promoting business is passing away. Last year's achievement represented a paid-up capital of over 119 millions sterling, the existing paid-up capital of re-registered companies being £21,238,000, while the amount considered as paid on vendors' and other shares was £17,640,000. London, of course, easily took the lead, the number registered being 3,883 compared with 285 in Edinburgh, and 97 in Dublin. On April 30 of the present year the companies on the register aggregated 40,995, possessing the enormous capital of more than 2,000 millions.

Resignations from a board of directors when an important amalgamation scheme is on foot always create a bad impression, and for this reason it is good to learn, on the authority of the chairman, Mr. C. J. Stewart, that the departure of Mr. Eley Cuthbert Quilter from the Allsopp directorate has nothing to do with the big fusion scheme now under weigh. This meets with Mr. Quilter's entire approval, and the only reason for his withdrawal from the board is the pressure of private business. That might have been stated when the resignation was announced.

"Ye Mecca," Limited, is a company which supplies cups of tea and coffee, light refreshments, cigarettes, &c., and for quite a long time did very well indeed, but it lately has fallen on rather evil days. The result was the appointment of a committee of investigation to have a look into things, and their report, together with the directorial observations on the same, has just been issued. A drop in profits from £10,702 to £5,749 must have some other cause than bad trade, and the committee puts the shrinkage down to incompetent management, holding the board responsible for it. The directors should have known, they say, that matters were not being properly looked after, because everybody else connected with the concern was aware of the weakness in the management. It is also complained that the company allowed to leave a very capable lady superintendent, who was largely responsible for the previous prosperity. Then the fact that some of the directors are interested in the supply of goods, &c., to the company is commented on, and the committee clearly thinks that the auditor should not be a director's partner, as he is in this case. Non-remunerative depôts should be got rid of, and a little fresh blood on the board would probably do no harm. The directors' reply, accompanied by a

letter from the secretary, in which the committee's report is described as of "very little value," consists of a general repudiation of all shortcomings, and attributes the entire falling off in profits to the smaller spending power of the public. At the same time, we fancy we detect a desire on the part of the board to meet the committee's suggestions in a reasonable spirit, which is satisfactory, because the company has undoubtedly done badly, and no good can result from taking up an antagonistic attitude.

The directors of the London and Hanseatic Bank, a well-managed Anglo-German institution which does a useful business in a quiet way, have decided to increase the capital by the issue of 10,000 new shares of £20 each, £10 to be paid up. The capital will then consist of £1,000,000 subscribed, with 50 per cent. called. Present proprietors will be offered the new shares at £12 each, and as the existing price is £13 a small bonus will accrue.

Eleven English railway companies paid £1,853,700 in rates and taxes in the half-year ended June 30, and if the sum seems big it must be remembered that the businesses are large also. Compared with the corresponding period of 1905 the increase was £35,100, or under 2 per cent., not an important amount when new lines, and, therefore, additional premises are taken into account.

A Buenos Ayres correspondent of the *Financial Times* sends a cable to the effect that the Government has despatched a report to Congress approving the proposed amalgamation of the East Argentine and Argentine North-Eastern Railways. Some while ago, when the East Argentine Company contemplated an amalgamation with the Entre Rios Company, the Argentine North-Eastern Company acquired sufficient East Argentine stock to prevent the fusion, which would probably have proved inimical to its interests. Being virtually in control, the North-Eastern Company later proceeded to bring about a working agreement between the two lines with the idea of paving the way for a complete joining up. Before this could be done the consent of the Argentine authorities, which has now been given, had to be obtained, so that presently we may get the terms. While on this subject, it may be remarked that the crop prospects give promise of plenty of employment for the railway companies. There have been hints of drought and locusts, but it is now said that the general conditions continue excellent, and the next crops are expected to yield as follows:—Wheat, 4,800,000 tons; linseed, 770,000; maize, 6,600,000; alfalfa, 18,000,000; sugar cane, 2,275,000; and grapes 530,000. The total estimated value is 96 million pounds sterling.

When the United Railways of the Havana and Regla Warehouses Company arranged for the acquisition of the Cardenas and Jucaro Railway at the end of last year it was understood that the deal would include a plan for giving a nice bonus to the stockholders. This will soon be forthcoming. The company's Bill in Parliament has received the Royal assent, and after it comes into operation on November 1 every stockholder registered on that date will be entitled to new stock to the extent of 50 per cent. of the amount held. It is perhaps not going too far to say that the avowed intention of giving this bonus, which involves an increase in capital of £1,270,000, is to restrict the dividends so that the authorities shall not think the undertaking too flourishing and throw additional burdens upon it. This business having been satisfactorily completed, the directors now have another proposition to lay before the shareholders. Provisional contracts have been signed for the acquisition of the Matanzas Railway, and the fusion of that undertaking with the United Company by the purchase of the whole of its capital in exchange for shares and debentures of this company. The transaction will involve the issue of £950,000 nominal in ordinary shares, convertible into stock, and £650,000 of 5 per cent. irredeemable debenture stock (1906). Of this £912,750 ordinary stock and £608,500 debenture stock will go to the Matanzas shareholders, and the balance will be applicable to the general requirements of the company, including the payment of expenses connected with the operation. It is to be hoped the company's interests will not be adversely affected by the revolutionary movement in Cuba.

Critical Index To New Investments.

Lincoln Corporation 3 per Cent. Redeemable Stock.

A further issue of £90,000 of this stock was offered through the Union of London and Smiths Bank, nominally at the price of 84 per cent., but as a full six months' interest will be paid on January 1, while the second and final instalment of £79 is not due until September 5 next, the actual cost is appreciably less. The stock, which ranks equally with existing issues and is redeemable at par on or after July 1, 1919, on one year's notice, is issued to provide for extensions of the water and electric light undertakings, the construction of the new electric tramways, the building of a new grammar school, and an extension of the city hospital. At present the nett debt of the Corporation is £513,847, against which investments and productive properties represent a capital value of over £625,000, while, in addition, £300,000 has been spent on general municipal and sanitary works.

Letters to the Editors.

Sirs,—My attention has only just been drawn to a report—evidently derived from certain American newspapers—of the annual meeting of the Westinghouse Electric and Manufacturing Company, Pittsburg, Pa., which appeared in your journal under date August 11.

The following cablegram from the stockholder, Mr. John R. Gregg, to whose remarks you gave publicity, sufficiently explains his attitude in the matter. It is dated August 7, four days before your report appeared:—

I know you must have been insulted by the remarks attributed by the newspaper reports to stockholders of the Westinghouse Electric and Manufacturing Company at the annual meeting. I simply made inquiry as to the acquisition of the securities of the Lackawanna and Wyoming Valley Rapid Transit Company, and I had forgotten that it had been explained by your circular to the stockholders issued August 2, 1904. I have since had my recollection refreshed, and am perfectly satisfied, and regret the unnecessary publicity given to the matter and the garbled and sensational reports issued by the Press.—John R. Gregg.

I am, Sirs, yours faithfully,

B. W. Westinghouse.

On Banking Reserves.

To the Editor's of The Investors' Review.

Dear Sirs,—For several years past the question has been unceasingly asked by leading financial, banking, and economic experts:—Ought our banking reserves to be increased? It is not to be denied that this is a question of supreme importance, indeed of vital importance, for it is upon our reserves, the law being what it is, that ultimate stability depends. It is, however, so profound and complicated a problem that it is not surprising to find absence of unanimity. In fact, unanimity is impossible, for it is impossible to calculate the forces of human impulses and fears at any given moment. Past experience may help us a little to calculate them, but the causes that have operated in the past may be quite dissimilar from causes that may operate in the future, both in their quality and strength.

From one point of view it is most reasonable to say that our gold reserves ought to be larger than they were ten, twenty, or thirty years ago, because the banking credit, or money, created is considerably greater. As this quantity is increasing daily the gold reserves ought to increase proportionately, otherwise the position must become weaker. That is to say, in a panic the demand for gold might be far greater now than it would have been years ago, and unless the greater quantity of gold were there to satisfy it the disastrous effects might be more widespread.

But it is impossible to calculate what the precise demands will be, therefore it is impossible to estimate how much gold should be kept in hand to meet them. When we make a deposit at a bank we are presumed to make a deposit of gold, when we often make nothing of the kind. And the very next day we may be unable to get it in gold, should a panic break out in the interval. For the panic would destroy the wealth we imagine we possess.

If instead of receiving cheques everyone asked for gold, that all might hoard it instead of depositing it at the banks, the gold resources of the country would soon be exhausted and the country would find itself face to face with a state of things exceedingly grave. Hence the great convenience of banking and of the creation of bank money as distinct from legal tender money, which must necessarily be inadequate and inelastic.

That is to say, it must be inadequate and inelastic as long as the law remains as it is, but laws can always be repealed and re-

formed. The limitations and inconveniences of the law can be removed by wisdom and forethought.

The law states that debts must legally be paid in legal tender, or tokens, but if creditors choose to accept satisfaction in any other tender they are at liberty to do so. Having laid down this provision the law takes upon itself to enact what legal tender shall consist of, and says it must be gold, or its equivalent, Bank of England notes. Logically the law ought not to stop here—it ought to provide a sufficiency of legal tender or tokens. Legal tender is little used nowadays. The quantity employed to discharge monetary obligations is becoming less daily, and is likely to become less in the future. Looked at from this standpoint, therefore, it should not be necessary to keep such large reserves as when banking was less developed than it is now.

It it with this banking money that debts are paid, and it meets every daily need and requirement. As this money represents wealth in currency form it follows that the monetary obligations between debtor and creditor are met by the interchange of wealth, and this is as it should be. We cannot conceive of anything better. An individual produces wealth of some kind, even though it be the writing of a newspaper article, and he receives a cheque for it. With this cheque he can repay a debt, but if in a panic he could get no gold for it and could not legally discharge his debt, think of the unjust consequences. He has produced his wealth, and it remains, but something has been destroyed; what is it? His wealth has not been destroyed in the shape of what he has actually produced and which has value, but something has happened to make him poorer. Not having provided sufficient legal tender for him the law says he must suffer the consequence of this and run the risk of being ruined. The law compels every wealth producer to face these risks, and actually helps to create them. To be logical, it ought to regulate the actual amount of money created by banks, but here it allows absolute freedom.

Bank currency is the best currency we know, because it is created by wealth production, whilst the other is altogether imperfect, dependent upon capricious supplies, and wholly independent of real wealth production. In many respects gold may be convenient, but it has its serious inconveniences, and these the law should lessen, not increase.

A legal tender paper currency has many advantages over a metal currency and certainly comes nearer to an ideal currency. If one nation could be absolutely independent of other nations, could exist within itself and rely upon its own resources, and have no relationship with neighbours, a paper currency would be best. But as the civilised nations of the earth are dependent on each other there must, of necessity, be an international currency. This has in modern eras been composed of metal, some nations choosing silver, others gold, whilst some have had a double currency consisting of gold and silver, called bimetallism. But in settling international debts these metals are regarded as commodities, and as debts can be settled by the exchange of commodities, other commodities would do equally as well as gold or silver. If there were no gold and silver, debts would have to be settled in some other way, therefore the absence of gold and silver would be an inconvenience the intelligence of the world could overcome. This might, of course, complicate the supreme question of price, which is expressed in terms of gold or silver, but this could be overcome also, as equally recondite problems have been solved. There is an international currency in the shape of bills of exchange and securities, but the values of these are not fixed in terms of themselves, but in terms of specie.

Economists declare that a paper currency would tend to drive gold out of a country, and so it would if the law did not enact measures to prevent it, and if nothing were done to attract gold from one counry to another. The law, for instance, can impose certain fines, or penalties, upon the export of gold, as is done on the Continent. In my opinion, the most detrimental effect of a paper currency would be its effect upon prices, but such an effect would have to be neutralised by its judicious creation and circulation. An excessive issue would tend to raise prices generally, and the nation would not in the least benefit from this, for individually we should be as rich or poor as we were before, whilst in many cases grave injustice would result. The worst consequence probably of a general rise of prices in this country only would be its effect upon our international trade, for it would tend to diminish it. It would increase our imports and diminish our exports, for we could not then expect to undersell those competitors who had the advantage of low prices. Human nature being what it is, underselling is the most potent law in the markets of the world, and if we could not contend with our rivals there would necessarily be a great decline in our international commerce.

Despite, therefore, the greater abundance of money and the general rise in prices the nation that adopted such a policy would tend to become poorer, showing that wealth does not ultimately consist in money, but in the wealth exchanged. A similar state of things would result from a plethora of gold in any one country. An abundance of this currency would raise prices in exactly the same way, and ultimately result in greater poverty. Individually, we should be no better off, there would still be the wide gulf between rich and poor, and the gulf would be gradually widened because other nations, where lower prices prevailed, would buy less of our resources.

It would seem to follow from this that the lower prices are the wealthier a nation must be in relation to prices existing elsewhere. It is only where prices rise and fall locally that they affect individuals; where they are general, as the effect of the quantity of money in circulation, individuals are neither better nor worse off. But prices, like water, have a tendency to find their own level, whether that level be a high or a low one. It is a disadvantage for it to be a high one, an advantage for it to be a low one, just as it is an advantage to all for nature to give her fruits abundantly. The salvation of individuals, as of nations, lies in satiety, not in want, a truth that has yet to be recognised.

If high prices ultimately produced poverty, that would not bring satiety, but want.

This is a truth not recognised by bimetallists and others who are lured by the vision that high prices connote wealth. But this is a general delusion. A price is merely a numerical relation between commodities, and we are just as well off if we say it is as 2 to 4 as 50 to 100. It is a mental conception and expression. But the higher numeral makes all the difference in international markets. If, however, in international markets prices rose in the same ratio or to the same level as in one nation; that is, if the high level extended all over the world, the situation would not be altered, one country could still undersell another. Only the numerals would be altered and raised. But bimetallists and similar thinkers imagine that a greater metal currency would advance prices in isolated spots and make individuals richer. They neither conceive that this would make others poorer, nor that a more abundant currency would make such local effects impossible.

What has this question of price to do with bank reserves? It has much to do with it, for prices are largely dependent upon money, and money is largely dependent upon reserves, therefore the welfare of the nation, in more respects than one, is directly affected by the gold reserves of our great banks.

Looked at from the two points of view of prudential provision and of prices our gold reserves ought to be high. But when we speak of high gold reserves we talk in quite an indefinite way. The word "high" is a relative term. What do we mean by it in this connection? What is the exact height of the reserve to be? Is it to be a certain quantity, having relation to nothing in particular, but simply quantity *per se*? Or if it is to have relation to something, what is this something? Is it to be solely the aggregate liabilities of the banks of the kingdom, together with the Government's vast liabilities, or is it to be the regulation of our money, prices, trade, and commerce? It is absurd to say we must have high reserves without relation to something else. For unless we have such a relation more gold would only encourage banks to increase their liabilities, and we should speedily be in the same position we were in before. We cannot speak of high or low gold reserves without reference to ratio and the ratio all have in their minds is the ratio to bank liabilities. But what is the ratio each bank should work on? What is a safe ratio? No one knows. We can but guess at it in a haphazard way.

In America the law insists upon a certain rigid reserve, but we know that this is utterly impotent to avert crises and panics, or to prevent banks from getting into serious messes, as was demonstrated in the spring of the present year, when vast quantities of gold had suddenly to be imported from London.

There is one grave difficulty in insisting upon a legal ratio. A reserve is a provision against serious emergencies, such as crises or panic. But how can a legal reserve meet a panic if the law says it must not be touched? If such a reserve is to be efficacious at the needful moment the law must allow the banks to use it. Then will arise the difficulty of defining what is a needful moment, so that all kinds of evasions would be possible.

I cannot see how the law could surmount this difficulty without creating endless trouble and confusion. It could insist upon the Bank of England always keeping higher reserves, but it would be necessary to give the Bank greater facilities for getting gold and for preventing its exportation at inconvenient times. Or it could allow the Bank judiciously to create more paper money with which to supplement the reserve in critical times. This might remove many difficulties and enable the whole machinery to work more smoothly and efficiently.

So we should have to fall upon the force of public opinion, which, despite its limitations, is a powerful restraint. The banks themselves seem fully aware of this when they strive at the end of each half-year to show as large balances as possible at the Bank of England. But this momentary strength is merely an illusion, and no one is deceived thereby, hence the silliness of it. We ought to know exactly how the banks are working week by week.

Nor would this be disseminating new knowledge, it would merely be reverting to an old and wise custom, which is far more necessary now than it was years ago. The balances which the banks kept with the Bank of England were published weekly from the passing of the Bank Act in 1844 up to 1877. It would be a futile task to ask the banks themselves to insist upon the republication of these balances, or "reserves," as they are called, but the law could easily insist upon it.

I do not say that such a reform is absolutely needed, or would keep us immune from crises and panics, but it might help largely to allay ill-timed alarm. We know that our joint-stock banks are managed with exemplary caution and honesty, but the dishonesty of other banks may bring them down, unless they could give the public some striking evidence of their individual stability. So even from their own point of view it would be prudent policy. That they are averse to it creates the reasonable enough suspicion that they fear to reveal the real weakness of their positions. This tends to weaken confidence; the other policy would tend to strengthen it.

The one great obstacle to such reform, however, if it be left to voluntary choice, is the jealousy existing between the various banks and their unwise rivalry. This ought to be checked in the interests of depositors, the country and the banks

themselves. There is, as I have already described, an insane greed amongst banks to earn high dividends for their shareholders, and this cupidity is pernicious. A mere handful of men are to gain at the expense of the community, for theirs is that kind of gain that involves loss by others. It is not a gain that is representative in itself of new wealth, it usurps in a way some of the new wealth created independently of the banks. The rights of shareholders ought not to dull their minds to the moral and legal rights of the depositors. Cupidity, without morality, should not be their sole guiding principle. Yet some shareholders are never tired of crying indignantly: "Let the depositors look after themselves; why should we consider them?" What a state of moral chaos we should drift into if every debtor cried thus unto his creditor! And the foolishness of it is as obvious as the non-morality of it.

Anyway, public opinion has the power and the right to safeguard itself to some extent through the law. If banks accept our money and trade with it on the plea that they do it honestly we have a right to insist on honesty, but there is a grave danger of dishonesty where there is keen rivalry and where cupidity is so strong. The law could insist upon a greater restraint than non-legal public opinion, and the banks would not suffer thereby. It would be far from perfect, but it would probably get as near to perfection as possible.

In order to strengthen public confidence in them and induce people to do business with them the banks could still adopt the policy of keeping large balances at the Bank of England. Indeed, we should then probably witness the strange spectacle of bank rivalry in maintaining high reserves. But this could only be if the balances of each bank were published separately, and I fear such reform is not probable. However, to publish the aggregate balances would be better than nothing.

If banks kept larger reserves—and this is a seriously important point—it might sometimes tend to the restriction of bank credit or money, and this would make money dear. It would be a great drawback, but not so serious, maybe, as some might imagine. It would tend to lower prices, which should encourage exports. At the same time it would bring gold and credit from abroad, and this would make up for the limitation of the home supply.

To the objection that dear money would handicap home industries by curtailing capital facilities it might be urged that in times of need and of gold scarcity greater power should be given by the law to the Bank of England to create more legal tender money, in order to lend it on good security. A method similar to that in vogue in Germany could either be adopted here, or some modification of it, in order to prevent abuse of such a power. Currency should be, and could be, so regulated in this way as to prevent any great and violent rise in prices, yet at the same time satisfy demands. For it is not the mere satisfaction of needs that creates a superabundance, but the supply furnished in disregard of needs.

Yours faithfully,
W. W. WALL.

Answers to Correspondents.

PUZZLED.—The second broker's calculation is the correct one. As to commission, a broker is entitled to charge as if the stock were fully paid.

H. Y.—This institution does not seem to be a progressive one, but, as far as we can tell, it is doing a steady kind of business. The second company has, of course, very powerful interests behind it, and is likely to get the lion's share of any loan-raising business. Its securities, however, are not officially quoted, and much depends on the price you have to pay as to whether or not the exchange would be worth making.

C. B. U.—(1) Although the company appears to be doing a very large business, we fear it is pushing ahead too fast, and a good deal more capital will have to be raised before its finances can be considered really sound. The dividends seem to have been paid rather at the expense of the future, as depreciation allowances are inadequate. There is, of course, a chance that the developments you mention may help the company, but its shares are at best decidedly speculative. (2) This company has a good trade and is in a fair position, but we should not like to say that there is much prospect of an advance in the price of its shares.

OLIVE.—Shares offered in that way are always open to suspicion, and the particular company in question is far from being an important undertaking. Better leave the shares alone.

SUBSCRIBER.—We believe the company is now doing better, so that the stock should be a fair enough investment.

J. H. A.—As no accounts are published we cannot say with any certainty what the position of the company is. The drop in price, however, may be due to fears lest the high value of wool in the earlier part of the year may have cut deeply into profits.

NAMELOC.—(1) Not as a fixed permanent investment, but regarded speculatively, we fancy they offer a chance. A good profit should always be taken on a stock like this. (2) If you can sell without loss and are prepared to face possible fluctuations in the other stock the exchange might be worth making. (3) An excellent security, but rather high priced now. Some time ago, when the stock had a very severe fall, and stood 30 or 40 points below present figures, we indicated that the fall had been absurdly overdone, and there has been a steady improvement ever since. Worth picking up on any sharp reaction. (4) This is quite a good security, and the dividend should be pretty safe, the only thing against the company being that it does not publish accounts. (5) Apart from the fact that there is continual talk of convertion involving a reduction in interest, this stock is perfectly safe to buy.

H. A. K.—We know nothing whatever about this company, nor can we find any particulars regarding it in the standard reference books. Have you any document or circular respecting it? Your fee is held to your credit.

G. W.—Yes, the company is honestly enough managed, and the steady drop appears now to have come to an end. You may purchase a small number for a long holding, for, as far as present indications show, dividends seem assured for a long time to come.

L. T. B.—We will answer your questions next week.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and August 18, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Aug. 18, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Aug. 19, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369
		10,451,487	7,430,278
REVENUE.			
Customs	32,230,000	12,843,000	12,811,000
Excise	30 200 000	10.715,000	10,950,000
Estate, &c., Duties	13,200,000	6,674,000	5,358,000
Stamps	8,150,000	2,885,000	2,954,000
Land Tax and House Duty	2,650,000	340,000	400,000

The Investors' Review.

The Week's Money Market.

BANK RATE 3½ PER CENT. (Reduced from 4 per cent on June 21.)

Norfolk House, Friday Evening.

A good deal of apprehension regarding the course of the Money market has made itself apparent all week, and credit dealers have not shown any great willingness to lock up their resources for lengthy periods. For one thing, the time is approaching when we ought, in the ordinary course of events, to expect demands for gold from the United States, Egypt, and South America, and that in itself would be sufficient excuse for caution, but there is at present an even greater incentive to walk warily. It is now pretty generally accepted that the purchaser of the last two consignments of gold in the open market was Russia, although nothing has been allowed to transpire, and it is said that the metal is still lying in London. That country is very much in need of gold at present, and as it has the proceeds of the recent loan at its disposal, the drain may become serious. But that is not the only point from which danger is to be expected, as Wall Street has of late succeeded in forcing the pace to an extent which foreshadows an urgent demand for the metal. Bankers in Wall Street have been preparing the way by creating large credits in London, the supply of American paper here this week having been exceptionally heavy. New York exchange has gone steadily down day by day, and although it is not yet low enough to render a purchase of the metal profitable, it is not far off that point. Already inquiries have been noticed in the bullion market, indicating an intention to compete for the £800,000 or £900,000 coming into the market next Monday. Even if they do not compete, there is no likelihood of the Bank being able to secure any of the amount. On the other hand, a somewhat unusual remittance of about £500,000 is on its way here from Argentina, and will certainly go into the Bank, but the movement cannot be taken to indicate that the autumn requirements from that country will be smaller than usual, as recent advices show that the crops are likely to be enormous, despite rumours of drought and locusts.

Largely, no doubt, owing to this uncertainty regarding the outlook dealers in credit have preferred to keep their resources in a more or less floating condition, and money for the day or week has never been really hard to come by at any time. The instalment of about £1,000,000 on Irish Land stock on Tuesday, and dividend disbursements by several railway and other companies on Wednesday naturally caused loan rates to harden, but the available supplies were sufficient to meet all requirements without help from the Bank. Now and again the charge for day-to-day money rose to 3 per cent., but the bulk of the business was arranged at 2½ per cent., and during the early part of the week bankers were not able to obtain more than 2¼ per cent. for weekly fixtures. By Thursday, however, the general charge had risen to 2½ per cent., and occasionally 2¾ per cent., but to-day lenders could only get the latter figure for eight-day money. Overnight loans, too, were decidedly easier this afternoon. Various reasons were given for the changed appearance of the market. A large amount of credit was said to have come in by the American mail to pay for stocks bought during the current account, while the Japanese were lending fresh money into October at 3 per cent., and from these and other causes balances became, if anything, over-abundant, and difficult to place even at 2 per cent.

It was in discounts more than in the money market that the possibility of gold withdrawals made its influence felt. Brokers reported that the supply of paper coming forward was plentiful, and with this to help them they proceeded to push up their rates with great rapidity. A week ago the quotation for full three months' remitted bills was no better than 3⅛ per cent., but each day saw it raised until 3⅜ per cent. became the minimum, and business was said to have been done at 3 7/16 per cent. So persistent was the upward movement that the market began to talk of a probable advance in the Bank rate before very long, and for a time it looked as if dealers were bent on forcing the Bank to take that step. The Bank return, however, did a good deal towards bringing about greater confidence, and its effect was immediately noticeable in the weakening of rates. Where in the morning the quotation had been called firm at 3⅜ per cent., in the afternoon it was given as weak with a suspicion of 3 5/16 per cent. in it, and to-day there was even less of the higher figure mentioned. The large houses still quoted it, but sellers held out for 3 5/16 per cent., and experienced less difficulty in finding buyers than they did yesterday. Six months' bills are not a maturity much in favour just now, as they involve a locking up of credit for a longer period than is considered desirable or prudent, and for these the quotation has remained pretty steady at 3⅜ per cent., even the Indian banks being unable to place their bills at less than 3 9/16 per cent. Yet the £1,000,000 Treasury bills sold by tender last Monday

were placed at an average of £2 15s. 5d. per cent., a divergency wider than dealers have ever known before. It was therefore assumed that, as usual of late, the Japanese had bought the entire amount, although it was also said that certain speculators had underbid them in the expectation of being able to re-sell the bills at a profit. These bills must be paid for to-morrow, but £2,000,000 will mature at the same time, and dealers are hoping that even if the Japanese hold the bulk of these, part at least of the money let out will find its way into the market.

The Bank return was again considered very satisfactory by many people, and in a sense it was so. Coin has returned very freely from the country, and with £96,000 in from abroad the stock of bullion is £764,000 higher. At the same time there was a reduction of £272,000 in the active note circulation, so that the reserve shows a further increase of £1,036,000 at £26,918,135, which is about £750,000 higher than at the corresponding date a year ago. But the market has not derived any appreciable benefit from this strengthening of the reserve, as other deposits are a mere trifle of £131,000 up. Owing to the instalment paid on the new Irish Land stock, the bulk of the increased resources of the Bank has passed to the credit of the public deposits, and that account has also benefited by a rise of £768,000 in other securities, with the result that the Treasury balances are £1,630,500 larger. The increase in other securities was not due to market borrowing, as no applications were made to the Bank for assistance during the week, and the small sum due there on Wednesday was paid off. It was therefore generally assumed that it represented some municipal transaction, but in some quarters the movement was put down to operations by the Government itself.

Silver.

The silver market has exhibited a persistently strong tendency, though at no time has the buying been on a very vigorous scale. A fair quantity of the metal has been purchased on behalf of the Indian bazaars and a moderate amount by the India Government, but probably the strength was more the effect of the small sales from the United States, owing to the Governmental action there. The Paris Mint again invited tenders for 20,000 kilos for delivery about the middle of next month, and this has likewise had a stiffening influence upon prices. Quotations have fluctuated between 30 13/16d. and 30 15/16d. per oz. for cash and 30½d. and 30 13/16d. for forward delivery, the top prices being reached to-day, spot metal being rather scarce. Tenders for the Rs. 80,00,000 Council drafts on India on Wednesday amounted to Rs. 5,24,00,000 in bills and Rs. 1,90,00,000 in telegraphic transfers. Of these Rs. 61,12,000 were accepted in bills and Rs. 18,88,000 in transfers, applications at 1s. 4 1-32d. and 1s. 4 1/16d. receiving about 9 per cent. Next week the amount to be offered is Rs. 90,00,000.

Stock Market Notes and Comments

That Yankee geyser to which reference was made i these notes a fortnight ago, suddenly burst forth wit dazzling effects at the end of last week, and as ou market was closed on Saturday, Wall Street had th play all to itself till Monday morning. By that tim Unions had risen about 20 points, and the rest of th list recorded huge advances. The overturn in Wa Street was enormous, the sales for the six days ende Thursday reaching a total of close on 11¼ millio shares. The excitement is still at fever heat, althoug it has been cooling off a little the last day or two, an our market does not seem to have been drawn into th vortex to any serious extent. The advance was s rapid that even those who thought they had early in formation of the movement found prices several dollar up before they could operate, and a few minutes hesitation meant that the opportunity of getting in wa lost. People on the spot, therefore, were not muc better off than outsiders, and few of them had th

courage to buy after the first wild upward rush. Comparatively few shares, therefore, changed hands here, and quotations were merely marked up to keep pace with advices from New York. But, all the same, it has been the most exciting week the market has experienced since the Northern Pacific corner in 1901.

The origin of the boom is characteristic of Yankee methods, and is worth referring to as an illustration of the utter impossibility of attempting to gauge either intrinsic values or market prospects. It would be just as profitable to guess a throw of dice. Reports from Wall Street seem to show that the decision to put Unions on a 10 per cent. basis (as against 6 per cent.) and to give Southerns a first dividend at the rate of 5 per cent. was reached on Wednesday night of last week. The announcements were expected on Thursday, but the directors met and separated without making any statement, thereby creating the impression that action on the matter had been postponed. The news was actually kept back till Friday morning, and in the meantime it is alleged that Harriman netted an enormous sum by his stock operations—some estimates put it as high as $25,000,000. It is certain that Wall Street was bitterly disappointed when it found that the dividends would not be declared on Thursday, and stocks were freely offered in consequence, thus affording insiders the opportunity for the additional plunder which they desired, and took full advantage of. We suppose in some quarters the whole episode may be regarded merely as a fine example of Yankee cuteness, but we should feel inclined to apply a very different description. It is amazing, however, and rather saddening, that there are still so many people ready to offer themselves as eager victims of such unmitigated thievery, which can only be successfully combated by steadfastly declining to touch the wares of these swell mobsmen. But the greed of gain is widespread and strong, and the crop of pigeons to be plucked never seems to fail.

What of the future of a market where rascality of this sort goes unpunished? The end cannot be in any doubt, but it may be a long way off unless money troubles precipitate a crisis. In the meantime, we should not be at all surprised to see further sensational advances in several directions. The Atchison dividend will give scope for play of the Harriman type, and there is talk of Steel Common being put on a 4 per cent. basis. Then there are several "melons" to be cut—or perhaps left uncut if that should suit the policy of the bosses better when the time comes. The once respectable Chicago Milwaukee announced a few days ago the issue of $25,000,000 stock at par, while the market value was nearly double that figure. The result is that the company is robbed of between four and five millions sterling, most of which doubtless goes into the pockets of the directors and their pals. The Great Northern ore lands deal, when it is ripe, may be used to put up the price of the preferred stock to any figure you fancy—enthusiastic Stock Exchange prophets "talk" it up to $500. The Wabash is enjoying a grand reconstruction scheme, in which the use of the air pump will not be neglected, and several other roads are projecting huge capital issues. It is all very wonderful, but there is one point which should not be forgotten. Where we have thousands of gambling counters Wall Street has only scores, and this helps to account partly for its success in postponing a crisis long after it seemed overdue. The inevitable smash may possibly be put off for some time yet, but it will come in due season, and such firework displays as we have witnessed this week must tend to hasten it.

Nothing much need be said with regard to other sections of the market. General business has been poor enough, and gilt-edged stocks have shown a drooping tendency owing to dearer money. The Kaffir boomlet is gradually fizzling out. The market has had a tired appearance all the week, and it is evident the public are not coming in sufficiently to keep the game going. So the bears are plucking up courage again, and it is hinted that one of the big houses is giving them every possible assistance. It may be that the reaction is simply in preparation for next week's settlement, and that the upward movement will be resumed once the carry-over is arranged. The chances are against it, however, and we can only hope that holders who have been nursing losses so long were wise enough to take advantage of the rise while it lasted. They may never have a better opportunity.

The Week's Stock Markets.

The Stock Exchange has passed through a curiously uneven week. The "House" adjourned for the holiday on Friday evening, leaving the American and Kaffir markets with a "boom" going strong, and on resuming business on Monday, thanks to the stimulus administered by a "record" Saturday's trading in Wall Street, which left prices at about the top, there were plentiful signs of an exciting time to follow. Members turned up in force after the brief holiday to find a new factor paramount in the stock markets—namely, the news of the earthquake on the Southern Pacific Coast. This was such an unpleasant shock that there was a disposition to belittle the news at first sight, but as the week went on the cables from Valparaiso gave still more unfavourable intelligence, and a feeling of uneasiness soon began to pervade markets. True, the advance in United States railroad shares went on for a few brief hours longer, and no reaction worth mentioning followed, but Consols went lower and business dried up, so that the early promises of a boom were all too soon falsified. Although some fairly large blocks of stock came on the market, Consols may be said to have stood the test fairly well. The steady hardening in discount rates following the exports of gold and the prospects of dearer money all tended to damp the spirits of dealers, while the contention that the loss of capital in Chili will eventually react on the London money market, and so adversely affect investment securities, was also not without weight. Notable weakness was again shown by Bank of England stock, and dealers are at a loss to know why the price goes on shrinking month after month. The new Irish scrip has again fallen to a small discount, and other British Funds were neglected, but any attempt to sell Home Corporation and County stocks led to a marking down of prices.

In view of the news from Valparaiso interest in the Foreign market naturally centred in Chilian bonds. As a measure of precaution prices were put down several points, but there were few sellers about, and hardly any stock came to market. It is feared, however, that a new loan may have to be arranged to provide funds to repair the damage done by the earthquake, unless there proves to be hidden resources available for the purpose. Russian bonds have been a weak spot, the new loan touching 11 discount, and the Paris bourse showing signs of uneasiness owing to a curious rumour going around to the effect that the transformation of the Russian State Bank into a limited liability company is meditated. Another wildly improbable story also went the rounds, which was that the Russian Government was withdrawing its balances from London. Why, or for what reason, no one stopped to ask. Peruvian Corporation stocks were largely bought on German account, and it was stated that negotiations with the Government had been resumed through fresh channels. The leading details of the Argentine Budget for 1907 foreshadow a considerable reduction in expenses, and present conditions point to a continuance of the steadily increasing prosperity which has been enjoyed during recent years. Argentine bonds failed to respond in any way, and towards the latter part of the week prices gave way in sympathy with other descriptions. Greeks opened weaker and rallied again, the revenue statement being regarded as satisfactory. The news of the rising in Cuba had an adverse effect on Cuban Fives, and Spanish Fours weakened a little owing to reports from Bilbao that there has been some rioting, and a collision between the strikers and the troops which has necessi-

tated the proclamation of martial law. Among Foreign Corporation issues City of Valparaiso fell 6 or 7 points, and then partially recovered, practically no stock changing hands.

The Home Railway market has been the most uninteresting section in the whole "House." Most of the traffic returns were highly satisfactory, but had no effect on prices, which showed a tendency towards crumbling away almost throughout the week. There were a few unimportant exceptions, Mersey rising £1 to £6 on the belated appearance of the report, this document exhibiting a further slight all-round improvement in earnings. The cross-Channel traffic is said to be improving, and Dover "A" was in some request as a consequence, but Brighton stocks relapsed, this company's traffics showing up rather poorly. The North-Western, Great Western, and "Ayrshire" Companies have all had mishaps during the week, fortunately in each case the damage done being comparatively slight. The Midland Company, which has hitherto been content to watch what other lines were doing, is now about to make an experiment in electric traction, the directors having decided to electrify part of the system from Lancaster to Morecambe. Lancashire and Yorkshire stock was sold owing to short time in the cotton trade being considered advisable in view of the slackness just now in the East Lancashire trade. Districts, which were in some speculative demand after the chairman's remarks at last week's meeting, have since had a reaction, some people being dubious as to whether the proposed increase in fares is altogether a wise move. Even after the change is made the revised fares will still be lower than those charged a few years ago, and well within the Parliamentary powers. The Metropolitan Company is expected to await results before deciding to follow the example of the District Company. The unfortunate North London has marked a new low record, business being recorded at 93½.

The Yankee market has presented a striking contrast to last week, when dulness reigned supreme. Although the Stock Exchange was closed on Saturday, a considerable number of the principal dealers assembled in Shorters-court to receive New York opening quotations, and a certain amount of business was transacted. The scene of excitement in Wall Street following on the announcement of the Union Pacific and Southern Pacific dividends has hardly been equalled since the struggle for control of the Northern Pacific five years ago, and Saturday's trading is said to have been a record one for a Saturday in the history of the New York Stock Exchange. Some tolerably severe criticism was levelled against Mr. Harriman for keeping the declarations secret so long. Bear operators were badly hit, and as a result of their frantic efforts to cover prices soared sky-high. Interest was by no means entirely absorbed by Union Pacific and Southern Pacific, there being an increasing disposition to buy other stocks liberally, the theory being that if two leading "Grangers" could increase their dividends others might follow in due course. Atchison Common was selected as the most likely one, and an increase from 4 per cent. to 6 per cent., with a bonus in addition, was talked of, which caused a sharp upward move in the price of the shares, the next warmest favourites being Chesapeake and Pennsylvania. Naturally enough, there was some heavy profit-taking, principally in Unions, when London resumed business operations on Monday, but the price flinched very little, and closed that night somewhere in the neighbourhood of 190 or some $16 better as compared with Friday's quotation in the "Street." The boom showed signs of exhausting itself after a run of three days, and an announcement that there will be no meeting to discuss the Atchison dividend until October was somewhat of a damper. Great Northern preferred had a sensational rise of $22 on Tuesday, after which prices gradually settled down, the great heat experienced in the City tending to restrict business, so that the wind up of the week was remarkably tame.

Canadian Pacific shares followed the upward move in Americans, advancing about $5, and then partially reacting. The estimates of the crop returns for the season are favourable, harvesting being now general throughout the country. Grand Trunk stocks were quiet and uninteresting, the market estimate of this week's takings being £20,000 increase.

The chief feature among Foreign Railways was a heavy fall in United of Havana, which fluctuated between 179 and 168. The primary cause of the weakness was the news that an insurrection had broken out in Cuba, and was assuming disquieting proportions, but another reason for the fall is the fact that the company is about to largely increase its capital for the purpose of extending its system. Cuban Central and Western of Havana issues shared in the depression. Chilian stocks were naturally weaker on the news from Valparaiso, and there was some steady selling when it was found that the official announcements went far to confirm the magnitude of the disaster. Most South American stocks were dull in sympathy, parts of Argentina being within the area of the earthquake. Nitrate shares dropped to 14½, and Arica and Tacna, after being actively dealt in, gave way with the rest, nothing fresh having transpired in regard to the Chilian Bolivia Railway proposition. The leading Argentine companies published good traffics, but the possibility of a locust invasion is said to be causing some uneasiness. On the other hand, the reports as to the general agricultural conditions in the Republic continue excellent, and the prospects at present point to another prosperous year.

In the Miscellaneous market interest centred in the various securities affected directly or indirectly by the disaster in Valparaiso. Nervous holders of shares in nitrate-producing companies were inclined at first to throw away their shares under the impression that the nitrate fields had suffered heavily. They were soon reassured, and the market recovered its equanimity. The plight of the Chili Telephone Company is a different story, and there is very little doubt that it has suffered to a considerable extent, hence the fall in the ordinary. Then as regards the insurance section, very little is known up to the present as to the position of the companies doing business in Chili, but the general impression is they are safeguarded to such an extent that they will suffer no loss. There was a good deal of quiet buying of the shares of the more prominent companies up to the time when the news from Chili was received, since when buyers have disappeared and dealing was a matter of negotiation, jobbers preferring not to make prices; but there was no pressure to sell. Thanks to the great activity in arbitrage business, Anglo-American Telegraph deferred has shown some lively movements, and Hudson's Bay shares, following the lead of Canadian Railways, went to over 90 at one time. The iron and steel section was again one of the busiest, the reports now coming out showing a highly prosperous state of affairs, Guest, Keen, and Bolckow Vaughan having had astonishingly good years. The news from Valparaiso was considered to be a bull point for Associated Cement issues, following so closely upon the heels of the San Francisco disaster, although the quantity of cement likely to be needed for the rebuilding of the latter city will not be so enormous as was imagined at first. However, there is no doubt that the cement industry is now in a more healthy condition than it has been for some years past, and the demand arising in connection with the construction of the Panama Canal is likely to be of great importance to the trade. The shares of the London Motor Omnibus Company slumped badly, owing to the beginning of litigation as a result of the recent accident at Handcross, and the report is now very much overdue. The accounts were to have been made up to April 30, and the delay in the publication of the figures is giving rise to adverse criticism. Santa Fé Land shares attracted attention, as there is some market gossip of the company being likely to get rid of a large portion of its surplus land at a fair price. Good reports from Mincing Lane led

to a demand for tea shares, and textile securities were quietly steady, Bradford Dyers being unaffected by the announcement of the usual 7 per cent. interim dividend, while Calico Printers were bought on the increase in the distribution from 2½ to 4 per cent. Brewery stocks remained dull, Guinness falling 10. It is now said that the resignation of Mr Quilter from the board of Allsopps is owing to pressure of private business, and in no way due to the amalgamation scheme of which he entirely approves. Dutch buying of Pekin Syndicate shares was a feature, but it was short-lived.

Business was quite slack to-day in all sections of the Stock Exchange; in fact it was the quietest day of the week. As the account is now near its end and the settlement commences with the carry-over in mines on Monday, speculators were not encouraged thereby to extend their commitments. The unlooked for plentitude and ease of money had, however, a favourable effect upon Consols, which closed ⅛ better. Home Rails, on the other hand, developed renewed weakness, with biggish losses in some of the "heavy" stocks, the solitary gain being ¼ in Hull and Barnsley. Yankees were quite calm, though they improved after receipt of New York advices, Union Pacifics, Southern Pacifics and Atchisons being the most favoured stocks. Kaffirs and Rhodesians again relapsed in a universal way on a resumption of profit-taking.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Fall: 2½ p.c. Annuities Acct. ¼, to 86-86½, Irish Land Acct. ¼, to 88⅞-89, Transvaal 3 p.c. Acct. ½, to 98½-98¾, Bank of England Stk. 3, to 279-283, India 3½ p.c. Acct. ½, to 104½-104¾, ditto 3 p.c. Acct. ½, to 93¾-94¼, ditto 2½ p.c. Acct. ⅝, to 78-78½.

MINING NEWS AND NOTES.

*** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

At one time it looked as if the Kaffir boom had actually come, for prices went up as though there were no limit to their flight. They shot up like so many rockets fired simultaneously, and though they did not come down with the swiftness of rocket sticks, they have fluttered about tremulously at heights lower than they at one time reached. The advance which has been so cleverly and successfully engineered by the controlling houses and the gamblers has tempted many who have stood aside from the market for years. Brokers have heard from clients who have not bought a Kaffir share for goodness knows when, and it is this broadening out of genuine business that has kept up the spirits of the bosses and the speculators. Hence the unflagging energy of these gentlemen in pushing prices upwards in these hot and enervating August days, their cheeriness, optimism, and almost frenzied enthusiasm, and the delight with which they are prognosticating so hopefully an autumn, if not a summer, boom. "Didn't we tell you the mu—public would come in if we could only keep the game up long enough?" they cry. "They're coming in dozens, and a bit cautiously: but we shall soon see 'em in their scores and hundreds, and then we shall be all right." Welcome as a mad boom would be to gamblers and magnates alike, it does not follow that it would be a good thing for the market or for the public. For booms are necessarily short-lived; there cannot be inflation without collapse, and if the public quickly discover that they have come in right at the top their disillusionment must inevitably bring the reaction, and possibly a prolonged depression. Healthy activity is to be welcomed, but anything in the nature of wild-eyed, irrational, uncalculating frenzy is to be deprecated, and something resembling this mental unhealthiness we have already seen. The public cannot be too frequently advised to keep their heads calm and cool, to be cautious, calculating, and discriminating. "Bear" covering has been proceeding, and there has likewise been a considerable amount of option buying both on English and Continental account, yet prices have not kept up.

Monday was the most exciting day of the week, mainly because brokers found an accumulation of orders awaiting them; in fact, it is no exaggeration to say that it was one of the most exciting days, judged by the rise in prices, witnessed for some years past. The advance was general and practically unbroken, embracing out-of-the-way shares which in ordinary times are scarcely mentioned. It was too much to expect speculators to see substantial profits staring them full in the face and resist taking them; they were as alluring as limpid, pure water to the man with a maddening thirst. So they seized them, lest in a moment they might vanish like shadows, and accordingly the news went round that there was a reaction, a set-back, a recession in prices, and so on and so forth. "But it's a healthy reaction," some cried; "for the market looked like going out of hand and out of bounds." It is possible, you see, to take more than one point of view. And the cause of this wonderful change in the Kaffir Circus? Nothing new and nothing strange, except that the bosses feel they have gone far enough, have played every trump card in their hands. With no other "trumps," the risk of pursuing the game and of pushing matters to an extreme on the chance of favourable turns of good fortune might be too ruinous in the long run, hence the wisdom of of abandoning their designs before more precious time is wasted. Still, from some points of view the outlook has greatly improved. Not only has the Government taken up a determined policy on the Chinese labour question, but there is the welcome fact that the Robinson group has been allowed to recruit labour in the Mozambique territory, and that the Native Labour Association has been compelled to grant the right to recruit individually over South Africa except the Transvaal and the east coast. In other words, as we say elsewhere, this boss-labour monopoly is breaking up, and it will all be for the good of the industry, for undoubtedly it strove in the past to put every

obstacle in the way of getting blacks in order to have a plea for importing coolies. But welcome as this may be, it does not justify rigging and inflation.

Rhodesians have been comparatively quiet; that is to say, quiet not only in comparison with the furore in Kaffirs, but with the sudden outburst of excitement in this section a week or so ago. Though business has fallen away—speculative business—because the rise has not been supported by the public and there are no inexhaustible "boss" resources to rely on, still the insiders manage in a desperate kind of way to keep prices generally steady, and even firm. Tanganyikas continue to be the most prominent share in the group, but even their strength has recently evaporated, and if there is to be a "boom" in Kaffirs it will be well if it does not embrace Rhodesians.

Activity has characterised the diamond group and in particular De Beers deferred, as the result largely of option buying, of sanguine dividend prospects, based upon the improving price for diamonds, and other sanguine forecasts, which may or may not be justified by forthcoming events. At any rate these are the reasons given by the market, but there is undoubtedly a great deal of manipulation going on. Even these have reacted, however. Jaegers also have been good, but the "bears" have once again succeeded in "banging" Premier deferred, which may be symptom of another exciting tussel in these.

As regards such things as West Africans, West Australians and Egyptians, little or no interest, speculative or other, is taken in these groups, which are not sharing in the attention paid to South Africans. There have been very few movements, indeed, in these combined sections during the week and the changes are in the main of a quite trifling and unimportant character.

This cannot be said, however, of the copper group, the leading shares of which have been consistently strong, partly justified by the further rise in the price of the metal. Rio Tintos have, as usual, been in the van, with a steady rise daily, so they are very much higher on balance. Anacondas have been influenced more or less by the wild and erratic movements in Yankee railways, but Cape Coppers, Tharsis and others exhibit much strength.

It is most welcome to see a steady recovery in Indian shares, which goes far to prove that the recent weakness was not due to any serious happenings at the various mines, for there cannot be such a sudden and simultaneous change for the better in the conditions of the mines to justify so sharp an improvement in share values. It supports the rumour of the liquidation of a large deceased account, to which we alluded last week, and it may be that this selling has ended.

Some goods news of mine devolopments in the properties of the El Oro Mining Co. and of the Esperanza, have helped the shares of the Mexican group and in particular these two. Broken Hill shares of all kinds have strengthened on the rise in the prices of silver, lead and zinc and these exhaust the principal movements in the miscellaneous department.

African and European Investment.—Further important news is contained in the report for the week ending July 19, just sent out to the Press. The upper adit on Snyman's drift has advanced to 264 ft., the winze to 104 ft., and the lower drift to 127 ft. A new reef has been struck in the lower adit showing heavy visible gold. On Palmietfontein steady progress is being made in the sinking of the new shaft in the No. 2 pay chute and in the main shaft workings at the 185-ft. level, which is now being connected up by winze with the 285-ft. level. The washings from the Roberts Victor mine continue to give the high average results obtained during July. As regards the Roberts Victor Diamonds, a cable states that a London transfer committee has been appointed. Transfers can, therefore, be accepted at the offices of the London agents, the African and European Investment Company.

Apex Mines.—In their report for the past quarter the directors of the Apex Mines complain that some trouble has been experienced with the class of labour employed on sinking, but of late the efficiency has somewhat improved, which must be a great relief to the directorial mind. Accordingly the hope is cherished that better progress will be made during the quarter now current. In the three months the colliery, from which alone profits are being earned, sold 74,280 tons of coal at a gross profit of £13,552, and it is stated that the underground development continues to expose coal equal in quality to the general average of the mine. The quarry, on the other hand, sold stone to the value of £1,090, resulting in a loss of a few shillings over £58. The quality and thickness of the stone continue satisfactory, it seems, but owing to the depression sufficient orders have not been obtained to cover the working costs.

Camp Bird, Limited.—Shareholders in the Camp Bird Co. have been awaiting the annual report with much expectancy from the natural enough desire to see how profits would be affected by the disaster last March, when the mill was destroyed and other serious damage was done by the snowslide and fire. Not only will the shareholders suffer directly in pocket in having to recoup the monetary value of the machinery, but there is the hindrance caused to mining operations which will tell upon the profits in the immediate future. The effect will probably be more seriously felt in the current twelve months than in the past year, for it will take some time to rebuild the mill. There was, as expected, a big falling off in the revenue and profits, owing to the above-mentioned accident. Sales of bullion realised £321,791 against £395,291 and sales of concentrates £5,000 less at £65,334, the entire income amounting to £390,474 in comparison with £482,625. The gross working profit was £236,003 against £322,099, and the nett profit £175,065, a decrease of £72,187. This is then reduced to £139,694 by allowing £30,000 for the estimated losses due to the snowslide and fire, and after adding the considerable balance of £111,941 brought in the divisible surplus is £251,635. Out of this three interim dividends, of 1s. per share each, have already been paid, absorbing £123,000, the directors' additional remuneration of 1 per cent. takes £1,397 and income-tax a further £11,617, so £115,621 is left, sufficient to pay a good final dividend. Instead, however, of supplementing the interim payments with a further distribution the directors carry forward this balance and no umbrage can be taken at the cautious motives counselling this policy. Thus the dividend aggregated 3s. per share, or 15 per cent., and compares with 5s. 6d. in the previous year, so the accident has already cost the shareholders 2s. 6d. per share. Their only solace is that it was no more to be avoided than the earthquakes in San Francisco and Chili and they must try to bear the loss with philosophical fortitude. Otherwise prospects—that is, the mine prospects—look hopeful. According to the reports of the engineer and general manager, after treating 66,223 tons of dry ore, the reserves at the end of April consisted of 120,477 tons broken in the stopes and 90,443 tons blocked out, making a total of 210,920, which it is estimated will yield a profit of approximately £881,147. Compared, however, with the figures of a year ago these show a biggish decrease and this must modify the satisfaction shareholders might otherwise feel. At April 30, 1905, the total was 231,497 tons, calculated to yield a profit of £993,853, and the inference is that development has not kept pace with the extraction. The consulting engineer of the Camp Bird is Mr. John Hays Hammond and in a lengthy report to him his chief assistant, Mr. Charles Beatty, speaks hopefully of the future. Notwithstanding the falling off in the ore reserves he regards the figures as fairly satisfactory, for the reason that a great deal of the work has been confined to the lower levels at a depth of 1,700 ft. to 2,000 ft. below the surface. "The future policy as regards development," says he, "will be to complete the development work in the lower levels and especially to carry on vigorous development work in the upper levels of the mine from the general horizon of the Chicago tunnel. The Chicago tunnel is now connected with the third level by a working shaft and supplies and workmen can be easily conveyed to the upper levels, which will greatly facilitate operations in this part of the mine. While the results of development below the third level have not been particularly favourable, still some pay ore has been found in both the fourth and fifth levels and at present the face of raise 415 is in pay ore. This raise lies below the ore chute developed on the third level between raises 308 and 319. This, taken in connection with the fact that winze 417 west sunk from the third level shows good values, makes it probable that further development at this point will open up additional ore." The cost of the reconstruction of the mill and building the necessary barriers for the future protection of the plant and maintenance of the present organisation should not, he thinks, exceed $340,000, say £68,000 sterling.

Mount Morgan Gold Mining Company.—The principal event in the affairs of this famous company in the past twelve months was in connection with the erection of the copper reduction works and the necessary equipment of the mine for extracting the auriferous copper ore. The works, which consist of three blast furnaces and two converters, are capable of treating 10,000 tons of ore per month, and provision has been made for additions which are now under consideration. It was on January 20 that the first blast furnace was blown in, and the converter commenced operations on April 18. As expected, progress was slow at first, but the directors say the whole plant has given entire satisfaction. The production of Bessemerised copper to date amounts to 484 tons, the whole containing approximately 7,085 ozs. of gold. During the year the inclined shaft and shaft house were completed, whilst additions were made to the power house, the railway was further extended, and improvements were made in the gold reduction works, all of which have been the means of effecting further economies and of making the treatment of lower-grade ore possible. Tenders were invited from the principal refining firms in Europe and America for the purchase of the copper, with the result that a contract for the first year's output was settled with the Delamar's Copper Refining Company, of Chrome, New Jersey, U.S.A. The amount of oxidised ore extracted from the open cut workings was 135,210 tons, yielding 52,882 ozs. of gold, whilst the amount of sulphide gold ore mined and treated was 108,736 tons, for a production of 58,866 ozs. Proceeds of the gold sold, in transit, &c., amounted to £482,801, the total credits aggregating £546,703, including £18,771 bought in and income from copper precipitate, blister copper in transit, interest, &c. Dividends again absorbed £150,000, at the rate of 3d. per share per month, or 15 per cent. Although further reductions in working costs are becoming more difficult, there is again an appreciable decline. For the twelve months to May 31 the cost was 10.75 shillings, compared with 11.3 shillings, a saving of over 6d. per ton. The average grade of all ores treated was 9.16 dwts., or 38.90 shillings per ton, a decrease of 2.34 shillings. During the year the board obtained temporary advances to the extent of £65,000, and it is proposed to apply the proceeds from copper sold to the repayment of these loans, and make further additions and improvements to the plant, and to start a reserve fund before recommending an increase in the dividend. Quarterly instead of monthly distributions are also contemplated.

North Broken Hill Mining Company.—The accounts for the half-year ending June 30 show a net profit of £16,102, but it must be remembered that during this period production was

perforce suspended owing to the fire in the adjoining Junction mine. There is now a total credit balance of £17,093, and liquid assets well exceed the current liabilities. It is stated that the proposed amalgamation with the Broken Hill Junction North Silver Mining Company has been abandoned.

Paringa Mines.—A circular has been issued by the directors of the Paringa Mines in reference to the present position and prospects of the Paringa lease. According to the information given the property is situated immediately north-west of the richest portions of the Kalgoorlie field, and is surrounded on all sides by well-known and productive mining undertakings. On the north and on the east the property is bounded by that of the well-known Oroya-Brownhill Company, on the south by the Associated Northern Blocks, and on the west by the North Kalgurli Company. Having detailed the several points of development and the results of work done, the directors argue that want of success in locating any payable body of ore in the past is no proof that the large area of the lease (24 acres) is barren, but some would regard this as strong presumptive evidence against success in the future. At the present time the company's mines are being worked by tribute parties, as it would not pay the company to employ miners and mill-men to raise, crush and treat the ore when the leaders or veins are small or of low value. There is a profit in the royalty paid by the tributers, who seem content to go on working even when at times they barely earn wages. The supervision of the tribute work is in the hands of Messrs. Bewick, Moreing and Co., who are still acting as consulting engineers for a nominal fee. In brief, the prospects of the company are said to consist in the promising developments in the adjoining mines, so it is deemed premature to recommence mining operations which, under the circumstances, might involve expenditure without adequate results. So expenses are reduced until the position becomes clearer. Which would show that the directors themselves are not over sanguine, despite their language.

Phillips River Gold and Copper Company.—A report by Mr. Charles Kaufman, the chairman of this company, states that he has made a thorough examination of the properties and can fully endorse previous reports. The Mount Cattlin property has been equipped with machinery and buildings, and he declares that the mine is opening up splendidly. The main shaft has been sunk to a depth of over 200 ft., where water was struck, the lode here having an average width of 12 ft. of oxidised ore and 8 ft. of sulphide ore. Ore on the dump and in sight is estimated to have a value of over £200,000, and is stated to be increasing rapidly. After inspecting the Harbour View mine, Mr. Kaufman concluded an agreement to take it over under a working option for a period of 12 months, and he also purchased the Elverdton group, comprising 92 acres in all. The Government have agreed to sell their smelter to the company, the stock of accumulated ore—about 1,100 tons—and the stores and contracts for coke and cartage. Ministers have recommended that £70,000 be placed on the estimates for building a railway from the coast to the mines.

Queen Cross Reef Gold Mining Company.—Owing to the time occupied during the half-year ending May 17 in repairing the mill, there was no revenue from output beyond £11 received from the sale of 218 tons of residues, the debris collected at the mill. The financial statement shows cash and fixed deposits £6,187, and a credit balance of £1,266 at the London office, total £7,453. Against this there are debit balances at current account (mine and mill) amounting to £3,721, leaving the nett cash credit £3,731. In addition stocks on hand are valued at £1,055. This reduction in the credit balance is officially accounted for by the expenditure of £4,793 on the renewal of the mill and non-productive mining outlay. According to the details given of the area available on the 948 ft. reef, the size of the reef has greatly diminished, though the quality of the stone is payable. In consequence of this the output cannot exceed 1,000 or 1,200 tons per month unless greater success attends the exploration of the far eastern ground. So far the Victoria footwall reef has been a failure, and the chief hopes are centred on the vertical shaft.

Nicaragua Development Syndicate.—The directors' report covers the period from the date of inception to December 31 last, and from it we learn that the mining properties owned by the company comprise the Santa Francisca and San Luis mines, Santa Rosa mines, Quilali mines, and San Juan Telpaneca mines, acquired at a gross cost of £5,683. The purchase of the Santa Francisca and San Luis mines includes a large quantity of valuable mining plant and machinery, some of which has been used in the equipment of the other properties, but no credit is taken in the accounts for the balance of this plant, which constitutes a considerable asset. Milling operations have been continued at the Santa Francisca and San Luis mines during the whole of the year, and bullion to the gross value of £7,253 has been won from 5,082 tons of ore taken solely from surface workings. The new vertical shaft at San Luis has been sunk to a depth of 190 ft., and a crosscut is being put in at a depth from surface of 154 ft. to intersect the reef 80 ft. under the old workings, and open out the reserves of ore. It is reported that the ground passed through is of a favourable character. Unavoidable delays occurred in the erection of the new 50-ton crushing and cyanide plant at the Santa Rosa mine, but one mill was started during December, 1905, and the cyanide plant has since been set in operation. The usual difficulties incidental to a new plant have been met with, but are being overcome, and the directors are relying upon considerable returns from this mine in the near future. Work on the Quilali mine during 1905 was in the main restricted to that necessary to protect the property, and the bullion won amounted to only £980. Operations on the San Juan Telpaneca mine have continued on a moderate scale, and treatment by the small plant available of 1,803 tons of ore has yielded bullion to the value of £1,327.

Homeward Bound Mines.—The directors of this hapless concern deem the present time a favourable opportunity, it seems, to try the chances of another reconstruction, but if shareholders are wise they will try in vain. The company is a reconstruction, in the year 1899, of that sorry concern, the Birthday Amalgamation of Western Australia, which was originally formed eleven years ago. The directors again propose an alteration of the title to "The Rocky Point Gold Mines, Limited," which strikes us as being decidedly appropriate. Many a time and oft the company has floundered near the threatening point, and now it is actually again on the rocks money would be ill-spent, we fear, in attempting salvage operations. Anyway, time, energy, and money could be more profitably expended in other work, and in more attractive enterprises. There is to be no liability on the new shares, but fresh ones are to be issued to produce a paltry £500. Yet this is considered sufficient to do all the development work on a new property to be acquired! Is it not ludicrous? And why all this trouble to get so little? "We are hoping to declare a dividend in the course of a few weeks," said the chairman, as far back as 1902; but the hope has never fructified. If the directors still have faith in the future of the company, cannot they subscribe this £500 themselves? It appears, however, there have been many appointments to and resignations from the board, and that the directorate now consists only of the engineer, now managing director, and the secretary. The former says profits are not likely to be sensational. Who could imagine they would be? The great probability is that there never will be profits.

Santa Isabel United.—The directors have issued a lengthy report, without accounts, to the shareholders of this company. In the course of it they say the company has ample funds at its disposal to cover all capital expenditure demanded to place the business on a sound footing and arrive at the objective of mining below the old Colombian workings, after which the very valuable nature of the undertaking should be permanently established. It is calculated that the electric plant will not be at full work under four months' time, but a recent cable from the manager stated that the shaft is now free from water, which indicates that current for the electric pump has been obtained. It is, therefore, they argue, a fair deduction to assume that exploitation in the interim can succeed and rich stone possibly be sent to the mill, when the drives have been advanced and stoping ground is opened up. "What has been said about the veins on the property will make clear to the shareholders that in no sense is there the smallest necessity for anxiety touching the intrinsic value of the enterprise. All reports as to future prospects, from various sources, have been consistently and increasingly satisfactory. The vexatious delay in obtaining electrical power, due to mechanical and other causes, is the sole reason for the past disappointment. It is to be particularly noted that the ore from No. 1 is only partially oxidised or free and consequently that the stone milled from that vein has yielded probably only one-fifth of its gold contents over the plates. In other words, the bullion return is by no means representative of what might have been recovered had the concentrators, now erected, been at work and the sands and slimes submitted to cyanide treatment." Milling the surface ore has been intermittently carried on since September last, and the gross yield of free gold to June 30 was £4,862, whilst the expenditure on construction and equipment was £21,924.

Cambrian Collieries.—A letter has been sent out by the chairman and secretary of this company stating that the exceptional circumstances attending the working of the collieries since the disastrous explosion of March 10, 1905, renders it advisable to issue an interim report. In this they say the profits for the half-year to the end of June are satisfactory, and the outlook for the rest of the year may be regarded as encouraging. In view, however, of the large outlay necessitated on new works and the cost of extinguishing the fire that followed the explosion, the directors have thought it well, until they have had an opportunity of consulting the shareholders as to how this expenditure had best be met, to confine the declaration of a dividend to the 6 per cent. due on the preference shares for the twelve months to December 31 last. It has been decided to work the whole of the engines above and below ground, with the exception of the winding and fan engines, by electric power. A contract has been entered into with Messrs. Sieman Bros. for the requisite plant, and it is hoped that the electric installation will be completed early in 1907. The total cost of the explosion and fire is put at £47,303.

El Oro Mining and Railway Company.—In confirmation of his cable published on July 31 with reference to the discovery of ore in the south drift of the 1,000 ft. level of the El Oro mine, Mr. Raymond reports that things are looking well in the bottom of the Somera shaft at the 1,000 ft. level. "The drift going south in the stuff which I mentioned in my letter of June 13 as showing some promising streaks now shows these streaks much larger, and although there is considerable slate in the heading this is so mixed with quartz that the whole heading assays fairly well. The streak on the hanging wall side in the middle has rather a promising appearance, and has quite a little sulphide, and the whole thing is a big improvement over the start of the drift at the station. We always look northward as the most promising country for the vein, and the drift which was made some time ago from the north side of the station showed narrow

streaks assaying from $7 to $9, which got quite small and lower grade as it got north near the fault. Looked at from the small end in the north it has steadily increased in value going southward, and the part already opened up southward from the station has been made better in size and value than anything opened up previously." The secretary adds:—"Mr. Raymond further advises that he has now reached the third fault, through which he is at present driving in a southerly direction, and expects to reach the continuation of the ore-body already exposed on the north side of this fault in the 1,000 ft. level in the course of a few days."

Mineral Production of Tasmania.—The following statistics of the mineral production of Tasmania in the years mentioned are taken from the report of the Hobart Chamber of Commerce in 1905-6:—

	Quantity. 1904.	Quantity. 1905.	Value. 1904. £	Value. 1905. £
Copper (blister) ..tons	8,371 ..	8,610 ..	582,540 ..	704,287
Tin and tin ore .. ,,	2,316 ..	3,891 ..	266,121 ..	362,670
Gold .....fine ozs.	65,921 ..	73,540 ..	280,015 ..	312,380
Silver lead ore ....tons	51,138 ..	75,270 ..	203,702 ..	246,888
Copper & copper ore ,,	316 ..	1,500 ..	16,056 ..	52,939
Coal ..... ,,	61,109 ..	51,993 ..	51,942 ..	44,194

Zinc ore.....tons	1,931 ..	— ..	1,982 ..	—
Flux ore..... ,,	9,869 ..	— ..	4,697 ..	—
Total value....	— ..	— ..	1,411,192 ..	1,729,129

Victory (Charters Towers) Gold Mining Company.—During the half-year ending April 30 2,137 tons of stone were crushed for a yield of 1,615 ozs. of gold of a value of £5,617, in addition 48 tons of concentrates realised £991, the cyanide treatment of 2,759 tons of tailings, &c., produced 1,359 ozs. of bullion, worth £2,401, residues sold fetched £278, and slags £135, making a total of £9,423. The cyanide works were recently closed, as the directors consider that the disposal of the sands and sludges by public tender will be more profitable to the company. A dividend of 6d. per share was paid on January 25.

New South Wales Gold Yield.—The gold yield of New South Wales for July was 20,705 ozs., valued at £80,532, compared with 39,862 ozs., of a value of £128,091 in July of last year. For the first seven months of the current year the yield amounted to 183,364 ozs., worth £646,113, compared with 171,140 and £603,280 respectively for the corresponding period of last year.

Queensland Gold Returns.—For the month of July the Queensland gold returns were:—Charters Towers, 19,200 tons crushed, 18,500 ozs.; Croydon, 2,200 tons, 1,300 ozs.; Gympie, 17,800 tons, 7,200 ozs.; Mount Morgan, 20,300 tons, 12,000 ozs.; Ravenswood, 2,400 tons, 2,800 ozs.; other fields, 2,800 tons, 1,700 ozs.; alluvial, 1,500 ozs.; total, 45,000 ozs.

The Victorian Gold Yield.—The Agent-General for Victoria has received a cablegram from the Government of the State informing him that the gold yield of Victoria for the past seven months was 468,535 ozs., of a value of £1,874,140, an increase of 32,457 ozs. and of £129,828 respectively compared with the corresponding period of 1905.

West African Gold Output.—The gold return from West Africa for the month of July, as compared with the corresponding month of the previous year, is given by the Chamber of Mines as 15,665 ozs. against 13,873 ozs. This is not a wonderful improvement in twelve months.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Mexican Light and Power Company.

The lengthy interim report issued by the directors of the Mexican Light and Power Company is in many respects an exceedingly interesting and informing document, for it throws sidelights upon many matters and circumstances affecting Mexico itself. The original plans of this company involved merely the installation of a hydro-electric station at Necaxa, the construction of a transmission line to a distributing station to be erected in the City of Mexico, and the sale of electric energy at wholesale rates for power purposes in the same city and its immediate vicinity. At the time of its inception there were three companies supplying light and power in the City of Mexico, one of which, the Mexican Electric Works, was acquired by this larger company. It was afterwards ascertained that the Federal Government of the Republic was favourable to the consolidation of all the electric lighting and power interests in the city, and in April of last year the directors were authorised to organise a second Canadian company to purchase all the properties and assets of the other two concerns. For this purpose the Mexican Electric Light Co., Limited, was formed, all the capital stock of which is held by the Mexican Light and Power Company. During these negotiations the directors became impressed with the growing demand for electric power in the City of Mexico and neighbourhood, from the Government, the tramways, the population, and from the El Oro mining district. Accordingly new extensions and improvements were resolved upon and carried out, together with the construction of a second permanent dam at Tezcapa, five miles beyond Necaxa. From surveys made by the company's engineers it is estimated that under the rights now acquired there can be produced about 200,000 horse-power of energy. The water rights recently secured are perpetually vested in the company to the extent to which they are developed and used during the next 15 years; those formerly acquired in the rivers Necaxa and Tenango are perpetual. Valuable franchises have likewise been granted, including long terms of exemption from State and municipal taxation from the States of Puebla, Hidalgo, Mexico, and Michoacan, through all of which the company's transmission lines now pass. The contract for supplying light to the public streets of the city has been extended to February, 1917. Already the company is supplying light and power in the towns of Guadalupe, Hidalgo, Atzcapotzalco, Tacubaya, Mixcoac, and San Angel, and it is rapidly extending its field of operations to other important points in the Federal district. This Federal concession extends till the year 2012. In laying these extensive foundations it is not surprising to learn that the company has absorbed the proceeds of $13,000,000 of its capital stock and authorised bond issue of $12,000,000. The transmission lines to and the power station at El Oro have entailed an additional outlay of $850,000 gold, but from this installation a gross annual revenue of $500,000 gold is expected within the next two years for an extra operating cost not exceeding $50,000 gold per annum, whilst the additional dam and reservoir at Texcapa represent an extra expenditure of $550,000 gold. There will be required to complete the work now in hand the sum of $1,000,000 in excess of the anticipated nett earnings for the period ending December 31, 1907. From the first installation the nett earnings are estimated by the general manager at $190,000 gold per month in January, 1908, and should the demand for power continue to increase the directors consider the advisability of constructing a second hydraulic installation which should cost not more than $2,500,000 gold, and which, after providing for the fixed charges upon this capital expenditure, should ultimately ensure an increase of the earnings to more than $300,000 gold per month. The directors have not yet decided what securities they will advise the shareholders to issue to provide for future expenditures on capital account, but they say they do not anticipate any difficulty in providing for the company's financial needs. The gross earnings for the first six months of the present year in Mexican currency were:—January, $281,634; February, $279,688; March, $285,570; April, $299,295; May, $295,220; June, $313,426; total, $1,754,833. In the same period the operating expenses amounted to $722,330, of which $320,000 was due to the use of steam power; while maintenance charges came to $111,772. On the assumption that the company will be able to commence the supply of power to the tramways of the Federal district on October 1, the estimated gross earnings for the current year are put at $4,012,000, and the operating costs at $1,440,000, leaving nett earnings in Mexican currency $2,572,000 and in gold $1,286,000. On these statements and figures the prospects of this company appear to be very promising. There can be no question that Mexico is rapidly progressing, and that immense scope should be opened up for a company such as this. Its relations with the Government appear to be most cordial, and it will apparently enjoy something like a very valuable monopoly. Bearing all these circumstances and possibilities in mind the directors should experience no great difficulty in getting the additional capital they need.

Bolckow, Vaughan and Co.

We are very glad to find that the stupendous capital expenditure in which this company has indulged during the last few years gives promise of producing good results, and need only express the hope that the excellent display for the 12 months ended June 30 has not come about because revenue has been relieved by this capital outlay. After providing nearly all the interest charges the company reports a profit of £345,135 or £131,364 more than in the previous year, and £44,224 was brought forward making £389,359. Of this debenture interest takes £13,325 in addition to the sum already paid, and preference dividend £23,604 after which the dividend is raised from 5 per cent. per annum to 6. A sum of £56,700 is then applied in relief of capital expenditure during the year, and £50,000 is written off capital account direct, leaving the immensely increased sum of £80,952 to be carried forward. Total outlay upon new collieries and plant, electric installations, machinery and extensions during the year was £247,919, of which £191,219 has been debited to capital, and the balance comes from revenue as mentioned. The property item now reaches the stupendous figure of £3,864,386, an increase on the year of £113,931, so that the depreciation allowance would appear to be £77,288 apart from the aggregate revenue provision of £106,700. As we predicted a year ago, a large part of the floating indebtedness has been turned into fixed debentures, the amount now being £475,900 compared with £122,000, and for this reason the creditors are lighter, although still quite heavy enough. To bankers the company now owes £262,614 or £336,202 less, and under all heads the unfixed liabilities are £650,162 against £967,077. This total includes £256,712 due to sundry creditors, £68,039 for royalties on minerals, and £37,697 for salaries and wages. Reserve fund is £150,000, and the accident and fire insurance funds reach £23,528. On the other side the investments have been reduced somewhat to £69,074, stocks are up by £14,044 to £586,186, and debtors are larger by £55,843 at £214,112. Cash

and bills, however, continue remarkably small at £3,907, and £16,043 is lent on mortgage.

John Abbott and Co., Limited.

This is a company which has not benefited from the iron and steel revival. The business is that of engineers and ironfounders, and while the sales during the past year, though low, were larger than in the previous 12 months, selling prices have proved to be below manufacturing cost. We believe the past was the third year in succession in which the company has produced a debit balance, and it is no cause for wonder that at the last annual meeting the shareholders appointed an advisory and investigation committee. We have not come across a copy of the committee's report, but the directors say that in accordance with the recommendations made, and with the object of improving the affairs of the company, many changes have been made during the last half of the financial year. So far the time has been too short to gauge the full effect of these changes, but beneficial results are expected. The electrification of the works is also expected to effect a considerable saving in working expenses, but the installation has interfered to some extent with the ordinary operations of the business, although every effort has been made to minimise the disturbance. The trading loss for the year ended June 30 was £12,112, interest on loans and debentures took £4,672, and £500 was set aside as a general provision for bad and doubtful debts, so that the total deficiency was £17,384. Debits brought forward being £15,973, there is a total shortage to be carried forward of £33,257. This is bad, but the financial position is worse. Although sundry additions have been made to properties during the year, not a penny has been allowed for depreciation, so far as one can see, and in one case we find the valuation the same as it was in 1878. Under all heads, the various properties are valued at £199,245, and the only reserve possessed is the trifle of £606 against bad debts. The revenue losses have involved borrowing from bankers to the amount of £25,056, the total creditors, including this sum, being £51,506. There are also temporary loans of £15,386. On the other side sundry debtors owe £42,755, cash is startling at £197, and stocks on hand, work in progress, &c., are valued at £62,043.

Mason and Mason, Limited.

We should recommend capital reconstruction for this miserable printing ink company except for the doubt whether it would benefit the business in the slightest degree. The company's case seems quite hopeless, and shareholders must count the investment an error of judgment and write it off. The process may be painful, but it will have to be done. There appears to have been an increase in the quantity of ink manufactured and sold during the 12 months to June 30, but this was no good because the proportion of profit yielded was less. More trouble came from an increase in bad debts, which has "somewhat counterbalanced the economies which your directors, in accordance with their promise, had succeeded in effecting." They again take no fees. Profit from all sources was £16,445 or £22 less than in 1904-5, registration fees gave £1 less at £206, and the balance brought in was down by £207 at £285. This time, however, £500 is taken from the reserve, because the company had to pay its share towards some paving in one of the principal roads near the company's works, and the revenue balance is brought out at £17,437 against £17,167. Salaries, travellers' commissions, and sundry expenses required £5,964 or a drop of £451, managing director's salary £600, and fee for special attendances £250, were the same, and rents, rates, taxes, and a larger number of other charges fell £200 at £7,442; but bad debts increased from £49 to £323, repairs and maintenance drew off £763, or an increase of £254, the road-making cost £403, and new engines and buildings and electric light each required heavier sums. Therefore, after meeting debenture interest £1,145 the nett balance is just £242, a drop of £43. And the goodwill account is only £141,073. Other property is valued at £46,437, and all told the reserves add up to £5,652, the general fund being £500 less at £2,500. The loan from bankers has been reduced by £350 to £5,000, and a much smaller sum is due to sundry creditors, mainly because the stocks are a good £3,000 lower at £11,656.

Lawes Chemical Manure Company, Limited.

There was a small decline of £342 to £15,322 in the profits of this business for the year ended June 30, compared with the preceding 12 months, but the balance brought in was £1,742, against £1,326, so that with £12 for transfer fees the total credit was just a trifle better at £17,076. The usual £680 having been provided for debenture interest, the balance over is £16,396, from which preference dividend takes £5,372, and the dividend proposed of 6s. 6d. per share £8,209. This is the same as for 1904-5. Then £1,000 goes to reserve, also the same, and £180 is reserved for income-tax, but the directors cut down the carry forward to £804 in order to reserve £750 for bad and doubtful debts. The financial position at best can be considered only fair. With the addition now proposed the reserve reaches the slender sum of £7,000, and nothing is written off for depreciation of land, plant, leases, goodwill, &c., standing in the balance-sheet at £188,094. The company has to give credit pretty liberally, a large part of the capital on which dividends have to be paid being represented by sundry debtors. These reach the important sum of £116,500, against only £27,334 owing to sundry creditors. Bills payable are £10,799, against bills receivable £6,541, stocks are valued at £63,382, and cash is £6,837. A good point is the smallness of the debenture debt, which amounts to £17,000 only.

Old Albion Brewery, Limited.

The Old Albion Brewery is to be numbered amongst the breweries that showed a welcome recovery in its business last year. It is interesting to note how the directors attempt to diagnose the position and to seek for causes of this improvement. Many attribute adversity to several and strange causes, even to such an inundation of virtue as a wave of temperance, and, of course, the Government has imposed upon the industry alleged crushing burdens. Only last week the directors of one provincial brewery attributed the growth in profits to lower prices for hops and malt, but the board of the Old Albion ascribe the better results to careful management and the production of malt liquors of the purest and finest quality. This looks like vanity and self-praise, but there may be something in it, something in the theory that the customers of the brewery have exceptionally refined, fastidious tastes. Whatever the cause may be, the profit, exclusive of the amount brought in, advanced nearly £400 to £11,182, and as £639 was the credit from the previous year the total was £11,821, out of which interest on debentures and loans takes £3,264, leaving £8,556 for distribution. After paying the preference interest the ordinary shares again get 8 per cent., £2,000 against £977 is transferred to property reserve account, and £601 is carried forward, against £639 brought in. The above allocation brings the property reserve account to £8,000, whilst the general reserve remains at £2,500. In other directions also the financial position has been improved, loans being reduced from £17,398 to £15,320, and sundry creditors and rents from £6,464 to £5,711. Against these liabilities book debts, loans, rents due, &c., amount to £7,881, investments are a trifle lower at £1,450, and cash has dropped from £132 to £84. No mention is made of the allowance for depreciation, but it is to be noted that the brewery and other properties are only £158 lower at £160,708.

Chloride Electrical Storage Co., Limited.

For the 12 months ended June 30 the nett profits earned by this company amounted to £24,702, of which £8,589 was written off for depreciation, and after providing for debenture interest a balance of £15,663 was left. To this was added £6,259 from the previous account, making £21,922, out of which the preference dividend is paid and the ordinary shares receive 10 per cent., £8,000 is put to reserve and £6,877 is carried forward. Leases of works and land appear in the balance-sheet at their original cost of £1,443, but patents account was written down by £4,041, or 20 per cent., to £16,000, and against £1,542 spent on works £3,140 was allowed for depreciation, reducing the item to £35,590. Other assets consist of stocks, stores, &c., valued at £44,152, investments taken at £29,272, sundry debtors amounting to £19,639, and cash £19,599, while on the other hand £50,383 is due to sundry creditors, including provision for battery maintenance and cash received on account of uncompleted contracts. The present appropriation from revenue constitutes the only reserve, but the issue of £20,000 4½ per cent. debentures matured in December last and was duly paid off, so that the position seems creditable enough.

Belgravia Dairy Co., Limited.

This company's nett profit for the year to May 26 was £14,204, a figure which shows a considerable improvement compared with the previous 12 months. Interest and transfer fees gave £44, making £14,258, from which administration, &c., together with £2,131 for debenture interest, require £4,652 leaving £9,606. This sum, added to £2,946 brought forward, makes up a total of £12,552, so that after allowing £750 for directors' fees the dividend is maintained at 6 per cent., with £3,000 to reserve and £3,654 carried forward. Reserve fund will now be £17,000, and the position on the whole seems pretty good, although we should like to know how much goodwill is wrapped up in the main item of properties, leases, goodwill, &c., £130,189. Horses, machinery, plant, fittings, &c., are entered at £8,001, and against creditors £5,420 debtors amount to £11,542, stock is £352, and cash reaches £9,876. Premiums of £829 have been paid on new leases, and alterations, improvements, repairs, and expenses paid in advance £3,930 is an item which must presently be written off. One new business was acquired during the year, and the directors say that the purchase has proved very remunerative.

Midland and South-Western Junction Railway.

Gross revenue for the six months ended June 30, £41,389, decrease £3,566; working expenditure £30,012, decrease £855; nett revenue £11,378, decrease £2,711. Revenue from ordinary traffic was satisfactory enough, goods business improving by £1,184, parcels by £404, and passengers by £398. The decrease in receipts is entirely owing to the fact that in the corresponding period the company received £5,527 from the conveyance of material for the military barracks at Tidworth. In addition to the decline in nett revenue the balance brought in was only £12, against £940, and nothing was received on account of general interest, compared with £60, so that all told the income shows a drop of £3,698 at £11,391. This provides all fixed charges and interest at the rate of 3 per cent. per annum on the "A" debenture stock, carrying forward £176. On this occasion there appears to be no payment to the Midland Company on account of interest, against £4,031 last year. Capital expenditure for the six months was £2,662, and the debit to the account is £235,865.

Cockermouth, Keswick, and Penrith Railway.

All classes of revenue showed a decided improvement during the half-year ended June 30, receipts from merchandise traffic

being £968 higher, minerals yielding £655 more and coaching traffic £254 more, and with trifling gains in other receipts the gross income was £1,880 up at £22,744. Working expenses only rose by £818 to £15,410, leaving a nett balance of £7,334 compared with £6,272 a year ago. To this was added £105 brought forward and £131 from Cockermouth Joint Station and other interest making a total of £7,570, and after meeting the dividend on the preference stock, the ordinary stock receives a distribution at the rate of 2¾ per cent. per annum against 2 per cent., and £74 is carried forward. Nothing was spent on capital account during the six months, but there is a debit balance already existing of £35,315, of which £20,355 has been met out of the reserve fund and £10,868 is due to the bankers.

Cleator and Workington Junction Railway.

An increase of £2,183 in receipts from merchandise during the six months ended June 30 was largely neutralised by a reduction of £1,976 in mineral traffic, but as there was a saving on shipment and cartage charges, this section showed an improvement of £219 at £30,410. Passenger traffic yielded £47 more at £1,305, but miscellaneous receipts fell off by £28, and the total income came to £32,224 against £31,986. Working expenses were £1,007 lower at £20,425, thanks mainly to reductions in maintenance of way and locomotive power, and the nett balance was, therefore, £1,246 up at £11,799. Only £65 was brought in compared with £627 a year ago, so that the amount available was £11,864, or an improvement of £683, and after providing for the preference dividends the dividend on the ordinary stock is raised from 3 per cent. to 3½ per cent. per annum, leaving £493 to be carried forward.

Leopold Schwabacher, Limited.

This import and export drapery and fancy goods business earned a trading profit during the year ended June 19 of £15,588 or £907 less than in the previous 12 months. Interest on investments yielded a further sum of £575, making £16,163, from which managing director's remuneration and directors' fees took £2,500, and audit fee £125, leaving £13,538. Add £4,371 brought in, and the sum for disposal is £17,909, so that the directors provide £3,000 for the preference dividend and repeat the 12½ per cent. distribution on the ordinary shares. Reserve account then gets £1,100 or £100 less, and £4,402 is carried forward. The balance-sheet is much as we should expect to find it and indicates a moderately good position. Sundry debtors £50,729 are slightly less than creditors, but stock-in-trade is valued at £79,598, cash is £6,011, and bills receivable amount to £9,307. Goodwill, leases, and fixtures are valued at £49,573 and the reserves, including £7,500 for share premiums, amount to £23,600, of which £14,873 is invested in securities outside the business.

Clergy Mutual Assurance Society.

In its year ended May 31 last this society secured a new premium income of £13,304, having issued 99 more policies than in the previous year—654 of them insuring £402,731, of which £30,000 was reinsured. Claims absorbed £261,278, including £15,108 paid as interim bonuses, and the total was less than the estimate by about 25 per cent. The entire income for the year was £438,200, and the total outgo £397,288, leaving £40,912 to be added to the funds raising them to £4,292,692. The average rate of interest earned on the invested moneys was £4 0s. 1d. against £3 18s. 11d. in the preceding year, income-tax not allowed for. Working expenses were at the rate of £7 8s. 6d. per cent. on the premium income, a reduction of 14s. 5d. per cent. on the outlay for the year ended May 31, 1905. According to the quinquennial investigation results the average cost of the business in the past five years was £7 13s. 4d. per cent. as against £6 16s. per cent. in the previous five years. After deducting income-tax the average rate of interest earned in the latest period was 6d. per cent. less than in the immediately antecedent quinquennium at £3 15s. 1d. per cent. This is the consequence of the higher scale of taxation. For the five years 1896-1901 the total amount disbursed by the society in income-tax was £28,900, and in the past five years it was £42,900. The valuation of assets and liabilities shows a surplus of £490,717, of which all but £617 is to be distributed among participating policyholders. This is exclusive of £42,644 already distributed in interim bonuses. The bonus is "equal in all respects to that of 1901."

The Australian Mutual Provident Society.

The 57th annual report of this society indicates continued prosperity, and the new premium income for the year 1905 was £191,761, including £50,361 of single premiums. A good start was also made with the new industrial department, and as the entire premium income was £1,798,000, while £950,000 came in as interest and £40,397 was received as capital sunk in annuities sold, while the claims, including £221,225 of bonus additions, came to only £739,699 and the working expenses and taxes of all kinds to £240,000, it followed that the accumulated fund was increased by £855,946 at the end of the year, and now amounts to £21,423,081. The actuary estimates that there was a cash surplus of funds over liabilities amounting to £713,369, and of this sum £635,533 is set aside to provide reversionary bonuses to policy-holders amounting to about £1,200,000. The expenses of working the business, it should be added, amount to less than 12 per cent. of the premium income, including the establishment expenses of the industrial department, £32,000 written off foreclosed properties and other items, but excluding taxes amounting to £26,602. If the establishment expenses are not taken into account for the year the business was worked at little more than 11 per cent. of the premium income, surely an excellent record for a colonial, for any life insurance, office.

COMPANY MEETINGS.

SIBERIAN PROPRIETARY MINES, LIMITED.

An extraordinary general meeting of the shareholders of the Siberian Proprietary Mines, Limited, was held on Monday at the registered office, 20, Copthall Avenue, E.C., Mr. F. J. Dormer (the chairman of the company) presiding.

The secretary (Mr. Ernest Lesser) having read the notice convening the meeting,

The Chairman said: This meeting, like the one that took place in March last, is held in pursuance of our articles, which require the sanction of the shareholders to the alienation of any property once acquired. It may be that in this particular our constitution will not always prove convenient in its operation, and in that case we may have to come to you on some future occasion to authorise its amendment. So far, however, we have no reason to regret the presence of this provision in our statutes of incorporation. It affords us the opportunity of meeting you at not infrequent intervals, when we can tell you what we are doing in regard to things generally, as well as seek your authority for particular acts. The property which forms the subject of the present meeting is one to which our attention has been continuously directed for more than 12 months past. It formed, indeed, the original substratum of the company, but our definite acquisition of it was delayed for the reason that we first desired to acquire and float the property now known as the Orsk Goldfields, about which I shall have something to say presently, and because we entertained the hope that some delay would result in a favourable modification of the terms of purchase. That result has ensued to a certain extent, and we thought it inadvisable for various reasons that the delay should be further prolonged. The property is situate in the province of Orenburg, European Russia, about 50 miles south of the railway station at Bishkil on the main Siberian railway, and 64 miles south of the more important station of Tscheliabinsk. It is in extent about two square miles, and is held on perpetual lease direct from the Russian Government. It is a going concern, one portion of it having been worked for about five years, and the other for about 25 years. The main lode has already been opened up along a distance of 1,875 ft. There are eight shafts, varying in depth from 304 ft. to 420 ft., sunk upon this reef, and these are well constructed and substantially timbered, and will eventually become more useful for deeper working. The ore body varies from a narrow width to over 14 ft., and the average yield of the past five years is represented to us as 9 dwts., a result that closely agrees with the assay of the samples taken on our account as the potential purchasers. There are numerous parallel veins intersecting the property from east to west, some of which have already yielded distinctly payable results, and their further development must be embraced in any scheme for the systematic working of the property as a whole. The Russian miner does not work in a way that corresponds with our ideas, and consequently there are no reserves of developed rock in the mine; but we know that several of the shafts have been carried 50 ft. below the level from which the mills are now being supplied, and we are justified in stating that the ore bodies, where they have been laid open and are not yet excavated, are of a strong looking nature, presenting a satisfactory appearance and giving indications of continuance to an indefinite depth. The present equipment consists of two milling plants, one capable of treating 50 tons per day and the other 40 tons. There are also two cyaniding plants, together capable of treating over 600 tons of tailings per day, and a chlorination plant of a capacity of three tons per day for treating the concentrates. This, of course, is a very small equipment indeed for a property of the size and character already indicated. We have had the best professional advice on the subject of its better exploitation, and the recommendation made to us is that £50,000 should be at once spent upon development, with a view to the expenditure of a further £50,000 to thoroughly equip the property and amplify the milling and treatment plants. It is in order to carry out this scheme that we propose to form a separate undertaking, with respect to which the negotiations are already very far advanced. We do not conceive it to be any part of the business for which this company was formed to carry on directly the business of a going concern. Our part is to acquire such undertakings after due investigation, to arrange the necessary finance for their development, and to secure for them better superintendence and direction than they have hitherto enjoyed. With undeveloped properties, of course, it is different. When these come into our hands we make it our business to examine them, to bring them to the stage of development at which their value may be regarded as proved, and then to launch them as separate subsidiary concerns. The terms on which we propose to float the company now to be formed are set forth in the draft agreement which has been open to your inspection since Wednesday last. They are in effect the same as we adopted in the case of the Orsk Goldfields, Limited. The consideration we receive for the benefits of the agreement we propose to make over to the new company will come to us wholly in the shape of shares of £1 each with 14s. paid. The balance remaining to be paid will provide the company to be formed, which is to be named the Troitzk Goldfields, Limited, with the initial capital required for its various purposes. The further capital ultimately required will be provided by the issue of the 100,000 shares held for the time being in reserve. We shall, of course, retain a majority holding in the new company, and under no circumstances do we propose to part with any portion of that holding, which we in-

tend to retain as this company's permanent interest in the undertaking. I now move: "That the draft agreement submitted to this meeting, and expressed to be made between this company of the one part and Troitzk Goldfields, Limited, of the other part, be and the same is hereby approved, and that the directors of the company be and they are hereby authorised to enter into an agreement with Troitzk Goldfields, Limited (when incorporated), in the terms of the said draft, and to carry the same into effect with such (if any) modifications as they think expedient."

Mr. J. Jonas seconded the resolution.

The solicitor, Mr. Kahn, read the principal clauses of the agreement, after which the resolution was put to the meeting and carried unanimously.

BRITISH AND ARGENTINE CORPORATION.

The statutory meeting of the British and Argentine Corporation, Limited, was held on Wednesday at Worcester House, Walbrook, E.C., the Right Hon. Lord Teynham, chairman of the company, presiding.

The secretary (Mr. T. W. Gilbert) having read the notice convening the meeting,

The Chairman said: Before the Corporation had been three weeks in existence we had brought to our notice a new issue, which was about to be made in connection with the Argentine shipping trade, known as the Anglo-Argentine Shipping Company. The object of this company was to acquire the benefit of, and to carry out, two valuable freight contracts with two important meat companies in the Argentine Republic. The contracts provide for a regular three-weekly service of steamships from Buenos Ayres to London, and the estimated nett profits will be sufficient to pay a dividend of 12½ per cent. on the ordinary shares, after setting aside a considerable sum for reserve and other purposes. We went into this business most carefully, and, having come to the conclusion that it was of a satisfactory and sound nature, we consented, in conjunction with the eminent firm of Chalmers, Guthrie and Co., to act as sponsors to the issue, and we also agreed to subunderwrite 4,000 shares. The consideration to the Corporation for doing this business was a bonus of 1,000 fully-paid ordinary shares, and a cash commission of £500. More than half of the shares which we underwrote were taken off our hands, and we have since sold some more, but we retain with our bonus shares a considerable interest in the company, the board of which I have joined as your representative. We have obtained an option over an important mineral proposition in the Argentine Republic, and through our consulting engineers, Messrs. J. Norton Griffiths and Co., we sent out on the 27th of last month Mr. Bruce Marriot, a gentleman of proved capacity and experience, to make a report on this and other properties. If his report on this particular property should turn out as satisfactory as we anticipate, we shall be in a position to acquire a most valuable asset. We have also had brought to our notice promising enterprises in Brazil, Columbia, and Mexico, so that you will see that, as indicated in the prospectus, we have not been confining our attention entirely to the Argentine Republic. No doubt, however, our principal energies will be centred in that country, especially as we are represented in Buenos Ayres by a local board of exceptional merit and standing. We have been in constant communication with Senor Calastreme, one of the local board, since he returned to Buenos Ayres, and I am happy to be able to inform you that we received a cablegram from him this morning in which he says that he has concluded a business showing a profit to the Corporation of £9,000. (Applause.) He is also, he says, dealing with another transaction which is likely to show a very great profit, and adds that he is working the business and has every prospect of success. (Renewed applause.) Now, I think it would not be out of place if I make a few remarks on the financial and commercial position of the Argentine Republic at the present time. There can be no possible doubt that the Argentine Republic is passing through a period of—in the words of Mr. Harford, the Secretary of His Majesty's Legation at Buenos Ayres—uninterrupted prosperity. We believe, however, that the prosperity of the Argentine Republic has only just begun. Its commercial potentialities, with its large continuous immigration from Europe, are immense. Its undoubted mineral wealth is practically untouched, and we have also the authority of the British Consul at Buenos Ayres for the statement that opportunities for the extension of British trade appear to exist in every direction, and in every line of business. I can only say, in conclusion, that your directors will spare no efforts to take advantage of the opportunities referred to, and that it will not be our fault if we do not secure a large proportion of this new business. (Applause.) I will now ask Mr. Charles Rigg to address a few words to the meeting. (Applause.)

Mr. Charles A. Rigg: Lord Teynham has so carefully gone into the position of this company that there is practically nothing left for me to say; but as I have been in very close correspondence with Senor Calastreme I suppose that is the reason our chairman has asked me to say a few words. Well, I think I may say that the company ought to consider themselves singularly fortunate in having secured the services in the Argentine Republic of such well-known people as we have on our local committee to represent their interests. I should like to add that on the formation of this company your directors had in view a definite aim, and that aim was, I may say, to act as an issuing house principally, in conjunction with old-established firms in London, the Continent of Europe, and in South America. We feel, moreover, that we are entitled in this respect to the confidence of the shareholders, because, as your solicitor will inform you to his cost, within three hours, I think it was, of our receiving our certificate to proceed to business, we acted as an issuing house—that is to say, we brought out the Anglo-Argentine Shipping Company in conjunction with one of the oldest-established firms of merchants in the City of London. (Applause.) I think that that was a business transaction which the shareholders will give the board credit for, and which wil entitle the directors to a certain amount of confidence. I do not think that I have anything more to say to you.

There being no resolution to consider, Mr. Gwyther Jones proposed a hearty vote of thanks to the chairman and directors for their services, and expressed his satisfaction with the business which had already been done.

The resolution was seconded and carried unanimously, and the chairman having acknowledged the compliment, the proceedings terminated.

TRADE AND PRODUCE.

Wheat.—English wheat is now coming on to markets in fairly liberal supply, and where quality is good it is readily bought, but as a general rule demand has been poor, and neither spot nor forward parcels have received much attention. Mark-lane buyers at mid-week sales were apathetic, and bought little, and that at prices slightly under last week's. Reds were offered at 29s. to 30s. 6d., whites from 29s. to 31s., and foreign sorts from 31s. to 32s. Foreign oats showed little or no change in rates. For the past week farmers' deliveries amounted to 8,583 qrs., averaging 29s., against 32,712 qrs., averaging 28s. 5d. a year ago. Imports were higher than a year ago, but showed a decrease on those of last week, 498,633 qrs. against 463,377 last year. The supplies of wheat and flour on passage this week are also more moderate, 2,445,000 qrs. against 2,590,000 last. American markets opened lower, but advanced on unfavourable weather reports. These gave way again on improved crop accounts, and finally recovered upon better demand for both spot and options, reports of rain in the north-west and private advices that the Russian crop would prove 2,070,000 bushels below the average. Bradstreet estimates the quantities in sight east of the Rockies at 46,288,000 bushels, against 44,394,000 last week, and 23,868,000 last year.

Wool.—Business has been a little more active these last few days, and as a result prices have stiffened up again, and holders seem convinced that a little waiting will see values up to the level of June quotations. But against this come rumours of a big clip in Australia, which it is said will exceed those of any previous year by 100,000 to 150,000 bales. It is no wonder, therefore, that forward business is more than at a standstill, buyers hesitate to commit themselves further than they can see. Home-grown produce is not in a very bright condition—that is, as regards staplers, for they cannot sell except at a loss, the prices offered by Cummings being at least 2s. per tod of 28 lbs. below that paid by staplers themselves in the beginning of the season. Spinners continue fairly well employed, and in the piece trade all those employed in cheap goods are busy.

Linen.—There is little to note again this week, except that the improving tone of markets grows more and more pronounced. Prices keep hardening, and this week new business in yarns has been done at higher rates than ever, both home and Continental, and that in spite of the fact that immediate delivery is practically impossible. Current rates of manufactured goods have all they can do to keep up with yarn prices, but they too have been steadily coming up during the slack season, and if the autumn will not exactly see a boom it promises at any rate a remarkably flourishing trade. The improvement is an all-round one, home, American and colonial markets all going strong. Flax-pulling in Ireland has been checked by the heavy rains of late, but first lots will probably be ready in a week or so.

Cotton (From our Manchester Correspondent).—A generally quiet tone has prevailed in most quarters of our market during the past week. Holidays have been in full swing in several spinning centres of Lancashire, and as a consequence the production of yarn has been considerably restricted. The attendance on the Exchange has been below the average. Very little life has shown itself in any section, the inquiry all round being of an indifferent character. Buyers of both cloth and yarn find that they cannot enter the market at anything like the reduction in price to balance the recent decline in raw American cotton. At the moment American yarn is the master of the situation. Producers of cloth cannot reduce their quotations very much if they are to retain their margin of profit, as yarn prices do not show very much alteration as compared with two or three weeks ago. Advices generally from most of our markets abroad are encouraging, and a fair amount of business has been offering at a price. Shippers are evidently endeavouring to find out how manufacturers are situated, but the offers as a rule cannot be taken seriously, the difference between price and bid being in most cases considerable. Occasionally fairly large lines are mentioned as being put through in shirtings for China, and advices from Shanghai denote that in spite of heavy stocks held there the outlook is not discouraging. It would seem that certain makes of cloth require replenishing, but not much has been done this week. The turnover for India con-

tinues of small dimensions, and with the exception of a little activity on the part of buyers for Madras, very little has been done for the different outlets. Fine goods, such as muldhooties, continue neglected. Certain firms who usually produce these cloths are extending their holidays owing to a lack of work. The smaller markets only provide a miscellaneous business of small dimensions. The South American outlets are healthy enough, but buyers hesitate before operating freely at a time like the present, for the raw cotton situation is so uncertain. Burnley printing cloths have again moved slowly, especially the commoner kinds, and manufacturers are getting rather concerned at the paucity of business coming round. T-cloths and Mexicans are generally firm, but slight weakness can be noticed here and there. Coloured woven goods and sateens have moved in small lots, few transactions of weight being reported. Shirtings on the whole are well held owing to engagements. In home trade goods the orders have only been small in extent. Buyers have hesitated to do business in large lines. Home trade American yarns have only moved off quietly in all counts and qualities. Twist continues firm, and weft is a shade easier, as in the coarser numbers there is rather overproduction. There is still some pressure for delivery in good cop twist, but this is not so marked as a few weeks ago. In export bundles very little trade of importance has transpired. Two-fold yarns are deeply engaged, and spinners have continued firm at late rates. Egyptian yarns are variously situated, the finer numbers being firmly held owing to engagements, but the commoner kinds have again been quiet. In doubling wefts an increasing trade has been done, and spinners are well off for orders.

In New York the cotton market opened with a steady tendency, a point or two higher, and the improvement was sustained for some time. This was followed by a slight ease, but again there was a rally on reports of less favourable crop conditions. At the close the market is a trifle firmer.

Coal.—Much the same may be said of markets this week as last. House coals, if anything, are receiving a little more attention, and merchants are beginning to prepare for the autumn and winter trade. Special summer price lists have been withdrawn, and the tone is firmer. The Yorkshire industry still shows an amazing activity in steams, especially for shipment, last week's exports from Hull reaching a total of 85,753 tons compared with 28,428 tons in the corresponding week of 1905, and if supply were not quite equal to demand there would be a considerable advance in values. Further north gas and coking coals are the chief features, the supply of the latter being hardly equal to requirements and prices stiffening in consequence. Quotations for foundry coke are 19s. 3d. per ton, f.o.b., and medium, 17s. 9d. Scottish trade is firmer generally with prices practically unchanged, and in Wales conditions are healthy. Output is increasing and prices are firm.

Copper.—The buying of this metal still continues good, and a fairly large turnover was reported. Prices opened at an initial advance, firm American advices and considerable speculative buying helping the rise. Bears were also covering readily, and influential support was received for future metal. Cash warrants were in very small supply, but later in the week the speculative enquiry slackened, and prices were disposed to ease off, the figures being £84 12s. 6d. cash and £84 10s. for three months

Tin.—This market commenced quietly, but important shipments to New York and the fact that the London stocks have been reduced kept the market firm. Prices opened at a good advance, and bear covering easily sustained the improvement. Slight weakness then supervened owing to the receipt of lower Eastern cables, but quotations soon recovered when some good orders came forward, and prices went up again to £183 2s. 6d. for cash and £184 for future delivery.

Iron and Steel.—Business is still brisk in these industries, and it is many years since there was so spirited a demand. Firms everywhere are working full time, and in some places difficulty is actually being experienced in getting a sufficiency of workmen to carry out the orders on hand. The large consumption and the improbability of any increased foreign supplies being available make users anxious to cover future requirements, and forward buying is more active probably than it has been at any time this year. Some smelters of pig-iron have sold their productions up to the end of the present quarter, and are not disposed to commit themselves further. In Scotland the pig-iron warrant market also continues exceedingly strong, mainly because of the heavy buying of Cleveland iron by Germany and of the good reports from America. Even merchants in the Glasgow district have received cables from the United States asking for quotations for various kinds of iron, but so far no actual business has been done. In fact, the demand from Germany is appreciably affecting this market everywhere, and the outlook is regarded as exceedingly hopeful.

Tea.—With improved quality now coming from India, says Messrs. W. J. and H. Thompson's circular, and in a smaller degree from Ceylon, coupled with news of smaller shipments from the former country, the market has developed a distinctly better tone, rates for all except common being strongly maintained. Indian auctions comprised 32,625 packages, of which 30,151 packages sold on garden account at an average of 7.93d., against 7.7d. last week and 8.11d. per 25,064 packages, last year, Assams and good liquoring Dooars being the best supported. In Ceylon teas also, although auctions were again heavy, as they amounted to 33,417 packages, bidding was good, and prices steady for all but the commonest. The week's sale averaged 6.60d. against 6.42d. last week, and 7.24d. in 1905; 2,668 packages of Java were offered, demand for them running on medium and better sorts as in the other markets; 120 packages from Tanawattee realised 10½d. per lb. The quantity of Indian and Ceylon tea taken outside the United Kingdom during the last six months shows a satisfactory increase—according to Messrs. Gow, Wilson, and Stanton, Limited, 61,148,171 lbs. against 53,604,350 lbs. The extraordinary low prices now ruling for medium and common teas gives an exceptional opportunity for fostering their use in foreign markets. The bulk of the increase is in re-exports from the United Kingdom, and amount to over 4,000,000 lbs.

Sugar.—A further moderate transaction in beet to New York and firmer quotations from there, as well as the news of the insurrection in Cuba, created more demand for August-September at 3¾d. advance, partly for covering "bear" sales, and the new crop likewise improved about 1½d. per cwt. It is extraordinary, says Mr. Czarnikow, that with 38,000 tons 88 per cent. beet stored in Hamburg and a good quantity in river barges, there should hardly have been any tenders for some time, notwithstanding the premium quoted over September. Some people doubt whether the stock is correct, and that holders should sacrifice one month's charges and interest does seem strange. Meanwhile, the exports from Germany continue on a large scale, 40,000 tons having left the country in the first ten days of August, whilst last year the total quantity for the month was only 60,000 tons. At this rate our stocks on October 1 will get much reduced, unless production begins earlier than last year. The American market has improved slightly. Meltings at 49,000 tons are higher than before, and with imports of 28,000 tons stocks are reduced to 279,000 tons.

MINING RETURNS.

Battlefields (Rhodesia).—1,050 tons, 753 ozs.; cyanide, 720 tons, 649 ozs.

Briseis Tin.—Shipped 28 tons, including 11 tons on account of New Brothers Home No. 1.

British Broken Hill Proprietary.—2,403 tons crude ore produced 387 tons concentrates, containing 236 tons lead and 11,223 ozs. silver.

Broken Hill Proprietary, Block 10.—Treated 11,221 tons ore, producing 1,507 tons concentrates, containing 934 tons 7 cwts. lead and 48,224 ozs. silver.

Broken Hill Proprietary, Block 14.—Treated 4,575 tons ore, producing 655 tons concentrates, containing 407 tons lead and 19,585 ozs. silver.

Esperanza.—Crushed 13,890 tons of dry ore; shipped to smelter, 6,784 tons of dry ore.

Indarama Co. Butterfly.—Milled 1,000 tons, 325 ozs.; cyanided 1,000 tons, 177 ozs.; total, 502 ozs.

Kelantan.—No. 3 recovered 31 ozs.

Komata Reefs.—Crushed 1,600 tons; bullion, £3,725.

Mount Lyell.—Treated 29,338 tons of ore. In addition 259 tons of purchased ore and metal-bearing fluxes. The converters produced 739 tons blister copper, containing:—Copper, 731 tons; silver, 49,750 ozs.; gold, 1,431 ozs.

North Broken Hill.—2,000 tons crude ore, producing 341 tons concentrates, containing 240 tons 15 cwts. lead and 4,944 ozs. silver.

Oroville Dredging.—Gross returns, $19,000.

Ouro Preto.—6,050 tons ore produced 2,244 ozs.

Palmarejo and Mexican.—Zapote: Crushed 3,315 tons; treated 2,900 tons, producing $13,040 gold, $39,710 silver.

NEXT WEEK'S MEETINGS.

Tuesday, August 28.

Ascot District Gas.—50, Cannon Street, noon.
Bolckow, Vaughan.—Manchester, 2.30 p.m.
Forth and Clyde Railway.—Sterling, 3 p.m.
Workington Iron.—Workington, 4 p.m.

Wednesday, August 29.

Gloucester Railway Carriage and Wagon.—Gloucester, 12.15 p.m.
John Abbot and Co.—Gateshead, 2 p.m.
Mather and Platt.—Manchester.
Scott (Walter).—Newcastle-on-Tyne, 12.30 p.m.

Thursday, August 30.

Guest, Keen, and Nettlefolds.—Birmingham, 2.15 p.m
Goldfields of Matabeleland.—Cannon Street Hotel, noon.
Lawes Chemical Manure.—58, Mark Lane, noon.
London General Omnibus.—Salisbury House, 3 p.m.
Mersey Railway.—Worcester House, noon.

Friday, August 31.

South Hetton Coal.—39, Lombard Street, 1 p.m.

British and Argentine Corporation.—Mr. John Waddington, J.P., has been unanimously elected a director.

The Bank of Adelaide opened a branch at Snowtown, South Australia, on July 17.

The chairman of the Royal Mail Steam Packet Company, Mr. Owen Philipps, M.P., accompanied by Mrs. Philipps, left Southampton yesterday in the new twin-screw R.M.S.P. *Amazon* for Buenos Ayres on a business tour.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended Aug. 17, $3,002, decrease $710.

Argentine North Eastern.—Traffic receipts for week ended July 20, $24,720, increase $8,544; aggregate from January 1, $561,190, increase $49,261.

Assam Bengal.—Traffic receipts for week ended July 21, Rs. 67,809, increase Rs. 13,420; aggregate from July 1, Rs. 2,13,396, increase Rs. 31,240.

Canadian Northern Railway.—Traffic receipts for week ending Aug. 21, $133,200, increase $57,800; total from July 1, $1,006,490, increase $255,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended July 21, Rs. 20,250, increase Rs. 380,000.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 2nd week of Aug., $18,630, increase $2,236; aggregate from January 1, $560,499, increase $84,363.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended July 14, Rs. 20,250, decrease Rs. 1,391.

White Pass and Yukon Railway.—Traffic receipts for the week ended Aug. 14 amounted to $63,698.

English.

Cleator and Workington Junction.—Receipts for week ending August 18, £1,153, increase £41; aggregate from July 1, £7,933, decrease £170.

Cockermouth and Keswick Railway.—Receipts for week ending August 18, £1,133, increase £41; aggregate from July 1, £7,917, increase £336.

East London Railway.—Traffic receipts for March, £4,206 decrease £188.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending August 18, £371, increase £28; aggregate from July 1, £1,966, increase £101.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Blessington and Poulaphouca.—Traffic receipts for week ending August 15, £56, increase £18; aggregate from July 1, £236, increase £38.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 17, £4,976, decrease £148; aggregate from July 1, £39,692, increase £838.

British Electric Traction.—Receipts of all the Associated Companies for the week ending August 17, £30,444, decrease £11; aggregate from January 1, 1906, £978,684, increase £113,274; 428¾ miles, against 424¼.

Burnley Corporation.—Traffic receipts for week ending August 18, £1,268, increase £78; aggregate from July 1, £8,840, increase £696.

Dublin and Blessington.—Traffic receipts for week ending August 15, £213, increase £1; aggregate from July 1, £1,231, decrease £2.

Dublin and Lucan.—Traffic receipts for week ending August 17, £147, decrease £8; aggregate from July 1, £1,018, decrease £44.

Dublin United.—Traffic receipts for week ending August 17, £5,460, decrease £101; aggregate from July 1, £39,137, increase £318.

Edinburgh and District.—Traffic receipts for week ending August 18, £4,946, increase £40; aggregate from January 1, 1906, £163,971, increase £3,411.

Hastings and District.—Traffic receipts for week ending August 16, £1,375.

Isle of Thanet.—Traffic receipts for week ending August 18, £1,819, decrease £27; aggregate from October 1, £23,990, decrease £1,085.

London County Council.—Traffic receipts for week ending August 11, £28,987, increase £11,699; aggregate from April 1, £507,143, increase £217,313. Miles 99 against 51½.

London General Omnibus.—Traffic receipts for week ending August 18, £20,629, decrease £1,827; aggregate from July 1, £170,136, decrease £8,395.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending August 18, £3,347, increase £2,230.

London Road Car.—Traffic receipts for week ending August 18 £6,982, decrease £188; aggregate from July 1, £58,885, decrease £446.

Rossendale Valley.—Traffic receipts for week ending August 10, £206, increase £3; aggregate from July 1 £1,232, decrease £3.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending August 19, £859, increase £36; aggregate from January 1, £27,401.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending August 19, £15,829, increase £2,725; aggregate from January 1, £488,714 increase £53,476.

Barcelona.—Traffic receipts for week ending September 23. £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of May, 1906, £11,691, increase £776.

British Columbia Electric.—Nett earnings for June, $29,696, increase $3,858. Nett earnings from July 1 to June 30, $491,294, increase $129,614.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending July 22, £3,492, increase £69; aggregate from January 1, £103,390, increase £6,203.

Buenos Ayres Electric.—Traffic receipts for week ending July 21, £1,323, increase £119; aggregate from January 1, £39,715, increase £7,258.

Buenos Ayres Grand National.—Traffic receipts for month of June, $271,500.

Calcutta.—Traffic receipts for week ending August 18, Rs. 44,728, increase Rs. 1,092; aggregate from July 1, Rs. 3,06,736, increase Rs. 8,938.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of July, £4,049, increase £604. Total from January 1, £31,515. increase £11,532.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of June, $484,590, increase $92,062; aggregate from January 1, $2,554,608, increase $383,138. Nett traffic receipts, $269,046, increase $54,371; aggregate from January 1, $1,340,226, increase $208,283.

§ From July 1.

DIVIDENDS ANNOUNCED.

BANKS.

Bank of North Queensland.—Usual at the rate of 2½ per cent. per annum for half-year to June 30.

London of Mexico and South America.—Interim for half-year ended June 30 of 5s. per share.

BREWERIES.

Milwaukee and Chicago.—Interim at the rate of 5½ per cent. per annum on the capital stock for past half-year.

Swansea United.—Interim on the ordinary capital at the rate of 5 per cent. per annum for half-year ended June 30.

MINES.

Great Boulder Proprietary.—Interim of 9d. per share on account of the current year.

"O.K." Copper Mines Development Syndicate.—(No. 7) of 6d. per share.

MISCELLANEOUS.

Aberdeen Suburban Tramways.—2½ per cent. for half-year to July 31, carrying £131 forward.

Adelaide Electric Supply.—On the preference shares at the rate of 6 per cent. per annum for half-year ending Aug. 31, payable Sept. 1.

Astley and Tyldesley.—15s. and a bonus of 10s. per fully-paid share, and 12s. and a bonus of 8s. per £8 paid share, being at the rate of 25 per cent. per annum for half-year ended June 30, carrying £10,600 forward.

Barlow and Jones.—Interim at the rate of 8 per cent. per annum on the ordinary shares for half-year ended June 30.

British Insulated and Helsby Cables.—Interim on the ordinary shares at the rate of 8 per cent. per annum for half-year ended June 30.

Crossley Bros.—Interim at the rate of 10 per cent.

Eastman Kodak of New Jersey.—Usual quarterly of 1¼ per cent. (being at the rate of 6 per cent. per annum) upon the outstanding preferred stock, and of 2½ per cent. (being at the rate of 10 per cent. per annum) upon the outstanding common stock. Payable October 1.

Fletcher, Russell, and Co.—Interim of 1s. per share on the ordinary shares, being at the rate of 10 per cent. per annum, for half-year ended June 30.

Fraserburgh and North of Scotland Trawling.—10 per cent., carrying £300 forward.

George Whitechurch.—Balance on the ordinary shares of 7 per cent. for six months ended June 30, making 10 per cent. on the ordinary shares for year.

Glasgow Cotton Spinning.—For half-year ended July 31 at the rate of 7½ per cent. per annum, carrying forward £7,050.

International Investment Trust.—Interim for half-year ended July 31 at the rate of 4½ per cent. per annum on the preferred stock.

London and Glasgow Engineering.—Dividend, including bonus, of 29s. per share, carrying forward £28,114.

Lynn Gas.—Interim of 6½ per cent.

New Zealand Insurance.—Interim at the rate of 10 per cent. per annum.

Oxford Electric.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

Penarth Harbour, Dock, and Railway.—Usual at the rate of 5¼ per cent. per annum on the ordinary stock for half-year ended June 30 last.

Smedley's Hydropathic.—Final of 10s. per share, making 12½ per cent. for past year, and a bonus of 20s. per share.

Thomas and Evans and John Dyer.—7½ per cent. per annum on the ordinary shares, carrying forward £3,210.

William Stones.—Placing £5,000 10 reserve, 18s. 9d. each on the ordinary shares, being at the rate of 12½ per cent. per annum, placing £5,000 to reserve, and carrying £1,699 forward.

Wilson Brothers Bobbin—8 per cent. for year ended July 14, placing £5,000 to reserve, and carrying £2,147 forward.

Wilsons and Union Tube.—Half-year's of 5 per cent. on the preference shares.

CORK GAS CONSUMERS' COMPANY.

During the half-year ended June 30 the total revenue was £26,384 showing a small increase over the corresponding period due, the directors say, to a satisfactory return from residuals, the extended use of gas for cooking and heating, and the large number of slot meter consumers. After providing all ordinary expenditure, the nett balance is £7,737, from which debenture interest and bank charges take £574, sundry expenses £385, Parliamentary outlay £196, and bad debts allowance a similar sum. One or two smaller debits take £35, leaving £6,350 which permits a dividend at 8 per cent. per annum with £795 added to the reserve. All told the reserve funds amount to £15,541, of which £6,275 is separately invested.

BRITISH GUIANA.—Tenders for the issue of £70,000 British Guiana 4 per cent. immigration 10-year debentures were opened on Monday at the office of the Crown Agents for the Colonies and amounted to £207,100 at prices varying from the minimum of £100 to £102 3s. Tenders at £100 16s. receive about £43 per cent. of the amount applied for; those above that price in full. The average price obtained was £100 16s. 11d. per cent.

Prices of Mine and Mining Finance Companies Shares.

Shares £1 each, except where otherwise stated.

THE PUBLISHER

The Times Weekly Edition,

PRINTING HOUSE SQUARE. LONDON, E.C.

Herewith remittance for £ : : Kindly forward regularly THE WEEKLY EDITION of THE TIMES with the _____ Supplement to the following address for _____ Month .

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by Clement Wilson, at Norfolk House, Norfolk Street, Strand, W.C.—August 25, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 452. SATURDAY, SEPTEMBER 1, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Railway Half-Year.

There is not much fresh to be said about the accounts of English railway companies for the six months ended on June 30 last, but it may be well to emphasise a little the improvement shown in their position. All the companies showed more or less substantial increases in their gross receipts except the Metropolitan, and into its special position we need not now inquire. It, like the District, is in a transition state, and we must wait perhaps a year or two before attempting to form a judgment of the consequences likely to result from electrification. They ought to be good, time given, and it is certainly too early as yet to indulge in lamentations. Among the greater companies which gathered in substantial increases the most prominent were the North-Western, with an increase of £307,000, the North-Eastern whose receipts went up more than £294,000, and the Midland, the rise in whose income was £243,000. Then came the Great Central with upwards of £147,000 more, followed by the Great Western whose gain was only £135,000. The greater part of these increases came from goods and mineral traffic, and reflected the important improvement which has taken place not only in the foreign, but in the internal commerce of the Kingdom. It has been racing along like a dammed up flood let loose. First and second class passenger traffic was by no means elastic in any direction, and companies serving the metropolis have all had to complain of the competition of tramways and motor 'buses. This competition is likely especially to hurt the underground lines for some time to come, and the outlook there is accordingly rather clouded.

With such additions to the gross income it was to be expected that a more or less substantial improvement would take place in the dividends paid to the holders of the ordinary stocks, and accordingly most of the companies either did better on this head or carried forward a little larger balance. Both the North-Western and the North-Eastern gave their shareholders ½ per cent. per annum more than in the corresponding half-year; the Midland increased its dividend by ¼ per cent. per annum, and so did the Great Eastern and the North Staffordshire, but the Metropolitan distributed 1 per cent. per annum less, and there was a decrease of ½ per cent. in the yield of the Tilbury Company, while the Great Western stuck at 3¾ per cent., the Great Northern at 3 per cent., and the South-Western at 4 per cent. The South-Eastern, however, gave ½ per cent. more. These results seem rather insignificant compared with the increase in the gross figures. In the case of the Great Northern, for instance, the increase was almost £114,000, and yet the only benefit was a larger balance carried forward, which may help the deferred stockholder when the year is completed. It is the more surprising that better results were not reaped by the ordinary stockholders in that some little attempt was made to save in working expenses. In most instances the percentage of these to the gross receipts was slightly less than a year ago. Any such improvement, however, cannot be depended upon to last because the public continues to demand greater comfort, greater speed, more facilities of all kinds, not only in travelling, but in every branch of the carrying business, and electrification of the main lines looms near for all these companies. We noticed

the other week that the Midland was about to put a small portion of its line in the north under electricity, and the chairman of the North-Western Company intimated to the shareholders at the meeting that his board contemplates electrifying the company's suburban lines as far out as Watford.

This is only the beginning, and it means an indefinitely large increase in the already formidable burden of capital, a burden nothing is ever done to reduce but which is continually increasing, and increasing in ways which we continue to doubt the wisdom of. Last half-year, for example, 17 English railway companies spent nearly £900,000 of capital on new working stock alone, and their total capital outlay for the half-year was nearly £4,250,000 of which nearly £1,900,000 went into lines open for traffic. The result of these continued increases in the capital account is partly visible in the enlarged charges thrown upon revenue for interest and preference dividends. Each half-year sees an expansion in the burden borne the year before in the case of nearly all the companies. There may be adjustments, and burdens may be shifted or hidden under other names, as was the case last half-year with regard to the Midland and Great Central joint lines, a new guaranteed stock to pay, therefore, having been issued which recouped the capital spent by the Midland Company and enabled it to show a credit therein on the half-year. None the less was £245,000 added to the formidable weight of its capital by that company on expenditures of various kinds within the half-year. This was not so much as the North-Western Company, whose gross outlay was about £337,000, but all figures of the kind pale entirely before those of the Great Western's total which was £1,158,285 for the half-year, including subscriptions to other lines, and no less than £470,000 of which went into lines already open for traffic, and £228,000 odd into new working stock. Part of this outlay was for electrification of the Hammersmith and City branch, but the figures were, on any explanation in excuse, most formidable, and the tendency of all such expenditures must be to hurt the position of the ordinary stockholder. He runs all the risk, unless in the case of companies like the Great Central, the District, or the Chatham, where the ordinary capital is so remote from revenue that nobody dreams of taking it into account as a dividend-producing asset.

But even powerful corporations like the Great Western, the North-Western, Midland, and North-Eastern must all hurt their ordinary shareholders whenever traffic slackens, and, time given, whether or not, as in the course of years, not only the weight of preference charges becomes heavier, but the mass of ordinary stock to earn dividends upon grows more formidable. It is, therefore, in the order of things that the charges ahead of the ordinary stock should show an increase of nearly £15,000 in the past half-year compared with the first half of 1905 in the case of the Great Western Company, that the Midland's overburden of this kind should have risen nearly £8,000, the North-Eastern's nearly £21,000, the Brighton's fully £9,000, and so on. Even where the preferential and floating debt interest charges seem to be down, it is merely a matter of transfer of the charge imposed by floating loans to an increased amount of ordinary stock over which the balance left for dividends has to be spread. From this point of view the outlook is always unsatisfactory for British railways, and we never examine their accounts without feeling regret that they did not start on a better plan. There ought to have been sinking funds established or fixed percentages set aside with a view to the redemption of the various debts from the very first, and we must repeat that we cannot regard the policy of these companies in charging all new working stock to permanent capital account as one of thrift or prudence. There are other items in their accounts debited to capital, such as a large proportion of the law and Parliamentary charges incurred, which, insignificant though they may seem in any individual half-year, in course of years mount up and attain a magnitude well calculated to help to intercept the dividend which should have belonged to the holder of the common stocks.

All these things, however, are likely to be forgotten at present while the business of the country continues to flourish and grow, while the travelling habits of the people are steadily swelling the passenger traffic, the numbers of those who use the railways in their journeyings for pleasure or business; and as we have repeatedly said of late, the immediate outlook for all these railway common stocks is favourable to higher prices. A sentiment is awakening among the public that it is a good time to buy such stocks, and to hold them for a rise, and sentiment always has a most powerful influence upon price movements. For a time the mere indulgence in this revived habit of buying will effect the purpose sought, and unless the Money market checks the movement we shall probably see a substantial advance in all these stocks between now and the end of the year. And it may be justified by better dividends next January, but a passing movement of this kind and transitory increases in the dividends paid on the ordinary stocks cannot alter the set tendency of our railway finance. That tendency is towards the destruction of all ordinary stocks as reliable dividend-earners. Is it too late to change the policy? Some of the companies have tiny reserve funds hidden or disclosed, others manipulate their figures so as to claim the existence of such reserve funds when a great emergency arises such as the loss caused to the North-Eastern by the stoppage of Pease's Bank; but none of them have systematically reorganised their finances with a view to escape from dependence upon their bankers, or upon the investment market, when they want more money. And no company ever dreams of setting aside money systematically to be used even to equalise dividends. Everything is divided up to the hilt at least once a year, and the finances of all the companies are, therefore, conducted on the happy-go-lucky system. If chance favours the ordinary shareholder for a year or two it is well, if otherwise he suffers not only from the setback in nett earnings which may arise when trade conditions are adverse or when the country is impoverished, but also from the additional dead weight of capital piled up in the meantime. It is a fine trait of the English race this habit of building—and of borrowing—for all time, a mark of its strength, its self-confidence, but it has its dangers.

Motor Buses, Cabs, and Rickshas.

We suppose we ought to be grateful to the motor 'bus promoter for providing us with some interesting copy during the dead season of the year. The further our investigation goes the more instructive it becomes, and we now append details of another batch of companies whose unfortunate case we have enquired into. As a rule, when the public is asked to furnish capital for anything novel or striking in the company line a kind of insanity breaks out, and a rare lot of money is lost or thrown away before it is fully realised that the main purpose of the promotions is to provide nice fat profits for greedy and unscrupulous vendors and others, rather than the establishment of a solid and remunerative industry. We have had numerous examples of this truism during the past decade, and the success which attended the plotting, scheming, and thieving encouraged some of the out-o'-works to have another try. But once bitten twice shy is an old saying, and although it does not usually apply to company shareholders, who as a class are proverbially reckless and stupid, seems to fit admirably in the present case. We never remember an instance in which the true worth of the company promoters' efforts was so intelligently sized up as with these motor ventures. A few unfortunate people have been induced to risk their hard-earned savings, but in most cases the prospectuses put before the public have been so audacious that they have failed to deceive and entangle the most simple speculator. With nine out of ten ventures the thing is worked out on the principle of heads I win,

tails you lose. We are not going to point to any particular company, because nearly all are tarred with the same brush, but in a good many instances not a farthing's worth of assets are handed over, and the deferred share trick has been made very free use of. Let us just trace the history of one of these things. A few of the knowing ones put their heads together, and come to the conclusion that the public would be impressed with the possibilities of big profits from a line of 'buses running from Land's End to John-o'-Groats. So a little promoting company is formed with a capital, say, of a couple of hundred pounds, whose sole assets consist of this brilliant idea. Sundry wordy and often unintelligible agreements are entered into, under which the mentioned "assets" are acquired by another company possessing a capital of, say, £451,000, divided into 450,000 £1 ordinary shares and 20,000 1s. deferred shares. First of all, we find that a few thousand pounds is paid to the promoting company, which then undertakes to meet all the preliminary expenses, such as registration, advertising, bribing, &c., and, if possible, gets a portion of the capital guaranteed, said portion being the minimum subscription on which allotment can be made. It is all so delightfully simple. The two hundred pound company, in which about four more or less impecunious people are usually interested, also receives all the mentioned deferred shares. These deferred shares get half the profits after, say, 10 per cent. has been paid on the ordinary, and the whole thing comes to this—outsiders provide all the money and take all the risk. If the 'buses in which their capital is invested turn out successfully the promoters come in for a huge share of the profit for doing nothing, while if, on the other hand, the enterprise proves a failure the investor alone suffers and the promoters lose nothing. No wonder such one-sided bargains have failed to attract, and it is really amusing to note the trifling response to some of these well-advertised ventures. It appears to have ranged from nothing up to 25 or 30 per cent. at the very most, and we are greatly impressed with the good sense displayed. We have not seen a motor 'bus prospectus for months now, and fancy a still longer period will elapse before we shall set eyes on another. To put the matter plainly, the whole thing has been a miserable fizzle, and those individuals and firms who so lightly risked their money in underwriting on the idea that the public was going mad again have got some tidy losses to nurse. Attempts to make a market in the shares failed utterly, and instead of the seductive premium which is usually quoted during the time the subscription lists are open, often as not the shares tumbled to a discount. Once or twice the regular intimation was sent out that the shares of such-and-such a company had been dealt in at a small premium, and it was not at all difficult to get the contract note produced, transactions of this kind being wonderfully easy of arrangement, but nobody is nowadays taken in by these painfully obvious devices. Up to the present we have confined our research to those enterprises which saw the light in the ordinary way, through the advertising and editorial columns of the newspapers, but the present instalment does not nearly exhaust the list. We have many more to overhaul, large and small, bad and indifferent, and as opportunity offers we shall duly record the result. Not only the propositions actually put before the investor but the little promoting companies as well will be inquired into in the fairly certain hope that they will afford some interesting and educative material. In writing the foregoing we have no particular company in mind, and our remarks must be applied generally rather than individually. We have no grudge against any one company, being anxious only to guard and warn the ordinary investor against the many pitfalls which endanger his path; to show him how and for what purpose many undertakings are brought into existence, so that a judgment may be easily formed of the real need for such enterprises, and whether under all the circumstances they are likely to prove a permanent success. We should not like to say that no single company will do well, possibly one or two are already more than paying their way; but the outsider is wise not to lose his head over visions of untold wealth which are never likely to turn into solid and tangible profits.

The Great Eastern London Motor Omnibus Company.

This is the company which obtained a certain notoriety by posting up the prospectus in its 'buses, and boldly announcing on the front of the car the last day for receiving subscriptions. That an enterprising device like this should not succeed seems a little discouraging, but the public was unappreciative as, although 300,000 shares were offered, the underwriters had to extend a lavish hand in order to make up the minimum of £100,000. The total capital is £405,000 in 400,000 ordinary £1 shares and 100,000 1s. deferred shares. There was one good point about the company, and that was that when the prospectus was issued it had 20 'buses running, but as the directors did not see fit to produce any actual profit figures this fact counted for little. The usual optimistic estimates were indulged in, but people naturally wondered why so good an opportunity to make known real results was not grasped with eagerness. A very large number of contracts were entered into with various companies in which one of the directors was interested, and we cannot help thinking that this kind of thing, although it may be, and doubtless is, perfectly legitimate and above board, has not a little to do with the ill-success which has attended these promotions. People naturally dislike these inside interests. The Eastern Omnibus Passenger Trust was the vendor in this case, and the consideration paid for the various assets acquired seemed fairly liberal. We append some of the largest holdings:—

Gearless Motor Omnibus Company.

Ten special advantages over all others were claimed for this company's particular vehicle, which was described as a new departure in motor omnibus construction and operation. But nobody seemed to care twopence about the remarkable characteristics possessed by the company's 'bus, and the list of shareholders conveys the impression that the underwriters had to earn their commission in order to ensure the subscription of the minimum amount of £50,000. The capital was fixed at £220,000 in 215,000 ordinary £1 shares, and 100,000 deferred 1s. shares, the whole of the ordinary being offered. None of the directors were interested in the promoting Cerol Syndicate, but one of them owns about 1,000 shares in the London and Parisian Motor Company, which will supply the chassis. Preliminary and other expenses were put down at £7,500, apart from the underwriting costs, which run away with another £5,000 or so, and the Cerol Syndicate receives all this money subject to its own sub-contracts, and all the deferred shares, so that it at least is all serene. We are not conscious of having encountered any gearless motor 'buses plying for hire, but as they are said to be practically noiseless we may

have missed them. The ordinary motor 'bus is easily detected while it is still a mile away. We append a list of the principal holdings :—

Motor Ricksha Company.

Searching company records at Somerset House is apt to become a rather wearisome business, and it is only very occasionally that something humorous crops up to relieve the monotony. But somehow the name of this oddity raised a kind of hope that the documents would not be so very prosaic, and to our intense delight the hope was no false friend. The thing is not as funny as we should have liked, because it is often a good thing to wind up a serious subject with an episode in lighter vein, but a subscription of £1,770 out of a total amount offered of £35,000 possesses a certain humour. The minimum subscription of £1,750 was exceeded by no less than £20, but up to the present the streets are not exactly teeming with motor rickshas. The idea seems to be to attach a sort of car to either side of a motor cycle, and then delude yourself into the belief that you possess a first-class motor-car at wonderfully little cost. Some comical figures, statistics, and so forth were put into the prospectus, but we need not be hard on the thing because it produced a certain amount of advertising for the financial dailies, and it only remains to extend our sympathies to the unhappy little band comprised in the following. It is a complete copy of the share register :—

General Motor Cab.

We can now turn to another branch of the motor transit business. If London can have good motor omnibuses—and we shall get these in time with a little patience and forbearance—why not motor cabs? These vehicles serve Paris with the greatest success, and on the face of it there seems no reason why equally good fortune should not attend their advent to the streets of London. So far as one can tell the cabs leave little to be desired; they run smoothly and easily, make very little noise, are extremely comfortable, and, most important of all, quite reliable; at least, we never saw one break down. All are fitted with the taximetre, and whether the London cabman likes it or not the London public will not much longer consent to a system which deprives one of all knowledge of a distance covered, or what fare will be demanded at the journey's end. In the long run the system of recording the length of a journey with the payment of the proper charge at the end would undoubtedly pay better than the present method, because a much greater number of people would use cabs if the cost did not render the hiring more or less a luxury. It should be easy, too, to teach a man of ordinary intelligence how to handle the new vehicles, and for these reasons we shall welcome the taximetre motor cab when it makes its appearance. Evidently French investors have faith in the success of the business in London, because the greater part of the money subscribed for the English company was put up by Frenchmen. The concern has a capital of £260,000, divided into 257,000 preferred ordinary shares of £1 each and 60,000 deferred shares of 1s. each, the first issue consisting of 230,000 preferred ordinary shares at par. Of these no less than 200,000 were underwritten, so that it is pretty certain we shall get our cabs. They will be supplied by the French company, and while the profit calculation seems somewhat extravagant the company could not be set down a failure if it earned half the amount estimated. The United Investment Corporation is the intermediary, but instead of getting its proportion of the deferred shares, one-half, for nothing it has to pay for them at par. The remaining moiety is taken by the French taximetre company on the same terms. In other ways, however, the preliminary expenses are rather heavy, as underwriting alone cost no less than £20,000, but if carefully and efficiently managed it is not improbable that the enterprise has in it the elements of success. From the subjoined details from the share register it will be seen how largely French interests preponderate :—

Economic and Financial Notes and Correspondence.

Yankee Boss Methods.

It is surely an encouraging sign that the principal American papers, of whatever shade of opinion, have not a good word to say about the Union Pacific and Southern Pacific dividends or the method of their declaration. In fact, from every quarter comes strong denunciation of the flagrant market manipulation of the Harriman group. This is all the more significant because it is pretty generally admitted that financial opinion in the States is very largely moulded by the

views which the bosses wish to put forward, and so far as market information is concerned the papers are pretty much in the hands of the various "news bureaus" subsidised, if not entirely run, by the trust-mongers. But these modern highwaymen are probably impervious or indifferent to criticism of their actions so long as it does not interfere with their plans, and the critics seem to have been left with a pretty free hand. The *Wall Street Journal* indulged in some very effective mockery as thus: "It must be accepted as a fact that not a single director nor official of the Union Pacific bought or sold a share of stock upon foreknowledge of these dividends. For the directors of the Union Pacific are surely honourable men. Any director who bought stock from an innocent stockholder of the Union Pacific put himself in the position of a trustee who allowed his client to sell to him, the trustee, certain of the trust estate, keeping back from that client the knowledge that this part of the estate was about to become much more valuable. Therefore, it must be assumed that neither E. H. Harriman nor any other director used this tremendous bit of knowledge in the Wall Street market. If they had done so they would have been not one whit less culpable than would the trustee who swindled his client. This being so, the movement of the stocks of Union Pacific and Southern Pacific over the last four weeks becomes intensely interesting as a study in spontaneous activity. By way of illustration, prices at various dates may be compiled as follow:—

	July 19.	Aug. 2.	Aug. 15.	Aug. 17.
Union Pacific	144⅛ ..	157⅜ ..	161½ ..	170¼
Southern Pacific..	68⅞ ..	75⅞ ..	81⅞ ..	87⅜

"Are not these market advances singular things? Perish the thought that any director or executive officer of the Union Pacific or the Southern Pacific has sold his honour for stock profit! Some one else did this. Where Harriman genius has sown some other man has reaped the golden harvest." The New York *Globe* remarked that the source of the trouble is the irresponsible power of directors. "No one knows whether dividends will be proportionate to earnings. Now they are marked down; now marked up. This has narrowed the market for railroad securities. Stocks are often worth more than their conventional dividend-rate justifies; the man who wants to invest, not to gamble on how successfully he can read the melon-cutting minds of directors, is naturally afraid of the market." Similar criticisms appeared in most of the other papers, and the general impression created is that people who are not easily shocked by financial brigandage were disgusted at this latest illustration of the utter unscrupulousness of the market manipulators. But in these bustling days such feelings are soon forgotten, and the public display no more unwillingness to be fleeced than they did before. So the market remains at an elevation which commands our respectful admiration, and we suppose it would be useless to suggest that possibly a great deal of the apparent prosperity in Yankee Railroads is due to the enormous amount of new capital expended on them in the past few years. In the case of the Union Pacific the common stock has been nearly doubled since 1904, and altogether not far short of forty millions sterling has been pumped into the system recently. That represents a considerable amount of freight, and there are lots of pickings for and from other lines, all of which have been spending money as fast as they could raise it. But while the Union Pacific in 1904 distributed only 4½ million dollars on the common stock it is now to pay 20 millions, and the directors promise to keep this rate up so that there will be a good deal less money with which to create traffic. How long this kind of game can be continued it is impossible to say, but it would not surprise us in the least to see three-fourths of the American railways in the hands of receivers again, as they were little more than a decade ago.

The American Trust Failure.

There was an ominous pause in Wall Street when the failure of the Real Estate Trust Company of Philadelphia was announced, and it looked for a time as though the incident might be sufficient to upset all the boss plans of plunder. But the upward movement was quickly resumed, as if bad news were quite as effective as good for lifting prices. For the collapse of this trust is not quite such an insignificant item as some people pretended. If the reports are to be trusted, a sum of seven million dollars (£1,400,000) was required to save the concern—a tidy amount even in these days of megalomanical finance. The Philadelphian banks were prepared to find half the sum necessary to stave off default, and it may be taken for granted that desperate efforts were made to raise the balance. They did not succeed, and the doors had to be closed. The immediate cause of the collapse is said to be the speculations in real estate of the late president of the company, who committed suicide a week ago. Most of these financial trust companies, however, are in a thoroughly rotten condition, and how they escape disaster is a constant matter for wonder. Some day whole strings of them will crumple up like houses of cards, and the real estate boom which has been in progress for a year or two past will doubtless hasten their downfall. As we have often pointed out, these trusts keep scarcely any reserve of cash against their deposits, and it is rather amazing that widespread distrust about their position has not already made its appearance. But the people in the States have been thinking in the clouds so long that hard matters of fact have escaped their attention, or been deliberately ignored.

Allsopp's Committee's Final Report.

While patiently awaiting the issue of the annual report, which is being kept back pending the hoped-for final adjustment of the amalgamation scheme, stockholders of the unfortunate Allsopps have just been favoured with the final report of the advisory committee. It is a very exhilarating production, and if the advice tendered is taken this wonderful fusion scheme on which so much energy has been expended will never be consummated. The committee reserves its bombshell until the end of the report, and then boldly announces that it was only because imperfect knowledge was supplied to the shareholders that a majority favourable to the scheme was secured. The valuation placed upon the properties of Salt's and the Burton Brewery is sharply criticised, and the committee sets down their true worth at about 50 per cent. of the sum adopted for the purposes of the scheme. Allsopp stockholders are laden with most unfair burdens, it is said, and the position created is considered so serious that proprietors are practically invited to say if it would not be a good thing to ask the Board of Trade to conduct an examination of the company's affairs. It is the intention of the committee to oppose the adoption of the report at the annual meeting whenever it is held. Good and careful management could have avoided much of the misfortune, the committee says, and quite truly points out that the remedy is to be found not in further reductions of capital, but in large reductions in expenditure and increased trade. Pensions, directors' allowances, and principal salaries should all be revised, being much too high, and exception is taken to the policy pursued with regard to agents' remuneration. Fixed remuneration should be reduced one-half, and further payment be made to depend upon results. Reform, involving a reduction in expenditure, is likewise recommended in the advertising department, and the board ought to be able to concentrate its mind upon these suggestions with useful results. They could put one or more of the proposals into operation straight away, gradually introducing the others as opportunity offers. A display of energy in this direction would do much to conciliate shareholders, who see nothing but disaster in store if the existing policy is continued.

London and Glasgow Engineering and Iron Shipbuilding.

This company's business has produced some remarkable results during the last three or four years. Profits have fluctuated in a most extraordinary manner,

a rise from under £40,000 to £115,000 being followed by a sensational drop to £17,000. The last-named event happened during 1904-5, but in the twelve months ended June 30 last another tremendous spurt occurred, and the directors now report a revenue, after payment of all departmental and general charges, including depreciation, &c., of £91,197. Transfer fees produced £3 and £1,438 was brought forward, raising the available balance to £92,638. Directors' remuneration, £600, seems a very modest sum, and after this has been provided £92,138 remains. Curiously enough, the dividend is dropped from 7½ per cent. to 5, but on the present occasion shareholders get a bonus of £1 per £9 share, representing a further payment of about 11 per cent. Then £30,000 is transferred to the reserve fund, and no less than £28,114 is carried forward. Two years ago when the company also performed extremely well the dividend was restricted to 5 per cent. as now, and shareholders were given bonuses of £2 per share, but a similar amount of capital was immediately called up in order to render the shares fully paid. At that time the balance of the mortgage debt, £26,000, was also paid off, and £34,000 was added to reserve, this highly prudent and thoughtful method of handling the profits placing the company in a wonderfully sound financial position. The present addition of £30,000 will increase the reserve fund to £170,000, only £41,000 less than the entire paid-up capital, a large part of which was actually provided from profits as already shown. Additions to property account for the twelve months were £4,500, but £3,341 is deducted for old machines and tools written off inventory, and £4,575 is allowed for depreciation, so that the land, buildings, machinery and tools now appear at £209,808 against £213,225. Shares and debentures in other companies at market value are worth £82,988, and the cash balance is the great one of £141,402. It is therefore of no consequence that £33,247 is owing to sundry creditors against debtors £1,916, the position indicating that all finished contracts have been paid for, a very satisfactory state of affairs. Stocks and work in progress less instalments received amount to £43,470. In speaking of the year's business the directors say that several large contracts have been completed, but the works have not been fully employed. A considerable amount of trade has been placed with other firms, but the prices ruling were extremely low. The machinery, plant and buildings of the shipbuilding yard and engine works are in efficient repair, and well up to date with regard to modern machinery and appliances, but the directors say the boiler department requires to be modernised in many respects. This, however, will present no difficulties from the financial standpoint, because the directors can easily draw on the splendid reserves if necessary, which is only another example of the wisdom of prudence in the handling of a company's resources.

Steel Company of Scotland, Limited.

This company's annual report made up to July 12 supplies further evidence of the marked recovery which has taken place in the position of the iron and steel industry. The works were well employed, particularly at Blochairn Plate Mills, where the output was considerably in excess of any previous year. Hallside Mills were also much more active than in the previous twelve months, although no difficulty was ever experienced in overtaking the demand. Changes in prices, too, were more numerous than in 1904-5, thanks to the better demand for steel. In September of last year a large volume of business was done at the low prices then ruling, but as the demand continued and the cost of raw materials increased prices for steel gradually appreciated until the month of February. Since then they have remained stationary. The result is an increase in the company's manufacturing profit of £36,779 to £128,492, from which £34,359 against £33,010 is allowed for reconstruction of and additions to plant, leaving £94,133, an improvement of £35,430. Rents from workmen's houses and land, after deducting charges for repairs, &c., gave £1,016, and £4,265 was brought in making an aggregate credit of £99,414. Bad debts absorbed the trifle of £48, administration, general expenses, rates and taxes, &c., reached £15,973, directors' fees were £2,000, and debenture and other interest took £12,813. A few smaller charges need not be particularised, and before increasing the dividend from 5 per cent. to 7½ the directors add £25,000 or £20,000 more to the reserve fund, and write off £943 from the dwelling-houses at Hallside. The balance carried forward is then more than doubled at £8,699. Two years ago the dividend was only 2½ per cent., so that the payment has been trebled since 1903-4. The sum now added raises the reserve fund to £105,000, but £13,742 has been appropriated to the purchase of collieries, plant, shafts and leases, leaving £91,257 to credit of the account. Hitherto it has been the policy of the directors to purchase fuel from various coal masters, but after careful consideration of reports bearing on this question they have come unanimously to the opinion that it would be advantageous to acquire the mineral field, already partly developed, lying north and south of the Monkland Canal, about three miles from Blochairn works. This has been carried out, and arrangements are being made to further develop the property, so as to deliver the coal as cheaply as possible to the company's works. It is good policy to carry out a transaction of this kind through the medium of the reserve fund instead of charging the cost to capital, as the benefit to the shareholders will be so much the greater if the new policy results in a lower cost of producing the finished steel. During the year the trustees for the debenture stockholders redeemed by drawing £3,800 of the "A" first mortgage debenture stock bringing the total amount cancelled to £37,560, and leaving the balance outstanding at £112,440. A sum of £385 for premiums and other expenses was charged to profit and loss. The "B" mortgage debenture stock remains at £100,000 bringing the total debenture debt to £212,440, but it is reduced to £208,940 by the fact that the company holds £3,500 of Consols for the debenture stockholders, being the proceeds of land sold. Property at Hallside is valued at £297,632, and at Blochairn at £225,610, and while the depreciation directly written off is slight, we must not overlook the £34,000 odd charged against profits for reconstruction and additions. Loose plant and tools are in at £57,466, and floating stocks are valued at £113,681. Sundry creditors are fairly large at £110,121, but debtors reach £171,914 and cash is £15,271. Bills receivable of £59,441 have been already discounted.

Is the Rand Industry a Sucked Orange?

Mr. Raymond Schumacher is a magnate who has distinguished himself by diverse literary achievements, or, perhaps, we should more correctly say efforts; but whatever admiration one may feel for his mental gifts, it requires a prodigious effort of imagination to conceive him as a disinterested apostle of the rights of himself and his brother bosses. To regard those rights from many points of view, and particularly from the point of view of unselfishness and self-sacrificing magnanimity calls for that strong and uncommon mental calibre which, with all our desire to be just and to pay due homage to his qualities, we cannot feel Mr. Schumacher is gifted with. He has written much, but he has speechified even more, on many occasions during the last 12 months, and though he has made many admirable defences, and has proved to be a most vigorous counsel on his own behalf, still there has been an inability to take that broad point of view which has given his critics—shall we say his enemies?—opportunity to bring to nought so many of his elaborate pleas. A week ago this magnate delivered a speech at the annual meeting of the New Modderfontein Company, and made several observations thereat which are worth making note of. At the same time, we must feel that

the brief summary of his speech which has been cabled to this side may have misrepresented him, have done him an injustice, but, if so, Mr. Schumacher will, no doubt, speedily rectify it. He declared that the development and size of the property, and the cash resources all warranted an immediate and considerable increase of reduction plant, but little can be done before the coloured labour question is satisfactorily settled. Many other mines, said he, were in a like position, and the progress of the gold industry was retarded. These matters concern more particularly the shareholders in the New Modderfontein, who certainly will be anything but delighted to learn that a further huge expenditure of capital will be necessary before this big concern can pay dividends. Now this company, which has recently become a member of the Wernher Beit group, was originally formed in the year 1888, yet towards the close of 1906 not only is more capital needed, but it is absolutely impossible to forecast when it will earn its first dividend. And look at the capital! £1,200,000 in 300,000 shares of £4 each, nearly all of it water. For under the reconstruction scheme in 1894 the £200,000 in £1 shares became £1,000,000 in £4 shares, and it was increased to its present amount in 1902. True, the property is of an enormous size, so is the capital, but machinery cannot be bought with water, nor will workmen accept their hire in that element, and this is the simple explanation of its needy position to-day. Seeing that the company commenced to crush in 1892, and resumed after the war in 1903, and that at last the debit balance has been wiped out is no evidence that the company has been waiting all these years—fourteen—for a settlement of the coloured labour question. The fact is, somebody must pay for water, and shareholders must purchase huge plant and battery to enable decently large profits to be earned, and, let them not forget, simultaneously exhaust the gold in the property the more quickly. If other people have eaten up all the cake there are merely the crumbs and currants left for the late comers to the feast, and the fragments are much more costly than the whole cake. Mr. Schumacher's mind was quite keen enough to see these points, especially the contention that larger batteries must shorten the lives of mines. Imagining that some such answer might be made to him, he argued, with that subtlety that so strongly impresses the illogical, "Larger batteries will bring about lower working costs, and really lengthen the mining life of the country by rendering payable millions of tons of ore otherwise of too low a grade." If larger batteries will make low-grade ore pay, why import coolies? Here, then, is the very remedy for high costs the bosses are presumed to have been seeking? What a pity it was not thought of before. But how is this yearning for economical working to be reconciled with the limitless pumping of water into capitals? And it is to be observed that M. Schumacher spoke of the country in general, not of the Modderfontein in particular, as if the large battery of this company could be spread all over the country, and universally reduce working costs. On the lines of this argument it follows that enormous capital must be spent in increasing other batteries in order to earn problematical profits out of low grade ore. So ludicrous and inconsistent are all these pleas that they would not be worth answering did they not go down with many unreflective and ignorant people. Only recently the Transvaal Colonial Treasurer said the country should not be handed to posterity like a sucked orange, and this Mr. Schumacher described as an unfair picture. It is neither unfair nor untrue, for what other apt simile can be found for mines nearing exhaustion and those whose rich ore has already been "picked" out in the glorious days gone by?

The West African Mining Industry in 1905.

The Government Report.

The Government has issued its report on the mining industry of the Gold Coast for the year 1905, but there are few, indeed, who have eagerly awaited these statistics. Still, the figures have a certain amount of interest, if only to remind us that there is a gold mining industry in this part of the world, a fact we might excusably overlook. If we judged solely by the results of individual companies working there, the impression might be gained that the industry languishes, that the gold is of little commercial value, or is hardly worth the candle to exploit. This, however, would be an erroneous impression, for though profits are tiny and dividends nil, something that bears a resemblance to progress is actually being attained. More gold was won in 1905 than in any previous year, and shareholders in Jungle companies may well be surprised to hear it and to wonder whither it has all gone. We cannot say where it has gone, except in expenses, for it costs considerably more to get gold from West Africa than the metal is worth. And as far as we can see into the future, conditions do not promise any great change for the better. Says the report:—"Although the amount of gold obtained for the year did not reach the estimated amount, there is, nevertheless, a very considerable increase in output over the preceding years." This is set out clearly in the following table:—

Year.	Ozs.		Estimated Value. £
1896	23,941	....	86,186
1897	23,555	....	84,797
1898	17,733	....	63,838
1899	14,250	....	51,300
1900	10,557	....	38,007
1901	6,163	....	22,187
1902	26,911	....	96,880
1903	70,775	....	254,790
1904	104,460	....	378,480
1905	171,150	....	653,821

The report explains that last year's increase was obtained by the mines of the Gold Coast colony, for whereas in 1904 in Ashanti the percentage of the total gold obtained was 56 per cent., only 39 per cent. of the total was obtained from Ashanti in 1905. The increase in Gold Coast colony was due mainly to the output of gold of the Abosso mine, which started to crush in March with 20 stamps, and added another 10 stamps in July. During the 10 months to the end of the year the total amount of gold obtained by this company was 26,843 ozs., of an estimated value of £107,344, and the Bibiani Company likewise shows an increase of 13,116 ozs. over its 1904 yield. The plant of the Abbontiakoon Block 1 Company started in the latter end of August, 1905, and produced 8,721 ozs. during the remaining four months of the year, but the output was reduced by a fire in the main incline shaft. Of the other producing mines in the colony the Broomassie produced 12,373 ozs., an increase of 9,161 ozs., and the Himan Concessions yielded 4,166 ozs. from its Bogosu concession, on which a light 10-stamp battery has been erected. On the other hand, the Wassau (Gold Coast) Mining Company shows a decrease of 7,650 ozs. compared with 1904, but the 30-stamp battery stopped crushing in June, and during the latter half of the year the only gold obtained was by the treatment of the old tailings.

In Ashanti the output of the Ashanti Goldfields Corporation exhibits a falling off of 6,236 ozs., due to the hanging up of a large number of stamps with a view to further developing the underground workings. Its subsidiary, the Sansu Company, also shows a decrease. Crushing was suspended during the last seven months of the year, likewise in order further to develop the property. The Akrokerri Mining Company started milling with 20 stamps in the month of January, and during the year produced 20,663 ozs. of gold, despite the fact that for several months the company was handicapped by a large inflow of water. The quantity of gold obtained by the dredging company shows a considerable advance over 1904, due chiefly to the amount caught by the dredges on the Offin River.

With regard to the very important matter of the value of the ore, the report gives some informing details and makes many useful comments: "During the year the various companies working on the Tarkwa banket reef treated 64,209 tons of ore with an extraction of 48,484 ozs., being a yield of 15.1 dwts. per ton

of ore treated. This value per ton compares very favourably with the extraction obtained on the Johannesburg banket reef. On the quartz properties from which complete returns were received 62,824 tons of ore were crushed for a recovery of 59,778 ozs. of gold, equivalent to an extraction of 19.02 dwts. per ton. Although there are no available working costs published, these will be greatly reduced, and will be still further reduced on the completion of the larger batteries which are now being erected." The above figures, as far as they go, authenticated in an official publication, are satisfactory. They go to show, at any rate, that the ore is not very poor. And the promise of a reduction in the working costs is decidedly welcome, but it by no means follows that shareholders in Jungle companies will materially benefit. It is no evidence that the deposits will last for many a year to come, and even if they do small batteries cannot earn very large profits. Since 1896 the output of gold has increased from 23,940 ozs. to 171,150 ozs., and the value from £86,186 to £653,821, yet shareholders do not seem to be any the better off in pocket. During the next 10 years the increase may be quite as great, without ensuring good and regular dividends. The report adds that batteries are being erected by the Prestea, Broomassie, and Attasi mines. On the other hand, "a considerable number of companies which were engaged in prospecting and developing have now stopped work, and will probably remain idle until the companies which are erecting batteries in various parts of the colony have proved that they can make the venture payable." This is highly significant, and is certainly not reassuring and encouraging. It must be admitted, despite the vast amount of capital that has been spent during the past 10 or 12 years, that the country is yet only in the early stages of development. But the important question is: When will it emerge from these stages? No one can foresee. There are still many formidable difficulties to overcome, and they cannot be surmounted quickly. As regards the labour question, the report says that in spite of the fact that a very much smaller amount of labour was employed by the mines in 1905, yet in most districts there was no surplus of labour, and taking into consideration the number of companies which will start crushing in 1906, there will, unless more labour be recruited from other parts of the colony, be a considerable shortage during the present year. A certain amount of labour will, however, be obtained when the mines conveniently situated commence to use coal as fuel, thus liberating some thousands of natives at present engaged in cutting firewood. Several of the mining companies situated on the railway have started to use coal instead of firewood, and though coal at present is more expensive than firewood, yet the impossibility of obtaining a regular supply of wood has made the use of coal necessary.

F. Steiner and Co.

We are quite gratified at the way in which this excellent business of Turkey red dyers and calico printers is picking up. Time was when we had to be rather severe with the company because the directors took us to task for quite properly making known certain unpleasant facts which, denied at the time, were true nevertheless. All the more reason therefore that we should now express satisfaction at the continued recovery from those trying times, which not only resulted in the temporary cessation of ordinary dividends, but caused the disappearance of the reserve fund as well. The rumour is revived periodically that the Calico Printers' Association would like to make its already powerful monopoly stronger still by including this company in its embrace, but up to the present the directors have resisted the blandishments of the Manchester agglomerate. During the 12 months ended July 31 Steiners made a profit of £89,369, after providing directors' remuneration and the tidy sum of £29,229 for repairs and depreciation of machinery. This is an increase of £15,151 compared with the previous 12 months, which itself showed a gain of £12,732, so that the improvement is rapid. Add £10,171 brought forward and the disposable sum is £99,540 against £82,069. Interest on the debenture stock requires £18,000, and on the preference shares £22,500, leaving the directors in a position to increase the ordinary dividends from 4 per cent. to 5, and the contribution to the reserve fund by £11,000 to £23,000. The sum of £12,290 is then carried forward. This addition builds the reserve fund to £50,000, and it is nice to see how clearly the directors, who hold all or most of the ordinary shares, recognise the necessity of strengthening the financial position. A good many men in the same position would have sacrificed the future for the sake of big dividends now. The mentioned £50,000 has been built up in three years, and in that time the ordinary dividends paid have aggregated 9 per cent. only, or 3 per cent. per annum. A very slight drop to £790,034 has taken place in the land, buildings, machinery, water-rights, &c., and having regard to the size of this item, we think the actual additions and writings off for each year should be regularly stated. Sundry investments at cost or under £33,963 are probably held on account of the reserve, and against sundry creditors £76,968, and bills payable £14,888, there are debtors £71,102, cash £46,603, and bills receivable £4,769. Stocks on hand and consignments, less advances, show a reduction of £5,943 at £596,924, and although the item has been much reduced from the £700,000 or so which used to be held, the asset still strikes us as being somewhat unwieldy. There is, however, no real fault to find, and the company has undoubtedly taken full advantage of the textile revival.

British South African Tobacco Plantations.

A very pretty story has been unfolded in the Rhodesian Courts about the promotion of this concern by the London and Paris Exchange and its subsidiary, Kaffirs Consolidated, Limited. The prospectus of the company was issued in April, 1905, and subscriptions were invited for a capital of £100,000, mainly on the strength of a "report" by Mr. George M. Odlum, tobacco expert to the Chartered Company. The capital originally proposed was £30,000, and when Mr. Odlum saw a draft prospectus containing a letter he had written to a Mr. E. H. South, acting for or in close connection with the London and Paris Exchange, he demanded that it should be withdrawn. When this request was disregarded, and the letter appeared in the final prospectus with its £100,000 capital, he went about denouncing the whole thing as a swindle. So Mr. South, very imprudently as it turns out, brought an action against him claiming £1,000 damages for slander. The case was heard a few weeks ago, and a full report appears in the *Rhodesia Herald* for August 3, which arrived by the last mail. From the evidence it appears that Mr. Odlum's letter was never intended to figure in a prospectus; it was written in reference to an experimental acre of tobacco cultivated by Mr. South, and made to do duty for another farm of 20,000 acres, situated somewhere else, which was quite a different story. The summing up of Mr. Justice Watermeyer is exceedingly refreshing, and the following extracts seem well worth reproducing. In the result, judgment was given for the defendant in the slander action, and on a counterclaim Mr. Odlum, who did not press for heavy damages, was awarded £20 and an injunction restraining the further use of his letter.

"Mr. South's evidence was not candid. He tried to fence with every question put to him. He told us about planting a few acres with tobacco, which worked down to one acre; he told us about Mr. Mandeville staying nearly a year here, which worked down to a little over three months; and he tried to prevaricate—I can use no milder term—regarding his attempt to stop the second publication of Mr. Odlum's letter, when he said it was too late. Any person who heard that evidence would have inferred that the second publication had already taken place, but in cross-examination it came out that, although he communicated with the people at home, he found that they declined to withhold the

letter. Then we have Mr. South's failure to produce any letters or communications between himself and his principals at home to show what steps he really did take to prevent the further publication. Granting that he may have allowed the first publication by mistake, he knew before the final publication of the prospectus that the letter had no right to appear there.

"Mr. Odlum has candidly admitted that if his letter had been shown by Mr. South to some of his private friends for the purpose of raising a small amount of money to assist him in his farming operations, he would not have raised any objection whatever. But it was never his intention that that letter should be foisted on the public in a prospectus issued for the purpose of raising £100,000 to work on some different ground. The letter was given for the purpose of the farm Warwickshire; but it has been admitted by the plaintiff that the object for which the letter was used, and even for which it was asked, was to raise money for the Kent concession. If the plaintiff had been candid and truthful he would have told Mr. Odlum that that was his object, to assist Kaffirs Consolidated in floating the Kent concession. I say it was his duty to tell Mr. Odlum candidly what he wanted the letter for, and leave Mr. Odlum free to write him a report if he cared to do so.

"Now I am not here to say anything about the prospects of this company, whether it is likely to prove a flourishing concern or not, or to make good profits. But I have to say that the means used to float this company were fraudulent. The company itself may be a perfect success—I have nothing to do with that—but the means used to float it were, by the plaintiff's own admission, a fraud, because the whole prospectus was Mr. Odlum, Mr. Odlum, Mr. Odlum right through. He is the foundation upon which they are trying to float the company; his name, against his expressed wish, is made the foundation upon which to float the company, and in my opinion that is a fraud.

"The matter is very different from the case of Botha *v.* Brink; this is not a raking up of old crimes committed years before; it is a matter of a company being floated, falsely alleging that it has a favourable report from the tobacco expert of the Government. Surely that is a matter of public interest, that it should be known that people are using the name of the responsible tobacco adviser of the Government in a sense which he has not authorised. This is the position as I understand it. Mr. Odlum stated to as many people as cared to listen to him that these people had used his name as the tobacco adviser of the Government in a sense in which he had not authorised them to use it; and that I think is a sufficiently public matter. I think he is justified in calling such a use of his name a swindle."

American Business Notes.

The outburst of speculation on Wall Street could not have been conducted without recourse to heavy borrowing, but nothing of the kind was reflected in the return of the New York Associated Banks last Saturday. Loans and discounts showed a comparatively trifling increase of $3,840,000, and it is evident, therefore, that the bulk of the required funds has been obtained either from the trust companies and other institutions outside the association or from borrowing on this side. At the same time the loss of cash was quite disproportionate to the known movements of currency at $3,100,000, and the return is consequently misleading, but the gamblers seem to be in no mood to consider the question, and as the statement looked favourable on the surface, it was accepted as quite satisfactory. The elements of danger in the position, however, could not be altogether concealed, and the risks run by the market may be gauged from the fact that the surplus reserve has dropped another $2,810,000 to $4,290,000 or the lowest figure at this season for many years.

The Home Market Club of Boston, which is one of the chief pillars of the present high tariff policy in the United States, has commenced a campaign of retaliation against the retiring governor of the State of Massachusetts for his recent declaration that the Republicans of that State cannot afford to retreat from their stand for tariff revision taken last autumn. The club, under its leader, Colonel Albert Clarke, is trying to force the Republican party to declare against tariff revision "until required to promote prosperity," and to place themselves under the banner of the "stand-patters," that is, of the unyielding protectionists. The Massachusetts Democrats are said to be delighted with the prospect, as they wish to run their candidate on a strict tariff issue.

It has been announced by Mr. J. Ramsey, junr., formerly president of the Wabash Railroad Company, that he has in hand a project for the building of a new trunk air line between New York and Chicago viâ Pittsburg, which will be 108 miles shorter than the present shortest line between New York and Chicago, and will cut off 85 miles from the distance between New York and Pittsburg by the Pennsylvania. Mr. Ramsey said that the enterprise would be financed in Europe and would cost some $150,000,000. It is proposed to operate the line throughout with electricity, and as the maximum grade will be only 20 feet to the mile as compared with 65 on the Pennsylvania, trains can be run at high speed. It is intended to start work this autumn, and, if possible, complete the section between Pittsburg and New York in three years.

The failure of the necessary number of persons summoned to appear to serve on the grand jury for the investigation of the charges against the Standard Oil Company at Chicago on August 14 caused the postponement of the inquiry until the requisite number of jurors could be got together

The three best business customers of the United States are Great Britain, Canada, and Germany in the order named. During the fiscal year ended June 30 Canada bought 61.4 per cent. of all her purchases from the United States. The total was a little over $94,000,000, and of that $86,529,291 worth went in free of duty. Of the rest of Canada's imports 23.5 per cent. went from Great Britain, 2.6 per cent. from France, and 2.3 per cent. from Germany. The remaining 10.2 per cent. covers the Canadian imports from all other countries. Whether this condition of things, which American papers find highly satisfactory, will continue seems uncertain, as it has been announced that there is to be a readjustment of the Canadian tariff next year with a maximum and minimum scale. Should this be the case, the New York *Sun*, which gives a good deal of attention to the subject, says, "our relations with her (Canada) might become just a little more interesting than are our present relations with Germany."

The management of the Chicago and North-Western Railroad Company has under consideration a new issue of stock to be sold to the present stockholders of the company at par. In July of last year the North-Western sold $10,609,200 of new common stock to its stockholders at par, and last February sold $16,267,400 more to expend in extensions, betterments, and improvements. This raised the amount of common stock issued to $75,217,300. The object of the new issue is said to be to take over the minority stock of the Chicago, St. Paul, Minneapolis and Omaha railway.

With reference to the above, it was announced in New York on August 16 that a special meeting of the shareholders had been called to authorise an increase of $100,000,000 stock, to be issued from time to time at the discretion of the directors. No statement of the specific purpose for which the money to be raised is needed accompanied the call for the meeting.

The directors of the St. Paul Railroad Company met in New York, August 16, and decided to issue the $25,000,000 common stock authorised in 1902 for the extension of their system to the Pacific coast. The new stock will be issued at par to shareholders registered in the books of the company on August 29 to the extent of 23 per cent. of their holdings. This offer includes the present outstanding preferred stock as well as the common. Contracts for the Pacific coast ex-

tension were let last autumn, and since then it is understood that convertible bonds as well as the $25,000,000 common stock would be sold to complete the new mileage. Up to the present the work has been carried on out of the assets of the company and bank borrowings.

The number of immigrants arriving in Canada during the year ending June 30 last was 189,084. Of these there came from Great Britain 85,796; the United States, 58,816; Continental Europe, 44,472. Among those from the United States are many repatriated Canadians both English and French, the former selling their land in the United States west at high prices and buying the cheaper lands in the Canadian North-west, and the latter going in considerable numbers to the Lake St. John and Lake Temiscamingue regions in the province of Quebec, whose Government is making great efforts to increase the French population of the province for political reasons. The return movement of the French Canadians to Canada is in great part from the New England States, and is caused mainly by the closing of cotton mills consequent on the removal of machinery and the transfer of capital to the Southern States, where the negro and child labour is cheaper and not yet organised in unions.

In connection with the inquiry going on into the railway rebates given to the Standard Oil Company going on at Chicago, it is stated that Mr. J. D. Rockefeller will not be called to testify, he having, so it is said, ceased his active connection with the Standard Oil Company's management more than ten years ago.

The nomination of Mr. Nicholas Longworth, President Roosevelt's son-in-law, to the Secretaryship of the International Policyholders' Committee from which his predecessor, Mr. Eaton, resigned abruptly two weeks ago, seems to have been a good deal of a surprise to the American public. It now seems practically assured that there can be no investigation into the question of the contributions to the Republican presidential campaign funds by the Mutual, no matter which side wins in the coming election of officials of the company.

Passing Events.

Deep and sincere sorrow will be felt by every true Englishman for Sir Henry Campbell-Bannerman in the terrible bereavement which has just befallen him by the death of Lady Campbell-Bannerman, which took place at Marienbad on Thursday. On a man of his kindly and sympathetic nature the blow must tell with special severity, and we trust it may be softened a little by the profound grief that the event has created in all sections of society. Also may we trust that the shock will not be so great as to deprive the country of the services, even for the briefest period, of the noble-minded man and real patriot that Sir Henry has proved himself to be, and when the first keen grief is over we hope to find his energy unimpaired for the great work that lies before him in the leadership of the Liberal party. Of an unobtrusive and retiring nature, the country in general did not know much of Lady Campbell-Bannerman, but her sterling worth was proved by a life-long devotion to her husband and the cause he has so closely at heart.

The return of the New South Wales Railways for the quarter ended June 30 shows that satisfactory progress has been made. With an extra 109 miles open, the gross revenue increased by £150,207 to £990,439, an improvement to which all classes of traffic contributed. Passenger receipts were £50,403 higher, of which £19,484 came from first-class and £27,398 from second-class travellers, and £3,521 from parcels and miscellaneous earnings. General merchandise rose by 53,189 tons in weight and £57,589 in revenue, hay, straw, and chaff gave 8,689 tons and £5,380 more, grain, flour, &c., 14,048 tons and £8,904 more, and increases of 1,061 tons and £1,228 were shown in wool, 169,233 tons and £8,828 in coal and coke, and 4,841 tons and £15,674 in live stock, against a decrease of 579 tons and £2,201 in minerals other than coal and coke, the nett improvement in this section being £99,804. Expenditure, notwithstanding an increase of 377,908 miles in the train miles run was only £62,066 higher at £535,161, the expenditure per train mile working out at 3s. 9¼d. against 3s. 10d., while the earnings were 2d. better at 6s. 11⅛d. No particulars are given of this outlay, but we presume it does not include the whole cost of the work done on the line. According to the report, the permanent way, bridges, and works generally have been well maintained, and are in good condition, re-laying, re-ballasting, and re-sleepering operations have been continued, and work on several bridges has made satisfactory progress, while the additional elevators for the new shed at Darling Harbour have been completed. The tramways, which are also under the control of the Railway Commissioners, showed an increase of 2,746,997 in the number of passengers carried and a consequent advance of £17,228 to £223,864 in receipts, with at the same time a reduction in expenses of £8,782 to £162,755.

Riga, in common with many other Russian towns, suffered considerably from labour and political disturbances last year. Yet, this notwithstanding, little trace of the disorganisation of trade is to be found in the statistics relating to the inward and outward trade passing through the port. At a rough estimate the imports for 1905 are valued at £8,281,280, a figure which Mr. Woodhouse, our Consul, thinks under the mark, and the exports at £13,955,256, or more than a million sterling above those of 1904. Trade prospects for the current year are considered very favourable, as it is thought the Russian workman, round about Riga at any rate, has had his fill of strikes, and has arrived at the conclusion that he and his fellows are the persons who suffer most in capital and labour warfare. Perhaps he may think so now, but lessons of this description are quickly learnt and as soon forgotten.

Thanks mainly to the remarkable outburst in American railroad shares and in a less degree to the recovery in Kaffirs, the 325 representative securities chosen by the *Bankers' Magazine* as an index to the general position showed substantial improvement during the period from July 21 to August 20. Prices recovered to the extent of £32,000,000, and although there is still much leeway to be made up before values even approach those current earlier in the year, the advance is decidedly welcome, if only for the opportunity it provides weary holders of Kaffir shares who have stuck to their paper during the long period of painful exhaustion, which so nearly culminated in a first-class Stock Exchange smash. The morality of the business which brought about the Yankee boom need not be inquired into here, and we can only express the hope that legitimate holders have seized the opportunity provided by the manipulating cliques to get clear. Having done so, the market should be shunned like the plague. It must not be thought that these two sections were entirely responsible for the rise. Indeed, the most satisfactory point about the movement is that it extended to practically every department, and where reaction occurred the loss was quite unimportant.

Shareholders of the Burmah Oil Company are fairly certain to sanction certain proposals laid before them by the directors, because they mean an important saving of money, and will give greater power in connection with the managing agents. The company's business has grown at such a rapid rate that the remuneration paid to the managing agents was thought to be a little onerous, and certain changes have been suggested. These are cordially approved by Messrs. Finlay, Fleming, and Co., the company's representatives in the East. They used to receive a commission of 5 per cent. on the gross value of the sales made by themselves directly and 2½ per cent. on the sales made by or through sub-agents. Under this plan the agents' remuneration came to £21,000 in 1902, £30,000 in 1903, and £41,000 each year in 1904 and 1905. This seems a large sum, but no doubt the expenses were heavy and the money was well earned. It is, however, now proposed to pay Messrs. Finlay, Fleming, and Co. a salary of £15,000 a year and a commission of 2½ per cent. on the profits of the company, instead of on the gross sales. On the basis of 1905 the new arrangement will show a saving to the

company of £16,000, and the directors point out that as the commission part of the payments made will be on profits instead of on gross sales, the more the volume of business grows the greater will be the proportionate saving. A further recommendation relates to the agents' tenure of office. Under the present articles they can only be removed from the company's service in the event of incompetency or wilful default, but under the new provisions this restriction will be removed, and the board's power will be more or less absolute. The agents are to be appointed for a period of five years from January 1 last and thereafter from year to year, so that after 1911 the directors will not be bound in any way. These recommendations will be considered at a meeting called for September 6, and shareholders are sure to cordially endorse them.

Readers will doubtless remember the tremendous fuss made by certain halfpenny jingo sheets when the Welsh Whitworth Collieries were sold to a syndicate in which certain German financiers were interested. The business was subsequently floated as a limited liability company, 40,000 £5 shares being offered in England and 60,000 in Germany. We now gather that the German buyers are not at all pleased with their bargain. Dissatisfaction does not necessarily arise with the shares as an investment, but with their technical position as a vendable commodity. The special settlement has just taken place, and, greatly to the Teutonic surprise, it related only to the 40,000 shares placed or offered in England, and not to the 60,000 sold in Germany. The latter appear to be regarded as vendor shares, and are not good delivery until further notice. Whether the allottees are anxious to get clear we do not know, but they talk of seeking legal aid to force the shares back on the original sellers. Decidedly an instructive episode, and it would be nice to have a word or so regarding the present position and future prospects of the company.

The first report of the Rand Water Board is a rather formidable document, because it contains a complete history of the circumstances which led up to the formation of the Board, besides a detailed account of the operations for the year ended March 31 last and an instructive statement by the chief engineer. It was as far back as November, 1901, that a commission was appointed to inquire into the Rand water question and devise the best means of ensuring an unfailing supply. A good deal of evidence was taken, and in the year 1903 the Rand Water Board was formed to carry out the committee's recommendations. It consisted of 20 members, 10 representing the all-powerful Transvaal Chamber of Mines and five the Johannesburg Municipality, the remainder being appointed by neighbouring towns. Total cost of expropriating the four companies bought out was £2,216,238, the Johannesburg Waterworks Estates and Exploration being by far the largest undertaking, and in March, 1905, £3,400,000 Rand Water Board 4 per cent. inscribed stock was offered at par. The sum realised was £3,316,700, and we find that at the close of the financial year the board had spent £1,868,315 on undertakings account and £40,088 on the Wonderfontein Concession. Preliminary, arbitration, and issue expenses reached £189,266 and a sum of £79,698 has been expended on new works, leaving the board with £551,429 invested and £598,060 in cash. This causes us to wonder why it was necessary to obtain a loan of £130,000 from bankers. So far the operations appear to have turned out successfully enough, as the revenue from supply of 851,129,292 gallons of water was £145,033, and rents and sundry receipts produced £2,257, a total of £147,290. Working costs cannot be regarded as excessive at £49,900, and after meeting interest payments of £73,948, in addition to several smaller charges, there is a balance over of £11,990. So the board is able to credit £9,770 to the machinery and plant renewal fund and carry forward £2,220. We gather that the cost of water has already been reduced, which can be considered good, because the Johannesburg Municipality now gets its water at 6s. per 1,000 gallons or less as a monthly minimum, a startling reduction on the 12s. 6d. formerly charged. Provision is now being made to increase the water supply by 10,000,000 gallons, and when this has been accomplished at an estimated cost of £793,000 there will remain about £400,000 for future requirements.

It is a task almost of supererogation the American Consul at Puerto Cortes takes upon himself in solemnly warning his fellow countrymen not to invest their money in the Honduras mining industry until the Government has constructed roads for the transport of machinery to the mines, since no sensible persons would risk their money in an industry so undeveloped and so little known, no matter what assistance the Government might give in regard to the above-mentioned facilities. Up to the present all the American ventures in his consular district have been failures, large sums of money having been spent with little or no returns. Owing both to poor roads and absence of roads, machinery costing many thousands of dollars can be seen rusting and ruined on trails or banks of streams, like the relics of some ancient war. Not that he himself doubts there is gold in the country, but what value is all this gold if it cost more to get it than it is worth? The Acting Consul knows of one or two mines only in the interior which are doing well, but these have built their own roads to the Pacific Coast, and employ automobiles in conveying goods to and from the mines. The warning applies to those in this country too who happen in these days to dream of Honduras as a land of promise.

There are many indications that the mineral wealth of Hunan is attracting the attention of capitalists and of experts, for it is considered by many to be a very rich region. This is the opinion of the Acting Commissioner of Customs at Changsha, who in his report for 1905 says the opening up of the mines here is only a question of time, "and it may safely be assumed that, once the movement begins, it will go forward with a rush, finding employment for the surplus labour which is now streaming to South Africa and the Straits, and at the same time quickening and swelling the volume of every branch of trade." This is, says he, the day of small things at Changsha, and even now it is difficult to get a foothold, but those who do establish themselves and can afford to wait, extending their field of action as new ports are opened, will be in a position to take full toll of the valuable trade which before long will assuredly prevail throughout the entire province. At the present time the Chinese authorities are taking steps to throw open to foreign trade two of the largest marts in Hunan-Hsiangt'an, 30 miles above Changsha and Changteh, on the Yüan River. Sites for custom houses have already been selected or purchased, and suitable port regulations drawn up for submission to the Central Government, whose approval of them is the one thing wanting before these places are added to the number of open ports.

Many interesting facts were disclosed at the meeting of the Dolcoath Mine, but it is very doubtful if one of these in particular is to the liking of the great body of shareholders. In April last, when the shares were standing at 17s. or 18s. apiece, an offer was made to the directors to buy some of the unissued shares at par, and this was accepted by them. Simultaneously an offer was made to take up the balance of the unissued shares at a price which would give the company a substantial premium, and this option has some little time to run before it is completed. Looking at the very strong financial position of the company, it is doubtful if it was at all desirable to issue further shares, but granting that it was, it seems hardly fair to the shareholders not to give them the first opportunity of buying them. The offer may have been a very tempting one—one impossible to resist; still, this hardly disposes of the just claims of the shareholders, and it is comprehensible some may feel indignant thereat. The chairman said he could give the name of the party to anyone curious enough to learn it, but assured the meeting it was no official connected with Dolcoath. It is pleasing to know this, for many directors placed

in similar positions might be less scrupulous in endeavouring to feather their own nests.

In what profound silence has the gold mining industry of Madagascar been forgotten or buried! We never talk of it nowadays, and the outburst of frenzy some months ago requires quite an effort to recall. Did not the controlling houses on the Rand send experts to the island in the hope probably of awakening public interest in a foreign place? And did we not hear of wonderful strikes and marvellous finds as the experts alighted upon surreptitious salting? Yes, we have forgotten all these exciting episodes and incidents, and are once more hoping that we shall see ere long an old-fashioned boom in the Kaffir Circus and the poor millionaires doubling their fortunes against their own wishes. But for all that the Madagascar gold mining industry does not seem to be quite dead; it may be inert, but it has not lost every symptom of vitality. For recently Dr. Augagneur, the Governor-General of Madagascar, spoke at the annual banquet given by representatives of the industry, and told them that the decree of November 21, 1905, is not a perfect one. But he cannot suspend its application. Modifications are necessary, but the decree was drafted with excellent intentions. Here evidently is another grievous instance of where intentions are good, but where the practical application of them is not beneficial. It is so easy to intend good, so difficult to know how to put the intention into fruitful action.

The latest news regarding Indian crop prospects are a little more reassuring, but on the whole they are still dark enough. In the United Provinces of Agra and Oudh there has been a break at last, particularly in the affected districts of Bundelkhand, but gratuitous relief is being extended to Jalaun to meet some privation amongst children. In Rajputana more rain is urgently needed; crops are withering on dry lands; the break is causing anxiety in Merwara, and the relief works have been closed in Karauli. There has been a fairly general fall of rain in Central India, and the crops are stated to be in good condition. Though a little rain has fallen in Bombay, more is greatly needed in several districts, especially for rice. The demand for labour is increasing and numbers on relief are falling. In Eastern Bengal there are high floods in most districts, but in three of them the scarcity continues. Numbers on relief are:—United Provinces of Agra and Oudh, 112,000; Ajmar and Rajputana, 38,000; Central India, 12,000; Bombay, 75,000; Eastern Bengal, 2,000; total, 239,000.

The Bechuanaland Estates Company has presumably given up all hopes of ever securing a profitable business in Bechuanaland, for it is conducting, or trying to conduct, what appears to be a petty business of company promoting, and it is not easy to imagine how this can result in any benefit to the public. With this object in view, the directors urge the desirability of converting all kinds of businesses into joint-stock companies, and in order to find the necessary capital they announce that arrangements have been made with a large firm of London advertising contractors to insert small private advertisements, without in any way divulging the name or nature of the proposed company, in some 200 to 300 newspapers throughout the kingdom. Furthermore, the company appears to have representatives in 60 or 70 towns. What has this kind of business to do with Bechuanaland? It may be a good thing for some lucky tradesmen, who may be able to sell their businesses at fancy prices, to be resold to the public at figures which will enable the Bechuanaland Estates to exist in comparative comfort, if not in affluence, but the directors will not find it so easy a game as they imagine. They may still discover more profitable scope for such business even in Bechuanaland, if they have the patience to wait. If that is hopeless, then wind up the company.

One cannot be very favourably impressed with the figures detailed in the report just issued by the Colonial Office in respect to the Gold Coast Colony. This report deals with the year 1905, and shows that the actual revenue for this period, exclusive of £15,000, the Imperial grant-in-aid towards the cost of the administration of the Northern Territories, was only £586,221, being £97,143 under the estimate and £95,971 less than the revenue of the previous year. The actual deficit on the year was £29,897. Expenditure was slightly reduced from £622,376 to £616,118, notwithstanding the payment of £20,000 to the Imperial Government in respect of loans. Exclusive of grants-in-aid for the Northern Territories the revenue for 1905 shows a decrease of £57,930 compared with that for 1904. But, great as this falling-off was, the revenue exceeds that for any year prior to 1904, so it may be a temporary decline. It is pointed out, moreover, that this decrease would not have been so marked had it not been for reasons in respect to the receipts in Customs duties and for the fact that the royalties due were not collected by the close of the year.

According to all accounts the Kaffir bosses have discovered another reason for a boom. Many years ago, when rock drills were first introduced, the machines were regarded as a most economical labour-saving invention, and were to make the mines almost independent of black labour. They were to revolutionise methods and enable even the lower-grade mines to work profitably. When, however, the bosses wanted to overthrow the Boer Government and to kick freedom-loving white men out of the country, rock-drilling was found to be terribly expensive, and it was proclaimed that coolie labour would be ever so much cheaper. It is now claimed that a better rock-drill than any ever used has been perfected, called a stope drill. In order to work it no intelligence beyond the average is needed, it is declared, also that it will enable Englishmen to be employed, as one white will be able to do as much work with it as six or eight blacks or coolies with the present machines. Accordingly, magnates can now see their way to a solution of the labour problem. We shall see. But should we have heard anything of this had the Government permitted the bosses to import Chinese without let or hindrance? Little noise has been heard about this invention so far, but it will be interesting to note how much cackle it will raise.

A movement is afoot in Natal, so a Press message informs the world, in favour of a complete union with the Transvaal, by which Natal would secure the Transvaal's trade and the Transvaal would secure its own harbour and also a heavy British vote. Who the movers are, whether sane or insane, idealists or confederationists or any other ists, we are not told; nor even whether or not the idea has originated in a mutual improvement debating society. But it is considered good enough to make a Press cable of, as though it were, for all the world, one of the late Richard Seddon's visions of world-dominating Imperialism. Simultaneously with this news the Durban correspondent of the Board of Trade sends some statistics of the trade figures of Natal for the first six months of the current year. Excluding bullion, specie and Government stores, the imports aggregated £4,575,000, a decrease of £205,000 compared with the corresponding period of last year. Shipments of foodstuffs declined from £1,593,000 to £1,462,000 and miscellaneous imports from £1,238,000 to £891,000. No wonder the hoity-toity little colony, the rival of New Zealand in its lowly opinion of its sublime destiny, wants to secure the whole trade of the Transvaal. Why not aim at getting the whole trade of Africa? Surely the one is as modest as the other?

The Pretoria correspondent of the *Tribune* makes the important statement to the effect that a prominent member of the Chamber of Mines and a leading progressive politician, likewise a large employer of coolies, will shortly announce to the world that he is prepared to acquiesce in the proposal that no further importation of Chinese should take place, and that repatriation should be carried out immediately on the conclusion of the existing contracts. No clue is given

to the identity of the gentleman, but the correspondent declares he has reason to believe that his example will be followed by the mine owners as a body. Why have the bosses determined to make this virtue of a necessity? The plea is, says this same writer, the cost of Chinese labour, and it is a strong one, even if it be offered as a hypocritical excuse for doing the right thing from compulsion, not from choice. But when this cost is attributed to the humane acts of the Government the duplicity and insincerity of the action become the more flagrant. It shows how the bosses resent the Government's insistence in making the habitable conditions of the Chinese bear some remote resemblance to civilisation. But white men are not to benefit even from this cunning chicanery. "No, good gracious, no!" cry the bosses. "You are too dear, my good fellows. We shall get blacks from British South Africa and Portuguese territory." But what hundreds of thousands it would have saved shareholders had they adopted these measures of recruiting blacks years ago!

We are told by Reuter that the New Zealand financial statement was received with satisfaction in the colony, but there does not appear to be much ground for this feeling in the figures presented. The revenue, it is true, amounted to £7,650,000, or rather more than the estimates, but expenditure, including £500,000 transferred to the public works funds, was £7,622,000, leaving a trifling surplus of £28,000, making with the balance from the previous year a surplus of £789,000. In spite of this, however, the public debt was increased by £2,279,040 by the expenditure of £607,750 on close settlement schemes, and £197,660 on railways, the addition of £1,000,000 to the public works funds, £210,000 advanced to settlers, and £151,000 to local bodies. Proposals for the current year display the old spirit of lavish outlay in many directions. For one thing, the Treasurer hopes that in a few years, three of the largest railways being completed, a greater impetus will be given to the construction of new lines. Last year £620,221 was spent on such work, exclusive of the large sums for extensions to opened lines and the straightening of the Hutt line. In another arrangements are being made for a line of steamers trading fortnightly between Great Britain and Australia to go from Adelaide to New Zealand, and a contract has also seen arranged for a bi-monthly service with Canada. Then a complete experimental station and a school of instruction in connection with the dairying industry is to be established. There is nothing to say against these proposals, but it seems that the outlay in other directions is much more extravagant than the condition of the colony warrants. National pensions for one thing is an idea that might be shelved for a considerable time yet, and the outlay on telephones in remote districts keep it company. Powers are asked to raise loans for railways and for another £1,000,000 for public works, while further borrowings are foreshadowed in the statement that Parliamentary authority would be sought for borrowing another £4,000,000 to £5,000,000 under the Advances to Settlers Acts. Any amounts required for this last-named purpose, however, are to be found by the Post Office Savings Bank, and the Treasurer also announced that he does not propose to come to London for any of the other sums, as he is assured that the necessary £1,000,000 could be raised locally at a reasonable rate of interest. As regards the current year the expenditure is estimated at £7,575,972, against a revenue of £7,807,000, leaving a surplus of £291,028.

Prompt to see the advantages of the picture postcard as an advertising medium, all or nearly all the English railway companies now issue one or more series dealing with their respective systems. In the majority of cases the pictures are those of locomotives and carriages, interesting, no doubt, but hardly artistic. But those issued by the Furness Railway are a notable exception, as they give really artistically coloured views of scenery and places along the line, and the marvel is how they can be sold at threepence the half-dozen.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and August 25, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Aug. 25, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Aug. 26, 1905.
Balances, April 1:	£	£	£
Bank of England	—	6,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369
		7,451,487	7,430,278
REVENUE.			
Customs	32,230,000	13,490,000	13,490,000
Excise	30,200,000	11,558,000	11,527,000
Estate, &c., Duties	13,200,000	6,277,000	5,661,000
Stamps	8,150,000	3,138,000	3,154,000

NO MEMBER OF THE STOCK EXCHANGE IS ALLOWED to ADVERTISE for business purposes, or to issue circulars to persons other than his own principals.
Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the Control of the Committee.
A list of Members of The Stock Exchange who are Stock and Share Brokers may be seen at the Bartholomew Lane entrance of the Bank of England or obtained on application to EDWARD SATTERTHWAITE,
Secretary to the Committee of the Stock Exchange.
Committee Room, The Stock Exchange, London, E.C.

The Investors' Review.

The Week's Money Market.

Bank Rate 3½ per cent. (Reduced from 4 per cent. on June 21.)

Norfolk House, Friday Evening.

Much to the surprise of the discount market New York did not after all secure any of the large amount of gold which came forward on Monday, and in spite of all prophecies to the contrary the Bank proved to be the principal buyer. The price asked from New York dealers was said to have been 77s. 10⅝d. per oz., and as this figure meant a considerable loss on the transaction competition was out of the question. Russia was the only other buyer likely to make a bid for the metal, and it was thought would take the bulk if not all the available supply, but here also there was a surprise. Only a portion was wanted, presumably to complete a fixed sum, and the Bank was therefore enabled to secure about half the total at 77s. 10d. per oz., plus no doubt brokerage and other usual charges, this being a reduction of ¼d. per oz. Notwithstanding this withdrawal of New York, it is certain that gold is very much needed there, and the trifling sums engaged in Australia this week will not go far towards meeting that want. The exchange has been steadily moving downwards all the week, and on Thursday morning a sharp drop took place, which was followed by a keen inquiry for any odd parcels of gold remaining in the market. About £20,000 was scraped together, for which 77s. 10½d. was paid, and the urgency of the demand led to a renewal of the fears that next Monday's arrival of £400,000 to £500,000 would be bought up for that quarter even if the price rose to 77s. 11d. per oz.

New York is undoubtedly preparing the way for taking large quantities of gold by a liberal creation of credits on this side, and bills have been coming into the market very freely for some time past. So strong did the American hunger for gold become that the price in the open market was lifted another ¼d. per oz. to 77s. 10¾d. per oz., and it was reported that £500,000 in eagles had been obtained at the Bank. Negotiations to that end seem to have been entered into, but fell through owing to the Bank raising its selling price by ¼d. to 76s. 8½d. per oz. But it is not in that quarter alone that we must be prepared for demands for the metal. The time is close at hand when the Egyptian withdrawals will commence, and, in fact, it was rumoured to-day that the drain had actually commenced with £100,000 taken out of the Bank, but this statement had no foundation. Although it is thought in some quarters that the Argentine requirements in the autumn will be less than usual, the prosperity indicated by the crop reports now coming to hand do not seem to bear out that view, and no one need be surprised if the demand is considerable.

With all these considerations before them, discount houses were naturally disinclined to let their rates slip away, and the very finest quotation for three months' remitted bills has been $3\frac{5}{16}$ per cent. Even that rate was only current for a short time, and most of the business has been done at 3⅜ per cent., with a tendency to harden still further as the week wore on. Bills have been plentiful throughout, and American paper in particular was offered so freely that brokers were quoting $3\frac{7}{16}$ per cent. for forward business. On Thursday some houses endeavoured to force the rate for 90 day paper up to Bank rate, but in this they were not successful, and even $3\frac{7}{16}$ per cent. was obtained with difficulty, as one or two of the joint-stock banks proved to be takers from the market at $3\frac{5}{16}$ per cent., and sellers were, therefore, encouraged to hold out for 3⅜ per cent. To-day the rumours of gold withdrawals caused considerable uneasiness, and brokers in some cases gave their minimum rate as 3½ per cent., but very few bills were secured at that figure. Business, however, was done at $3\frac{7}{16}$ per cent. readily enough during the "scare," and with some difficulty later. The supply of paper seemed to be rather less heavy than has been the case recently. Four months' bills, of course, are now January maturities, and consequently somewhat out of favour, so that the rate has been raised to $3\frac{5}{8}$-$\frac{11}{16}$ per cent., or the same as for sixes.

The short credit market has been influenced by the usual end of the month withdrawals for balance-sheet purposes, and also by the Stock Exchange settlement. On the whole, however, supplies were ample for all requirements until Thursday, and even then the pinch was only temporary. For overnight loans the charge rarely exceeded 2½ per cent., and was more often 2¼ per cent., except for a few hours on pay-day, when the rate rose to 3½ per cent., and a little money had to be borrowed from the Bank on the usual terms. Part of the pressure was said to be due to the Japanese having called in balances in connection with the redemption of their Internal Exchequer bonds, and some portion of these was believed to have found its way back to the market later in the day. Weekly fixtures were always wanted, and the rate gradually hardened until from 2½ per cent. it rose to 3 per cent., and occasionally 3¼ per cent. The pressure for accommodation this morning was great enough to drive rates for overnight loans up to 3¼ per cent. in some instances, but it was more often 3 per cent. and in the afternoon dropped to 2½ per cent. or less. This was in some measure due to banks having completed their end of the month arrangements and being free to lend, but the surplus floating balances were also said to have been increased by the release of funds accumulated by New York bankers' agents to pay for the eagles. Seven-day advances still cost 3 per cent., as a rule, but it was possible here and there to obtain this accommodation at 2¾ per cent.

Stock Exchange loans caused a good deal of perplexity to borrowers and much grumbling. Bankers and other credit institutions found a very keen inquiry for accommodation, and most of them asked 4 per cent. for loans for the fortnight. One bank did lend at 3¾ per cent., and money dealers got their supplies at that figure, but the general rate was 4 per cent., and some borrowers had to pay as much at 4½ per cent. Yet inside the House the openings for the employment of these funds did not appear to be large, and even in the Yankee market, in spite of the great activity and the big differences to be met, the demand for loans was only moderate. Where, then, did the pressure come from which enabled lenders to exact such a stiff rate outside? One explanation given was that the American speculators were again concealing the extent

of the account open by arranging their loans direct with the bankers, and that their requirements were so great as to have a very appreciable influence in fixing the rates demanded.

The Bank return was an exceedingly good one for the market as well as for the Bank. Gold came back from the country to the value of £263,355, and with £454,000 received from abroad the stock of coin and bullion showed a further increase of £717,355 at £38,514,765, a figure which is £1,864,000 larger than in the corresponding week of 1905. At the same time the note circulation was down £122,645, so that there was an addition of £840,000 in the reserve, making it £27,758,135, compared with £25,438,087 a year ago. The Treasury, instead of gathering in revenue, has been paying out, and public deposits are down £480,320, and the whole of this money, together with the addition to reserve, appears on other deposits, bringing that item up to £43,751,396.

SILVER.

The silver market has been much quieter this week than in the preceding week, the business done being on an appreciably smaller scale. Nevertheless, prices have been very steady, with trifling fluctuations, between 30 13/16d. and 30 15/16d. per oz. for spot and 30¾d. and 30 7/8d. for future delivery, the closing figures being 30 7/8d. and 30¾d. respectively. America has been but a very moderate seller again, and no spirited demand has come from India or any other quarter. Tenders for the Rs. 90,00,000 Council drafts on India on Wednesday amounted to Rs. 8,36,15,000 in bills, and Rs. 40,00,000 in telegraphic transfers. Of these, Rs. 78,40,000 were accepted in bills and Rs. 11,60,000 in transfers, applications at 1s. 4 1/16d. and 1s. 4 3-32d. receiving about 58 per cent. Next week the amount to be offered is Rs. 1,00,00,000.

Stock Market Notes and Comments.

Not much need be said about the Stock markets this week. They have been busy with the settlement, and the account proved a good deal heavier in one or two directions than any experienced for quite a long time past. There was a good deal of grumbling at the banks charging 4 per cent. for their fortnightly loans against 3½ per cent. last time, but a little consideration will show that the exaction was fully justified. The great increase in business is due to the outburst of gambling in Yankees, and every observer whose opinion is worth having admits that the game is an exceedingly risky one. In a market where such violent fluctuations occur fortunes may be made or lost in a few minutes, and no human prescience can protect the players with these dangerous counters. They may be lucky, or, again, they may not. Take the following hard case as an example. Just before the Union Pacific spurt a young jobber, doing a steady legitimate business, sold 1,000 shares. Before he could make his book even the price had shot up, and the whole of his capital was swept away at a stroke. The market, we are glad to hear, after investigating the circumstances, and assuring itself that he had not been speculating on his own account, has agreed to help him through, and he will not be hammered. But when such things can happen the banks are surely prudent to do everything reasonable to protect themselves, and if they help to make gambling a little less easy so much the better. It is gratifying to learn that they have been using a good deal of discrimination, not only in regard to loans on Yankees, but also as to the stocks on which they will advance money.

In the Kaffir market there is more shouting than business, except in a few things like Tanganyikas. These have been exceedingly lively, and the price has jumped about in a way that makes them a very pretty gamble for those who like that kind of thing. But what is behind it all is not easily discoverable. The latest story is that the Amalgamated Copper group

are taking an interest in the property, and will finance the construction of the railway to Lobita Bay. But it is mainly talk, and we have a shrewd suspicion that there is more desire to give the Rhodesian market a lift than to forward the development of the Tanganyika Concessions.

The Week's Stock Markets.

The activity and attention in the Stock Exchange has been above the average for August, which is usually regarded as the deadest month of the year in the City, but it has again been the American and South African markets that have appropriated most, if not all, the week's business. In spite of the heavy work connected with the carry-over, and which was got through smoothly enough, new business was quite active. The huge rise in United States railroad shares during the past fortnight naturally dwarfed changes in other departments, but the account in this market to be arranged proved to be somewhat smaller than was generally looked for, judging from the fact that the demand for accommodation was nothing like so keen as dealers had bargained for. A bad impression was produced on the Paris bourse by the news from Russia, and towards the close of the week the decline in Consols offset to some extent the good effect produced by the fact that the settlement went through quite comfortably and without the hammer falling. A few names were bandied about, but any difficulties that may have existed were surmounted. Consols and other gilt-edged securities were disposed to harden at first on the easier monetary conditions, although the unexpectedly large amount of gold secured by the Bank on Monday did not have quite as much effect as might reasonably have been expected. The small withdrawals of sovereigns from the central institution later on in the week for Chili were not liked, the market fearing lest larger amounts should be required for the same quarter, and the pronounced weakness of the New York Exchange on Thursday caused a decline of 3/8 in the price of Consols in the space of a very few hours. Irish Land new scrip fell from par to 3/8 discount, and the rest of the market was flabby, dealers refusing to make anything but wide prices. Lincoln Corporation 3 per cent. fell 2, as in spite of the smallness of the amount of the new stock offered last week, the issue was not a very brilliant success, underwriters being saddled with about a third of the total offered.

The Paris Bourse was unfavourably affected by the news of the attempted assassination of the Russian Premier and the disquieting news from St. Petersburg, but a quite moderate decline took place in Russians, the new scrip at the worst only falling to 11¼ discount, and recovering later on speculative purchases. Chilian bonds picked up a little owing to a little buying on the part of investors on the look out for a foreign Government bond yielding a high rate of interest. Peruvian Corporation issues were supported by renewed German buying orders, and Buenos Ayres Cedulas rose sharply on buying, said to be from South America, to secure representation at the forthcoming meeting of the bondholders. Spanish Fours advanced slightly, the situation having improved considerably in Bilbao, although later advices from Santander report that a general strike has been declared throughout that district. Carry-over rates were light, usually 3 to 5 per cent.; Turkish Unified were still scarce, and commanded a "back" of 3/8-1/8 per cent. The Home Railway was in a state of suspended animation throughout the week. The news that a concerted campaign is to be organised among railway men for a reduction of hours and an increase of pay having the effect of causing investors and speculators alike to stand aloof. Rumours of a threatened engineering strike in Lancashire also caused dealers a certain amount of uneasiness. There seems to be no doubt that a movement for the improvement of the conditions of labour of all grades of railway servants is being prepared, but no disposition is shown by the leading railway officials of the principal lines at present to express any opinion on the statement, none of the companies as yet having received any intimation of any such proposals. Following the lead of the District Company, the directors of the Metropolitan have reluctantly agreed to the increase of certain fares between some of the stations on the inner circle. The change will affect a good many passengers, and the advances are of a substantial character. Nearly all the traffic returns were excellent. The South-Eastern looked poor at first sight, but it compared with a very large increase a year ago, but the Brighton return was decidedly disappointing, and this company's aggregate increase for the current half-year has now been reduced to a very small total. By the announcement of a dividend of 1 per cent. on Great North of Scotland deferred stock, as compared with ½ per cent. for the corresponding period, the Scottish companies made a good start, a considerable saving in expenditure having been made somehow, as the published traffic increase was a mere £1,800, and the carry forward is nearly that much bigger. On Tuesday next the Caledonian distribution is looked for, and that of the North British on the following Thursday, increases of ¼ and 3/8 per cent. respectively being anticipated. Most of the changes on the account were against holders, the most prominent exceptions being Hull and Districts, which made up 1½ higher. Rates as a rule were inclined to ease off, but London and North-Western stock was noticeably plentiful for delivery owing to the liquidation of a deceased estate during the past account.

United States Railroad shares opened the week in good style owing to the fact that the Associated Banks' statement turned out more favourable than expected, which helped the market for a time. Last week's business in Wall Street was said to show much fuller participation on the part of the public than for a considerable time past, and a marked disposition by those who had made profits on paper to make them good soon left its traces on prices. Operators on the other side soon saw prices begin to dwindle, the tone weakening perceptibly owing to the failure on the part of American buyers to secure as much gold in London as had been expected, and this, coupled with the stiffness of the money market, led to large speculative selling. On Tuesday there was a sharp break in Wall Street on the news of the difficulties of the Real Estate Company of Philadelphia, and selling became general, tremendous sales of Reading and Pennsylvania shares being the feature. This was reflected here by extensive realisations, partly profit-taking prior to the settlement, and partly sales made by operators who wished to evade the necessity of carrying over stocks in view of the uncertainty as to the size of the position open. Although rates were stiffer this time they were not abnormally heavy, 4¾-5¼ being usually exacted, but 3 per cent. was not unusual where stock proved scarce for delivery, the large amount of stock shipped to New York, and put at anything up to two millions, lightening the account very considerably. As is usually the case when elaborate arrangements have been made betimes, it was found that the provision was on too generous a scale, many operators having secured outside facilities. Among the more prominent features may be mentioned Milwaukees, which touched 204½, the highest price seen for several years, the buying being based on the growing belief that the Union Pacific is bent on securing the control of the system. Union Pacific went to over 196, and Atchison shot up to 111½ on the publication of the July return. Great Northern preferred was very much in evidence on rumours that the "ore lands" deal with the Steel Corporation would result in a huge paper distribution, and one enthusiast was said to have given $1 for the call of Great Northern preferred to the end of the year at 440. A 6 per cent. dividend is considered quite likely on Norfolk common, as it is asserted that 10 per cent. has been earned for the year ended June 30 last, and the Pennsylvania dividend is expected to be increased to 8 per cent. "to facilitate the placing of a bond issue." Yet, in spite of all these wonderful stories, the market has developed several weak spots, and has looked like

going to pieces on more than one occasion, and no wonder, after the rise of the past fortnight, which left Unions about 30 up on the account, not to mention Atchison and Southern Pacific, which made up about 13½ higher, and Northern Pacific and St. Paul both about 10 higher.

Canadian Pacific shares had a sensational rise of about 10 points in two days, and no very convincing reasons were given to account for the sudden movement. The buying came from Montreal and New York, and was accompanied by rumours of the formation of a separate undertaking to deal with the land interests of the company, giving stockholders a handsome bonus. A good statement for July, showing that fully 50 per cent. of the gross increase had been retained, and favourable harvest prospects also tended to add strength to the market, while the full report just to hand showed a very gratifying reduction in expenses. In marked contrast to Canadian Pacific was the case of Grand Trunk stocks, which were sold on the appearance of the July statement, which instead of showing an increase of some £20,000, was only able to total a mere £8,700, nearly the whole of the increased earnings on the main line having gone in working expenses.

The feature among Foreign Railway stocks was an appreciable advance in Mexican issues, the company issuing an amended statement for July showing an increase of practically double that indicated by the weekly returns. There is also some talk of the company paying in full on the first preference next time. Argentine descriptions were buoyant, Rosario ordinary being noticeably firm, the buying of which was based on a revival of the statement that the amalgamation with the Central Argentine Company is about to be officially sanctioned. Although for all intents and purposes the amalgamation has been an accomplished fact for a considerable time past, yet until the scheme is officially approved nothing can be done in the way of reorganising staffs, or effecting any other of the numerous economies which usually follow the consolidation of two important systems under one management. In spite of the unrest in Cuba, the traffic returns of the leading companies do not appear to have suffered to any appreciable extent, and prices have remained fairly steady. United of Havana has shown some big daily movements, and on balance is slightly higher, the chairman's remarks at the meeting concerning the revolutionary movement being of a reassuring character, whilst as regards the business of the company, he was decidedly optimistic.

Hudson's Bay shares have furnished the feature in the Miscellaneous market, the price rising to 93½, which is a fresh "record." It was assumed that some of the advance was due to the reports of an extraordinarily rich discovery of gold three miles from the line of the Ontario Government railway, "north of the Hudson Bay watershed," but the description of the locality seems to be too vague, and the company itself declares that no information on the point has reached it. "Bays" made up 5 higher at 90, and the continuation rate after opening at about 4s. ran off to 1s., shares being short for delivery. Other Canadian land companies' shares also attracted attention, as a large inquiry for land by American farmers is now being made, and Australasian and South American land and finance companies' securities shared in the upward movement. Trust companies' stocks, and more especially those that have benefited by the rise in American railroad shares, were in demand, and so were the shares of the leading Australasian banks, business having been slightly more profitable during the first half of 1906, judging by the reports now arriving in this country. Iron and steel shares remained buoyant, the outlook for the near future being regarded as excellent. Great Northern Telegraph advanced on the opening of the new Iceland cable, and Anglo-Argentine Tramway shares were bought on dividend prospects. Dock stocks were unaffected by the publication of an alleged outline of the scheme for the creation of a Port Trust in London, although the details were considered conducive to a satisfactory settlement of the question. Associated Cement issues were dull for a time on sales to secure profits; the report will be out shortly, and it is now thought that although trade prospects are bright, yet the results for the year ended June 30 will show little or no improvement over the preceding 12 months. Although the Havana tobacco crop is not supposed to have suffered up to the present as a result of the insurrection, yet there was a little selling of Havana Cigar preference, which fell ½. Nitrate-producing companies' emissions showed a dull tendency, as it is feared that as one of the results of the recent earthquake an increased duty may be suggested by way of helping the Republic to repair the damage done. In the Brewery section any attempt to sell even fairly good debenture stocks usually led to a fall of from 3 to 4 points, no one caring to touch this class of security just now. Allsopp stocks, however, were quite unaffected by the final report of the advisory committee just issued.

The fresh developments in the bullion market, the fears created by the further weakening of the New York exchange, and the uncertain outlook which is the outcome of these, continued to have a dispiriting effect upon the gilt-edged and Home Railway sections, where prices further tended downwards. It was the opening day of the Consol settlement. At first the charge for money was strong at 3⅜-⅞ per cent., but after early requirements had been satisfied it eased off to 3¼-½ per cent. The making-up price showed a decline of ⅜. Americans opened over parity, but they were more sold than bought, and were generally lower on balance. Canadian Pacifics were again very active, but were subject to considerable profit taking, and the final price was below yesterday's. In the mining market the gambling in Tanganyikas was incessant all day. At one time the shares showed a substantial gain, but speculators seized their profits with avidity, with the result that at the close the quotation was unaltered. Northern Coppers, however, were strong, and advanced ¼, with Bankets ⅛ weaker. Kaffirs were dull and heavy in places, with no support from any quarter. The settlement is proceeding in Paris, whence comes the report of a small failure.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2¾ p.c. Annuities ¼, to 93¼-93¾, India 3½ p.c. Acct. ¼, to 104½-105, do. 3 p.c. Acct. ¼, to 94-94½, do. 2½ p.c. Acct. ¼, to 78½-78¾. **Fall:** Exchequer Bonds ⅛, to 99⅞-100⅛, Bank of Ireland 2, to 329-334

CORPORATION STOCKS.—Rise: Brighton 3½ p.c. 1, to 101-103, Tees 3½ p.c. 2, to 95-97. **Fall:** Lincoln 2, to 83-85.

COLONIAL AND FOREIGN. — Rise: Cordoba Issues 1, to 37-39, and 1, to 38-40, Gothenburg 1, to 98-101, Melbne. and Met. 1, to 102-104, Vancouver 4 p.c. 1, to 101-103, Wellington 4½ p.c. Debs. 1, to 105-107. **Fall:** Johannesburg ¼, to 95-96.

COLONIAL GOVT. STOCKS.—Rise: Canada 4 p.c. Reg. ⅛, to 101-103, Gold Coast ⅛, to 86½-87½, Grenada 1, to 102-104, Hong Kong ½, to 99½-100½, New Zealand 3 p.c. 1, to 90½-91½, Tasmanian 3 p.c. ⅛, to 88⅝-89½, Victoria 4 p.c., 1911-25, 1, to 101-103.

FOREIGN GOVT. SECURITIES.—Rise: Argentine 4½ p.c. 1888 1, to 97-99, Bulgarian, 1888, ⅛, to 100-101, do., 1892, ⅛, to 100-101; Chilian 4½ p.c., 1886, ½, to 91-93, do., 1889, 1, to 92-94, do., 1892, 1, to 96-98, do., 1895, 2, to 92-94, do., 1896, 1, to 96-98, do. 5 p.c., 1905, 1, to 96-98, Chinese 4½ p.c., 1898, ¼, to 100¼-100⅝, Greek, 1881, ⅛, to 53½-54, do., 1884, ⅛, to 53-53½, do. 1887 ¼, to 54-54½, do., 1890, ⅛, to 52-52½, do. Rlys. Loan ⅛, to 93-93½, Honduras Issues 1½, to 11-11½, Japan 5 p.c., 1901-1902, ⅛, to 103½-104, Russian Ser. III. 1, to 72-76, do. 1894 1, to 67-71, Spanish ⅜, to 95⅝-96½, Uruguay 3½ p.c. Bonds ½, to 70⅜-71½. **Fall:** Bahia ½, to 93-94, Brazilian, 1889, ½, to 89½-90, do. 4 p.c. Bonds ½, to 88-88½, Portuguese ¼, to 70¼-71¼, Russian (Scrip) ¼, to 101¼-101¾ dis.

HOME RAILWAYS.—Rise: Caledonian Pref. ¼, to 77-77½, Glasgow and S.-W. Def. ½, to 41-42, Hull and Barnsley ½, to 48-49. **Fall.** Gt. Northern "A" ¼, to 43-44, Nth. Staffs. 1, to 100-102,

Guaranteed—Rise: Fishguard and Rosslare 3½ p.c. 1, to 100-103, Forth Bridge 4 p.c. 1, to 115-117, Gt. Central 5 p.c. Irr. 1, to 133-135, Gt. Northern 4 p.c. 1, to 116-118, Brighton 5 p.c. 1, to 143-145.

Preference.—Rise: Caledonian No. 2 1, to 115-117, North. Western 4 p.c. 1, to 116-118, District 5 p.c. Ext. 1, to 61-64. **Fall:** Chatham 2nd 1, to 57-59.

INDIAN RAILWAYS.—Rise: Bengal-Dooars 2½, to 94-97. **Fall** East Indian "D" 1, to 138-140.

COLONIAL RAILWAYS.—Rise: Beira 4½ p.c. Debs. 2, to 55-59, Buffalo and Lake Huron 1st and 2nd Bonds 1, to 138-140, Canadian

Pacific Certs. 14, to 117-122, Grand Trunk of Canada 2nd Pref. 1, to 114-115, Mashonaland 5 p.c. Guar. Debs. ½, to 91½-93½, Ontario and Quebec 5 p.c. Deb. 1, to 136-138, Rhodesia 4 p.c. 1st Mort. Debs. ½, to 79⅝-81½. **Fall:** Canadian 3 p.c. Deb. ½, to 90½-91½, Mashonaland 5 p.c. Guar. ½, to 92-94.

AMERICAN RAILWAYS.—Rise: Atchison Pref. ½, to 105-106, Erie 2nd Pref. ½, to 73½-74½, Gt. Nthrn. (U.S.A.), Stk. 7½, to 340-345, National of Mexico Pref. 3½, to 47-48, do. 2nd Pref. 1, to 22-23, N. Y., Penn., and Ohio Deb. 2, to 90-94, Rock Island 1, to 29-30. **Fall:** Chicago Gt. Wstrn. "B" ½, to 19-19½, Pittsburg F. Wayne 7 p.c. Guar. 1, to 177-181, Wabash Pref. ½, to 47½-48½.

CANALS AND DOCKS.—Rise: Manchester Ship Canal 3⅛ p.c. Deb. 1½, to 93½-94½, Millwall Dock 5 p.c. Pref. 1, to 89-94. **Fall:** London and India Pref. Ord. ½, to 96-99, do. "B" Pref. 1, to 101-103.

COMMERCIAL, INDUSTRIAL, &c.—Rise: Bell's Asbestos 1/8, to 2 1/16-2 3/16, Borax 4⅛ p.c. Deb. 1, to 109-111, British Aluminium 7 p.c. Pref. ⅛, to 6⅛-6⅜, British Oil and Cake Mills Deb. 2, to 91-93, Brunner Mond 1/16, to 5 5/16-5 1/16, Californian Petrol Refineries ⅜, to 11/16-¾, Eastman's ⅛, to 9⅜-9⅝, Goldsbrough Mort. "A" Deb. 1⅛, to 84-88, do. "B" Deb. 1⅛, to 84-88, Gramophone 1/16, to 2⅛-2⅜, Hope Bros. Pref. ¼, to 4-4⅛, Neuchatel Asphalte ⅛, to 10-10⅛, New Tamarugal Nitrate 4 p.c. Income Bonds 1, to 72-74, Nobel-Dynamite ⅛, to 16⅛-17⅛, do. (Warrants to Bearer) ⅛, to 16⅛-17⅛, Pillsbury-Washburn Flour Mills ⅛, to 4⅛-5⅛, Premier Cycle 3-32, to 11-32-13-32, Rover Co. 1/16, to 1⅛-1⅜, Salt Union 1/16, to 13/16-15/16, do. Pref. ⅛, to 3⅜-3⅝, Variety Theatres 1/16, to 11/16-¾. **Fall:** Aerated Bread ⅛, to 6⅛-6⅜, Assoc. Portland Cement 1/16, to 1 15/16-2 1/16, do. Pref. 5/16, to 7 9/16-7 13/16, Aux Classes Laborieuses 1/16, to ⅞-1, Colorado Nitrate ⅛, to 14-14⅛, English Sewing Cotton 1/16, to 1 5/16-1⅛, Home and Colonial 15 p.c. Pref. ⅛, to 2⅛-2⅜, Imperial Tobacco Deb. ⅛, to 106⅛-108⅛, Jay's 1/16, to 1 1/16-1 7/16, Lovell and Christmas ⅛, to 7⅛-8, Martinez Gassiot Pref. ⅛, to 4⅜-4⅝, Owen (Wm.) Pref. ⅛, to ⅜-½, Peebles (A. M.) ⅛, to 2-3, Peek Bros. and Winch ⅛, to ⅜-½, Piccadilly Hotel Deb. 1, to 86-90, Rio de Janeiro City Improv. ⅛, to 4⅛-4⅜, San Sebastian Nitrate ⅛, to 2⅜-2⅝, Spencer, Turner, and Boldero ⅛, to 4⅛-5, Waring and Gillow Pref. ⅛, to 4⅛-5.

LIGHTING AND POWER.—Rise: Brompton ⅛, to 8-9, Charing Cross ⅛, to 4⅛-5, Chelsea ⅛, to 5⅜-5⅝, City of London ⅛, to 10⅛-11⅛, do. Pref. ⅛, to 12-13, do. 2nd Deb. 1, to 101-104, County of London ⅜, to 8⅜-9⅛, Electric Lighting and Traction Co. of Australia Deb. 3, 88-92, Electric Supply of Victoria Deb. 1, to 99-101, St. James and Pall Mall Pref. ⅛, to 7-8. **Fall:** County of London Pref. ⅛, to 11⅜-12⅛, Indian Electric Supply Deb. 1, to 109-112.

FINANCIAL LAND.—Rise: Argentine Southern ⅜, to 4⅛-4⅜, Australian Mortgage 4 p.c. Deb. 1, to 101-103, Hudson's Bay 3⅛, to 92-93, Imperial Colonial Finance 1, to 110-113, Mortgage and Debenture Deb. 1, to 91-93, Santa Fé and Cordova Gt. South ⅛ to 3⅜-3⅝, Scottish Australian 2, to 57-62, do. 5 p.c. Pref. 2, to 103-108, Western Canada 1/16, to 1⅛-1⅛. **Fall:** Egyptian Delta Land ⅛, to 3⅛-3⅜, Freehold and Leasehold Pref. ⅛, to 8⅛-8⅜, Hyderabad (Deccan) 1/16, to 2 1/16-3 1/16, Law Reversionary Interest Society 1, to 116-119, Pekin Synd. ⅛, to 14⅛-15⅛, Peruvian Corp. ⅜, to 14⅛-15, do. Pref. ⅛, to 47⅜-48, do. Deb. ⅛, to 104⅜-105⅛.

FINANCIAL TRUSTS.—Rise: American Invest. Def. 1, to 124-128, Foreign, Amer., and Gen. Def. 1, to 103-106, Foreign and Colonial Invest. Def. 1, to 125-128, Municipal Trust "B" Deb. 1, to 99-102, do. "C" Deb. 1, to 97-100, Railway Debenture and Gen, 4½ p.c. Deb. (1911) 2, to 100-103, Trust Union ⅛, to 6⅛-7. **Fall:** Alliance Invest. Pref. 1, to 93-97, British Steamship Invest. Def. 1, to 78-80, Colonial Securities Pref. 1, to 96-99, Gas, Water, and Gen. Invest. Def. 1, to 14-17, Railway Invest. Def. ⅛, to 17⅛-18⅛.

GAS.—Rise: Imperial Continental 1, to 184-187.

INSURANCE.—Rise: Commercial Union 1, to 78-80, Royal Exchange 5, to 200-210. **Fall:** British and Foreign Marine ⅛, to 18-18⅛, Lon. and Lancashire Fire 1, to 21½-22⅛.

IRON, COAL, AND STEEL.—Rise: Armstrong Pref. ⅛, to 5-5⅛, Babcock and Wilcox ⅛, to 4⅛-4⅜, Consett ⅛, to 34⅛-35⅛, Ebbw Vale (£10 pd.) ⅛, to 8⅛-9, Guest, Keen, and Nettlefolds 1/16, to 2⅞-2⅞, Gwynnes Pref. ⅛, to 2⅜-2⅝, Moss Bay Hematite Debs. 2, to 88-91, Normanby ⅛, to 5/16-11/16, Pease and Partners, ⅛, to 13⅛-13⅜, Rickett, Cockerell Pref. ⅛, to 3⅜-4⅛, South Durham 1-32, to 1 5-32-1 7-32

Stewarts and Lloyds ¾, to 18¼-18¾xd, United States 1, to 48⅞-49, do Pref. ¼, to 111¼-111¾. **Fall:** Cammell Laird Scrip. 1, to 49-51.

SHIPPING.—Rise: Union of New Zealand ¼, to 16½-16¾. **Fall:** Cunard (£10 pd.) ¼, to 6½-6⅝, Royal Mail Pref. 1, to 92-94.

TEA AND COFFEE.—Rise: Lungla Debs. 1, to 98-101, Nuwara ¼, to 10-10½.

TELEGRAPHS, &c.—Rise: Chili ¼, to 6¼-6⅜, Gt. Northern ½, to 37½-39½, Natl. Telephone Pref. ⅛, to 108½-110⅛, do. Def. ⅛, to 108½-110⅛, do. 3rd Pref. 1/16, to 5 3/16-5 13/16, do. 3½ p.c. Deb. ½, to 98-100, do. 4 p.c. Deb. ⅛, to 102½-104⅛. **Fall:** Anglo-American Pref. ⅛, to 113¼-114⅛.

TRAMWAYS, &c.—Rise: Anglo-Argentine ¼, to 7⅞-7⅞, do. (new) ¼, to 7⅛-7⅜, British Electric Traction Pref. ⅛, to 9½-10, do. 2nd Deb. 1, to 92-95, Buenos Ayres and Belgrano 1/16, to 3⅜-3⅝, Buenos Ayres Lacroze 1, to 100-103, Calcutta ¼, to 8¼-8½, do. (new) ⅛, to 8-8½, London United Pref. ⅛, to 8¼-9¼, do. Deb. 1, to 94-97. **Fall:** London Motor Pref. ¼, to 3½-4.

THE TRANSVAAL MINING INDUSTRY IN 1905-06.

In Johannesburg there have recently been published statistics of the mineral production of the Transvaal for the year ending June 30 last. These show that the value of the gold production was £22,100,707, of silver £66,458, of diamonds £968,229, and of coal £837,176, a total of £23,972,570, the aggregate showing an increase in value of £3,473,092 compared with the similar period for 1904-5. The largest increase is, of course, shown in gold, which advanced by £3,726,590, whilst silver yielded £4,483 more; hence it follows that there were appreciable declines in diamonds and coal. In the former the value of the production was £230,301 lower, with a decrease of 236,596 in carats, and in the same period 237,312 less tons of coal were sold, with a diminution in value of £37,680. The following table shows the progressive value of the gold output:—

Year.	Output. Ozs.		Value. £
June 30, 1902	891,999	....	3,788,968
June 30, 1903	2,372,075	....	10,075,926
June 30, 1904	3,475,311	....	14,762,184
June 30, 1905	4,322,577	....	18,361,144
June 30, 1906	5,202,944	....	22,100,707

The number of machine drills in use in the mines increased from 1,733 in July, 1905, to 2,209 in June last, of which 2,172 are on the Rand, 30 at Heidelberg, and 7 at Barberton. The silver returns commence from the statistical year, July 1, 1902, and the weight and value of the output are detailed as under:—

Year.	Weight. Ozs.		Value. £
1902-03	280,997	....	29,215
1903-04	406,676	....	45,111
1904-05	476,085	....	54,221
1905-06	569,071	....	66,458

The monthly record for the past year was:—

	Weight. Ozs.		Value. £
July	45,440	....	4,992
August	45,932	....	5,125
September	44,617	....	5,002
October	45,123	....	5,078
November	46,038	....	5,272
December	47,890	....	5,511
January	47,463	....	5,555
February	44,131	....	5,251
March	47,725	....	5,783
April	47,896	....	5,829
May	50,499	....	6,180
June	56,310	....	6,880

Since the war the output of diamonds has been:—

Period.	Quantity. Carats.		Value. £
1902-03	35,572	....	46,357
1903-04	497,917	....	685,720
1904-05	995,602	....	1,198,530
1905-06	758,406	....	968,229

For each month of 1905-06 the figures were:—

	Quantity. Carats.		Value. £
July	57,227	....	67,203
August	69,365	....	76,544
September	61,977	....	68,661
October	57,632	....	67,270
November	39,511	....	45,359
December	50,166	....	59,712
January	41,733	....	52,201
February	46,501	....	58,772
March	72,757	....	96,182
April	89,999	....	123,994
May	92,315	....	135,277
June	79,241	....	718,154

The total number of those employed by mines and mines contractors on the last working day of June on the gold, diamond, and other base metal mines, chemical and metallurgical works, tailing syndicates, and alluvial works in the whole of the Transvaal was: Witwatersrand, 17,260 whites, 82,733 coloured, 52,352 Chinese; other districts, 1,608 whites, 16,171 coloured; coal mines, 461 whites, 10,076 coloured; totals, 19,329 whites, 108,980 coloured, and 52,352 Chinese. The percentage of coloured persons not at work on the Rand gold mines on the last day of the month was 8·26, and in those of other districts 8·18, whilst the percentage of non-working coolies was 9·06.

The number of mines producing coal is returned at 25, and the progress since 1902 has been as follows:—

Year.	Output. Tons.		Value. £
1901-02	1,134,871	....	469,769
1902-03	1,969,089	....	782,906
1003-04	2,370,465	....	895,931
1904-05	2,513,824	....	874,856
1905-06	2,751,136	....	837,176

MONTHLY PROGRESS IN 1905-06.

	Tons.		£
July	232,424	....	74,134

June	246,769	....	71,019

SOUTH AFRICAN MINE RETURNS.

We have another highest aggregate achieved by the various gold mines now crushing in the Transvaal. According to the official returns sent over by the Transvaal Chamber of Mines the output from the Witwatersrand mines was 473,385 ozs. of fine gold and from the outside mines 18,408 ozs., making a total of 491,793 fine

* Loss.

ozs., of which the value was £2,089,004. These figures show an increase of 15,818 ozs. in weight and of £67,191 in value compared with June and is by these figures the highest ever attained, though in the daily average, compared with June, there was a slight decline from 15,865 ozs. to 15,864 ozs., so there was no real progress. Compared with July of last year the gains are 72,288 ozs. and £307,060, so the progress in the twelve months is substantial even though shareholders may have to pay dearly for it. The returns in respect to native labour show a nett decrease in the blacks at work

of 562, at a total employed of 76,995. In regard to one or two of the individual performances the Nigel Deep shows a loss of £556, which was the effect of a breakdown of the machinery. There is also a further drop in the profits of the Bonanza, but this was to be expected, as the mine has only a few more months to live. There is a considerable advance in the profit of the Cason Gold Mines, which has now been crushing two months. The tonnage treated was considerable for a mill of 200 stamps.

Letters to the Editors.

DEAR SIRS,—We have to thank you for your courtesy in showing us the copy from which Mr. George Westinghouse's letter was printed. We think there is considerable justification for the error in giving his signature as "B. W. Westinghouse." Notwithstanding this, may we beg you to mention in your next number that the letter should have been signed "George Westinghouse."

Thanking you in anticipation,

We are, dear sirs, Faithfully yours,

THE WESTINGHOUSE COMPANIES' PUBLISHING DEPARTMENT.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

The week opened with the carry-over in the mining market, but the open account was not so large as some thought it might be, and carry-over rates were as light as those at the mid-monthly settlement; even a trifle easier here and there. The general rate was again 6-7 per cent., but Gold Fields were carried over at 5-6 per cent., East Rands at 4-5 per cent., Modderfonteins and Randfontein Estates at 5-6 per cent., and South African Gold Trusts at 5½-6½ per cent., as before. On the other hand, the charge on Rand Mines was 4-5 per cent., compared with 3½-4½ per cent. De Beers and Jagers were again continued at 4-5 per cent., and Premiers at 3-5 per cent. On Rhodesians also the contango was 6-7 per cent., including Chartered, the rate on which stiffened later in the day. West Africans and Egyptians were, as usual, carried over at 6-8 per cent., whilst rates were irregular in the West Australian section. Great Fingalls, Golden Horseshoes, and Oroya Brownhills were arranged at 4-6 per cent., Northern Blocks at 5-7 per cent., Sons of Gwalia at 1-3 per cent., and Perseverance, Ivanhoes, Lake Views, Great Boulders, and Associated at 6-8 per cent.

Owing to the steady decline in the last few days of the account the making-up list did not show such an array of rises as at one time was foreshadowed. The largest advance was 1/8 in H. E. Proprietary, followed by gains of ¾ in Cason Gold Mines and De Beers deferred, ⅝ in Central Mining, Welgedacht Exploration, and South African Gold Trust, 5/16 in Consolidated Gold Fields, East Rand Mining Estates, and Witwatersrand Townships, ½ in East Rand Proprietary and South African Gold Mines, 7/16 in Apex, ⅜ in Anglo-French Exploration, Jubilee, Modderfontein, Roodepoort United, and Steyn Estates, 5/16 in Cinderella Deep, A. Goerz, Knight's Deep, Langlaagte Deep, Jagers deferred, Randfontein Estates, Rietfontein, Tanganyikas, and Treasury, and 9-32 in General Mining and Finance. Practically, the only fall was the heavy one of ¾ in Premier diamond deferred. In the West Australian group Great Fingall improved 1/8, and Kalgurli ½, but Horseshoes lost 7/16. Of Americans Esperanza made up 5/16 higher, but Dolores declined ⅛. Amongst coppers Spasskys put on 1/32, Utahs 5/8, Rio Tintos 2¼, Anacondas 1¼, and Cape Coppers ½.

For the new account the market commenced in a very undecided mood. Dealers hoped to see a spirited resumption of public buying, but they hoped in vain. They put prices higher a fraction or so in several places, but they quickly saw it did not allure outsiders, and accordingly quotations eased off up to the close of the House. Still, on balance, changes were for the most part in favour of holders, but only rarely did a rise reach ⅛, an exception being Modderfonteins, which put on 7/16. The larger number of shares were unaltered in price. In the diamond group Premier deferred continued the recovery that set in on the preceding Saturday, and marked a gain of ¼, but De Beers and Jagers did not move. And each day of the week has been much alike. Instead of outside business broadening out, and swelling to the dimensions the gamblers and bosses hoped for, it has actually contracted. Not that prices have given way, except to a trifling degree in places. In others they have hardened a fraction or so. Paris has shown no decided or consistent attitude. At one time it would buy, at another sell, but it has never at any time displayed any spirited interest in the market.

In the diamond group Premiers have continued to recover their losses of the preceding week, the advance being as persistent as the previous fall seemed irresistible. Other shares have only been spasmodically dealt in, and they may be described as steady to firm.

Tanganyikas have been vigorously taken in hand again, and have scored substantial rises each day. All kinds of rumours are still in the air, circulated in order to give some cogent justification for the rise, but nothing definite or authentic has been published, and shareholders and the public are left to their own deductions. Zambesia Explorings have improved in sympathy, and other shares have exhibited a little firmness on the strength of the movement.

West Africans and Egyptians have never at any time exhibited symptoms of vitality, and West Australians have been almost as lifeless. In this group Great Fingalls have been the most prominent share, the biggish rise in the early part of the week being followed by a reaction on profit taking. Talismans and Waihis have been strong in the New Zealand group, and Esperanzas have given way amongst Mexican. Copper shares have been very irregular.

RAND KLIPFONTEIN COMPANY.—As it has been agreed between the boards of this company and the Klipfontein Estate to locate jointly in one block the mining rights accruing to each, and working them as one venture, and the approximate locality of the area having been determined, Mr. E. J. Way, the consulting engineer of the Kleinfontein group central administration, was entrusted with the work of selecting the site of the shafts and erecting the necessary equipment preparatory to the commencement of shaft sinking. It has not been considered opportune, the directors say, to place before the shareholders the basis for the amalgamation, but when the question is dealt with it is hoped to submit a scheme for providing sufficient funds to complete the shafts to the reefs before deciding on the capacity of the necessary

reduction works. So far the cost of shaft-sinking, and the erection of the equipment has been charged equally to the two companies. During the twelve months ending May 31 the expenditure amounted to £64,890, and the half-share of the Rand Klipfontein was £32,445. The cash available at the close of the year was £8,557.

Consolidated Langlaagte.—The results shown in the past quarterly report of the Consolidated Langlaagte Mines are certainly not encouraging. Some 53,617 tons were crushed for a yield of 16,864 ozs., an average of 6.3 dwts. per ton, and the profit was £11,907. Despite the larger quantity crushed and a decrease in the working costs, there was a drop of £2,722 in the profit compared with the preceding quarter, which was due to a fall in the grade in the first two out of the three months. In the third month the grade is said to have recovered, and to be maintaining the higher level. The Consolidated Langlaagte is the product of an amalgamation between two past failures, the New Crœsus Gold Mining Company and the Langlaagte Star, and has a nominal capital of £1,200,000, of which £890,000 is issued. It will be seen from the above that the grade of the ore in the property is very low, under 7 dwts. per ton, which has rarely proved payable anywhere on the Rand. It is difficult to see, therefore, how such a company can expect to earn dividends on so huge a capital, particularly as the capital expenditure is still heavy, no less than £7,522 in the past quarter. If higher profits cannot be earned, the mine might just as well be closed down again.

Ginsberg Gold Mining Company.—Another Barnato company which is doing comparatively badly is the Ginsberg. In the three months to the end of June, 23,741 tons were crushed, for a yield from all sources of 7,466 ozs., averaging as low as 6.29 dwts. per ton. Accordingly, the profit was only £6,511, and there was a capital outlay of £3,378. Compared with the preceding quarter, 640 tons more were crushed, and the costs were reduced by 3.67s. per ton, a saving partly due to the fact that no rent was paid for the Balmoral mill. On the other hand, the grade of the ore was notably lower, and as a result the profit averaged only 5.48s. per ton compared with 7.02s. for the first quarter of the year. The reefs in the lower part of the mine are split into comparatively thin leaders, and the grade can only be raised by doing more sorting than is possible under existing circumstances. So the outlook is not too bright.

Glen Deep.—For some time past the prospecting work carried out on the property of the Glen Deep, Limited, has been conducted in a formation underlying the main reef leader, known as the Bastard reef, which is apparently of igneous formation, carrying scattered pebbles. The existence of this body has always been known, but its grade has hitherto been regarded as too poor for profitable working as a separate body. Its width ranges from 3 ft. to 5 ft., and as its occurence is often in close proximity to the main reef body it can be mined direct from the stopes of that reef without having to break much barren matter between. It is officially pointed out that in cases of this kind the cost of mining is very low when compared with the stoping operations in the other reefs. Within the past six months several stoping faces have been opened in this reef in conjunction with the main reef leader, and some 9,300 tons obtained, of an average assay value of 6.6 dwts. Considering the cheapness with which this ore can be mined, such a grade is considered very encouraging, therefore it justifies more extended operations in the reef. It is premature to make any calculations regarding the extent to which this reef can be mined in conjunction with the other reefs of the property, but it is considered that sufficient evidence has been disclosed, especially during the past three months, to make it an object of great interest and encouragement to shareholders.

New Unified Main Reef.—The directors of this Barnato company confess that the results of the past quarter's work are "not particularly satisfactory," but they comfort themselves with the reflection that it is a considerable improvement upon that for the preceding quarter, for instead of a loss a small profit was earned. A slightly smaller quantity of ore was crushed, but there was just a trifling improvement in the recovery per ton—5.76 dwts. against 5.42 dwts.—and this sufficed to make a palpable difference. Complaint is, however, made—and this is not surprising—that the labour supply is still very inadequate. However, there are rays of light perceptible even in this darkness, for the directors say they see signs of an improvement, and hold out the hope that should an increased number of natives be procured there is every probability of better results being obtained. "There are very few mines," they urge, "where an adequate labour supply makes such a difference as on this mine." Indeed! Is there any hope that if they succeed ultimately in getting it by the adoption of better and more effective methods than those in vogue hitherto, particularly by the weakening of the monopoly of the Labour Association, the company will in the not distant years pay its first dividend? For it has not distinguished itself by any dividend payment since it was formed in 1891. Crushing started as long ago as 1899, but it had to be suspended in the following year, and was not resumed till the end of 1898. Less than twelve months afterwards the South African war broke out, but the company has been milling ever since May, 1903. The last balance-sheet, dated December 31 last, still showed a debit balance of £15,926, and now we learn that a profit has been earned in the second quarter of the current year. This is progress of a kind, and we can certainly say it is better than making a loss. But, for all that, even with an adequate supply of labour, we fear this company will never make a success of it, never repay those who have waited so long, and who are still doomed to wait for dividends. It has had a fairly long trial, and the result of it is far from encouraging. Nevertheless, we are grieved to learn that it has suffered from the action of the directors of the Aurora West United, who closed down their mine at the beginning of the year. The increased quantity of water the New Unified has thereby had to deal with has given some trouble, so we are told, but it is hoped this difficulty has now been overcome.

New Rietfontein Estate Gold Mines.—This is another member of the Barnato family of gold mines, but it has been a much more successful venture than the New Unified. In the quarter to June 30 it earned a profit of £29,197, which was an increase of £3,617 on that of the previous three months. Not only was a greater tonnage crushed, but the grade was notably better. Working costs were somewhat high, but this is attributed to the effort to keep an average number of stamps running whilst new shafting was put in and connections were being made for the new stamps; also during the changing over to the new sorting and crushing plant. The new 60 stamps are now ready, and the plates are set, so that it is only a question of sufficient water and labour to enable the full mill to be run. With regard to water a connection will be completed to the mains of the Rand Water Board, and there is every hope that a sufficient amount of native labour will be secured to run the full mill at an early date. As regards the mine itself, it is declared to be opening up in a satisfactory manner, especially in the Central section. It may be recalled that in March of last year this company acquired the undertakings of its two subsidiaries—the Rietfontein A and the Rietfontein B companies—both of them struggling concerns. Now they are amalgamated they may do better in the future than they have ever done in the past, but so far as present indications go the company does not promise ever to become a considerable dividend-payer.

Ayrshire Gold Mine and Lomagunda Railway Company.—Some fairly encouraging news, which cannot but be welcome to the shareholders in this Rhodesian company, is given in the latest report of the mine manager. The principal event of the past month's working, he says, was the striking of the reef in the eighth level, drive west. The body struck appears to be solid, and the assay value works out at 27 dwts. over 5 ft. for a distance of 30 ft., and the reef still shows strong in the face. An encouraging fact, it is pointed out, is that the reef and the gold values continue down to the eighth level. The general country in the neighbourhood of the reef looks less contorted and crushed than in the sixth level, "so it may reasonably be anticipated that the reef will have more continuity here than at the sixth level, and probably give a greater tonnage of payable rock." It is to be observed that the manager is very cautious and guarded in his statements and opinions. For instance, the reef "appears" to be solid, and there are the words "reasonably" and "probably," which imply certain doubts in his mind. The Ayrshire is undoubtedly one of the most promising of existing Rhodesian mining companies, but, after all, that is not paying it a very high compliment, seeing that the comparison is with a very poor lot of mines.

Broken Hill Proprietary Company.—A summary of the half-yearly report for the past half-year has been cabled to this side, and it is even more satisfactory than it was generally expected to be. During this period the silver market developed considerable strength, but the lead market was, if anything, even stronger, whilst the high price of zinc likewise greatly helped the company. The profit is stated to have amounted to £232,332, which compares with £196,959 in the preceding six months, a great advance. This is equal to over £1 per ton of ore treated, by far the highest obtained for many a year. The profit and loss account shows an accumulated credit balance of no less than £648,762. On construction work £20,690 was spent in the half-year, £4,304 of which was on account of zinc concentration plant and £2,044 on pottery plant in connection with spelter works, which will shortly be completed and put into operation in order to test efficiency and make what modification would be required or beneficial. It has been decided to commence operations with one distilling furnace holding 120 retorts. This furnace has a capacity of 10 tons weekly, or one-tenth of the capacity of the ultimate plant, and if the result of the trial is equal to expectations the manager will push ahead with the completion of other distilling furnaces. All departments show increases in the cost of working, due to the interruption of the work owing to the fire. A large fan is in course of erection at the Weatherly shaft, to improve the ventilation of the mine to the south, which will shortly be completed. After this has been accomplished the normal conditions of output will be resumed. The directors have added £25,000 to the reserve fund, which raises the total to £175,000, exclusive of the £16,000 insurance fund, and it is the intention of the board to increase the aggregate to £225,000 by transferring a further £25,000 to the reserve and £9,000 to the insurance fund. The average prices obtained during the six months were: Lead, £14 18s. per ton; silver, 2s. 8 27-64d. per oz. fine.

Chillagoe Company.—The results of working for the year ending March 31 showed a marked improvement upon those of the preceding year. Gross receipts from the mine, railway, wharf, &c., amounted to £170,946, and the outlay was £131,866, leaving a working profit of £39,080 compared with £10,429. Out of this credit £11,306 is absorbed in the payment of various charges, debenture interest takes £17,440, and £9,965 is allowed for depreciation on plant and machinery, leaving the small sum of £533 to be carried forward. The directors anticipate this position will be improved by actual returns not yet received for March-April shipments of matte and bullion, but not by any large amount. From the railway the gross revenue was £63,871,

and the nett £40,117, the increases in these amounting to £13,759 and £11,933 respectively. Public traffic was well maintained and yielded £44,612 compared with £30,376 in 1904, although this traffic was affected by the tropical rains in January, February, and March. No material damage was done to the railway by these floods; on the other hand, much benefit to the country and the company is expected from the rains. A steadily-growing traffic and the increase to be expected from the improvements in hand for the more economical treatment of lead ores will necessitate before long an increase in the rolling stock. As regards the proposed extension of the line to Etheridge, the agreement authorised by Parliament has been completed with the Government of Queensland, and the deposit of £5,000 stipulated for has been paid. Nothing further can now be done until Parliament meets and passes a Validating Bill, ruled to be necessary in order to comply with the forms of Parliament. So far as the directors are aware it is not anticipated that any difficulty will arise in the passage of this measure. A trial survey of the proposed railway has been carried through from Almaden to Georgetown, and surveyors are still at work, at the joint cost of the Government and the company, improving and shortening the lines. No close estimate of cost will be possible until the work in hand is finished, but sufficient data are already available to enable the directors to say that the cost of the railway is likely to be much below the amount named in the agreement. As regards the mine, the most noteworthy development has been in the Queenslander lode, at Morrison's. The ore body is said to be of good quality, taken as a whole. Up to the date of the report, 1,307 tons of ore, with an average of 7 per cent. copper and 3 ozs. of silver, had been won, chiefly by driving and sinking, and sent to the smelters. In order to test some of the mines by boring, a contract for 3,000 ft. was let nine months ago. Six holes in all were commenced, of which four are completed. Of these four, two at Queenslander gave disappointing results, one at Morrison's cut the ore body referred to at a depth of 246 ft., proving its downward continuance so far, and one at Tillmanton passed through an extensive body of payable copper ore, continuing in ore from 260 ft. to 361 ft. A year ago it was announced that satisfactory arrangements had been made with the Mungana Company for the erection at Chillagoe of a concentration plant for treating the lead ores from the Mungana mines. Further investigation proved that the ores could be better dealt with by improved roasting and smelting methods than by concentration. So the original determination was altered and a new agreement entered into for the protection of the Chillagoe Company in regard to the outlay involved in providing the improved plant.

WEST KITTY MINE.—In convening a meeting for the 30th inst., the secretary of this old Cornish company writes:—"As there appears to be a very strong feeling in the minds of some of the largest shareholders in favour of placing this company on a limited liability basis, the committee court an expression of views on the subject by the shareholders, by letter or otherwise." Messrs. G. W. Lennox, of Cardiff, and J. J. Cousens, of Taunton, have notified that they are candidates for the seats on the committee rendered vacant by the deaths of the Rev. W. M. Lennox and Mr. George Unwin. The accounts for the past 16 weeks show a profit of £1,253, the receipts totalling £12,685, £30 of which came from the sale of two tons of black copper ore and the balance from 115 tons of black tin sold. Tin ore mined and milled amounted to 6,989 tons, producing 38 lbs. of tin ore per ton. During the same period 183 fathoms of ground were opened up.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

CANADIAN PACIFIC RAILWAY COMPANY.

The issue of the annual report of this great corporation coincides with a Stock Exchange boom in the company's shares. It would be idle to deny that the business is in a very flourishing condition, recent traffics having been little short of wonderful. It is also probably true that the dividend will be increased shortly—it is pretty certain to be if the boom lasts—and likely enough the much-talked of deal in the company's lands will provide a nice fat bonus for the stockholders. But whether even all this justifies present prices for the company's shares is another question which the future alone can decide. The gross revenue for the twelve months ended June 30 was $61,669,758, an increase of $11,187,876 over the previous year, surely startling progress. Working expenses of $38,696,445 were only $3,689,651 larger, so that the nett earnings on operations rose from $15,475,088 against $22,973,313. This means a drop in the ratio between expenditure and income of 6.60 per cent. to 62.75 per cent. Nett earnings of the steamships in excess of the amount included in the monthly reports, and apparently embraced in the above totals, was $652,577, and miscellaneous revenue items produced $1,316,870, making the aggregate nett income $24,942,760 compared with $17,059,752. Fixed charges reached $8,350,545 or $396,479 more, and after transferring $500,000 to the steamship replacement fund and $80,000 to the pension fund, the revenue still left is $16,012,216. Only $1,659,133 is absorbed by the preference dividends, and the 6 per cent. dividend again paid on the ordinary stock makes away with $6,082,000, so that the surplus on the year's working is the really remarkable one of $8,271,082. If this is a legitimate balance the demand by stockholders for the larger dividend would appear to have much justification, and there is no direct evidence that capital has been in any shape used to the relief of revenue. The company raised 4 per cent. debenture stock to the amount of £2,531,273, but out of the proceeds the debt of $7,000,000, bearing interest at the rate of 4 1-20 per cent. per annum, due to the Province of Quebec in connection with the purchase of the railway between Ottawa and Quebec, was discharged. The remainder went to meet expenditure for the construction of branch lines, and of two additional Atlantic steamships already authorised. In addition to the debenture stock preference stock to the amount of £1,000,000 was also sold, and the company assumed other important capital obligations. The Minneapolis St. Paul and Sault St. Marie Company constructed an additional 291 miles, and the Canadian Pacific Company guaranteed interest on $5,820,000 mortgage bonds issued for the purpose. Various new extensions, now said to be progressing favourably, must also be swallowing up much money. The directors want an additional and more economical avenue for the movement of traffic between the head of ocean navigation and Georgian Bay, and steps are being taken to secure it. This will mean the construction of a new line by the Georgian Bay and Seaboard Railway Company, to be leased for 999 years at a rental equivalent to the interest at 4 per cent. per annum on the bonds issued for the purpose. Quite a number of other leases are being arranged, and more debenture stock is to be issued to build sundry branch lines. The company is therefore involving itself in very heavy outlay, but it seems legitimate capital expenditure, and we are glad to note that the policy of the directors is to replace at the cost of working expenses all rolling stock that becomes obsolete or is destroyed car for car and locomotive for locomotive, without reference to the increased capacity and cost of the more modern equipment. This will mean that every car and locomotive shown in the inventory of rolling stock is either in service, or is provided for in the equipment replacement fund. It would be nice if English lines adopted a similar policy. Company's land sales were 1,115,743 acres, realising $6,513,452, being an average of $5.84 per acre, and the cash receipts were sufficient to enable the directors to deposit with the Dominion Government towards the redemption of the $15,000,000 land bonds mortgage a further sum of $6,500,000, leaving a balance due on account of this mortgage of $1,500,000. Against this there are deferred payments on account of land and town sites sold of $16,382,823. This seems to indicate a very satisfactory position. The company's total surplus is $25,741,414, and the cash balance $17,752,416. Total bonded debt is $143,257,497, preference stock outstanding is $42,719,999, and the common stock amounts to $105,995,190, including the subscription payment on the new stock issued at par in March last. Ocean lake and river steamships represent a nett capital outlay of $15,709,139, but we are not allowed to know anything about the actual working of the gross earnings. Passengers produced $16,041,615, freight $39,512,973, mails $707,007, and sleeping cars, express, elevators, &c., including profit from ocean steamships, $5,408,161. Why are the profits of the steamers so carefully hidden? We suspect they contribute little or nothing to the nett income. On the expenditure side conducting transportation, or traffic expenses as we should name the item, came to $18,785,696, maintenance of way and structures cost $9,105,250, and maintenance of equipment $7,369,566. General expenses came to $1,964,093, and telegraphs to $728,762, some smaller items making up the total. The agricultural land owned by the company reaches 9,847,975 acres, besides 3,625,375 acres of British Columbia lands, and 2,500,000 acres to be received through the Columbia and Western Railway.

MERSEY RAILWAY COMPANY.

Distinct progress was made by this electrified line during the six months ended June 30 last. Although the train mileage was only increased by 418 to 412,633, the number of passengers carried rose by 490,489 to 5,352,867, and it is satisfactory to note that the conversion of the system from steam to electric traction is at last finding some justification. Passenger receipts rose by £2,604 to £38,033, season ticket revenue improved from £4,791 to £5,472, and other important revenue items also produced more, so that from all sources the receipts were £47,129 or an advance of £3,592. Against this the advance in expenditure was only £318 at £35,046 so that the nett revenue benefits to the extent of £3,274 at a total of £12,083. Under important heads like maintenance, locomotive and generating power, traffic expenses, and general charges, the outlay was somewhat less, but about £600 more had to be spent on repairs and renewals of carriages and wagons, and a little more on pumping, while we also find the inevitable advance under rates and taxes. A big rise of £603 to £733 in law costs was no doubt due to promotion of certain Parliamentary Bills, and we learn from the report that under the Mersey Railway Act 1906, which received the Royal Assent on June 22 last, the period of five years fixed by the Mersey Railway Act 1900 with reference to the interest on the debenture stocks, and the representation of the debenture stockholders on the board has been extended for a further period of five years from December 31, 1905. The powers relating to the running of omnibuses which were asked for in the Bill were passed by the House of Lords, but were rejected by the House of Commons on the opposition of the Birkenhead Corporation. To the nett balance is added £92 brought forward, making £12,175, and as the fixed charges which must be met amount to £16,921, the British Westinghouse Company has

to find £4,730, and £10 is carried forward as a debit. This is a considerable improvement on the corresponding half-year when the contracting company was called upon to provide £8,438, but it again disputes two sums of £500 each placed to the permanent way and locomotive and generating power renewal funds. Capital expenditure in the half-year was £5,059 and it is proposed to spend £16,800 in the current six months, but the company has a credit to the account of £11,466. There is, however, a deficiency in the revenue account of £8,451, and there seems little prospect of any substantial reduction.

Isle of Wight Railway Company.

In the half-year ended June 30 the gross revenue was £19,724, increase £404, and the working expenditure £9,808, increase £422, leaving the nett income larger by £42 at £9,916. Most items of traffic produced a larger revenue, season tickets alone showing a noticeable decline, and maintenance, locomotive power, and traffic expenses were all higher on the expenditure side. Rents, rates, and taxes were rather less. Sum brought forward was £1,784 or £203 more, making £11,700, from which the fixed charges again took £4,089. Preference dividend requires £1,680 and the distribution at 4 per cent. on the preferred stock £3,542, leaving the directors in a position to increase the dividend on the deferred stock from 2¼ to 2½ per cent. per annum, carrying £176 to the next account.

Commercial Banking Company of Sydney, Limited.

A profit of £72,634 was earned by this bank during the half-year ended June 30, being an increase of £369 against the corresponding period of 1905. To that is added £21,856, or £467 more brought in, making £94,490, and after providing £6,613 for rebate on current bills, the directors propose the usual dividend at the rate of 10 per cent. per annum, adding another £15,000 to the reserve fund and carrying forward £22,878. The balance-sheet looks a good one, and we note that the present addition will bring the reserve up to £1,115,000 against a paid-up capital of £1,000,000. The reserve capital is also £1,000,000. At the date of the accounts the note circulation was £492,418, or an advance of £64,359, bills in circulation were up by the considerable sum of £656,487, to £1,255,818, and deposits and other liabilities show the considerable increase of £1,232,332 to £13,571,143. One of the most interesting features of recent Australian bank balance-sheets is the large increase in the amount of capital used in London on call and notice loans. Practically every important institution is employing very large sums in this way, and those who put down the amount of Australian money in use in London at the present time at 18 to 20 millions are probably not very wide of the mark. This bank now has £1,917,034 on the short loan market, an increase of £1,422,034, and although there is no sign that the withdrawal of any part of this money is immediately contemplated, the position is apt to cause reflection. Coin and bullion in hand is lower by £151,385 at £2,906,823, while there is a moderate advance to £98,554 in the cash at bankers. Consols and Government securities are larger by £320,039 at £1,628,639, and there is a rise of £13,339 to £54,332 in Queensland Government notes. Bills receivable in London and remittances in transit have gone up from £1,312,110 to £1,648,551, and notes and bills of other banks are lower at £53,829. All told, the "cash assets" reach a total of £8,307,762, or nearly two millions more, all the additional resources being added to what the bank would call its liquid resources. Bills discounted and all other debts due to the bank have gone up by £22,202 only to £8,745,658, and with bank premises, furniture, &c., standing at £460,450, the aggregate of the balance-sheet is £17,513,870 against £15,529,856.

Commercial Bank of Australia, Limited.

It is useless to look for a satisfactory statement of this bank's position because it is burdened with the ghastly deficiencies of the old bank, and each half-year has to provide a heavy sum to meet losses on the operations of the Special Assets Trust Company, which administers the remains of the wreckage. The deposits in this Special Assets Trust Company, for which the bank is contingently liable, amount to £2,910,788 against which there are assets to the estimated value of £1,530,000 or a deficiency of £1,389,786, a fearful state of affairs. Last half-year ended June 30 the operations of this Special Assets Trust resulted in a loss of £28,721, and as £5,000 was put to the Trust's reserve a tidy hole was made in the bank's nett profit of £69,776. The gross amount was £128,154 against £122,518, and after adding £14,439 brought forward and providing all charges besides the deductions mentioned only £50,494 was left. This provides a dividend at 3 per cent. per annum on the preference shares with £5,000 to premises account and £12,734 carried forward. The Special Assets reserve now reaches £211,500, a fair accumulation and one that does the present directors credit, but there is still an enormous gap between the assets and liabilities to be filled up. At the date of the balance-sheet the bank had notes in circulation of £177,789 or £26,991 more, and there was a very big increase of £336,434 to £701,684 in the bills in circulation. Total deposits were also higher by the considerable sum of £614,090 at £4,264,861, Government deposits not bearing interest reaching £70,259, and those bearing interest £529,890. Other deposits on which no interest is paid amount to the considerable sum of £2,284,994 while those entitled to interest stand at £1,379,719. On the other side the "cash assets" add up to £2,819,642 or £559,971 more, the principal movement being in call and short notice money up £330,000 to £850,000. Coin, bullion and cash at bankers has been raised by £96,717 to £1,017,059. Investments are rather less at £128,900, bills and remittances in transit show an advance of £104,477 to £422,028, and notes and bills of other banks are larger by £22,719 at £377,377. Real estate including bank premises is down from £454,369 to £445,015, and bills discounted and other advances have been increased by £442,450 to £4,411,937.

Land Mortgage Bank of Victoria, Limited.

This company has had a rather painful career, and besides writing off capital to the extent of 23s. per share it became necessary to reduce the interest on debentures from 4½ per cent. to 3½ for a period of ten years. This arrangement, by the way, expires at the end of 1906, and the directors say that negotiations for a renewal have been entered into. In other words debenture holders are being asked to accept reduced interest for a further period. According to the report for the half-year ended June 30 the demand for properties increased considerably and 34 sales totalling £14,160 were effected. Gross income was £15,660, from which debenture stock interest and sundry fees absorbed £8,941, management expenses were £1,302, and repairs, rates, taxes, and insurance took £1,108, leaving a credit of £1,644, which will go in reduction of the debit brought in, lowering it to £2,664. The paid-up capital of the concern is £275,431 and the debenture stock outstanding amounts to £496,408, one or two trifling items making up a balance-sheet total of £773,071. Including interest accrued and outstanding the advances secured on real estate mortgages reach £274,587, while the freehold properties taken under foreclosure are exceedingly heavy at £235,864. Other advances secured by mortgage of real estate, with securities in possession, amount to £24,209 and balances owing under contracts against properties sold are £84,778. Freehold properties, in addition to the foreclosures, appear at £48,242, and cash, investments, and stamps amount to £68,720. Besides the profit and loss deficiency there is a suspense account of £32,306 to be cleared off some day, but debenture holders will probably first require their interest restored to its original rate.

Goldsbrough, Mort, and Co., Limited.

Really extraordinary improvement took place in this company's position during the 12 months ended March 31 last. In this period the company handled no less than 131,041 bales of wool, being an excess over the previous year of 22,800 bales, and business all round was so good that the company increased its profit by the remarkable sum of £125,516 at a total of £285,386. Against this the expenses of management rose only £3,884 to £57,115, a very small increase compared with the advance in profit. Interest on debentures was smaller by £198 at £77,825 owing to the cancellation of "A" debenture stock and other interest was slightly larger at £8,411. The directors then write off £38,043 from premises, plant, &c., including a special appropriation of £35,000, and £103,992 remains as nett profit, an advance of £86,555. It is, therefore, possible to add £45,607 to the primary reserve, bringing it to the fixed amount of £75,000, and £14,596 to the secondary reserve. Shareholders are next given a dividend of 5 per cent., the first they have had for 11 years, which entitles the "B" debenture holders to additional interest of 1 per cent., absorbing £7,277, and leaving £8,562 to be carried forward. This is a result which must have exceeded the most sanguine anticipations, and two or three years ago a suggestion that Goldsbrough, Mort, would soon be paying a dividend would only have caused a smile. Yet such it is, and although we have been compelled to say some hard things about the company in the past, we shall be very glad to see it go on and prosper. Now for the balance-sheet, which undoubtedly steadily improves. Share capital remains the same at £558,995, and so does the mortgage debt, £115,000, and the "B" debenture stock, £727,695, but the "A" debenture stock is lower by £5,512 to £1,212,412, representing debentures purchased and cancelled. Sundry creditors £32,149 are up by £2,250, this item representing customers' credit balances, while other entries on the debit side show little change apart, of course, from the balance to profit and loss. Several striking movements appear amongst the assets. Advances on stock and station properties have been reduced £166,113 to £1,952,030, owing to the improved returns for wool and stock sold during the year, and advances repaid by constituents. This decline, coupled with the larger profits, leads to an increase in the cash balances of £121,333 to £307,721 and the appearance of £155,638 invested in Victorian Government debentures and bonds, securities purchased during the year, and which now show a good profit. Bills receivable show a reduction of £17,826 to £15,286, and the freehold and leasehold premises are down £33,151 to £310,053, thanks to the large writing off, but plant and machinery are a trifle higher. Other items call for no comment, and the entire position is without doubt considerably stronger. Unfortunately there is a dark side to every picture, and in the company's case the rabbit plague is causing the directors no end of anxiety. The danger is said to be greater than ever, and while the directors are doing everything possible to minimise the evil on their own properties they fear that the pest is certain to cause great trouble and loss.

Metropolitan Gas Company.

This undertaking supplies the City of Melbourne with gas, and in the half-year ended June 30 gathered a gross revenue of £187,474. Of such sum sales by meter produced £142,026, public lighting and supplies under

contract came to £11,362, and £34,078 was received from residuals, certificate fees of £8 completing the total. To earn this income the company expended £110,429, manufacture of gas costing £75,518, distribution £17,408, management £9,410, rents, rates, and taxes £6,288, public lamps £3,640, and some smaller charges £1,165. Balance of nett revenue was £74,045, sum brought forward was £2,859, and interest gave £663, making the total available for distribution £77,567. Out of this the directors carry £9,000 to the general fund, £1,000 to the meter renewal fund, and £2,000 to the gas stoves, &c., account. Interest on debentures takes a further amount of £20,385, and after providing £42,860 to pay a dividend of 5 per cent., the credit carried out is £2,321. It is rather interesting to note that of 713,800,000 cubic feet of gas made, the total quantity accounted for by sales, and the amount used at the works, was 659,607,000, leaving 54,193,000 ft. unaccounted for—quite a considerable wastage. Paid-up share capital at the date of the balance-sheet was £857,210, premium account stood at £466,535, and debentures of £848,000 bring up the total capital received to £2,171,745. Of this, £2,149,842 had been spent, leaving a credit to capital of £21,903. In other ways the financial position looks pretty good, although the reserve fund does not benefit by the latest appropriation from profits. The £9,000 added brings the total of this account to £93,571, but during the period now being reviewed £10,671 was spent on extension and improvement of works and plant, and for contingencies, leaving the balance of the fund somewhat lower at £82,899. Part of it is separately invested in debentures, and the rest remains in the business.

Henry Clay and Bock and Co., Limited.

Although this Yankee-controlled enterprise improved its position considerably during the year ended December 31 last, there may be more sorrowful times in store if it be true that the Cuban rebellion is interfering with the plantation of the tobacco seedlings which usually takes place at this time of year. Profit from all sources is returned at £59,130 or £29,625 more than in 1904, a very bad year, and after meeting charges in London £3,361, together with other expenses, including £2,500 reserved for depreciation on buildings, plant, &c., the balance of nett profit comes out at £52,217. Debenture interest takes £10,200, and £17,595 was brought forward, so that the credit for disposal is £59,612. Preference dividend is £13,560, and the ordinary shares get a dividend of 15 per cent. against nothing for the previous year. Reserve is next credited with £6,836, a sum of £10,922 is provided to make up the deficiency in the Havana Cigar and Tobacco Factories preference share dividend, and £4,309 or £13,286 less is carried forward. Reserve will now be £25,000, a small sum of £1,514 having been withdrawn to provide for loss on the reconstruction of a steamship company. Property account has been increased by the trifle of £45, making it £382,494 after providing depreciation and certain losses on revaluation of the plant. Stock of leaf, tobacco, cigars and equipment are ponderous at £332,278, and outlay at tobacco plantations amounts to £44,082. Sundry debtors owe £57,395, no less than £12,000 having been reserved for doubtful debts, against creditors £61,334, and the cash balance is no more than £9,467. The sum owing to the Havana Cigar and Tobacco Factories for balance of working capital is £189,904, a very important total. Some big changes are taking place in the directorate, nine members of the board resigning in order to let in eight new men, and steps are being taken to transfer the direct control from London to the United States or Cuba. This is quite in the natural order of things, since the Americans have bought up all the ordinary shares at the nice price of £17 each, but we note that the old auditors offer themselves for re-election, while those in control propose another firm.

Havana Cigar and Tobacco Factories, Limited.

The display made by this company, which is allied to Bock and Co., for the year 1905 is not very inspiriting. Including £29 for transfer fees, the profits were only £23,198, from which charges absorb £2,391, depreciation on buildings, plant, furniture, &c., £2,502, and income-tax reserve £70, leaving £18,236. The charge for debenture interest, however, is £14,300, leaving £3,936 only, so that Henry Clay and Bock have to find £10,922 under their guarantee in order that the preference dividend may be met. Depreciation of £2,500 is allowed on properties, making the total set aside to date £17,500 on assets valued at £571,172. The only other important item on the credit side is the £189,904 which appears on the debit side of the Clay and Bock balance-sheet. Stocks are small at at £10,777, and cash is just £240. Preliminary expenses still stand for £4,283. Sundry creditors are not heavy at £3,099, and it may be noted that the reserve fund is £1,904. The firm of auditors which seeks re-election to Clay and Bock are also auditors to this company, and again come forward, but are to to be opposed to make way for somebody else. All of which is in the best Yankee style.

Yorkshire Dyeware and Chemical Co., Limited.

The board of this miserable enterprise advances no reason or explanation for the wretched results displayed for the year ended June 30, probably because there is none except rank over-capitalisation and inherently bad business. We are not favoured with a profit and loss account, but from the report it appears that after providing for depreciation of property, plant, and machinery, and all general charges the profit for the 12 months was £4,772. This is about £700 worse than last year, and, bearing in mind the flourishing condition of the textile trades and the splendid performances of other concerns, the company's case seems absolutely hopeless. Interest on debenture stock alone requires £102 more than the revenue, and when we tack on the tidy sum of £2,677 for directors' salaries and commission there is a deficiency of £2,779. Fancy £2,677 for earning £4,771. This loss, added to that brought forward, £7,707, makes a total debit of £10,486, and while the preference dividend is now two years in arrear, the ordinary have never secured a return of any sort. Probably the holders never expected to, for the very first year after the company was formed the vendors had to give a helping hand in order that the preference dividend might be paid, but they have evidently grown tired of that kind of thing now. It is almost waste of space to say that no reserve is possessed, but we may as well mention the fact so as to have a proper record of the position. Paid-up share capital is £180,000, and there is first mortgage debenture stock to the amount of £114,000, or £294,000 in all. Against this the property account stands at £156,190 only, leaving the company with a lot of unproductive assets. Stock in trade, for example, seems very big at £53,867, and we do not suppose the cash balance of £39,911 is earning much. It is nice to have a good round sum in hand, but not when it merely consists of capital lying comparatively idle. A good deal of credit, too, has to be given, as debtors and bills receivable, &c., reach £31,192—all good, we hope—against creditors of £6,662 only. Horses, wagons and stable accessories are valued at £3,895, and the company has purchased £5,120 of its own debenture stock.

Kay's Atlas Brewery, Limited.

This Manchester brewery business maintained its position pretty well during the year ended June 30, earning a gross profit of £41,906 compared with £39,761 in the preceding year, an increase of £2,145. Management expenses required £16,172, a sum of £4,499 was spent on repairs and maintenance, depreciation was allowed to the amount of £1,222, the compensation fund charge took £941, and directors' and trustees' fees £1,150. Interest on debentures and loans then drew off £6,060, leaving £11,862 as the nett balance, not a very exhilarating sum. To it must be added the credit of £4,979 brought in, making £16,841, from which the preference dividend takes £3,761 and the 5 per cent. proposed on the ordinary shares £5,937. The directors then add £2,295 to the reserve fund, and carry forward the slightly reduced balance of £4,847. Twelve months ago the company's reserve fund stood at £15,000, but the directors having considered the question carefully, have decided to write off £5,295 against losses in connection with licences surrendered and lost. The latest addition from revenue restores the fund to £12,000, rather a trifling amount against a property account of over £385,000. In fact the financial position is not at all a strong one. The capital expenditure is too big compared with the amounts issued, and the directors have been obliged to raise £10,000 on mortgage. In addition to this £21,156 is due to creditors against debtors of £9,294 only, and the absurd amount of £21 is held in cash with no less than £5,937 to be provided for dividends. Stock-in-trade also seems small at £11,947, bearing in mind that a pretty large business must be turned over, and the company is clearly operating on very slender resources.

Barnsley Brewery Co., Limited.

This company cannot be said to have made any appreciable progress during the 12 months ended July 31, as, in spite of one licensed house having been rebuilt and two new ones purchased, gross profits on sales only increased by £241 to £59,405. Rents produced £9,719 or £37 less, giving a total income of £69,124 compared with £68,920. Salaries, wages, &c., were reduced by £229 to £11,919, but the saving in this item was more than swallowed up by increases of £425 to £10,299 in trade discounts and £110 to £3,577 in horse feed, fuel, and other consumables. Repairs to property took £247 more at £3,850, but the allowance for depreciation and renewals was £165 smaller at £3,659, rents, interest, rates, and taxes required £123 less at £3,654, and after paying directors' fees the total outgoings amounted to £38,259 or an increase of £265. Nett revenue was consequently £61 down at £30,865, and the amount available was further reduced by the payment, for the first time, of £1,192 to the licences compensation fund. With £326 more brought forward, the disposable balance was £927 smaller at £31,257, of which debenture interest took £6,000 and preference dividend £6,600, leaving £18,657 to be dealt with. Out of this the directors pay the usual dividend of 10 per cent. on the ordinary shares, but transfer only £5,000 to reserve against £8,000 a year ago, and carry £3,657 or £2,073 more to the new account. Estates and goodwill account is £5,700 up at £30?,700, owing to the purchase of additional properties, and for the same reason no doubt the nett reduction in plant and rolling stock is only £50 at £11,375. Consumable stocks have shrunk by £2,482 to £13,312, a figure which seems small for the business done, and sundry debtors are £204 down at £16,735, but cash comes to £?,03? more at £15,076, while sundry creditors have risen by no more than £220, and are moderate enough at £6,552. Loans and mortgages, however, have been increased by £1,510 to £8,775. The reserve now amounts to £63,000, and in addition there is a special suspense fund of £1,100, but both these amounts are employed in the business.

A synopsis of the interim report issued by the directors of the Mexican Light and Power Company, Limited, will be found in our advertisement columns.

The Commercial Banking Company of Sydney, Limited, has opened a branch at Boggabri, New South Wales.

TRADE AND PRODUCE.

Wheat.—Another week of slow trading, but with little change in quotations. Spot parcels as a rule have been firmly held and forward positions of both spring and winter wheats have gone occasionally dearer; though in one or two centres where supplies have been liberal rates have gone a shade easier. English wheat is now coming forward steadily, and farmers' deliveries for the week amounted to 26,545 qrs., averaging 27s 9d., against 88,696 qrs. averaging 27s. 1d. a year ago. Imports were 418,577 qrs., and the quantities of wheat and flour on passage amount to 2,440,000 this week against 2,445,000 last. American markets have also been quiet and generally tending downwards. The estimate of the North Dakota crop was 100,000,000 bushels, the largest on record, giving a decidedly bearish tone towards the end of the week.

Wool.—Consumption of stock is fairly heavy, and the more confident tone of markets is maintained. Buyers are paying the high prices more willingly, but so far forward business is not great on account of the uncertainty as to the effect of the new Australian merinos. As, however, machinery is well employed holders of fine stock seem to think that they will get rid of all they have on hand before the new clip arrives, and therefore have nothing to fear. Spinners are busy in both old and new contracts, and they would, if anything, be glad to see easier prices come in, for at present, like manufacturers, their margin of profit is too narrow.

Linen.—There is no desire on the part of spinners, says the *Linen Market*, to push up prices further, but the upward movement has become irresistible and automatic, based on the principle of demand and supply. Protracted delivery is also being more and more submitted to as buyers see their only chance is to order now, and wait their turn patiently. Business continues on a progressive scale, without any specially marked improvement except in damasks, both yarns and cloths, and particularly in the finer ends. Foreign demands are heavy. United States buyers consider deliveries more important than prices, and are placing orders to cover next spring very freely. South American trade keeps steadily up, Barnsley doing a large export of drills to this country, and colonial and Continental orders generally are on the increase.

Cotton (from our Manchester correspondent).—The general trade passing in our market during the past week cannot be described as important, but if anything the inquiry has shown some signs of development. Sellers have been busy dealing with business offering, and although not very much has actually reached the order-books, yet in some directions it is thought that there are signs of greater activity on the part of buyers. The raw cotton situation is very uncertain. Buyers are not stimulated to operate freely when fluctuations in the raw material take place as they have done this week. The crop on the whole is making satisfactory progress. Various reports with regard to damage and deterioration affect values from day to day. In cloth for export shippers to India have been a little more inclined to give out orders, and offers have been more frequent. Transactions, however, have been difficult to arrange, and the sales for our Dependency on the whole cannot be described as important. Calcutta has improved, and some business has been done in shirtings. Bombay continues healthy, and Madras has also given occasional support. Fine goods suitable for our Dependency are in very slow request, the bids made not being acceptable to manufacturers. Shippers to China have been making offers for shirtings which have not been very far out. Advices from Shanghai are rather more encouraging, and the outlook is more promising on the whole. Exporters to the Levant have shown more activity, a fair number of small orders being placed. Egypt shows no particular alteration. The South American markets have not bought freely, the difficulty of arranging transactions being considerable. Burnley printing cloths have only moved slowly, the commoner kinds are not doing at all well. T-cloths and Mexicans have met with a little demand, and sateens and coloured woven goods have not been at all active. In the home trade houses distribution is going on on a fairly large scale, but buyers hardly seem to be in need of great supplies at the moment. The buying has been fairly steady during the last few months. Home trade American yarns have only moved in odd lots to meet the immediate requirements of users. Twist maintains its strength better than weft. Ring beams and warps are deeply sold and difficult to get hold of for early delivery. The position of spinners all round continues strong, there being no particular pressure for fresh contracts. Export bundles have only moved slowly for the markets of the Far East, but a fairly extensive inquiry has been made for the Continent. Gassed yarns show no particular alteration, and extra hard descriptions have again been quiet. Bolton spinnings do not move quickly, the demand all round being small in extent. The commoner kinds are not doing at all well, but the finer numbers continue fairly steady.

Cotton in the New York market opened with a firm tendency on good cables and covering by shorts and the advance continued for some time. Eventually, however, the market became perceptibly weaker on favourable official weather reports. At the end there is evidence of a slight recovery.

Coal.—Steams continue to be the chief support of the Yorkshire trade, but house coals are now beginning to show signs of returning animation, and a week or two should see demand for these steadily on the increase. There is no change in the position anywhere. Wales has had a busy week, and a fairly large export business for the principal ports. The tone has been firmer, but prices so far show no quotable change. Scotland also is fairly active with shipping higher than at the same time last year, though a little less this week than last. House coals quiet, and manufacturing varieties brisk. In the North of England business seems principally to be in coke and coking coal, of which latter large quantities are being exported to the Continent, particularly Germany.

Copper.—Consumption of this metal continues on a great scale, and the Continent is said to be placing large orders. Most of the European producers are sold out until October, and the Americans are in a similar position. Consumers may therefore consider themselves fortunate that the Chilian mines were not affected by the recent earthquake. English buyers appear to be just filling immediate requirements, and no more, so that business did not open very briskly. First prices were quite nominal, partly because speculative interest was small, and partly owing to the disinclination of bears to cover. Fluctuations throughout the week were very small, but the close was firm, prices being £85 5s. for cash and futures.

Tin.—Scarcity of supplies is still reported, and under the influence of higher Eastern prices the market here commenced with a strong tone. A good deal of fluctuation followed, "bull" support being neutralised by important realisations. A quick recovery led to fresh selling, and as speculation was limited prices again fell back. Lower Eastern advices pressed them further down, but at the lower levels renewed support was given, and although the announcement was made that the Dutch sales next year will be further increased the tone continued firm, quotations being £183 5s. cash, and £183 12s. 6d. for three months forward.

Iron and Steel.—A very brisk business is still done in these markets, and prices continue to advance all round. In several branches of the finished iron trade the demand is very vigorous and the order books of manufacturers are full for the quarter. A similar condition of things exists in the hematite trade, makers being all well sold forward. Large deliveries are being made not only locally, but to the North of England generally, South Wales and Scotland, and prospects point to a good winter's trade. In Middlesbrough prices have advanced to 66s. 6d. for East Coast mixed numbers. Speculators in warrants have been taking their profits, which depressed the price at one time, but it quickly recovered. G.M.B. is firm at 54s. 6d., and there is a good inquiry for foundry and forge iron. Exports of pig-iron to date total over 103,000 tons. After being very active and strong the Glasgow market for pig-iron warrants became quieter on realisations. It is stated that America is making inquiries here for hematite.

Tea.—Indian auctions were again very heavy, the largest of the season, and comprised 42,676 packages, and though the trade at first held up against such a heavy quantity, it weakened later, bidding became slack, and prices fell ¼d. to ½d. per lb., especially in medium and low medium descriptions. The average for the week came to 7.67d. for 39,312 packages sold on garden account, against 7.93d. last week and 8.19 a year ago. Ceylon, on the contrary, had a reduced quantity to offer, and this, together with a tendency towards improved quality, created more confidence among buyers, and competition for the 27,266 packages offered was good in all descriptions. The average for the week reached 6.78d., against 6.60d. last week and 7.02d. in 1905. Java sale was also smaller, but included a good selection, and some useful liquoring teas, and consequently bidding was brisk, with last week's prices maintained. From January 1 88,061 packages of these teas realised on garden account an average of 5.71d., against 79,094 packages, averaging 5.56d. in the same period of last year.

Sugar.—A fair business was again done to America up to 9s. 6d. f.o.b., which together with disquieting news of the Cuban insurrection had the effect of forcing August "bears" to cover and of raising May from 9s. 2d. to 9s. 4½d. Refiners abroad also bought largely, but trade was very slow here, although prices were fractionally better. America then withdrew, and as the news from Cuba became less disquieting. August tenders depressed that delivery to about 9s. 3¾d. and May to 9s. 2¾d., as the weather generally was rather favourable. A reaction then set in owing to less favourable Cuban news and supposed further demand for America, May improving to 9s. 3¾d. and closing at 9s. 3½d. We must not lose sight of the fact, says Mr. Czarnikow, that our prices are now below American parity, that more beet may have to go there now or later, and that the world's consumption, including shipments elsewhere, will have to fall off considerably next season if final stocks a year hence are to be kept at the present moderate level, especially if the Russian crop is not as good as expected. The American market has improved, and there is no special news from cane countries. Meltings remain high at 49,000 tons, and with landings of 41,000 tons stocks are reduced to 271,000 tons.

The World's Work and Play for September strikes us as being more interesting both in its reading matter and illustrations than usual. The premier article is one by Mr. Arnold White, and deals with "The Flagship: The Brain of the Fleet," illustrated by some excellent photographs showing the unhappy *Montagu* on the rocks at Lundy. Among the other articles worth reading are "The World's Most Perfect Drainage System," a description of the new drainage system of North London"; "Our Insect Foes and How to Deal with Them"; "Brickmaking at Peterborough"; and "An American View of Suspended Railways." The last is an excellent examination of the various methods of quick transit systems in towns, and results in the writer, Mr. John P. Fox, deciding in favour of what is known as the Elberfeld suspended railway, a decision with which we cordially concur.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Great North of Scotland.—On the preferred ordinary stock for past half-year at the rate of 3 per cent. per annum, and on the deferred ordinary stock at the rate of 1 per cent. per annum, carrying forward £4,098.

Waterford and Tramore.—For half-year ended June 30 at the rate of 4 per cent. per annum, carrying £1,108 forward.

BANKS.

Bank of Africa.—At the rate of 10 per cent. per annum, carrying forward £20,000.

British of South America.—Usual of 3 per cent. (6s. per share) on the paid-up capital.

Standard of South Africa.—For half-year ended June 30 at the rate of 16 per cent. per annum, placing £13,000 to the officers' pension fund, and carrying forward £39,500.

MINES.

Broken Hill Proprietary Block 10.—No. 75 of 3s. per share, payable Sept. 26.

Broken Hill Water Supply.—No. 52 of 6d. per share.

Mills' Day Dawn United Gold.—1s. per share, payable Sept. 28.

Mount Morgan Gold.—3d. a share for Aug., payable Sept. 1

Oroya-Brownhill.—Interim of 4s. per share, payable Sept. 25.

MISCELLANEOUS

Aberdare Gas and Water.—Interim at the rate of 8 per cent. per annum for six months to June 30.

Albert Baker and Co.—Interim at the rate of 4 per cent. per annum for half-year ended June 30.

Alton Court Brewery.—At the rate of 8 per cent. per annum for the year ended June 30, carrying £792 forward.

Cardiff Junction Dry Dock.—Interim at the rate of 3 per cent. for first half of present year.

Craigellachie Glenlivet Distillery.—Final of 6 per cent. on the ordinary shares, making 10 per cent. for year ended July 31.

Glasgow Cotton Spinning.—Interim at the rate of 7½ per cent. per annum for half-year ended July 31, carrying £6,924 forward.

International Investment Trust.—Interim at the rate of 4½ per cent. per annum on the preferred stock for half-year ended July 31.

Leeds Industrial Dwellings.—Interim of 2 per cent.

New Zealand and Australian Land.—4 per cent. on the "A" preference stock and of 7 per cent., with a bonus of 5 per cent., on the ordinary stock, one half of each payable Dec. 10 next and June 10, 1907.

Oban and Aultmore-Glenlivet Distilleries.—At the rate of 5 per cent. per annum on the preference shares for year ended June 30, placing £2,000 to reserve, and carrying £1,474 forward.

Penrikyber Navigation Colliery.—Interim for past six months at the rate of 5 per cent. on the ordinary shares.

Pontypool Gas and Water.—Interim at the rate of 5½ per cent. on the "A" shares and at the rate of 4½ per cent. on the "B" and "C" shares.

Prince Line.—For half-year ended June 30 of 2½ per cent., making 5 per cent. for year.

St. Neots Paper Mill.—1s. per share, carrying £535 forward.

Santa Catalina Nitrate.—Third quarterly of 5 per cent. on account of profits for the current financial year, payable Sept. 1.

Sheepbridge Coal and Iron.—A final of 7½ per cent., making 10 per cent. for year.

Silverton Tramway.—1s. 6d. per share.

Singleton and Cole.—Interim on the share capital at the rate of 5 per cent. per annum for half-year ended July 31.

Staveley Coal and Iron.—Final of £5 per share on "A" and "C" shares, and 16s. 8d per share on "B" and "D" shares.

Stewarts and Lloyds.—Interim for half-year ended June 30 at the rate of 9 per cent. per annum on the ordinary shares.

William Fulton and Sons.—10s. per share on the 5 per cent. cumulative preference shares, placing £1,155 to reserve and carrying £2,881 forward.

Witbank Colliery.—No. 5 of 15 per cent. (3s. per share).

MINING RETURNS.

Brilliant Central.—Crushed 1,170 tons quartz; value, including residues (tailings and concentrates), £3,000.

Briseis Tin.—Shipped 20 tons, including 3 tons for New Brothers Home No. 1.

British Broken Hill Proprietary.—2,707 tons crude ore produced 405 tons concentrates, containing 259 tons lead and 11,340 ozs. silver.

Broken Hill South Silver.—17,462 tons crude ore produced 2,768 tons concentrates, assaying 67 per cent. lead and 18 ozs. silver per ton, the lead and silver contents being 1,864 tons and 49,824 ozs. respectively.

Day Dawn.—Crushed 412 tons for 472 ozs.

Day Dawn Block and Wyndham.—1,720 tons; value, £3,900.

Hyderabad (Deccan).—Output of coal, 35,275 tons.

Kelantan Gold Dredging.—Nos. 2 and 3 dredges recovered 45 ozs

Mills' Day Dawn United.—Crushed 2,101 tons quartz; value, £6,600.

Mount Lyell Blocks.—Treated 5,600 tons crude ore for 65 tons 15 cwts. fine copper.

North Broken Hill.—2,050 tons crude ore treated, producing 364 tons of concentrates, containing 249 tons 14 cwts. lead and 5,642 ozs. silver.

Orsk Goldfields.—Tributers' ore and alluvial deposits on Siberia Claim produced 1,050 ozs.

Victoria Proprietary (1903).—Crushed 475 tons—265 ozs.

Waihi.—Bullion 25,898 tons, yielding £62,470.

Weardale Lead.—Ore raised, 215 tons; pig lead smelted, 237 tons; average price obtained for lead sold, £16 14s. per ton net.

Answers to Correspondents.

O. E. A.—We cannot advise the share for a permanent holding. As it is impossible to forecast probable dividends or even prospects, the undertaking is still too speculative to be regarded as an investment. But you might purchase a few as a speculation.

A. B.—It was, you see, only a market rumour, and vague at that, and it is possible it may have had no basis. But there is little likelihood of the price improving much as the quality of the ore for some time past has been deteriorating. Perhaps you have overlooked the fact that the shares have been split into half-crown shares, and that the present price is still equivalent to between £6 and £7 for the old £1 shares. If you bought the shares after they were split into 10s. each your holding, of course, shows a big loss, but you have had very large dividends meanwhile, which have helped to reduce it. Anyway, you might hold on a little longer in the hope of some improvement, as the risk would not be great

G. W.—(1) Apart from the recurrence of political troubles we see no reason why these shares should not improve, as the company has a nice business built up. You might, therefore, increase your holding to a moderate extent. (2) Notwithstanding the very satisfactory profit shown on your purchase, we think the bonds are worth holding for a further improvement. We are glad to hear that the "Model trusts" have proved of such great service to you.

L. T. B.—(1) It hardly seems worth while to buy these bonds, because they can be redeemed at any time, and redemption is in fact proceeding at the present time. (2) Being internal loans they are not much dealt in here, and we are unable to give you the prices asked for. (3) As indicated, the date is at the option of the Government, and we believe the price of redemption has been the subject of some dispute.

J. C. S.—We do not see good reason for selling these shares because the company possesses a good and extensive business, and recent losses will hardly damage its financial position. At the same time, if your holding is a fair one, it would scarcely be wise, perhaps, to increase it.

J. D. S.—As long as the country enjoys its present amazing prosperity the company should do very well, and its shares seem a very fair investment.

B. W. J.—(1) We are very doubtful about this company's prospects. It is true there is a guarantee from the Government, but you have only to look at the country's record to see how little that is worth. The bonds will probably get their interest so long as the arrangement with the contractors exists, but when it comes to an end the outlook becomes very problematical. (2) The company's business has improved of late, and it seems to have attained to a moderate level of prosperity. Our only objection to the shares as an investment is the smallness of the capital (which by writings down has been reduced to less than £40,000), and the consequent narrow market.

NEXT WEEK'S MEETINGS.

TUESDAY, SEPTEMBER 4.

London and Glasgow Engineering and Iron Shipbuilding.—Glasgow, 11.30 a.m.

WEDNESDAY, SEPTEMBER 5.

Buffalo and Lake Huron Railway.—Liverpool, noon.
City of York Tramways.—York, noon.
F. Steiner.—Church, 12.30 p.m.
Inverall Diamond Fields.—Winchester House, 2.30 p.m.
Steel Company of Scotland.—Glasgow.

THURSDAY, SEPTEMBER 6.

Barnsley Brewery, Barnsley.—Noon.
Surrey Commercial Dock, 106, Fenchurch Street.—1 p.m.

FRIDAY, SEPTEMBER 7.

Henry Clay and Bock, Hotel Cecil.—Noon.
Havana Cigar and Tobacco Factories, Hotel Cecil.—12.30 p.m.
Price's Patent Candle, Cannon Street Hotel.—Noon.

Pure and Fragrant

MAZAWATTEE TEA

Recalls the delicious Teas of 30 Years ago.

SOLD BY ALL GROCERS.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended Aug. 21, $3,413, increase $6.

Argentine North Eastern.—Traffic receipts for week ended July 20, $24,720, increase $8,644; aggregate from January 1, $561,190, increase $49,261.

British Columbia Electric.—Traffic receipts for month of July, $48,059, increase $7,669 nett.

Assam Bengal.—Traffic receipts for week ended July 28, Rs. 67,988, increase Rs. 6,750; aggregate from July 1, Rs. 2,81,384, increase Rs. 37,990.

Canadian Northern Railway.—Traffic receipts for week ending Aug. 21, $133,200, increase $57,800; total from July 1, $1,006,400, increase $255,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended July 28, Rs. 26,587, decrease Rs. 5,188.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 3rd week of Aug., $19,781, increase $1,844; aggregate from January 1, $580,280, increase $86,207.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended July 28, Rs. 16,746, increase Rs. 473.

White Pass and Yukon Railway.—Traffic receipts for the week ended Aug. 14 amounted to $63,698.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending August 25, £1,238, increase £50; aggregate from July 1, £9,171, decrease £120.

Cockermouth and Keswick Railway.—Receipts for week ending August 25, £1,135, increase £53; aggregate from July 1, £9,051, increase £389.

East London Railway.—Traffic receipts for June, £4,017, decrease £197.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending August 25, £337, increase £43; aggregate from July 1, £2,303, increase £144.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Blessington and Poulaphouca. — Traffic receipts for week ending August 22, £67, increase £18; aggregate from July 1, £303, increase £56.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 24, £5,404, increase £274; aggregate from July 1, £45,096, increase £1,112.

British Electric Traction.—Receipts of all the Associated Companies for the week ending August 24, £32,234, decrease £1; total increase from January 1, £113,273; 428¾ miles, against 424½.

Burnley Corporation.—Traffic receipts for week ending August 25, £1,220, increase £69; aggregate from July 1, £10,060, increase £765.

Dublin and Blessington.— Traffic receipts for week ending August 22, £225, increase £40; aggregate from July 1, £1,455, increase £38.

Dublin and Lucan.—Traffic receipts for week ending August 24, £153, increase £6; aggregate from July 1, £1,171, decrease £39.

Dublin United.—Traffic receipts for week ending August 24, £5,713, decrease £441; aggregate from July 1, £44,851, decrease £71.

Edinburgh and District. — Traffic receipts for week ending August 25, £4,832, increase £212; aggregate from January 1, 1906, £168,804, increase £3,624.

Hastings and District.—Traffic receipts for week ending August 23, £1,420.

Isle of Thanet.—Traffic receipts for week ending August 25, £1,993, increase £131; aggregate from October 1, £25,983, decrease £954.

London County Council.—Traffic receipts for week ending August 18, £24,519, increase £8,774; aggregate from April 1, £531,662, increase £226,086. Miles 98 against 51¼.

London General Omnibus.—Traffic receipts for week ending August 25, £21,818, increase £35; aggregate from July 1, £191,954, decrease £8,360.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending August 25, £3,739, increase £2,543.

London Road Car.—Traffic receipts for week ending August 25, £7,307, increase £307; aggregate from July 1, £66,192, decrease £62.

BOARD OF DIRECTORS.

JAMES ROSS, Montreal (President Dominion Coal Company, Ltd.), President.
J. H. PLUMMER, Toronto (President Dominion Iron and Steel Company, Ltd.), Vice-President.
Dr. F. S. PEARSON, New York (President Mexican Tramways Company, Ltd.), Vice-President.
The Hon. SIR GEORGE DRUMMOND, K.C.M.G., Senator (President Bank of Montreal).
E. S. CLOUSTON, Montreal (Vice-President and General Manager, Bank of Montreal).
E. R. WOOD, Toronto (Vice-President Central Canada Loan and Savings Company, Director Grand Trunk Pacific Railway Company).
F. L. WANKLYN, Montreal (Vice-President Dominion Coal Company, Ltd).
A. ELLERT, London (Manager Dresdner Bank).
Dr ALFRED BERLINER, Berlin.

Secretary and Treasurer: A. R. Doble, Montreal.

General Attorney: C. H. Cahan (of Messrs Harris, Henry, & Cahan. Halifax, N.S.).

General Manager: R. F. Hayward.

Bankers: Bank of Montreal.

Trustees for Bondholders, and Transfer Agents: National Trust Company, Limited, Toronto.

The Board of Directors of the Mexican Light and Power Company, Limited, have issued an Interim Report to the Shareholders showing the position of the Company's enterprises to date, the earnings for the first half of this year, the estimated earnings for 1906 and 1907, and the prospects with which the Company will enter on the year 1908. The full report can be obtained by those interested from the Company's bankers; the following are its chief features:—

The report refers briefly to the original plans of the Company, and indicates the lines on which the Directors, who have, by careful study of the situation, become deeply impressed with the enormous and growing demand for electric power in the City of Mexico and vicinity, have enlarged the scope of its operations. The changes include the acquisition, and amalgamation with the Company, of the Mexican Electric Works, Limited, the Mexican Gas and Electric Light Company, Limited, and the Ildefonso Company, the three companies engaged in the production and sale of electric light and power in the City of Mexico. The consolidation has been effected on satisfactory terms, and with the goodwill and approval of the Federal Government. The changes also cover an enlargement of the Power Station at Necaxa, larger storage reservoirs, pipe lines and transmission lines, the extension of the Company's lines and field of operations to the mining district of El Oro, and very great enlargements and extensions in Mexico and the Federal District.

The power station at Necaxa, which is now nearly completed, was increased to six turbines of 8,200 H.P. each, and six 5,000 K.W. generators.

Transmission lines, carried on permanent steel towers, were completed to Mexico City, a distance of 95 miles, and from thence to El Oro, 76 miles. Thoroughly equipped receiving and transforming stations were erected in Mexico City and El Oro; and the operating of the plant at Necaxa and of the transmission lines and receiving stations has been satisfactorily carried on simultaneously with the work of actual construction.

WATER SUPPLY.

The flow of the Necaxa and Tenango Rivers has been carefully measured and recorded daily since 1902, and while the total flow of water is greater than anticipated, the monthly supply has been variable. It was deemed advisable to construct, in addition to the main dam at Necaxa, a second permanent dam at Tezcapa, situated five miles further up the river. The plan of construction ultimately adopted for all the dams was that of hydraulically filled or sluiced dams, designed by Mr. James D. Schuyler, the well-known expert on dams, which work is now being carried on under his supervision. The Necaxa dam will have a storage capacity of 1,540,000,000 cubic feet, and the Tezcapa dam 630,000,000 cubic feet.

A dam known as the Laguna Dam, having an estimated storage capacity of about 700,000,000 cubic feet, to be available about the first of September, will provide storage for the dry season commencing in December next, and will probably form part of the second power plant.

FRANCHISES.

The Board, with a view to providing for future needs, recently made application for rights over the entire upper watersheds of the rivers adjacent to the Necaxa and Tenango, and a concession of these rights was granted to the Company. From careful surveys it is estimated that, under the rights now acquired, there can be produced about 200,000 H.P. of electric energy.

The Company has also acquired valuable franchises, including long terms of exemption from State and municipal taxation from the States of Puebla, Hidalgo, Mexico and Michoacan.

The contract for supplying light to the public streets of the City of Mexico has been extended to February, 1917.

The Federal District of Mexico, which is under the direct legislative control of the Federal Congress, comprises an area of nearly 400 square miles, including within its boundaries the City of Mexico, and twelve other municipalities several of them having large populations.

The franchise for distributing light and power, which this Company held for the Municipality of Mexico alone, has been extended to cover the entire Federal District. This new franchise runs until the year 2012. Already the Company is supplying light and power in Guadalupe, Hidalgo, Atzcapotzalco, Tacubaya, Mixcoac and San Angel, and it is rapidly extending its field of operations to all the other important points in the Federal District.

FINANCES.

In thus laying the foundations for one of the largest hydro-electrical installations in the world, the Company has absorbed the proceeds of its authorised bond issue of $12,000,000, and of $13,000,000 of its capital stock, leaving $3,000,000 yet unissued for future needs.

There will be required to complete the work now in hand the sum of $1,000,000 in excess of the anticipated surplus earnings for the period ending December 31st, 1907.

As the entire industrial development of the Federal District of Mexico, its lighting, supply of potable waters, and its sanitation, will depend for the future upon the efficiency of the service provided by this Company alone, the Board has not spared any reasonable expenditure necessary to guarantee the stability of its supply of electric energy for all these public purposes, thus laying stable foundations for a rapidly increasing and profitable future business.

SUPPLY OF ELECTRIC ENERGY.

By using approximately 10 % of steam power, chiefly on peak loads, the Company is now supplying a maximum of 20,000 H.P. daily.

The Installation at present connected in the Federal District amounts to	33,000 H.P.
Connected at El Oro	4,500 H.P.
Total now connected	37,500 H.P

The estimated natural increase in current business is 6,000 H.P. per annum.

In addition the Company has entered into a contract to supply power for the tramways of the Federal District for ten years, commencing in October next, with 5,000, H.P. which will rapidly increase to 7,500 H.P.

A contract has been made with the Federal Government to supply electric energy for pumping potable waters for the City of Mexico for twenty years, beginning in eighteen months from date, which will require about 3,000 H.P.

The mining camps at El Oro will require, in addition to the present supply, about 5,000 H.P. so soon as electrical equipments for its use can be installed by the mining companies, and many contracts for smaller units are under negotiation.

EARNINGS.

For the purpose of this report the Directors have consolidated the earnings from the properties of the Mexican Electric Light Company, Limited, with the Company's general earnings, and have treated the interest on its guaranteed bonds ($6,000,000) as a direct obligation. The entire capital stock of the Mexican Electric Light Company, Limited ($6,000,000), is owned by the Mexican Light and Power Company, Limited.

The gross earnings during the first six months of this year were $1,754,833, Mexican currency, while the operating expenses were $722,330, Mexican currency. Of these expenses, $320,000 was due to the use of steam power, which expense will presently cease.

The General Manager has made, and the report quotes in detail, estimates of future earnings, of which the following is a summary:—

Net earnings, 1906	$1,286,000 gold.
For the month of January, 1907	157,000 ,,
Net earnings for the year 1907..	1,750,000 ,,
For the month of January, 1908	190,000 ,,

The monthly earnings in 1908 will increase as the pumping contract with the Federal Government comes into operation, and from the natural increase due to industrial development in the Federal District and in El Oro.

The above net earnings are subject to the payment of the fixed charges, which, with interest on the guaranteed bonds of the Mexican Electric Light Company, Limited, amount to $900,000 gold per annum.

Should the demand for power continue to increase the Directors look forward to the construction of a second hydraulic installation of about 40,000 H.P. capacity, which by reason of work already done should not cost over $2,500,000 gold. This installation should ultimately ensure an increase of the net earnings of the Company to over $300,000 gold per month.

RELATIONS WITH THE GOVERNMENT.

The Directors have taken advantage of the opportunity afforded by the publication of this report to acknowledge the obligations they are under, for the uniform courtesy and consideration extended to the Company and to its officers by the Federal, Provincial and Municipal authorities. Their experience has given them implicit confidence in the administration of affairs in Mexico, especially in all matters affecting the interests of foreign investors.

Montreal, 30th June, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 443. SATURDAY, SEPTEMBER 8, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not late han the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Progressive Hamburg.

Have any of those who habitually try to frighten us and who doubtless contrive to frighten themselves over the sinister designs of Germany against England ever glanced at the progress made by the German mercantile marine? Surely not, else they might long ago have been struck with the ridiculousness of their attitude and language. Their mode of argument we know, and their real or simulated terrors, but the depth of the ignorance behind the whole agitation it is not given to mortal man to fathom. Logically, according to our alarmists, Germany ought to be intent upon gathering together the threads of a great foreign commerce just in order to show how soon she could throw it all away in one insane attempt to "conquer" and annex England. Or would her ships sail inviolate on all seas while ours lay helpless because coalless and unmanned in the blockaded harbours of the kingdom? They would not even earn good money any more by carrying grain to feed us; we should be all dead or vanished, or too poor to pay for food of any kind.

We read of the progress of the German people with other eyes and thoughts, for German progress means English progress, because the more the business of any country expands the greater is the profit accruing to those who share therein. No nation can carry on trade with or for itself alone, and the more intercourse it has with other countries in the interchange of commodities, the richer both tend to become. Our trade with Germany, as that with France, with every European country, the more it grows in value, the more it gives hostages for peace, and instead of looking with jealous eyes on statistics like those set before us by Consul-General Sir William Ward, relating to the trade of Hamburg, we rejoice. "Hamburg is a rival of London"—yes, and a tributary to London, to England. No fewer than 11,489 vessels entered the Port of Hamburg last year with cargoes, vessels of a gross capacity of 9,415,581 tons, the largest ever attained, and of these vessels 3,622 in number and 3,387,000 tons in capacity were British. And the figures of ships cleared with cargoes were just about as satisfactory. The aggregate was 10,971 ships and the tonnage 7,010,501, and the British share in this was 2,372 ships and 1,898,768 tons. No other country comes anywhere near us as a friendly rival of Germany for the carrying trade of the chief port of the empire, and that the German steamship lines do not suffer by the competition would seem to be demonstrated by the profits their shareholders enjoy. For 1905 the great Hamburg-American Company paid 11 per cent. on its capital, the Hamburg-South American 10 per cent., and the German-Kosmos 14 per cent., other smaller lines following with distributions more minute. The payments were in every case larger than in the previous year, and it is probable enough now when the fever of preparation for the new Imperial tariff is abated and trade back to its old lines, forced, moreover, to struggle with a new and more deadly obstruction, that Hamburg and other German shipping will not do so well for shareholders; yet in tariff despite the trade of the Empire will grow in bulk and as an influence making for peace between all great peoples.

Perhaps our blue funkists have taken fright at sight of the rapidity and success with which German shipping

companies appear to be opening new routes for trade. Seeing or hearing of these enterprises it has come into their minds that Germany means to grab our empire. Look a little closer and you will see that these German ships call at British ports and carry British goods as often as not. They are opening trade routes for us as well as for themselves, and cannot help doing so under modern mercantile conditions. It may have been our supineness, the hampering effect of our habits of over-capitalisation, that allowed these rival routes to be established by German enterprise, but once in operation they contribute to the expansion of British commerce almost as much as to that of German. How great the progress in this direction has been may be measured by help of some statistics furnished in Sir William Ward's instructive report to the Foreign Office. The value of the German mercantile navy has increased within the last decade from £16,350,000 to £40,500,000, the aggregate capacity having risen from 1,387,000 nett tons register to 2,353,000 tons, these totals representing an increase of 70 per cent. in the tonnage and 150 per cent. in the value. Hamburg stands first as contributory to this fine development, for its steam fleet has bounded up about 220 per cent. in value—from £6,250,000 in 1895 to £20,000,000 in 1905. Its sailing vessels have not increased in value, but still appear to be worth about £1,250,000. Bremen, too, a port of whose operations and successes Hamburg is far more jealous than of any British rivalry whatever, has also built up a mercantile navy estimated last year to be worth £13,500,000.

And, strange to say, instead of fighting each other or us, the disposition of those interested as capitalists —those with a stake—in these powerful shipping lines think less and less of "fighting" in any guise, and more of combination with the view to maintain and regulate freights. The Atlantic trade, if we mistake not, is no longer open to free competition, though little is said about "agreements" therein, and Mr. Consul-General Ward informs us that last year a large number of Hamburg and other steamship owners interested in the North European carrying trade, and owning about 1,800,000 tons of shipping, have bound themselves after the style of the International Association of Sailing Ships not to carry certain goods below an agreed-on scale of freight. Such is always the tendency, and we may at least concede that harmony even on these terms is better than strife. Freights cannot be raised beyond a certain limit without bringing loss of business.

Possessing such a magnificent instrument for international intercourse as its mercantile marine affords Hamburg inevitably handles a large and valuable mass of goods both out and in. Last year the value of the goods received at the port was £140,449,552, of which foods represented £44,681,033 and raw and partly manufactured goods £80,219,700. Exports from the port were worth £114,930,998, of which £31,324,289 were foodstuffs, £39,243,339 raw and partly made goods, and £13,559,380 textiles. Imports of textiles, by the way, were worth only £3,895,402. The value of the port's imports rose by £15,246,000 and its exports by £9,666,284, but the stimulus to importation was supplied by the ominous shadow of the new tariff, and it is probable that the current year will not make so excellent an exhibit. Our share in the trade was much the greatest of any foreign nation, for Hamburg imported last year £23,753,719 worth of British goods and exported to us the almost identical valuation of £23,407,814 worth. The United States of North America came next with "imports from" £22,823,431, but Hamburg's exports thereto were worth only £14,825,157. Free trade thus tells well in our favour, for the hands of the American trader are tied by his tariff more than those of any other country. British trade, moreover, is not measured by the mere record of goods sent direct from or to the United Kingdom; we must also reckon in British dependencies, among which India alone stands for £11,892,562 imports and £3,193,124 exports at the Port of Hamburg. A small trade is also done direct with Canada, and a more important one with Cape Colony and Australasia, although the figures relating to these are probably incomplete. As far as they go the figures relating to the business done between Germany and the Canadian Dominion offer significant evidence of the curse of tariffs, the blight of a class or "combine" serving patriotism. During the past decade the import trade of Germany from India has increased about 50 per cent. and her export trade nearly 100 per cent., but it is quite otherwise with the Dominion. In two years the imports of Germany from Canada have declined by £1,131,000 to £1,369,296, and the exports of German goods to the Dominion have shrunk by £196,000 to £236,423. These are reductions of, respectively, almost 44½ and over 45 per cent. What good the people of either country reap from this dog-in-the-manger warfare we should be much obliged to the Protectionists if they would explain. Both peoples are to blame for this disastrous state of affairs, and we must hope that they will recover their sanity in time.

Companies Born and Buried in 1905.

Last year the company-promoting industry from a promoter's point of view showed signs of improvement. The number of companies registered, 3,967, was larger than in any year since the outbreak of the South African war, while the aggregate nominal capital totalled £108,655,043, giving each concern an average of £27,389. All these figures though higher than those of 1904 are far behind those of 1896-9, the golden days of company promoting, when the public were greedy and ready to swallow anything good, bad or indifferent, a wild cat mine or a bankrupt drapery store being just as good for a promoter's purpose and pocket as a sound security. But even though not comparable with those golden days, yet, as the Comptroller of the Companies' Department of the Board of Trade points out in his last report, 1905 marks the first check in the continuous decrease in the amount of the nominal capital registered that has been so noticeable in the annual returns since 1896.

An examination of the table set out in the Comptroller's report, classifying the companies floated in the past ten years according to the amount of their nominal capital, reveals a remarkable and from some aspects a sinister change in the character of the promoter's work. In 1896 the large company, that is one with a capital of over £100,000, was far more popular, comparatively speaking, than one capitalised below that figure. For example, in the year in question there were registered 562 companies with a capital of between £100,000 and £200,000 and 190 with a capital of between £200,000 and £300,000; last year the number of the former class was only 176 and of the latter 49. On the other hand, in 1896 companies with a capital of under £1,000 or between £1,000 and £5,000 numbered 162 and 782 respectively, whereas in 1905 320 of the first and 1,260 of the second were registered. To give an exact explanation of this change is impossible without a detailed examination of the files at Somerset House, but we are inclined to think that such an examination would show that the small trader has recognised the advantages of converting his business into a limited liability company as a means of avoiding personal bankruptcy. It is far more pleasant to wind-up a company putting a friend in as liquidator than to appear personally before a Registrar at Carey Street. In addition to this, small syndicates with a nominal capital of anything up to £5,000 have become extremely popular of late years, the idea being to exploit a particular patent, process or property with a view of subsequently selling to a large concern. These two causes go far to explain the increase of companies at the bottom of the scale, while the decrease of those at the top is probably due to a lack of material. By now nearly all the big industrial concerns and other businesses must have been brought within the scope of

the Companies Acts, and therefore unless some new big enterprise such as an electric power or light company is started there is but little scope for a promoter's energies on a large scale in these days save to reconstruct and amalgamate mining companies and water their share capital.

The use of a prospectus which was largely discontinued on the passing of the Companies Act, 1900, showed signs last year of again coming into favour, 8.07 per cent. of the number of companies floated, with 19.03 per cent. of the aggregate capital, having filed one at Somerset House and taken out certificates to enable them to commence business. This is a distinct improvement on 1902, 1903, and 1904, though it is still very evident that the wily promoter prefers to launch his schemes by devious methods rather than by an open appeal to the public, and we can only hope that any future legislation on company matters will make it compulsory for every company, that proposes to seek money from the public, to issue a prospectus setting forth full and ample details of the proposed undertaking. Another point on which the present law requires amendment is as to the registration of companies abroad. At present, as the Comptroller points out, it is impossible to obtain any comparative figures on this subject, though it is well-known that many companies seeking capital here registered themselves abroad, under laws less stringent even than our own. To distinguish these concerns from companies registered here Mr. Barnes suggests that, after the word "limited," the name of the place of registration should be added, and any prospectus issued in the United Kingdom should state the company's place of origin, which should be put up also on its business premises if it acquires any here. We would go even further and compel all foreign and Colonial companies having British shareholders to file at Somerset House similar documents to those required from companies registered in the United Kingdom.

But though 3,967 companies were put on the register in 1905 the nett increase was only 1,162 as 1,693 companies went into liquidation, and 1,112 were removed under the provisions of the Companies Acts of 1880 and 1900. The disappearance of the latter is of little interest, but the 1,693 companies, or some of them, that went into liquidation deserve attention. Unfortunately only 89 were ordered by the Courts to be wound up compulsorily, and though 17 of the remainder were liquidated under supervision, the great majority were buried privately. But concerning the 89, in whose dissolution the Court took an interested part Mr. Barnes says one or two notable things. Their average life was a mere 4.72 years, and in all probability would have been less had one not existed for 50 years and two others for 22. Thirteen, however, had been registered less than a year before the winding up. The company that had been in existence for 50 years was the Reading Cattle Market Company, incorporated by the Reading Cattle Market Act, 1850, and only came to an end by the sale of the undertaking to the corporation. No provision, however, is made by the Companies Acts for the voluntary liquidation of companies incorporated by a special Act, and presumably there was nothing in the incorporating Act itself to enable the affairs of the company to be wound up. For this reason and this reason alone the assistance of the Court had to be sought to enable the company to distribute its assets—there were no liabilities—on its ceasing to carry on business.

All the companies were not like this, and among the others were Nelson and Co., Limited, of tea pension fame, the London (Riverside) Cold Storage, in the career of which there were certain strange financial dealings; the Economic Bank, started to encourage thrift, but ended by Stock Exchange gambling, having come under the influence of Cochrane, of the notorious Royal British Bank, and two small insurance companies, which were prepared to insure everything but lives. One of them, the Castle General Insurance, went ahead in fine style, and accepted risks of over £1,500,000, with a cash capital of £1,039. The other, the Times Insurance Company, came to grief because of its inability to meet claims amounting to £5,000, but although it had available uncalled capital to the extent of £15,000, of which £5,750 was due from the directors and managers, no call was made. Possibly all concerned recognised the futility of such a proceeding, and thought it better to save the postage on the call notices. As an illustration of the ease with which limited liability companies can obtain credit, mainly because creditors are too slack to make inquiries as to their stability, Mr. Barnes cites the case of the Bazaar Supply Association, Limited (Newcastle-on-Tyne). This association was formed in 1896 by one Tempest to carry on the business of 1d. and 6½d. bazaars, with the magnificent share capital of £306, of which £153, at the date of liquidation, was still uncalled and irrecoverable. Tempest, who was not a shareholder, ran the concern as his own, called no meetings, prepared no accounts, had the banking account kept in the name of a clerk, and, in fact, the only pretence made of carrying on the business as a company was the filing of the statutory annual returns. Yet, in spite of all this, which the slightest inquiry would have revealed, sundry people, fascinated by the magic word limited, gave the association credit, with the result that the assets will not be sufficient to meet the claims of the secured creditors, while the unsecured, to the extent of £1,059, will suffer a total loss. In addition to winding up British made companies, the Courts have also jurisdiction to interfere in the liquidation of any company so far as the assets in this country are concerned, no matter how the company may have been constituted or where it may have been registered. This jurisdiction was exercised last year in the case of the Storey Cotton Company, the cotton futures bucket-shop started in Manchester by enterprising Americans, and which the Official Receiver estimates will land the British depositors and unsecured creditors with a loss of about £100,000.

The tables of statistics annexed to the Comptroller's report show that the aggregate nominal capital of 83 companies wound up compulsorily was £7,037,850, of which £3,021,119 was called up. Losses to unsecured creditors and contributories were estimated by the liquidators at £3,455,577, of which the creditors' share was £666,182. From the table classifying the obligations to the public, exclusive of vendors' shares, it appears there was an increase in these of £864,021, compared with 1904, in the case of companies involving obligations of £100,000 or over. On the other hand, where the public obligations were less than £100,000 there was a decrease of £463,738. So far, therefore, as the companies wound up by the Courts are a criterion, 1905 may be regarded as a year of average mortality among limited liability concerns. There were no failures of the magnitude of the Liberator or London and Globe to fill the public eye, yet it is not always the biggest smash that reveals the most shady practices, and the study of one or two of last year's cases, particularly those of J. T. Beckett, Limited, relating to floating charges, and Hobbs Brothers, Limited, as to the satisfaction of debentures, would well repay those interested in the reform of our company law.

Economic and Financial Notes and Correspondence.

CALICO PRINTERS' ASSOCIATION.

There could be no better testimony to the flourishing condition of the textile trades than the fact that this great trust earned enough profit in the year to June 30 last to provide a 4 per cent. dividend on its ponderous share capital besides moderate additions to the reserve. The dividend paid is the largest distributed in the history of the combine, and if an undertaking swamped with capital and overburdened with goodwill and useless assets as this one is can produce such a result the country's prosperity must have a deeper foundation than the absurd theory that we are doing well only

because other communities are too busy themselves to trouble about competing with us. That was the burden of Mr. Arthur Keen's speech the other day at the meeting of that wonderful example of British industry, Guest, Keen, and Nettlefolds, and if we could not find a better excuse than that for harbouring protectionist fallacies we should be inclined to keep quiet. The truth of the matter is, of course, that prosperity in one country is certain to find reflection in another, because the greater the profit the greater the purchasing power. Decadence of the nations of the world would mean something approaching catastrophe for English manufacturers and the tariffites know that as well as anybody. Can a country be such a good customer to another when suffering from financial difficulties and commercial depression as it can when trade is good and a ready outlet can be found for its own produce and manufactures? Only the most elementary knowledge of economics is required to answer the question. In the past year the Calico Printers' Association easily excelled any previous achievement, and produces a trading profit of the big sum of £716,557. This is an increase against the previous 12 months of £165,392, and beats the previous best—1902-3—by £18,141, giving some hope that the chairman's forecast last year that the losses from hitherto unprofitable branches would cease in the current period has been realised. On this occasion the allowance for maintenance, depreciation, repairs, and upkeep, together with depreciation of leasehold interests and colliery, amounts to £195,937 an advance of £3,370, leaving the nett balance at £520,620 compared with £358,598. Transfer fees, interest on investments and balance of general interest, after providing bank charges, produce £6,404, making £527,024 in all, a good total. Administrative and legal charges were again reduced by a small sum to £40,800, and debenture interest absorbs the usual amount of £128,000, so that £358,223 is left, a gain of £162,543, an excellent achievement without a doubt. On this occasion, too, the credit from previous account is better at £131,437, meaning an aggregate disposable sum of £489,661. To meet the proposed dividend of 4 per cent., an increase of 1½ per cent. over the three previous distributions, requires a sum of £201,074, and £4,183 is allowed as additional depreciation, although on what particular asset we do not know. This leaves the directors in a position to add another £50,000 to capital reserve and £100,000 against nothing to revenue reserve, with a further small improvement to £134,404 in the sum carried forward. The subjoined statement briefly indicates the results displayed since the combine was started :—

* Deficit.

The directors think the undertaking of sufficient importance to justify the preparation of a capital account distinct from the balance-sheet, and we are glad they do, because it renders the position of the concern much clearer. After deducting a couple of pounds for calls in arrear the issued share capital is £5,026,838 out of an authorised total of £6,000,000, in addition to which there is debenture stock of £3,200,000, or a total issued capital of £8,226,838. Against this we have an actual property account valued at £6,117,879, including £74,807 nett added in the 12 months. This will be further increased during the current year because the trust has lately acquired the businesses of Messrs. Guthrie and McArby and the Ferryfield Printing Company, of Glasgow, good results being confidently expected from the combination of interests. The calendering and finishing business of Messrs. Crawford, Easton, and Co., of Glasgow, has also been acquired for the purpose of adding to the finishing capacity of the Association in Scotland. Thus the company's monopoly is gradually being extended, but a good many important enterprises still remain outside, of which Steiner and Co. is probably the largest. No doubt the Calico Printers would like to get this concern in its grasp, and we are always hearing rumours that overtures to that end are being made, but up to the present nothing has happened. Balance of the capital account is £2,108,959, a sum which ought to render the position pretty strong, but it can never be that because of the ponderous mass of unproductive assets thrown upon it. We are sorry to say that the auditors' report has not this time been circulated amongst the shareholders —at least there was nothing of the kind enclosed in our copy of the directors' report—but we know that closed works represent something like £763,000, and also that very extravagant prices, measured by earning capacity, were paid for many of the businesses acquired. Goodwill is quite small at £510,000 odd, but what is the use of that if the tangible assets are swelled out far beyond their true worth. Sum due to sundry creditors is £496,498, and there is a standing loan of £500,000 from bankers, but for which the bills and cash balance would be remarkably slender at £90,400. Stock-in-trade is stupendous at £1,945,824, sundry debtors owe £713,085, and copper and other rollers are valued at £864,661. We assume they are still in at 8d. per lb., a price which even the existing abnormal value of copper hardly justifies. Balance at the credit of depreciation account is £221,269, and the capital and revenue reserves now reach £450,000, or about 5 per cent. of the capitalisation.

Benoni Gold Mines.

This company is still struggling along as best it can with very little money and scarcely more hope. Consequently, in their report for the year to May 31 the directors have not much to say, since but little work could be done in that period. In the month of December, owing to the company's financial straits, it was decided to suspend work on the western section of the mine and to concentrate operations on the eastern section. According to the technical reports, the values obtained from the development of the 6th level, eastern section, have proved satisfactory, and work is now being carried on here with the main object of developing payable tonnage. But the object may never be attained. Having exhausted the available cash by December last, the directors made an agreement with the Anglo-French Exploration Company and Messrs. Farrar Brothers, whereby these parties undertook to lend the company jointly up to £20,000, at 7 per cent., the lenders being given an option on the 20,000 reserve shares at par, to run for one year and after that until the loan is repaid. Of this loan £12,000 had been called up at the close of the financial year. Prospects, however, must be considered very uncertain; it is impossible to say what kind of a property it will eventually turn out to be—payable or unpayable. The manager estimates the payable ore reserves at a total of 39,312 tons in both the western and eastern sections, of a value of 9.65 dwts. per ton, likely to yield a profit of £26,671. And he writes, in quite a guarded way: "It will be seen from the foregoing that there is a certain amount of ore opened up which, upon a fair milling basis, could be considered as profitable. There is no doubt that the mine has improved in depth and that the great bulk of the ore recently opened up shows a fair margin of profit; this in itself is a direct encouragement to seek further information, and you would be justified in still proving the values at greater depth." At the annual meeting, the chairman spoke, if possible, even more cautiously, and shareholders cannot derive much encouragement from his observations. "It will be

apparent to you," he said, "that the work done during the year has been of a very anxious nature. We have been buoyed up from time to time with the hopes of encountering large bodies of payable ore, and then, on the other hand, have met with disappointing results. The work which has been done recently in the 6th level is certainly most encouraging, and your directors think that they are well justified in spending money as long as payable ore can be opened up. The workings being exploited at present in your property are situated so far from the known workings of other mines that it is impossible to judge by analogy of what the future may bring forth. A very large amount of development work has been done since the mine was first opened, and the majority of that development has been disappointing, but latterly it has been distinctly encouraging. . . . It would seem, therefore, that so long as we can open up ore which shows a margin on the right side, we must persevere in following up the payable patches, hoping that eventually we shall prove that at greater depth the value will be maintained, but over larger sections than has formerly been obtained." General expenditure in the twelve months amounted to £7,368, and the income was only £233, showing a further deficit of £7,135, to be added to the previous accumulation of £27,934, making it £35,069. Such, then, is the equivocal position reached by this Farrar company after eleven years of existence, for it was formed in 1895. Its lack of success up to the present cannot be attributed to the dearth of native labour, nor to any other misfortune than that of the poverty of the mine. Still, so long as shareholders can be found willing to find more and more cash, we may be sure the company will struggle along for an indefinite time.

Dairy Produce in 1905-6.

Contrary to expectations, the decrease in our imports of foreign and colonial butter that was so marked in the 1904-5 season has proved only a passing shadow, and the figures for 1905-6 indicate a return to that steady annual expansion which has characterised every year of the past decade, with the exception of last. In the season just ended the imports reached a total of 215,493 tons, and though some 3,000 tons below the high-water mark of 1903-4, exceeded the figures of every other year of the past ten. But a change has to some extent come over the sources from which supplies are drawn, and Messrs. Weddell and Co. point out in their valuable *Dairy Produce Review* that the increase of the past year came mainly from countries other than European, Australia, Canada, and the United States being the areas providing the greater portion of the augmentation. For years past we have always looked to Denmark to furnish us with about one-half of the butter we imported, but of late the Danish supply has shown a decided tendency to diminish until last year its proportion to the whole imports was only a little more than one-third. This shrinkage is no doubt due partly to the increased imports of prime quality colonial butter during the winter months, and partly to demand for Danish butter and cream in other markets, notably Germany, and does not imply any waning of dairy farming in Denmark.

Examining the supplies we received from sources other than European, we find those from the United States showed in the past year a remarkable advance, their total being 8,810 tons, or 6,087 more than in 1904-5. But it must be remembered that exports from the States have always been erratic, and the current year may witness a drop equal to, if not greater than, the rise of the past year. With Australia it is different. Ever since the great drought passed away three years ago the quantity of butter shipped to this country has been steadily growing, the total last year amounting to 26,950 tons against 23,368 tons in 1904-5. This increase is the more remarkable in view of the partial drought that occurred in Queensland and the northern part of New South Wales, which materially reduced the supplies from these two States. But though this steady increase in quantity is highly satisfactory, British importers would be far better pleased if the same relative improvement were made in quality. Even Victoria, whose butter years ago obtained an excellent reputation, seems content to rest on the laurels then gained, notwithstanding the fact that there is still room for much improvement in the methods employed, and it is decidedly disappointing to see year after year pass with little or nothing done to change things for the better. The system of Government grading lately adopted, it is hoped, may ultimately bring about the much-wanted improvement, but so far, Messrs. Weddell state, the grading has not been well done, and cannot prove of much use until made compulsory. Queensland and New South Wales are to some extent handicapped by climatic conditions, and it is therefore not surprising that the butter shipped by them is at present inferior to Victorian.

The imports of butter from New Zealand during 1905-6 amounted to 15,177 tons, or 490 tons less than those of the previous season. This decrease was due solely to the high prices ruling for cheese which tempted New Zealand farmers to divert milk from the churn to the cheese vat, with the result that what butter lost cheese gained, the exports of the latter showing an increase of nearly 30 per cent. The quality of New Zealand butter, however, was well maintained and the reputation already gained enhanced during the season as the farmers and makers of the colony, unlike their neighbours in the Commonwealth, are always striving to improve their produce.

Canada's principal dairy industry is cheese-making, and the quantity of butter produced is generally governed by the profits to be made on cheese. Yet although prices for the latter ruled high last year, the quantity of butter exported amounted to 15,145 tons, or the largest quantity ever shipped from the colony. Unfortunately, the condition of a great portion when it arrived in this country was far from satisfactory, and the boxes, style of packing, parchment paper, and general appearance of Canadian butter is far behind that of Australasian. Moreover, mouldy butter from the southern colonies is a thing unknown, whereas complaints on this score against Canadian are only too frequent. All these defects are due to want of organisation and care, and that of mouldiness might be, in a great measure, prevented were artificial means of refrigeration substituted for the ice houses so commonly used at present.

With regard to values on the home markets, those of the 12 months just ended are the highest for the past ten years. Of the colonial butters New Zealand naturally fetched the best prices, the average for the season (September, 1905, to April, 1906, inclusive) being 109s. 2d. per cwt. "Choicest," while for Australian of the same grade the average was 107s. 9d. Classing the produce of both colonies together, the average price was 109s. 10d., compared with 104s. 5d. for the previous season, which is 9s. 10d. less than the average obtained in 1905-6 for best Danish butter.

Cheese, which for some years past showed signs of being ousted from the dietary of the working classes by the cheap and excellent qualities of frozen meat now on sale, has come into favour again since the exposure of the methods of the Chicago packing-houses. Naturally this was reflected in the volume of our imports which last season totalled 130,062 tons, or nearly 8,000 tons more than those of the previous season. Of this Canada sent us no less than 95,884 tons, or more than eight times the quantity received from Holland, the next largest exporting country, while New Zealand was fourth in the list with 5,870 tons, following after the United States. Of the quality of the Canadian cheese little need be said, the Canadian cheese-maker, like the Danish butter-maker, having become so proficient in his art that it is seldom necessary to criticise his work unfavourably. Moreover, the improvements made during recent years in the conditions of transit and shipment to this country and discharge at our ports have resulted in Canadian cheese reaching

our markets in much better condition than formerly. The amount of cheese exported from New Zealand is the largest the colony has yet sent us, and shows an increase of 30 per cent. on the previous year. This, as mentioned above, is explained by the high prices obtained during the 12 months. So far as quality is concerned there has been a steady improvement both in flavour and colour, though much remains to be done before New Zealand cheese can vie with Canadian in either of these essentials. With regard to prices those for Canadian cheese averaged 61s. per cwt., or 10s. above the average of the last ten years, which is a strong contrast to 1904-5, when the average was 10d. per cwt. below the decennial average.

Owing to the dry spring and hot summer experienced this year in the United Kingdom, the production of butter and cheese, so far as can be at present estimated, is almost certain to be much smaller this season than last. The milking herds, it is true, have steadily increased during the past three years until, on June 4, 1905, the number of "cows and heifers in milk or calf" was 4,211,917, the highest ever known. Yet, notwithstanding this, the supply of milk has shown of late a marked diminution, and there is little prospect of the flow increasing again, especially from those cows that have been in milk since the spring. Another factor against a large production of butter and cheese, Messrs. Weddell and Co. point out, is the increased demand for milk in its raw state. Without doubt, this is mainly due to the popularity of cafés, tea-rooms, and milk shops in large towns, which must in the course of a day consume considerable quantities of fresh milk. This demand for milk in its raw state has made the sale of new milk a far more profitable method of dairy farming than the making of either butter or cheese, and it is therefore only natural that farmers should diminish their output of the latter in order to send more of their milk to market.

Dealing with the prospects of the coming season, Messrs. Weddell state that there are reasonable grounds for anticipating an increase in the production of Australian butter, and New Zealand supplies should also be larger, though they will depend largely on the prices to be got for cheese. The Canadian make of butter is always difficult to estimate, and this year the difficulties are greater than ever. Still, so far as estimate can be made at present, an export about equal to that of the year just closed seems highly probable, but here, as in New Zealand, much will depend on the price obtainable for cheese. Supplies from European countries are likely to be augmented, though the increasing prosperity of the artisans in manufacturing towns will certainly cause a greater home consumption, and tend to reduce the quantity available for export. Against this must be set the expectation of a larger supply of Siberian butter in the Continental markets, which will fill the increased demand of the working classes, and release a similar amount of European butter for the United Kingdom. With regard to the United States, it is impossible to say anything definite except that, as last year's exports were abnormal, this year's are almost certain to show a big decrease. Altogether prospects generally appear good, while for Australian and New Zealand butter the outlook is distinctly favourable, and there seems every possibility that in their case last year's exceptional values will be exceeded. Already sales of New Zealand butter for the October-March shipment have been effected at prices higher than those of the season just ended, and so far as can be judged, everything points to these conditions being maintained for some time to come.

Foreign Trade of Austria-Hungary for 1905.

A further large increase was shown in the foreign trade of this country for 1905, making the fifth year in which there has been an improvement over its predecessor. The total value, according to Mr. Consul-General Paul von Schoeller, was £180,200,000, an advance of £8,700,000 compared with 1904, and the largest amount yet reached. Of this imports accounted for £90,300,000 or about £4,000,000 more, and exports were £4,700,000 up at £89,900,000, so that the excess of exports over imports, which fell from £10,000,000 to £1,000,000 in 1904 by reason of the drought in that year, has been further reduced to £400,000, the lowest figure since 1898, when imports exceeded exports. The smallness of this balance between imports and exports is largely explained by the fact that imports of raw materials increased more rapidly than the exports, which are still £2,600,000 below 1903, the year before the drought. Imports under this head rose by £3,240,000, the principal increases being £524,000 in cotton, £464,000 in metals, £775,000 in maize, £210,000 in oats, £221,000 in fruit and vegetables and £278,000 in cattle for slaughter. Cereals showed an advance of £175,000, but imports of coal were only £90,000 higher, and on the other hand wheat fell off by £712,000, tobacco by £114,000, raw hides and skins by £335,000 and wool by £82,000. Of the exports a big advance of £1,143,000 is shown in cereals, principally barley, but this is practically neutralised by reductions of £385,000 in cattle for slaughter and £877,000 in eggs. Increases of £240,000 in pulse and beans, £124,000 in fuit and vegetables and £363,000 in raw hides and skins were partly offset by decreases of £160,000 in draught cattle and horses and £129,000 in wood, leaving an increase in the aggregate of no more than £1,100,000. Semi-manufactured goods showed a small decline in imports and an increase of £900,000 in exports, but the totals are not important and no details are given. Manufactured goods, however, were imported to the extent of £24,320,000 against £22,500,000 a year ago, large increases being shown in provisions, hogs' grease, chemical products, machinery (including automobiles), ironware and instruments, &c., and the only serious reduction was in wines. Exports of cotton goods have risen by £389,000 or about 30 per cent., provisions have gone up by £1,182,000, instruments and fancy goods by £378,000 and mineral oil by £148,000, while ironware dropped £258,000, and there were small declines in woollen goods, garments and millinery and wood and bone goods.

Of the entire import trade of the Dual Monarchy Great Britain contributed £6,101,328, exclusive of precious metals, and her colonies and dependencies £6,120,828, the two together showing an increase of no more than £70,926, while exports to this country reached a total of £7,190,359 and to the colonies of £2,863,943 or an increase of £437,682. The imports from the United Kingdom were £72,843 less than in the previous year, as although iron and ironware and machinery were larger both in volume and value, there were heavy declines in indiarubber goods and leather and leather goods and in cotton yarns. Woollen yarns, too, showed a small falling off in value, although the quantity was greater, but this was much more than made good by the larger business done in woollen goods. Of exports to this country the principal improvements were in sugar, earthenware, metals and metal goods and fancy goods, but flour, fruit and vegetables, eggs, glass and glassware and iron were all decidedly less. British India was the largest customer amongst our dependencies, but sent in £86,886 less than in 1904 at £5,627,994, while it took £2,538,954 or £182,769 more. The British West Indies more than doubled their shipments to Austria-Hungary at £125,026, the increase being mainly in an item which is vaguely described as "colonial goods," but they took no more than £2,828 or just about half the amount of the preceding year, thanks mainly to a big drop in wooden and bone ware, and to the absence of any purchases of metal compared with £1,561 taken in 1904. The Mediterranean trade is insignificant, and the same may be said of the Canadian, but Australia found a good market for wool, and supplied £309,209 worth of this commodity, while dyeing and tanning materials, gums and a number of trifling items brought the total up to £321,040 against £154,169. Exports, however, to that colony only rose by £19,410 to

£60,109, the bulk of which consisted of earthenware and porcelain. Cape Colony, on the contrary, took £132,677 or £32,071 more goods, and sent in £19,542 or £3,458 less.

American Business Notes.

Wall Street is counting greatly on being able to secure large amounts of gold from abroad, or failing that, on receiving help from the Treasury in its hour of need, and was therefore disposed to disregard the warnings contained in the Associated Banks' return. At any rate, the statement was received with equanimity, although the position disclosed was very significant of coming stringency as the requirements in connection with crop movements press more and more heavily on available resources. Loans, it is true, show a reduction of $7,390,000, a decrease which is undoubtedly due to manipulation of the usual kind, the burden being transferred to institutions outside the range of the association, as the need for credit accommodation is not less. Nett deposits are $11,790,000 down, and with a decline of $4,280,000 in specie, surplus reserves show a further shrinkage of $1,420,000, bringing them down to $2,870,000.

An important point in bankruptcy law in the State of New York has been raised by a decision rendered in the United States District Court in New York on August 22. A discharge in bankruptcy was denied to the members of a firm who filed a petition in bankruptcy on March 24, 1905, with liabilities of $17,639 and no assets, on the application of a creditor firm. The principal objections the latter raised to the discharge were that the bankrupts made a false statement in writing to a mercantile agency, on the strength of which these creditors sold goods to the bankrupts, and also made a false statement in writing to another creditor who, however, did not oppose the discharge. The judge, discussing the question of statements to mercantile agencies, approved the views of the referee, that it is the fact of issuing a materially false statement and the fraudulent intent of the man who issues it that the statute seeks to punish by refusing a discharge, and decided accordingly.

A call signed by the president and secretary of the Wabash Railroad Company for a special meeting of the stockholders and debenture bondholders to be held at Toledo, Ohio, on October 22, was issued on August 22. The object of the meeting is to consider and vote on the creation of an issue of 4 per cent. 50 year refunding mortgage bonds for an amount not exceeding $200,000,000, to bear date July 1, and to be secured on all of the property of the company now owned or to be acquired hereafter. A sufficient number of the bonds will be reserved to refund, retire, and effect the exchange of the existing mortgage bonds of the company, all its promissory notes and equipment obligations; the balance to be used only for the betterment, development, extension, and equipment of the company and such purposes as may be provided for in the mortgages. There will be also an increase of the authorised capital by $16,500,000, and of the common stock by $81,500,000, the par value in each case to be $100. Authority will also be asked for the issue of such an amount of common and preferred stock of the company not exceeding $16,500,000, as may be necessary to effect the exchange of debenture bonds. Notice is given that the action to be proposed at the meeting will be dependent on the authorisation of the exchange of the debenture bonds.

It is reported that an American has secured a concession from the Mexican Government for the construction of a railway of about 500 miles in length in the State of Sonora. The beginning of the line will be at Carbo, a division point on the Sonora road, and it will be carried from there to Ures, *viâ* Copet and Bellen Mines, and on through the Yaqui Valley.

The New York *Press* publishes a despatch from Ottawa, Canada, which states that the rapacity of the Canadian sugar refiners is likely to end by their cutting their own throats. It is said that they have so manipulated matters in regard to the preference for British West Indian sugars that the producers and shippers are getting next to nothing out of it, while the Canadian refiners pocket nearly everything. The result is that an arrangement is being come to between the West Indian planters and shippers and the wholesale sugar dealers in Canada to start co-operative refineries in Canada in opposition to the present monopolists. The effect will be a reduction of price and the more even distribution of profits all round. It is said that the new refineries will be calculated to handle all the West Indian production.

The Havana Railroad Company, which is incorporated under the laws of the State of New Jersey, U.S.A., has filed a certificate with the State Secretary, increasing its authorised capital from $6,250,000 to $10,000,000, divided into 100,000 shares of $100 each of common stock. The consent to the increase was signed by the holders of 37,975 shares.

The New York *Herald* tells a curious story of the failure of Mr. Thomas F. Ryan, the head of the Equitable Life Insurance Company, to consolidate four of the subsidiary companies controlled by the Equitable and the Mutual Life. Those controlled by the latter are the Guaranty Trust Company and the United States Mortgage and Trust Company, and those by the Equitable are the Equitable Trust Company and the Mercantile Trust Company. It seems that Mr. Ryan caused a scheme to be drawn up for the consolidation of the companies named under the auspices of the Morton Trust Company, an institution dominated by Mr. Ryan, and of which he is the vice-president. As the owner of the majority stock interest in the Equitable Life, Mr. Ryan could easily have brought to bear the influence of its 65 per cent. holding of the capital stock of the Mercantile Trust Company, the market value of which on January 1 of last year was about $12,800,000. He could also have used the Equitable Life's holding of Equitable Trust Company's stock, amounting to about 50 per cent. of its capital, with a market value of about $8,000,000. It was in the attempt to acquire the control of the trust companies subsidiary to the Mutual Life that the scheme came to the ground. The Mutual Life had 10,736 shares of the United States Mortgage and Trust Company with a market value of about $4,294,400, and 8,643 shares of the Guaranty Trust Company worth about $4,756,400.

Under the new Armstrong Insurance Law the life companies are obliged to get rid of all their stock in these subsidiary institutions and of all other stocks within five years, and it was here that Mr. Ryan saw his opportunity. These companies were immensely profitable. The Mercantile Trust paid an annual dividend of 30 per cent. The book value of its stock was $434 and the market price $900. The Equitable Trust paid 10 per cent. The Guaranty Trust and United States Mortgage and Trust Company each paid 20 per cent. in 1905. The Guaranty Trust stock acquired by the Mutual for $147 had a market value of $550, while the United States Mortgage and Trust stock acquired at $155 had a market value of $400. Mr. Ryan also was not without influence in the Mutual Life, as it held 2,000 shares in his Morton Trust Company, estimated to be worth some $1,400,000. But when it came to a formal attempt to absorb the two big bantlings of the Mutual that institution jibbed, its rulers having, no doubt, views of their own. It is said, however, that Mr. Ryan has by no means abandoned his scheme, and is believed by persons competent to speak on the subject to be strengthening his influence in the Mutual so as to be able later to put it into effect. A current rumour in New York goes so far as to speak of Mr. Ryan as the force behind Mr. Untermyer in his attack on the president and management of the Mutual. It is not, perhaps, irrelevant to say that Mr. Ryan occupies a high place in the estimation of the Vatican, with whose financial affairs he is reputed to be concerned. Only recently he was given the exceptional privilege

of having a private chapel in his residence, to which the Pope appointed a Jesuit from Canada as officiating chaplain.

From all accounts the insurrection in Cuba has been started, armed, and financed by the same persons who promoted and carried through the revolt against Spain. The object then was to bring about the intervention of the United States Government and drive the Spanish flag from the American continent. The object now is the annexation of Cuba to the United States. American papers leave little doubt on this score, and several of them openly avow it. Several persons recall Mr. J. J. Astor's saying in 1898, after signing his name to the list of members of the Cuban League in New York, "We are not going to free Cuba, we are going to annex it."

The numerous bank defalcations of late in the United States, some covering long periods of irregularity, have caused a feeling of insecurity among shareholders and depositors regarding not only the management of banks, but also of the public officials charged with the duty of inspection. The case of the Milwaukee Avenue State Bank of Chicago has so alarmed the bank authorities there that the Chicago Clearing House has decided on a general overhauling of the books of the fifty-seven affiliated banks, investigating particularly the loans and assets. Any bank refusing to open its books to inspection will have its clearing privileges cut off without notice. The investigation will include the members of the Clearing House Association and the private banks that clear through them. In other parts of the country cases of irregularity are reported. One is the shortage of over $700,000 in the affairs of the First National Bank of Chelsea, Massachusetts, principally due to the president of the bank having helped himself and friends to ten times the amount legally allowed to be borrowed by any one person or group of interests out of the capital and unimpaired surplus of the bank. Several cases of small banks being placed in the hands of receivers are reported.

It is reported from Chicago that Mr. James Wilson, the United States Secretary of Agriculture, had visited that city to look into the question of meat inspection, he having discovered that the new law on the subject is not strong enough, and that there has been laxity in the passing of diseased cattle by State inspectors. From other reports it would seem that there is a great deal to be done yet before public confidence in Chicago's meat products can be justified. On August 16 the city food inspector discovered a place where large quantities of decayed pork and beef were undergoing a process of "renovation" before being put on the market. The whole of the meat and the plant of the establishment were seized and confiscated. The stench arising from the meat when the inspector and his men broke in is described as "awful."

A despatch from Victoria, British Columbia, of August 20, stated that arrangements were about completed for the establishment of a monthly line of steamers between Victoria and Vancouver and Mexican ports on the Pacific Coast. The vessels employed are to be of 3,000 tons each, and a subsidy of $100,000 annually is asked for, to be shared equally by the Canadian and Mexican Governments.

The South American Republic of Ecuador has just framed a new tariff, which will go into operation on November 1. The schedules are reclassified, and certain reductions are made on articles shipped from the United States. Among the reductions is one cent off the present duty of 4c. a lb. on manufactured steel, iron, brass, bronze, copper and tin. No reduction is made in the duty on flour and lard. American exports to Ecuador in 1905 were valued at $1,750,000, of which $270,000 was in flour; and the imports from Ecuador were $2,500,000.

The losses consequent on the earthquakes and fires at Valparaiso and other Chilian cities will, it is said, fall entirely on Chilian companies, the law passed about two years ago by the Congress having practically made it impossible for foreign insurance companies to do business in the country. Soon after the law was passed all the German companies withdrew, and American companies have ceased to do business for several years. The deposits required by the Chilian Government amounted to three-fifths of the capital of a company wanting to establish itself, and had to be invested in unencumbered real estate in Chile or securities approved by the President.

The New York papers of August 21 came out with two remarkable documents. One was a letter in the form of a political party encyclical addressed by President Roosevelt to Mr. James E. Watson, whip of the House of Representatives. It begins with a laudation of the work of the Speaker, Mr. Cannon, and then proceeds in the President's usual florid and somewhat pedagogic style to lay down a programme for the Republican party during the Congressional election campaign about to open. It is a straight bid for the popular vote and an endorsement of his policy, especially in the matter of the trusts, railway rebates and meat inspection. On the question of the tariff Mr. Roosevelt declares himself unequivocally in favour of Protection, but would be willing to revise rates and schedules "whenever it shall appear to the sober business sense of our people that on the whole the benefits to be derived from making such changes will outweigh the disadvantages; that is, when the revision will do more good than harm." The document is dated from Oyster Bay, N.Y., August 18, 1906, the President's private residence, and is said to have caused some surprise at Washington, though it is expected it will give a great impetus to the Republican cause in the coming campaign.

The other is a document of a very different character, and reminds one somewhat of those French duels in which one combatant fires and misses, and the other magnanimously refuses to return the shot. It is a letter from Mr. Philippe Bunau-Varilla, who engineered the sale of the wreck of the French Panama Canal scheme and work to the United States Government, addressed to the New York *Evening Post*, and published in large type covering half a page of the morning papers as an advertisement. In it, Mr. Bunau-Varilla explains why he does not proceed further with the action for libel taken by him against that paper, asking damages to the amount of $100,000. The *Evening Post* in reply delivers a trenchant stroke at both Mr. Bunau-Varilla and his lawyers, in which it asserts its possession of the documents necessary to prove its description of him as "this shameless French adventurer and conspirator," and invites them to come on.

No time has been lost in putting into effect the decision of the United States Government to employ Chinese coolie indentured labour in the construction of the Panama Canal. The Isthmian Canal Commission has called for tenders for the supply of 2,500 Chinese to be in the hands of the Commission before September 20, accompanied by check or certificates of deposit for $50,000. It will be an interesting experiment in many ways, one being the effect it will have on the labour vote at the elections in November next.

The great exploit of Mr. Harriman in the Union and Southern Pacific dividends does not appear to have been received by the New York papers with unmixed praise. The New York *Sun* in particular seems to regard his action as akin to thimble-rigging, and in the leading editorial of its issue of August 19, dealing hypothetically with the case of the head of a great corporation in which the directors have been reduced to the position of dummies, it says:—

For instance, suppose you are the president of a great and powerful corporation, and by the exercise of your genius you have amassed, and at infinite pains concealed, a vast and succulent surplus. You have steadily dissembled this surplus and assidulously inculcated in your directors a disbelief in its existence, or at least a stubborn incredulity in its availability for any practical purpose. How are you to do otherwise? Admit your directors to full and accurate knowledge of the real conditions of the corporation, and, pray, where are you? Either or both of two results will promptly ensue: your directors will want to direct or they will go to gambling in the stock of the corporation and leading all their relatives and friends to do the same thing. A most immoral thing to do, of course, and embar-

rassing, too. But the time comes when it is desirable to distribute this accumulated surplus, this product of your own unfettered genius; and as the greatest responsibility that devolves upon you is to determine the correct and appropriate direction of the distribution, you must guard yourself at every point.

Above all, the directors must be kept from the hazards and dangers of the stock market. They are invariably the most worthy and respectable persons in the community, and they deserve this consideration at your hands. Besides, how otherwise can you hope to be able to secure the amount of stock which your dignity and other considerations imperatively require that you should possess before the idea of a distribution is broached? If you have done your duty by yourself, and if your reticence has been supplemented by a judicious diffusion of discouragement, you will have your proper proportion of shares, and they will not have cost you too dear. It too commonly happens in corporation management that at such junctures the directors, anticipating improperly the disclosures to ensue, appear as buyers, and cause an undue and untimely inflation. No really astute and symmetrical head of a great corporation ever incurs such inconveniences.

Secure within his own seclusion and incommunicableness, he calls his board of directors, or his executive committee, for executive committees have now mostly superseded boards of directors, and the meeting is appointed for the close of the business day, say half-past two. If there is a telephone in the room it should be disconnected. The statement of the condition of the corporation is produced, and the directors with difficulty check their surprise at its lucidity and its disconcerting opulence. Then the dividend is proposed and agreed to with docility, as is also the suggestion that its public announcement, to avoid any appearance of precipitancy, be deferred until, say, half an hour after the opening of the market next morning. This, besides implying a dignified and deliberate procedure, affords the directors an opportunity of rectifying their several market positions. To a director who, deeming himself exceptionally well-informed, has gone short of the stock, it affords an occasion that is as grateful as it is invaluable, while to the ordinary, conservative members it furnishes the only available solatium for any sense of injustice they may be weak enough to confess. As the London market is open hours before New York is out of bed the next day, it is possible to do a good deal, always providing a discreet reticence has been observed—which is generally the case, all parties having an adequate incentive thereto.

Among the more prominent beneficiaries of the great "scoop," according to statements in New York papers, are E. H. Harriman $10,000,000, King Edward VII. $2,500,000, Jacob H. Schiff $5,000,000, A. G. Vanderbilt $1,000,000, James R. Keene $2,000,000, John W. Gates $1,000,000, Wm. K. Vanderbilt $1,000,000, and a number of others in smaller amounts. King Edward's good fortune is ascribed to the friendly offices of Mr. Jacob Schiff and Sir Ernest Cassel, who is described as the King's financial adviser, and is in New York in connection with the organisation of the new Bank of Havana and other matters. It is also stated that King Edward has become the owner of a valuable oil property in Pennsylvania.

It was believed in Wall Street that the associates of Mr. Harriman in his great dividend *coup* were more select than numerous. It is pointed out that the Standard Oil representatives are men who could not be left out of the inner circle, and who were probably in it from the beginning. Mr. James Stillman, for instance, would have been a useful man, as large borrowings had to be made; and Mr. Henry C. Frick, whom Mr. Harriman placed on the board of the Union Pacific at the time the Speyer representatives and others withdrew, would be in a position to return a favour with information about movements in Pennsylvania. It is also hinted that Mr. Charles A. Peabody, of the Mutual Life, may not have been so entirely preoccupied with the business of his company or its trouble with Mr. Untermyer's committee, as to be unaware of the doings of some of his closest personal and business associates. In any case, the field for speculation is wide and attractive.

In its "Gossip of Wall Street" on August 22, the New York *Sun* has a paragraph that may be usefully quoted. It is as follows:—

A partner in one of the most prominent arbitrage houses recalled yesterday that on July 12 he received a cable from the house's London representatives inquiring the reasons for a remarkably heavy buying of calls on Union Pacific in that market. The cable was supplemented by later messages emphasising the enormous demand for calls, but so cleverly was the origin of the buying orders concealed that the house was unable to give the information desired. It did, however, advise its London house to sell no calls on the stock, and thus saved itself participation in the heavy losses that, it has lately been learned, London houses sustained in the Harriman speculation. On July 12, the day the first cable was received, Union Pacific was selling at 139½, and calls sold at an average price of $4 a share.

According to the Commercial National Bank of Chicago, which issues an anual summary of crop and business conditions, the wheat crop in the fifteen States dealt with will exceed even last year's figures. The output for 1905 amounted to 547,522,349 bushels, but this year the production is estimated at 607,205,000 bushels, of a weight and quality above the average. For the whole of the States the crop is expected to reach about 769,000,000 bushels, compared with 692,979,489 bushels a year ago. The corn crop is also expected to exceed even the exceptional total for 1905, as twelve States in the Central West will, it is anticipated, harvest 2,051,000,000 bushels, against 1,950,000,000 bushels, and the eight Southern States 530,000,000 bushels against 486,000,000 bushels. Only the oats crop seems likely to fall short of the 1905 output, but the decrease is not expected to be more than about 7 per cent., while the average quality will be fairly good.

Passing Events.

Experts on the hop crop agree that the growth has been exceedingly disappointing, thanks in large measure to the exceptional and persistent blight of vermin which has been one of the unpleasant features of the season. Some say that the cost of spraying the plantations in the endeavour to mitigate the plague has run away with half a million sterling. At the outside the crop is estimated at 280,000 cwts., so that the yield will be little or nothing better than that of 1904. Imports are put down at 175,000 cwts., the Continental crops being poor and the American home consumption large, so that the total supplies will not go above 455,000 cwts. Against this we have to look for a consumption of 700,000 cwts., the lowest possible estimate, meaning that brewers must draw heavily upon present stocks. Fortunately, the quality of the hops is good, some of the plants turning out exceptionally well, and prices are certain to rule pretty high.

Although, on the face of it, the new arrangement with the managing agents of the Burmah Oil Company seemed fair and reasonable, the proposal has encountered spirited hostility from a section of the shareholders. The chief ground for objection is that the directors have misinterpreted the conditions under which these managing agents hold their position, and instead of their having fixity of tenure, except in the case of incompetency or wilful default, the opposition say the company has always had, since 1891, a free hand in dealing with its agents. They were appointed by the original founder of the business for a period of five years, expiring in 1891, as mentioned. Under these circumstances the proposed fixed salary of £15,000 a year is considered too high, because it "would be a severe drain upon the company's resources in years of bad trade, and if a conflagration took place or the trade of the company was interrupted by political disturbances, strikes, or civil commotions, or by forces of nature, it would be a heavy charge to have accumulating against the company." Quite true, but it is hardly necessary to anticipate these formidable happenings. At the same time there is something in the opposition case because it appears that, in addition to the remuneration, the company is to pay for rent and all other outlay of the agents, as it has partially done in the past. This puts rather a different complexion on matters, because when dealing with the subject last week we pointed out that while the remuneration was high, the expenses were also pretty considerable. The directors should have made it clear that these were mostly met by the company. The proposal of the opposition was to reduce the fixed remuneration to £5,000, they also contending that there was no need to proceed by special resolution. The meeting on Thursday was, therefore, a rather agitated affair, but while the opposition received a little support, the directors had no difficulty in carrying their scheme.

We knew quite well, and have said so all along, that the 30 million Transvaal loan, which the magnates promised Joe when he went to view on the spot the fruits of his misdeeds, would never come to the relief of the British taxpayer. The whole business was grotesque in the extreme, and, of course, we have no right to impose on the whole of the Transvaal any such burden as this contribution would have imposed. There has always been a lot of misapprehension on the subject, a good many thinking that because the Rand magnates promised to underwrite the first 10 millions this sum would be paid by the mining industry. The actual facts are nothing like that. It was to be the Transvaal's debt, and if it had ever been paid the ruined Boer farmer would have been contributing by means of taxes to the cost of annexing his country. What a pleasing spectacle of British justice and magnanimity. Of course, the 30 millions should have been exacted from the mining industry, but Joe knew better than that, and the magnates had their tongues in their cheeks when they promised to underwrite. Happily the Liberal Government at home has judged the promise at its true worth, and has taken steps to end the wretched piece of hypocrisy. It is stated, and there is no reason to doubt the accuracy of the report, that all claim to the war contribution has been abandoned, and instead the Government suggests that a £4,000,000 loan should be raised and spent for the sole benefit of the Colonies. The guarantors of the £10,000,000 are asked to underwrite the smaller loan, and can hardly have the temerity to refuse. They ought to raise the money and make it a gift, but that unhappily is not to be thought of.

For a long time past the debenture stock and shares of the Paraguay Central Railway have been steadily rising, the price of the former having almost doubled within 12 months. Although slightly improved, the position of the railway did not justify any such movement, debenture interest being in arrear since 1891, because the railway can never pay, and the Government refused to meet its guarantee obligations. Rumours, however, have been afloat that negotiations for a settlement were in progress, and this week the company sent out the following statement:—"Signed settlement with the Government, 1st day of September. Government will undertake to bring the matter before Congress during the month of October." Hints have been dropped of the basis of negotiations, the company giving up the guarantee and its claim to certain lands, and the Government relieving the company of its obligation to extend the line and handing back preference shares originally allotted to it in payment of the system taken over. Whether the discussion has proceeded on these lines is not mentioned, and the directors might usefully give a little information.

Gold has been found in France and in payable quantity, too. At any rate, this is the news we learn from the French press, whilst the *Echo des Mines et de la Metallurgie* goes so far as to declare that France is well on the way to become a producer of gold in considerable quantity. Several well-known French mining experts predicted with some confidence that the precious metal would be found in the Meurthe and Moselle district, and this prophecy has been verified. Some months ago it was announced that at Lucette gold was produced at the rate of 12 kilos. per month. Since then the output has gradually increased until it has reached 30 kilos. per month. It is declared that the gold is being bought up by English and German capitalists. The company working these gold deposits is said to be doing well, and it is estimated that the output will soon be brought up to a value of upwards of a million francs per annum. Some years ago we thought we were going to develop a magnificent gold mining industry in our midst—in Wales. But this has been more or less of a failure. And it remains to be seen whether or not a more successful one will be opened up in France.

In view of the anxiety of promoters to float Siberian mines on the English market, and to work up interest in Siberian mining, an article has just appeared in the *Torgovo-Promishlennaia Gazeta* on the means of communication in North-Eastern Siberia. The roads are in a most primitive condition; indeed, they can only be described as roads in a complimentary sense. In the province of Yakoutsk, for instance, there are roads only for mounted traffic, and forest paths, which have their special and restricted use, but there is nothing else deserving the name of road. The only means of carrying on traffic is the River Lena, along which steamers ply in the summer. The mail steamer service was started there quite recently, prior to which the steamship service on the Lena had its own special object, which was to deliver goods and all necessaries to the gold diggings. In the winter the traffic is carried on by horse vehicles on the ice. This province of Yakoutsk is reputed to be of vast mineral wealth, but if it be possible to float companies promoters will not have the patience to wait until roads are made and proper means of transport provided. For to wait might compel living in the workhouse.

The West African mining industry having failed to come up to expectations, is there a possibility of eventually cultivating a thriving rubber industry there? We shall not know for many a year to come, for as yet we can but dimly discern the first efforts to sow the seeds of it. In the report just issued by the Colonial Office it is stated that the increased demand for rubber seeds and plants, and especially for the variety known as Para, indicates the widespread interest taken in the cultivation of this product. "The mere wholesale distribution of these seeds to persons ignorant of the proper method of planting will not, in itself, accomplish the replacement of the stock of rubber trees which have been destroyed in the past by ignorant methods of tapping, but it is anticipated that at no distant date the steps which have been taken to disseminate an elementary knowledge of practical and theoretical agriculture by the establishment of classes of instruction for teachers in elementary schools at the various botanical stations will be productive of good results." Who knows but what these "good results" may be achieved by the time we have our next motor boom? It would be a blessing for many if we have to wait so long, looking at the results of the last one.

Mr. J. W. S. Langermann, Mr. Robinson's lieutenant, made an important pronouncement as the representative of the great Robinson group of mines. Speaking at a banquet at Krugersdorp, he severely criticised the Witwatersrand Native Labour Association, implying that the shortage of labour was the fault of this organisation of the bosses. Thus Mr. Langermann has had the courage to say in public and at a convivial banquet, of all places, what we ourselves have declared time and again. Now that a leading magnate has said so, the public will probably believe that the shortage of native labour is the effect of a deliberate design to have coolies, and thereby to reduce to a minimum the number of whites employed on the mines. The recruiting work carried on by the association has been a pure farce all along, and if intelligent men required evidence of this the deliberate reduction of the native wage at the end of the war was impressive enough. Mr. Langermann holds the opinion that sufficient labour can be found in Africa if the recruiting were but properly managed, and he favours the repatriation of the Chinese at the expiration of the contracts. Surely he knows the state of affairs, if anyone does? And is not Mr. Langermann's word as good as that of any other boss?

The Independent Labour Party in the Transvaal has held its first meeting, and though one would not expect infallible wisdom from an assemblage of working men, and an entirely disinterested view of economic affairs, yet their dogmas are well worth listening to, particularly on such a subject as coolie labour. Some 600 persons were present at this inaugural meeting. Councillor Whiteside, it appears, strongly criticised the Government and the Progressives, and said the sooner there was a change the better. He opposed Chinese labour, and deprecated the forthcoming importation of Cape Boys as a menace to the whites. The Liberals, he declared, had given the colony a constitution as nearly satisfactory as possible, and he was glad the Upper

House would be nominated by the Imperial Government. These were some of his sentiments, so far as they have been sent, and doubtless they echoed the feelings of his audience. It is to be hoped, however, that their aspirations and actions will not be so immoderate and selfish, so far beyond possible gratification, as those of some of the members of the Labour party in this country. This seems, perhaps, a little too much to hope for, for from opposing Chinese labour the Transvaal party goes to the other extreme and advocates female suffrage.

According to all accounts Canada is assured of a splendid wheat harvest this year, and "bulls" of Canadian Pacifics are trying to make the most of this. It is estimated by some statisticians that the yield will not be less than 90,000,000 bushels, and if it reaches this figure it will exceed the crop of 1905 by 5,000,000 bushels. Some sanguine mortals say there will be 100,000,000 bushels for export, but it is generally felt that this is an exaggerated figure. Anyway, not so many weeks ago the crop was stated to be the best ever known in the history of the Dominion, the yield being variously estimated at between 110,000,000 and 125,000,000 bushels. One characteristic of this year's harvest is that it is quite ten days earlier than were those of former years, which will give more time in which to carry the supplies to the ports. The Canadian railways, and particularly the Canadian Pacific, are making considerable preparations for coping with this tremendous harvest, by the building of new locomotives and cars. At the same time the permanent ways of the lines have been greatly improved, but, all the same, this is no justification for anything in the nature of wild gambling.

And speaking of harvests, the Hungarian Minister of Agriculture has published his estimates of the world's crops for the present year. The countries exporting cereals show the following returns:—Wheat, 68,700,000 tons; barley, 20,900,000 tons; oats, 32,900,000 tons; and maize, 93,100,000 tons. Of the total, the countries importing grain would require the following amounts:—Wheat, 16,600,000 tons; rye, 600,000 tons; barley, 3,600,000 tons; oats, 2,500,000 tons; maize, 9,000,000 tons. The total yield of the world's crops for the year amounts to:—Wheat, 94,900,000 tons, compared with 92,600,000 tons; rye, 38,200,000 tons against 39,400,000 tons; barley, 31,500,000 tons against 30,700,000 tons; oats, 52,700,000 tons against 53,400,000 tons; maize, 98,700,000 tons compared with 91,700,000 tons, making 316,000,000 tons in all. The world's supplies remaining over from the last harvest are:—Wheat, 4,900,000 tons; rye, 500,000 tons; barley, 500,000 tons; oats, 1,900,000 tons; and maize, 13,000,000 tons. Compared with the above figures the world's actual requirements for the year 1906-7 are put at:—Wheat, 92,300,000 tons; rye, 40,400,000 tons; barley, 31,800,000 tons; oats, 53,700,000 tons; maize, 95,200,000 tons. Thus the surplus shown in all kinds of grain is estimated to be between 11,000,000 tons and 12,000,000 tons.

An analysis made of America's wealth by Mr. J. J. Macfarlane, on behalf of the Commercial Bureau of Philadelphia, discovers some interesting and instructive facts and figures. Some people might be labouring under the delusion that the country's boasted wealth exists in its factories or in the export trade of manufactured goods, or even in tinned meats. But the country relies almost mainly upon the agricultural industry for its welfare and prosperity. During the last 50 years of the nineteenth century the number of farms multiplied by about 300 per cent., that is, the number increased from 1,449,000 in 1850 to 5,737,000 in 1900. In the latter year the aggregate value of the farms was put at £4,000,000,000, and at the end of 1905 at £5,314,400,000. This increase works out at the rate of £700,000 per day during the last five years. The chief crop in the States, it may not be generally known, is maize, no less than 94,000,000 acres being devoted to its cultivation last year, this area, likewise the quantity and value of maize produced, exceeding the combined totals of wheat, oats, barley, potatoes, rye, buckwheat and rice. Wheat comes next to maize, but nearly 40 per cent. of this cereal is exported compared with 5 per cent. of the other. The estimated value of the dairy produce in 1905 was £133,000,000 and of cotton £117,000,000. However much the producers may make out of their harvests, Wall Street gamblers probably reap more.

A White Paper just issued gives some more or less valuable statistics of the exports from Mr. Chamberlain's beloved colony, to wit the West Indies. These figures cover the long period of 20 years, and are brought up to the end of 1904. Despite Joseph's fostering care, the average annual value of the shipments to the United Kingdom declined gradually from £2,098,000 to £1,443,000, whilst the percentage of the total shipments fell from 37.3 per cent. to 26.4 per cent. This is not entirely due to any decrease in the colony's produce, for, to our shame, be it said, we were not patriotic and self-sacrificing enough to buy our sugar from our own family connections, but were mean enough to take our custom to the cheaper foreigners round the corner. This proves how strong is the instinct of greed and selfishness even in Englishmen who, at the bidding of the Birmingham prophet, yell for protection. For simultaneously with the drop in the exports to this country those to the United States increased. If, however, we have not bought largely of the colony's sugar, we have made up for it partly by purchasing more fruit, cocoa and tobacco. Instead, therefore, of robbing ourselves to make the rapid fortunes of the sugar planters, we may have done them a good turn by compelling them to extend the more lucrative industries above mentioned.

It is quite an interesting item of news we cull from the latest number to hand of the *Australasian Insurance and Banking Record*, which declares that the Treasurers of Victoria, New South Wales and South Australia have remitted, or are about to remit, various considerable sums to London partly to meet maturing loans. It is pointed out by our contemporary that the recent accumulations due to a succession of good seasons have given the various Governments the means to enable them to deal with many pressing financial problems. It is estimated that at the present time there are from fifteen to twenty millions of Australian money in London lent from week to week at about 2½ per cent. The argument proceeds that by reducing to a slight extent the amount of Australia's indebtedness to Great Britain it will not seriously upset the relations between the two money markets, but at the same time employment will be found for Australian banking balances. Moreover, will it not help to harden the market for Australian stocks? Ah! And, perhaps, prepare the way for borrowing more? We can hardly believe the Australian Governments are becoming so virtuous, thrifty and self-denying as the *Record* tries to make out.

The directors of the South Coast drapery business known as Plummer, Roddis, Limited, communicate to the shareholders their intention not to pay an interim dividend now, but to allow the profits to accumulate until the close of the financial year in February next. A similar course was adopted twelve months back, no doubt because in 1904 the company made an interim distribution of 2½ per cent. and was unable to add anything to it when the accounts were finally made up. For the year ended February 7 last 4 per cent. was paid, and there is reason to hope that this return at least will be again forthcoming, because the directors say that the business compares favourably with that of the corresponding period of 1905.

If production can be maintained at a fairly decent level, the high range of prices now prevailing for Russian oil should do much to compensate the various companies operating in the Baku district for their fearful experiences last year. Within a few months the price of naphtha has increased from 15-20 copecks per pood to 37 copecks, and the rise has so seriously affected industry in the Volga district and the steam shipping on the Volga that the Ministry of Trade and

Industry is now endeavouring to regulate the question and remove the causes which have affected the rise in quotations. One way would be the establishment of a decent and reliable Government and proper protection for the oil fields, so that they could pursue their business without the everlasting danger of another outbreak of anarchy and terrorism. The *Novoe Vremya* makes the brilliant suggestion that the best way to reduce prices is to raise the production, and few would be prepared to deny this elementary truth. But the wretched Government, which this journal so ardently supports, renders an increase in output a matter of extreme difficulty. Labour troubles are still a disturbing element, and Messrs. Nobel lately threatened to lock out all its workers in order to resist a demand made by the employees for a 30 per cent. participation in the dividend declared.

Shipbuilding on the Clyde continues exceedingly active, and the output for the first eight months of the current year of 415,911 tons is easily the highest ever reached. During August 28 vessels were completed, representing a tonnage of 49,525. while the total for all Scotch shipbuilding yards was 41 ships, aggregating 58,245 tons. For eight months the production on all rivers was 279 boats, giving a tonnage of 449,772, and some people are beginning to ask how uses are to be found for this huge output. A good many of the boats now completing were booked early last year, when the boom in shipping showed signs of revival, while those ordered later on are still on the stocks. It is expected that on the Clyde alone the increase this year over last will be 150,000 tons, but a distinct falling off of bookings has lately been noticed. Contracts placed during August were very few, but lack of numbers was to some extent compensated by the importance of the orders given.

Mr. Hester's estimate that the American cotton crop for this season will total 11,346,000 bales is regarded as a triumph for Mr. Henry Neill, and Messrs. Neill Bros. have been quick to point it out. When in November last Mr. Neill put the probable yield for 1905-6 at 11,500,000 bales, his figures were met with a storm of derision from nearly the whole of the trade, whose estimates were based on the calculations of the Agricultural and Census Bureaux, which put the yield at 10,168,000 and 10,697,000 bales respectively. Later on in the winter even Messrs. Neill themselves were doubtful as to the crop exceeding 11,000,000 bales, but notwithstanding all this opposition, Mr. Henry Neill still held to his calculations, and it looks as though at the finish his original estimate will, if anything, prove to be under rather than over the actual yield.

Referring to the prospects of the coming crop, Messrs. Neill state in their circular that the advices they have received all point to a supply amply sufficient to meet all possible demands. The condition reports of private authorities show a few points decline during the month, though only about one-half of what is usual during August. It is therefore probable the Bureau report, due the end of this week, may also show some decline from the 82.9 of last month. But even so, there can be no doubt that the conditions for the new crop have so far been extremely favourable. Some weeks, however, must elapse before anything like a trustworthy estimate can be made. Should the promise of a good yield be fulfilled, as it seems extremely likely to be, the New York bull leader and his followers may find themselves in an awkward positon, and regret the implicit faith they placed in the opinions of the Southern Cotton Association and the myriad of reporters they employed.

At last a really definite step has been taken in connection with the long-drawn-out Cedula dispute. The Provincial Government of Buenos Ayres has issued a decree calling a general meeting of the holders of Cedulas, coupons, bonds, and certificates of the Banco Hipotecario for November 25 next. At this meeting the representatives of the Government will set forth the position of the Bank, together with the financial position of the Province, and will, of course, communicate the nature of the terms proposed for a settlement of the Cedula debt. It is, however, to be hoped that a general outline of the scheme will be available some time before the meeting, because the question is exceedingly complicated, and the representatives of the holders at the meeting, which will be held in the city of La Plata, ought not to be expected to come to a decision offhand. That, indeed, is quite impossible, as the proposal is bound to require very close consideration and scrutiny, and as the authorities are apparently very anxious to get the business out of hand, there ought to be no difficulty in the way of disclosing the scheme. Meanwhile, holders should lose no time in depositing their securities, because at least 51 per cent. must be represented at the meeting or business cannot proceed. That would mean an adjournment to December 11, when a bare majority of those present could carry the scheme, an obviously undesirable alternative. In London coupons, bonds, &c., may be deposited with Messrs. Baring, the Council of Foreign Bondholders, or the London agency of the Deutsche Bank.

German competition in the shipping is evidently not going to become less acute. The Hamburg-America line proposes to increase its capital by another million sterling, making it six million, in order to provide additional tonnage. New vessels are specially required in the North American service, runs the official announcement, as hitherto the two big steamers, *Amerika* and *Kaiserin Augusta Victoria*, have been unable to take half the passengers applying for accommodation. This has rendered necessary the hire of inferior foreign ships. The company therefore intends to build more large vessels and to establish a regular weekly service to New York. Ships are also wanted on the routes Hamburg to South America, Hamburg to the West Indies, and New York to the West Indies. Not only that, but a line will be opened under the German flag between Genoa, the River Plate States, and Brazil. The statement adds that the service to Chinese waters must be increased, and suitable ships provided for the service recently started with the ports of the Soudan and the Persian Gulf. It is said that already the company possesses 341 vessels, of which 162 are ocean-going liners, but no doubt we shall be able to hold our own.

The securities of the Salt Union have lately attracted a little more attention on the Stock Exchange than usual, and prices have risen a good deal. There have been reasons for the movement, of course, a report being circulated that a working agreement was contemplated between all the leading businesses in the country. A correspondent of the *Financial Times* now conveys the intelligence that an understanding for regulating output, distribution, and prices has been arrived at. A company has been formed under the name of the North-Western Salt Company, possessing a capital of £10,000, the whole of which is to be subscribed by the salt manufacturers. The compact embraces the Salt Union and practically every outside manufacturer in the kingdom. Some people say that enormous advantages will accrue, and the Salt Union can certainly do with a turn of the Wheel of Fortune.

The unfortunate enterprise known as Cooper Cooper and Co. is in the throes of another disturbance. A section of the shareholders are anxious to obtain information about the position of the Cooper Cooper Profit Sharing Company, which was floated by the 1901 company to sell tea and other products on a plan based to a large extent on the notorious Nelson pension scheme. A requisition was therefore recently presented to the directors on behalf of the holders of six or seven thousand shares, calling upon them to convene a special meeting, at which the existing condition of affairs will be discussed. The gathering will take place on Wednesday next, and we hope no attempt will be made to exclude the Press.

The directors of the Great Lucknow Consols have made another heartrending appeal to the shareholders to give them more cash, "to take up as many deben-

ture bonds as possible in the issue of £10,000 just offered." Such distress as this would be enough to touch the stoniest heart were there not the possibility that the shareholders could do considerably more good with their money than put it into this struggling concern. It was reconstructed as recently as February of last year, and we can hardly feel hopeful that even were the whole £10,000 subscribed it would avert another reconstruction in the future. In their appeal the directors pathetically write:—"Success or failure rests entirely upon the extent to which the shareholders will assist in the way indicated." We are not so sure of this. It is after all a mere directorial and interested opinion, and those shareholders who feel convinced that it will not bring success may have formed a much more reasonable and reliable opinion. Anyway, past experience gives no encouragement whatever to the prudent to put any more cash into the concern; it would look too much like throwing good money after bad.

Experiments of the highest importance are being conducted at the Premier Diamond mine in regard to the treatment of the hard, blue ground. This is the news cabled to the *Financial Times* by its Johannesburg correspondent, and we are mildly pleased to hear it, for cheap diamonds would fill many empty stomachs. The treatment consists in the application of a special solution, the composition of which is not disclosed. By this means the material, which in its natural state is unbreakable with a sledge hammer, is rapidly pulverised. Representatives of the Premier and De Beers Companies were present, and expressed very satisfactory opinions as to the value of the process, opening negotiations forthwith for the purchase of the rights. It is stated that the cost of treatment under the new process will mean a reduction of from 4s. to 6d. per load. Scientific invention is all very well, but it cannot touch "bull" and "bear" operations on the Stock Exchange. For something like twelve months Premier Diamonds have been incessantly subjected to these, so that holders of shares have been bewildered and disturbed by the capricious and astounding vagaries of the share. New processes may be good, but less reticence on the part of the directors of this particular company would be greatly appreciated. They may have good reasons for maintaining a profound silence when shareholders are in a state of acute suspense, but the pity is that it benefits the gambler more than the *bonâ fide* investor, who is the victim of the unscrupulous.

If the figures can be depended upon and are not favourably influenced by land and other capital transactions, the New South Wales Budget may be considered fairly satisfactory. Against an estimated revenue of £11,327,300 the actual receipts amounted to £12,291,367, but the expenditure of £11,395,243 was £113,334 above the estimate. The actual surplus therefore came to £890,124 against £45,391, the amount budgeted for. The principal increases were:—Commonwealth returns £269,270, railways and tramways £463,498, land tax £104,972, stamps £89,894 and income-tax £44,299. For the current financial year the receipts are put down at £12,110,555 and the expenditure, including £350,000 devoted to the reduction of the public debt, at £11,512,019, leaving an estimated surplus in 1906-7 of £598,536. Under the new legislation of the State, the Treasurer has provided for the creation of a Public Works Fund, to be supplied in the first place by earmarking two-thirds of the proceeds of the Crown lands—money sometimes taken to the relief of revenue, we fear—and in the second by making transfers from the surplus revenue. For the future the cost of public works will be charged to this fund, instead of coming from loans, which will be restricted to expenditure on business undertakings of the State carried out by the Railway Commissioners, Water and Sewerage Boards and the Sydney Harbour Trust. Estimated loan expenditure is £1,200,000, including £735,135 for the completion of works already sanctioned and £247,735 for new works. Sinking fund debentures amounting to £224,900 have been paid off.

The New South Wales Government Railways considerably improved their position during the past year, thanks to the better conditions ruling in the colony. The railways earned £4,234,791 and the tramways £851,483, against which the expenditure reached £2,308,384 and £665,083 respectively, leaving the nett earnings on the two systems at £2,112,807. On the railways the revenue was larger by £550,775, to which general merchandise contributed £169,000, live stock and wool £208,301 and passengers £122,426. The increase in the tramway earnings was £57,579. Under expenditure we find an advance of £116,237, after making what is described as a liberal allowance for the general upkeep of the property and renewals, so that the proportion between expenditure and income is less by over 5 per cent. to 54¼ per cent. Working expenses and the interest on capital invested in the railways and tramways having been met, the Commissioners are able to return a surplus to the consolidated revenue of £440,940. The nett return to capital was £4 8s. 6d. per cent. taking the railways alone, and £5 1s. 7d. per cent. on the tramways.

Answers to Correspondents.

Olive.—(1) These shares at present price seem reasonably cheap, but we see no reason to anticipate that they will have any sensational rise. (2) Nor do we look for any big advance in these shares, and cannot advise them for a quick return. (3) On the whole, these look to have the best prospects, and you might buy a few of these, though we cannot promise you any substantial profits.

W. P.—The stock is good of its kind, and at the current quotation seems a fair investment. We do not think you need fear that it will be injured by either of the events you mention happening. (2) We do not think there is much danger of any default on these shares, but, all the same, there is the possibility of it if the Kaffir market does not permanently improve. Under the uncertain circumstances we cannot advise you to average.

W. G.—The country seems to be very flourishing just now, and although a dividend is not immediately in sight, owing to the fact that the people now controlling the road are supposed to be spending freely on physical improvement, there is no hurry to sell. (2) This stock looks dear, having had a very big rise, but if taken up and kept the purchase might turn out all right. (3) The same remarks apply here, but buy sparingly. (4) This security is in a very curious position. If the line is taken over in connection with a certain railway project the shares might easily have a good rise, but if, on the other hand, the undertaking is not taken over, the competition from the new line would render its prospects very poor. If you take the risk do so to a very small amount. (5) Not a very promising proposition, and hardly worth touching.

Nopir.—This line has got very good prospects, and the bonus you mention will shortly be forthcoming. But then the price of the present stock will have a proportionate decline. On the whole we think the stock a fair risk. This reply exhausts your deposit.

B. W. J.—We can get no definite information regarding the progress of this company, but are doubtful if it has improved its position to an extent sufficient to warrant the debentures being considered cheap.

H. D. R.—We do not think the competition mentioned will have the least influence on this company's business. In fact, the new system may easily prove a valuable adjunct to the large business. There is no occasion to sell.

P. D. E.—We know of no special reasons why the securities should rise except those you mention. The concern is a very fair one, and it is possible that the dividend will be increased.

The Royal Mail Steam Packet Company announces that, commencing with the R.M.S.P. *Orinoco*, on the 12th instant, the West Indies-New York Transatlantic main line steamers will leave Southampton on every alternate Wednesday instead of every alternate Thursday. The hour of departure will be at noon, as hitherto, and the steamers will call at Vigo on the outward voyage.

Though all the three Newnes' magazines for September that have reached us are excellent, the *Grand* is, perhaps, the best and most varied. "The Botor Chaperon," the new serial, promises to equal the previous novels of its joint authors, and the rest of the number, grave and gay, is very readable. In the *Strand* the "Chronicles of the Strand Club" are always amusing, in spite of the nutty flavour possessed by sundry of the yarns. Mr. W. W. Jacobs contributes a story which, by the way, is decidedly better than some of his more recent ones, and among the articles is an excellent illustrated one on the awful catastrophe at San Francisco. Two new serials commence in the *Sunday Strand*, the contents of which are of the usual kind. We have also received No. 1 of the new series of the *Scholar's Own*, a penny monthly for boys and girls, which is infinitely superior to the pernicious trash issued by certain other publishers for the same class of readers.

The Investors' Review.

The Week's Money Market.

BANK RATE 3½ PER CENT. (Reduced from 4 per cent. on June 21.)

Norfolk House, Friday Evening.

Interest this week has been directed to New York, where the need for gold has daily grown more urgent. The Bank's action in raising its price for eagles to 76s. 8½d. per oz. had the effect of staving off any demand on its stock for a day or two, but even that barrier proved ineffectual in the long run. Most, if not all, of the available supplies of bar gold in the open market were bought up for America, the price received by the seller being 77s. 11¼d. per oz., and in addition it was said that of the gold recently purchased for an undisclosed destination £250,000 had been shipped to New York. Whether this story was true or not it is impossible to say, but even if it were the case the amount secured was insufficient, and on Wednesday and Thursday no less than £806,000 in United States gold coin, or "eagles," was taken from the Bank, while to-day a further £604,000 was sold there. It is evident, however, that further large sums will be needed to help Wall Street through with its gigantic stock market operations, and at the same time to finance the harvest movement in the West. Help in this emergency is expected from Australia, and it is said that more gold has been engaged there, but even with that there is still a considerable gap to be bridged. The Secretary of the Treasury has recognised that it is an emergency, and has announced his intention of facilitating imports of gold after the 10th inst. by making deposits with the national banks. Under this arrangement bonds and legal investments for saving banks will be accepted at 90 per cent. as security pending the arrival of the metal, which must be actually engaged prior to the deposit, and the deposit must be repaid as soon as the gold arrives. A step of this kind indicates that the drain on our stocks of the metal will be severe, and the market has therefore good cause for apprehension.

In some quarters a disposition was shown to make light of the demand, and it was pointed out that the Bank's holding of coin and bullion is at present about £2,300,000 more than at the corresponding date a year ago, and that the proportion of the reserve to liabilities is fully 5 per cent. higher than it was then, while the Bank rate is 3½ per cent. against 3 per cent., so that the ability to bear the drain is correspondingly greater. Comfort is sought, too, in the belief that the Egyptian and Argentine requirements will not enter into the question until much later in the year, and it was asserted that last week's shipment of £100,000 was an exceptional transaction not likely to be repeated. Yet on Thursday another £100,000 went Eastwards, and several other small sums were taken, against which only £20,000 came in from France, making the nett outgoings for the two days £922,000. On top of all this comes a report that Germany is likely to be seeking gold next week, seeing money there, as usual about this time of the year, has become dear.

With all these attacks on our stocks of bullion threatening, the discount market is naturally very apprehensive, and matters have reached such a pitch that brokers have been very unwilling to take in bills. Rates consequently have been advanced to a point which is not acceptable to holders, and business has been brought almost to a standstill. Brokers, too, have begun to discriminate against American paper, of which so much has been poured into the market, and three months' bills to arrive next week could only be dealt in at $3\frac{9}{16}$-$3\frac{5}{8}$ per cent., although the current quotation for such maturities was $3\frac{7}{16}$ per cent. The market to-day was all at sixes and sevens, and rates varied with the opinions of different brokers, one house, for instance, giving 3½-3⅝ per cent. for full ninety-day usances, and another quoting 3½ per cent., "subject to a rise in the Bank rate." As a matter of fact, however, no bills, so far as we could learn, changed hands at a higher figure than $3\frac{7}{16}$ per cent., and the higher quotations were merely the response to reports of another withdrawal of any amount up to £1,000,000.

Discount rates would probably have been even stiffer but for the plethora of short credits. All the week these have been in superabundant supply, owing largely, it was thought, to the Japanese having lent freely in the Consol market for the settlement. The release of funds by the joint-stock banks after the turn of the month and the disbursement of over £4,500,000 on the 1st, through bond redemptions and interest payments all helped to swell the available resources and call money became a drug in the market. For loans renewed from day to day lenders began by charging 2 per cent., but as the week wore on the rate came down, first to 1¾ per cent. and then to 1½ per cent., while each afternoon complaints were heard of large surpluses which could only be placed with difficulty at 1 per cent. In the same way bankers had to bring down their rates for weekly fixtures from 2¼-2½ to 2 per cent., and both the India Council and the Japanese agents were forced to take 2⅜ per cent. or ¼ per cent. less for any renewals they granted for a month. The loss of gold from the Bank during the past three days has not so far had any appreciable effect on floating credits, which continued superabundant right up to the close to-night.

The Bank return proved stronger than had been expected, as the outflow of currency to the provinces at the end of the month was small. In addition to the £350,000 taken for abroad, £150,000 in gold coin had gone into circulation, making a total reduction in the bullion of £503,777, but against this £112,525 in notes came back from the provinces, leaving the reserve only £391,252 down at £27,366,883, the proportion to liabilities being $\frac{7}{8}$ per cent. lower at 50$\frac{1}{8}$ per cent. Government disbursements were on a liberal scale at £1,653,265, and as there was an increase of £789,169 in other securities, the market was able to meet the decrease in reserves and to add £1,904,221 to its resources as represented by other deposits.

This being the first return since August 31, when the Bank's half-year ends, the "Rest" has been adjusted by the addition of £129,923 on account of the profits for the six months, and it is therefore possible to make an estimate of the dividend that will be paid. The total of the "Rest" is now £3,680,074, but the account is never allowed to fall below £3,000,000, so that £680,074 will be available for distribution, a sum which will provide a dividend at the rate of 9 per cent. per annum, or the same as for the last four half-years.

SILVER.

The silver market this week has developed considerable strength and prices have risen accordingly. Large and urgent orders have been received from the Indian bazaars and quotations have steadily advanced until they reached 31$\frac{1}{2}$d. per oz. for spot and 31$\frac{3}{8}$d. per oz. for future delivery. Simultaneously much higher prices have been cabled from India, and these have had a sympathetic effect on the market here. Supplies, too, have been but moderate. The above are the highest quotations for many years past. But to-day there was a reaction to 31$\frac{7}{16}$d. and 31$\frac{1}{4}$d. respectively. Tenders for the Rs. 1,00,00,000 Council drafts on India on Wednesday amounted to Rs. 6,90,70,000 in bills and Rs. 96,00,000 in telegraphic transfers. Of these, Rs. 88,56,000 were accepted in bills and Rs. 11,44,000 in transfers, applications at 1s. 4$\frac{1}{16}$d. and 1s. 4 3-32d. receiving about 31 per cent. Next week the amount to be offered is Rs. 1,00,00,000.

BANK OF ENGLAND.

Stock Market Notes and Comments.

It is all "Yankees" and gold this week, and the struggle of New York to convert its paper of all sorts into gold is most fascinating to behold. Already the debt of the American security manufacturer to Europe is stupendous, and, as our shrewd French banker friend points out, the only hope he has of liquidating this debt lies in good markets on this side the "pond" for his grain and cotton. Thus far, however, the markets have not been propitious for either the one or the other commodity. "The demand for wheat is nil, and the price of cotton never stops falling." It must be so, because the world over grain harvests are good. There will be large surpluses of wheat in most exporting countries except Russia, and the competition to supply our wants will therefore be such as must drive prices down to a non-remunerative point. The same may not be true of cotton, but the American speculator has done his best to ruin his market for that commodity likewise by his tricks of market fleecing, and the large crop of cotton his country now has to sell will find cautious and reluctant buyers.

This, then, is the position into which the Yankee financier and market "scooper" has brought himself. All the crops supposed to be growing and available for disposal in Europe were realised or pawned, used as a basis for credit, many months ago, and the proceeds absorbed in propping the share gamble on the Wall Street market, or to assist the railway companies in financing their unheard of and unparalleled prosperity. If the crops do not sell either so promptly or to such good advantage as the financiers estimated, then they will be unable to meet their obligations, and we shall behold the most far-reaching liquidation the American union has ever encountered. But we have just said that the crops cannot be sold, or sold only at a loss; therefore the hectic fury of Wall Street, its purchases of gold in London, its demented maintenance of prices for its wares at heights that effectively warn buyers off, all seem to us to portend the imminence of collapse. If we here would only buy the railroad paper offered at

dishonest prices it might come all right; but that is just what the British public has learnt not to do, and the financial manœuvrers make no headway at all by their price-skying gambles and gambols. We look on and smile, waiting for the general overturn which cannot now be long delayed.

To the London money and stock markets the approach of the gambler's crisis in the United States is signalised by the renewal of the New York demand for gold, and we shall have to be watchful lest this demand should assume proportions that would involve us in the American whirlpool of insolvency. Why does New York want gold now? Because it is unable to pay its debts with paper. If the familiar process could go on, the process tersely described in his latest circular by our banker aforesaid, and which consisted in "forming a syndicate with or without the support of European bankers" when a new emission of capital was about to be made, a syndicate whose business it was to sell as much as possible of the paper at fancy prices, and then dump the balance on the insurance companies, all might still have been well. But this is no longer possible; the insurance companies are no longer buyers, are sellers rather than buyers, and with the public likewise standing aside the financier has now no choice. Debts contracted in gold have to be paid in gold, paper no longer sufficing, and, worst of all, the gold itself has to be borrowed. How much credit has already been created by New York in order to purchase gold we shall not attempt to guess, but whatever the total, it has not been liquidated, it remains a debt due to our market, and repayable in gold. To this older debt the proceeds of further accommodation bills have to be added as credit is again called upon to provide the gold now leaving the Bank for the States, and unless we after all buy grain and cotton to an extent sufficient to offset this debt, and buy soon, the acute stage of the vicious financier's rake's progress cannot be much delayed.

Gold is good up to a point, and if it is your own gold, but it is dangerous and exhausting as a stimulant if laid hold of by the creators of credit, if borrowed and devoted to sustaining the market for bonds and shares to an extent altogether beyond reason, and with a complete disregard of facts and intrinsic probabilities. In such circumstances the metal acts as a devourer instead of as a creator of durable wealth, and when the balance is struck among credit magicians, when the inflated prices dwindle, disclosing a yawning deficiency, the struggle to avoid open insolvency may bring trouble on all markets. At the best our circumstances are not such as to warrant us in looking for free and successful speculations for the rise in any section of the Stock Exchange, and before the next six months have passed by we may often be thankful that our markets have been "quiet," "stagnant," "slow," "inclined to recede."

For great as the danger in and from New York is, it by no means constitutes the only source of market disappointments. Russia is nearing a great bankruptcy, not merely because the revenues of the Empire must be dwindling, but still more because of the impossibility of borrowing. No further loans on foreign markets are possible for the autocracy, and without these loans it must before long admit insolvency. This is the law of being for most modern States, and Russia is about to illustrate its inevitableness in a way and with a magnitude full of sinister omen for all centres of high finance, the finance that puts mankind in pawn, and traffics in the prosperity, the very life, of states with no more thought than a Breton peasant devotes to the sale of onions. "It will be a rough year this year 1906," we have harpingly told the wielders of credit in the city all through the months now past us, and they are already finding out that we told them the truth.

The Week's Stock Markets.

The overpowering heat during the early part of the week reduced business in the Stock Exchange to very narrow limits, and markets all round were decidedly limp. While the American market has again held pride of place, there has not been the exuberant feeling shown in it this week that characterised the preceding fortnight. Consols were favourably influenced during the opening hours by the ease with which the account was completed, and the market also took comfort in listening to an ingenious theory that the American demand for gold might be partially satisfied by the utilising of a portion, or the whole, of the large hoard that has been piled up in London during the past month and surrounded with so much mystery. When the first of the heavy withdrawals of "eagles" from the Bank took place it struck a cold chill, and the price of the premier security dropped sharply, dealers being keenly alive to the adverse feature and showing an inclination to exaggerate it. Other gilt-edged securities followed the downward trend of Consols, and Irish Land scrip fell to ⅝ discount.

The Paris Bourse started off in cheerful fashion, the facility with which the settlement there was got through having a favourable impression. A change of mood followed; Russian bonds were offered largely and the scrip touched 12 discount, the news from Russia affording no encouragement, and speculators showed no disposition to touch stocks. Paris took heart and rallied later on, owing to the circulation of rumours that the return to office of Count Witte was probable, and the price of Russian scrip recovered to 10⅝ discount, the market in this stock has narrowed considerably, and dealing become more difficult. Japanese bonds were in a state of collapse for a brief period, selling orders said to be on American account coming on an idle and unwilling market. The sales were accompanied by rumours of the resignation of Viscount Hayashi, who was said to have quarrelled with the other members of the Cabinet. Prices rallied on the denial of the story and the withdrawal of selling pressure from New York. Cuban Fives have moved up and down, the news regarding the revolutionary movement in the island varying considerably from day to day; the net result at the close was to leave the price rather lower on balance. There was a sharp advance in Buenos Ayres Cedulas on speculative buying based on hopes of a settlement with the Province, though it was feared in some quarters that an outburst of speculation and consequent inflation of price would tend to reduce the chance of a settlement being arrived at. Peruvian Corporation issues moved up on Continental buying orders, and then relapsed to below last week's closing level, while City of Rosario bonds were favourably influenced by the official announcement that the funds necessary for the payment of the coupons due on October 1 are in hand. Spanish Fours closed firm, the latest news from Bilbao being of a reassuring character.

The unfortunate Home Railway market plunged into a still deeper state of despondency, chiefly owing to the persistent and ominous rumours of unrest in certain branches of the Clyde shipbuilding trade, coupled with threats of labour troubles on the railways themselves. Apprehensions as to the general effect of the Trades Union Congress now sitting in Liverpool, and the aggressive speeches made by Labour leaders up and down the country also tended to drive the investor away from Home Railway stocks, but on the other hand there was no very heavy selling reported, certainly not enough to account for the weakness of the market. It was inferred that dealers were bent on getting prices down with the object of providing themselves with stock at bedrock level, so as to be prepared for the inevitable reaction. On Thursday, when speculative markets were depressed by realisation and gilt-edged securities showed the same tendency, the Home Railway market took a course of its own, showing a remarkable disregard for adverse features, just as previously it had ignored favourable points with obstinate persistency. The steadier tendency was entirely due to professional support, although some dealers reported quite a flow of small buying orders, mostly for the heavy stocks. On Tuesday, when the market was in the dumps, the Caledonian dividend

statement appeared and helped to accentuate the weakness. Instead of the hoped for increase of ¼ per cent. in the distribution, the rate was the same as at the corresponding period of last year, but the carry forward showed a reduction of no less than £10,000. This, in face of the published increase of about £44,000 for the half-year, naturally caused a good deal of disappointment, but of late years the company has had a knack of disappointing operators. The blow this time was all the more unexpected because the announcement was preceded by a satisfactory one from the Glasgow and South-Western, this company paying at the rate of 1¾ per cent. on the deferred stock, as compared with 1½ per cent., without adversely affecting the carry forward. "Ayrshire" stocks, however, are not dealt in to any extent in London, and prices were unchanged.

Apparently the Caledonian dividend caused anticipations of even more unfavourable results on the part of the North British Company, so that when it was found to be "as before," and a similar balance forward, it had quite a cheering effect, although a week ago an additional ⅜, or at least ¼, per cent. was confidently looked for. "Heavy" traffic receipts still continue to show up well, but the Southern passenger lines are doing badly for some unaccountable reason, and in view of the encouragement to seaside travelling given by last week's weather, it was a surprise to most people when the Brighton and South-Eastern both published decreases.

In comparison with the late activity the American Railroad market wore a semi-holiday appearance during the early part of the week, Wall Street markets being closed for Labour Day celebrations. The tone was dull under the influence of monetary anxieties, and when call money touched 12 per cent. on Saturday it was duly noted that it was the highest level touched during the last week in August for the past ten years. Expectations of more favourable developments in the Money market caused a hardening tendency on Monday, the market being helped by the fact that the Associated Banks' statement turned out more favourably than had been expected, and favouring factors were found in the satisfactory earnings published, and by the general talk of impending announcements of increased dividends, while crop conditions continued favourable. The news of the engagement of gold in London for shipment to New York added considerably to the strength of Wall Street, but money rates at the same time were leaping up in an alarming fashion. There was a stiff contest between the influence of high rates for money, which ranged up to 40 per cent., and the efforts on the part of strong interests to prevent demoralisation in the market, and a see-saw performance was witnessed, a well-sustained rally giving a more cheerful appearance to the market last night. Mr. Bryan's progress was regarded with mixed feelings in Wall Street, but so far his speeches have fallen flat and caused not the faintest ripple in the market. Prices of seats in the New York Stock Exchange are still going up, the last one having been sold for $93,000. A curious stock market operation has taken place during the week, the Pennsylvania selling its holding of about 4½ million shares of Baltimore and Ohio to Messrs. Kuhn, Loeb and Co. As the Pennsylvania Company bought the shares about six years ago, the profit made over the deal is a fairly handsome one. With the proceeds of the present sale, or part of them, the Pennsylvania Company is expected to follow the prevailing fashion and increase its rate of dividend, and 7 per cent. is the least that bull operators expect to get. Baltimore and Ohio touched 126 on the news, though it might have been anticipated that a large sale of stock such as the above deal would have had rather a depressing effect on the price. Pennsylvanias, on the other hand, just about held their own. Union Pacific has set up another high record, 202⅝ being touched, and Milwaukees by rising $6 in a day went to 188. Bears were repurchasing, and German buyers were also in the market. At the annual meeting of the Norfolk and Western Company, to be held on October 11, a proposal will be brought forward to increase the capital to the extent of $34,000,000, such increase to be common stock. Needless to say, the mere fact that the company was going to load itself up with a trifling amount of fresh debt of, roughly, £7,000,000 sterling was not a thing to cause a fall in Norfolk common, which rose $1 on the news.

Canadian Pacific shares went dull on the official denial of the formation of a subsidiary land company story, but the effect rapidly wore off, and helped by a good traffic return for the last ten days of August, the price soared up to 184, and closed nearly there. Very little has happened to Grand Trunk stocks, although the return for the ten days ended August 31 showed an increase of about four times as much as the market looked for. Operators are still smarting under the effects of the monthly statement, and a considerable amount of criticism has been levelled at the heads of the directors owing to their conservative methods. Large weekly gross increases cease to have any attraction when it is found that only small nett results are declared at the end of the month.

Foreign Railway stocks have shown a considerable amount of activity. Those of the old Mexican Company went ahead on the appearance of a good traffic, but profit-taking sales left prices below the highest points touched. The line is doing exceedingly well, and the full 8 per cent. on the first preference is talked of, but it must be borne in mind that a considerable improvement has yet to be seen in the position of the company before that goal is reached. The situation in Cuba was declared to be worse this week than at any time since the rebellion broke out; United Havana was marked down in consequence, but now it is asserted that an attempt will be made to arrange a settlement between the Government and the insurgents by means of a compromise. Paraguay Central debentures advanced on news from the company's representative in Asuncion, which, while not particularly informing, yet seemed to point to the prospect of a settlement with the Government on the question of the arrears of the guarantee. There were sellers about, however, and the early advance was lost again.

The feature in the Miscellaneous market was a sharp rise of £4 in London and India Docks deferred, which took the price to 64. The long-looked-for scheme is supposed to be all "cut and dried," a satisfactory settlement of the Port of London question is "only a question of time," and "Docks deferred will go to par accordingly." Such is the airy manner in which the market treats the matter. National Bank of Egypt shares rose sharply, as it is said that the negotiations have been completed for the conversion of the bank into a State institution. Hudson's Bay shares have been actively dealt in, and Salt Union issues were in favour on the news that a combination for controlling the whole of the British salt output has been successfully arranged. Although no definite information was forthcoming, it was understood in some quarters that there will be no increase made in the export duty on nitrate of soda; the shares of the leading producing companies have been in demand. Iron and Steel issues advanced still further, although towards the close a pause in the upward movement took place. Pekin Syndicate fell to 13 on inside selling, but closed rather buyers.

Depression again characterised all sections of the Stock Exchange to-day, the nervousness of speculators receiving a further shock from the announcement of another large parcel of "eagles" going to New York. Here and there an attempt was made to rally prices later in the day, but the success of the movement was not noteworthy. Consols lost ⅛ both for cash and the account, and Local Loans fell ¼. Home Rails were very flat, being depressed by continued selling. Yankees started well, but the good opening was not maintained to the end, though a few of the leading things left off with small improvements. Canadian Pacifics were consistently strong, but Grand Trunks just steady. Kaffirs further receded on wholesale liquidation and "bear" pressure, but Tanganyikas recovered 5/16.

Last month's trade and navigation returns have reached us too late to be adequately dealt with this week, but we mention the figures for the pleasure they give. Imports of merchandise totalled £48,894,624 and exports £33,492,614, the imports showing an increase of £2,032,000 or 4.3 per cent., and exports an increase of £3,975,000 or 13.4 per cent. on August, 1905. Re-exports of foreign and colonial merchandise also went up a trifle of £496,000 to £6,924,140, and including the movements of bullion and specie—£5,859,870 in and £2,417,950 out—the entire commerce of the month in merchandise and bullion reached the splendid aggregate of £97,590,000. The increase in exports of British manufactures last month was no less than £3,246,000 comparing August, 1905, therewith, but comparing with August, 1904, the increase was £5,918,000.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—**Fall:** Bank of England Stk. 2, to 277-281, Bank of Ireland 1, to 328-333.

CORPORATION STOCKS.—**Fall:** Metropolitan Water Board Account ½, to 92½-93¾, London County 3 p.c. Account ½, to 88¼-89¾

COLONIAL AND FOREIGN. — **Rise:** Copenhagen 1, to 92-95, Rosario Issues 3,62-64. **Fall:** Cordoba (London Com. Certs.) 1, to 37-39, Rand Water Board ¼, to 94-95.

WATERWORKS.—Rise: West Middlesex Deb. ½, to 24-25, Monte Video 1st Deb. 1, to 106-109, do. 2nd Deb. 1, to 104-107.

London and South-Western Bank.—The statement for August shows current accounts and deposits of £13,734,603, other liabilities £373,421, and acceptances and endorsements £5,483, against assets consisting of cash in hand and at Bank of England £1,989,273, money at call and short notice £1,046,610, British Government and other securities £3,994,562, and bills discounted, loans, &c., £9,077,579.

MINING NEWS AND NOTES.

***Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The Kaffir Circus has developed distinct flatness. "What else could you expect this weather?" the gamblers ask. "How is it possible to pump up any energy with the thermometer over 90 degrees?" It is not a convincing argument, for things were really worse when the thermometer fell, the fact of the matter being that the gamblers and the public are passively waiting for something to turn up. The professionals and controlling houses have felt disappointed that the public did not respond to the tempting rise in prices with the enthusiasm hoped for. Quite an insignificant percentage out of the multitude watching the performance had the courage to step forward to accept the invitation of the affable manipulators, the others hung back with laudable prudence. No matter to what heights prices were skilfully hoisted the crowds knew they would speedily fall as soon as all artificial aid was withdrawn, and so it has happened. On seeing the unmistakable attitude of outsiders the inner ring, including the "shop," took their profits, and have been taking them daily, with the result that the condition of the market to-day presents a complete contrast to that of a fortnight ago. Declines have been persistent and numerous, and the "bears," naturally, have done their best to accelerate the relapse. It has, therefore, been a dull, dreary week, with business, except that of selling, virtually at a standstill. Paris has done very little indeed; has scarcely interested herself in the market. If anything, it has sold more than it has bought. The coming week brings another settlement, Monday next being carry-over day in the mining market, and holders are not looking forward to the making-up list with pleasurable anticipation.

In the diamond group Premiers have continued to be the most prominent share, and the fluctuations have again been erratic, for the "bulls" and "bears" are still contending with each other. One day a sharp rise, another day a biggish fall, and so it goes on, one party of gamblers prevailing one time, their opponents triumphing the next, while shareholders look on mystified and anxious. In contrast with the incessant movements in these De Beers and Jagers have been quiet and steady.

No matter what the temperature the gamblers who are playing with Tanganyikas have displayed unflagging spirit, and quite enviable, untiring energy. They have defied the oppressive, enervating heat, for with the thermometer at "record" heights the price has simultaneously been pushed to 8¼ more than once, which demonstrates what determined will-power will achieve in the effort to beggar-my-neighbour. Now the inevitable drop has come. What do the directors think of this frenzied speculation? The price has never stood for long at the loftiest altitudes to which it has now and then soared, for profit-snatchers have not hesitated to join in. Musty rumours and reports are still floating about the market, for the edification of the spectators, in the hope that they may thereby be tempted to descend into the gambling arena. Would it not be advisable for the directors to issue some authentic statement to put all doubts at rest? These sensational movements, we fear, can hardly be for the ultimate benefit of the company. At one time Northern Coppers were also taken in hand by the speculators, and whirled skywards, but they have come down with a rush, on profit-taking, for these are not the kind of thing one can tempt the public to buy. Bankets have had a somewhat similar experience. On Wednesday afternoon the directors of the Banket company issued a report on the Eldorado mine, and the Rowdy Boys' claims, but it was so vague and so brief that the price fell, doubtless because dealers felt certain the public would be disgusted with it.

West Africans and Egyptians have been devoid of movement, altogether flat and sluggish.

West Australians, too, have shown signs of little vitality. This section is still neglected by professionals and amateurs alike. Great Fingalls and Kalgurlis have been tolerably firm, but the majority of the shares in this group have been listless, with a weak tendency.

Copper shares have been rather undecided. At one time Rio Tintos rose to a substantial degree, but the strength has not been consistently maintained. Anacondas have been irregular, but Cape Coppers and Tharsis have improved on the position of the metal market.

Another Rand Amalgamation.—Another great Rand amalgamation is about to be consummated, embracing several companies to the deep of the Simmer and Jack Proprietary Company. It is based on the old plea that it will lead to great economies in shaft-sinking, equipment, working costs, and management. There is to be no fresh issue of capital, and no further money will be required. At any rate, this is what the officials say, and they are always hon—sanguine people. Probably they know it would be useless at the present juncture to attempt to issue fresh capital.

Boksburg Gold Mines.—For many years past attempts have been made by this company to test the richness—or poverty—of its property, and now we learn from the report for 1905, only now published, that the work of proving the reef by a series of six prospecting shafts has been carried on with distinctly encouraging results. At the end of the year the reef had been reached in three of the shafts, and since then intersected in the remainder. From the point of intersection of the reef in No. 1 shaft, down to the bottom of the incline, a distance of 244 ft., the average assay value obtained was 32 dwts. over

17.8 ins. As regards the other shafts, the contact in each case has been picked up, but the reef has not yet become clearly defined, although, it is urged, the evidence obtained from the shafts on the property of the East Rand Extension Gold Mining Company, and also from the boreholes, forecasts that the reef would not only become a well-defined, workable body, but also contain gold values which should be distinctly payable. As funds were insufficient, it was found necessary, in order to complete the temporary equipment and continue the necessary work of proving the value of the property, to provide additional cash, so it was arranged to borrow from the Anglo-French Exploration Company and Messrs. Farrar Brothers jointly up to a sum not exceeding £35,000 at 7 per cent. In consideration of this loan an option was granted over the 25,000 reserve shares at 25s. per share, the option to run concurrently with the loan. Total expenditure during 1905 amounted to £48,568. Cash stood at the end of December at £2,394, and of the above-mentioned loan there still remained to be called up £11,500.

NIGEL DEEP.—It was on June 19, 1905, that this deep level company, a member of the Consolidated Gold Fields group, commenced crushing operations, from which date up to the end of the financial year—April 30—31,064 tons of ore were milled for a yield of 19,373 ozs. of fine gold, equal to 12.47 dwts. per ton, to be regarded as a comparatively good ore. During the twelve months ten additional stamps were erected, and from March 1 last 30 stamps have been at work. Extensions have likewise been made to the cyanide and slimes works, and these are now almost completed. The gold realised £81,178, and the working profit was £8,185, raised to £9,087 with revenue from other sources. All but £59 of this was absorbed by interest, commission, profits' tax, depreciation, &c., so it but slightly reduces the debit balance to £43,979. The profit was so low because the working costs were very high, equal to 46s. 11.9d. per ton. This is attributed officially to the shortage of native labour, a plea seized with avidity by the bosses; in other words, it probably means that it was the effect of the employment of very dear coolies. It is anticipated that when the new portion of the reduction plant is running to its full capacity, and the native labour can be increased, the costs will be appreciably reduced, though it is admitted that owing to the narrow width of the reef they will always appear high compared with most mines on the Rand. The tonnage developed in the mine on April 30 is estimated at 70,000 tons of about 11 dwts. assay value, and 110,000 tons of low grade ore, beyond which there are 110,000 tons developed described as of low grade, including ore below 7½ dwts. assay value. Not included in these estimates are certain blocks of ore which can be attacked from the present development work, but to which no value can be assigned until actual stoping takes place. Judging, however, from certain chutes which have carried persistent values in the outcrop property the manager considers that it would be reasonable to expect a part of these blocks to contain payable ore. This company, in addition to its large debit, is heavily in debt, having borrowed, inclusive of accrued interest, £109,679 from the South African Gold Trust, and £20,694 from the Gold Mines Investment Company. These loans are repayable on June 30, 1907, and in consideration an option has been given to the Gold Trust on 100,000 shares of the Sub-Nigel at 10s. per share to the above date, and to the Gold Mines Investment an option on 25,000 reserve shares at par. So the directors are hoping that before the loans mature the lenders will be encouraged by improved conditions generally to exercise their options on these shares. As regards the debit balance, this is to be transferred to a separate account, and written off over a series of years, so that dividends may be paid as soon as possible. And if only dividends are paid how thankful and happy we shall all be!

FRENCH SOUTH AFRICAN DEVELOPMENT COMPANY.—At last the directors have issued their report for the year ending September 30, 1905, so it is practically twelve months old, and not of any great value at that. The accounts show another considerable loss of £13,075, which increases the debit balance to £54,598. With the view of reducing the amounts payable to the Chartered Company for inspection fees, the directors again ordered a careful inspection of the company's mining claims by the engineer, and sanctioned the abandonment of those that held out the least promise. Mr. Douglas is of the opinion that the present holding of claims should not be further reduced by abandonment. In the Gootooma district six mining properties are leased, and the royalties received therefrom in two years was £876. At the date of the report arrangements were being made for surrendering part of the land to the Chartered Company in consideration of the grant of a free title to the remainder, and these have since been completed. The cultivation of tobacco by the lessee of one of the company's farms has been so successful that he has exercised the option of purchase. Long ago the funds of the company were exhausted, but the directors refrained from telling the shareholders of this, as in the Athens mine the company had the good fortune to possess a property which required only a moderate (*sic*) amount of capital to bring it to the producing stage. The directors say they have used every effort to get the necessary working capital, but we are not in the least surprised to learn that they have been unsuccessful, for what Rhodesian company can get from the public in these days all the cash it wants? It is not put in this way by these particular directors; they simply say they have not matured a proposition which would be of ultimate benefit to the company. Perhaps the most beneficial policy in the end would be to bring the company's career to a close without delay. The directors urge upon the shareholders the advisability of providing the capital themselves to work the Athens mine, but it is doubtful if the appeal will meet with any response. It is estimated that by the expenditure of £30,000 a plant capable of treating 100 tons a day could be provided, the profits from which are computed to range from 8s. to 9s. per ton. Reconstruction is the course advised, with a nominal capital of half the present amount in 10s. shares to be credited with 7s. 6d. paid up. The debenture holders have agreed that if a sufficient sum be raised to enable the Athens mine to be worked they will take debentures in the new company, and also further debentures, redeemable on January 1, 1908, for the interest now overdue and to accrue to December 31, 1906, on the condition that such debentures are issued at £75 per £100, bearing interest at the rate of 6 per cent. per annum, and carrying the right of veto to any further issue. It is pointed out that the position of the French Ayrshire and Lo-Magundi District Development Company must be considered in connection with the reorganisation scheme. This is a subsidiary of the French South African Development, and was floated ten years ago. The parent company subscribed for 50,000 working capital shares, on which £33,745 remains uncalled. On an examination of the Ayrshire claims two years ago many had to be abandoned. It is recommended that the French Ayrshire be asked to retransfer its remaining assets to the new company in consideration of the allotment *pro rata* to its shareholders of 32,705 fully-paid shares in the new company—that is, one for each share held. Three directors retire from the board, but do not offer themselves for re-election. Are they tired of it all?

FRENCH AYRSHIRE AND LO-MAGUNDI DISTRICT DEVELOPMENT COMPANY.—This company is a subsidiary of the French South African Development Company, and, as stated in another note, it is proposed to amalgamate it with the parent concern. The company's area has by abandonment been reduced to 190 claims. The report and accounts now issued cover the lengthy period from October 1, 1903, to December, 1905. On accepting office the present directors instructed Mr. Van Wagenen, the consulting engineer, to inspect the whole of the claim holdings, and on his advice no less than 275 claims were abandoned. The Eureka block of 130 claims is held jointly with the Rhodesia Exploration and Development Company, and the result of the work undertaken by this company having proved the property to be of insufficient value to float off as a gold mining proposition, it was decided to lease the claims on tribute. Under the proposed scheme the parent company is to forego its share interest in the subsidiary, the shareholders of which will receive one 10s. share, credited 7s. 6d. paid, in the new company for each £1 share now held. The balance-sheet shows a debit balance of £11,300, cash only £14 and creditors £4,000.

CHIMES WEST.—Work in the year ending May 31 was trifling, and was confined to extending the first and second level drives west of the western shaft of the New Kleinfontein Company for some distance over their boundary into the Chimes West property on the Main Reef and Main Reef Leader. There being no funds available, the work was done at the expense of the New Kleinfontein Company, with, however, the understanding that the liability thus created should rank *pari passu*, and become payable with the existing loan. In view of the encouraging results, the directors consider it unfortunate that the work could not be prosecuted further; but the New Kleinfontein could not see its way to incur the expenditure necessary without some assurance of a recoupment within a reasonable time. The directors are watching the exploratory and sinking work carried on by the neighbouring companies, and are of opinion that the values and widths obtained on the intersection of the ore bodies by the New Kleinfontein Deep will have a material bearing on the prospects of the company. At the end of May the liabilities stood at £21,177, and it has not been possible to mature any scheme for the liquidation of these. The expenditure deficit in the balance-sheet now amounts to £77,951.

KLERKSDORP ESTATES AND TOWNSHIP.—In their report for the year to May 31 the directors say a contract has been entered into with the East Rand Proprietary Mines under which the Klerksdorp Estates is permitted to pump water from the No. 2 dam at the rate of 1s. per 1,000 gallons, and pumping was commenced in January last. By May 31 87,170,714 gallons had been withdrawn, realising the sum of £4,358. The contract with the New Kleinfontein company, by which they pay a rent of £75 per month for the supply of water for the steaming stations and the use of the dam for circulating purposes, remains in force. Total income from the dams was £5,858, but the result from the catchment areas was disappointing. The farming operations have proved a failure, and the directors have abandoned the experiment. A sale was held in the early part of May, when all the stock, produce, and implements were sold by auction. During the twelve months 203 stands were sold on the instalment principle, four additional stands were transferred to the Government, six were given for religious and scholastic purposes, four were utilised for the agent's house, and one for the agency office, making a total of 218 stands disposed of, for £14,857. Other revenue consisted of £6,218 from water and ground rent, £723 from the farm, £2,324 from brickmaking, and £521 from interest. Including £1,279 brought in, the profit is £10,938, carried forward, the directors holding out the hope that they may be in a position before the end of the present year to divide some of the available cash, either in a dividend or a bonus. Cash amounts to £5,562.

WITWATERSRAND (KNIGHT'S) GOLD MINING COMPANY.—A certain degree of satisfaction may be derived from the quarterly report of the Witwatersrand Gold Mining Company. In the three months some 92,210 tons were crushed, for a total yield of 28,630 ozs. of fine gold, equal to 6.20 dwts. per ton milled.

At the end of June the ore reserves amounted to 990,565 tons, calculated to yield a profit of £37,135. The most gratifying fact about the quarter's work, it is pointed out, was the reduction in the working costs due to the greater efficiency of the Chinese coolies employed. The working costs amounted to 19s. 4.39d. per ton crushed, a decrease of 1s. 6.84d. per ton, compared with the preceding quarter. It is added that the mine is opening up satisfactorily, the ore developed for the quarter being quite equal in grade to the average of that previously developed.

El Oro Mining Company.—It is stated that at the El Oro mines, in Mexico, where the recent promising discovery has been made, electric power has now superseded steam, with the result that working costs have been appreciably reduced. This power has been supplied by the Mexican Light and Power Company, with whose interim report we dealt a fortnight ago. It is declared that the price at which the power is furnished is a third of what it cost for steam. Thus it has enabled ore, hitherto thrown on the dump, to be cyanided at a profit. A further advantage is that it allows the reduction plant to work longer hours without interruption. It is making possible the working of low grade ore, which will have the effect of extending the lives of the mines.

No. 2 South Great Eastern Gold Mining Company.—The quantity of ore treated by this prosperous company in the past half-year was 29,508 tons for a yield of 14,768 ozs. smelted gold, the value of which, together with proceeds from sale of residues, was £52,520. After paying dividends amounting to £23,400, equal to 3s. 3d. per share, the following cash balances are carried forward:—Fixed deposits £4,000, current £2,450, total £6,450. Apart from current expenses, there are no outstanding liabilities. The working costs averaged 18s. 10.44d. per ton. As the expenses of the Christmas annual overhaul, together with a certain amount of prospecting work, are included in the half-year's expenditure, the directors consider the above costs highly satisfactory. The work of prospecting for the slate floors intersected in neighbouring mines has not been abandoned, but suspended, pending further developments in those neighbouring mines. A cross-cut was started from the southern end of the No. 2 reef at the 1,320-ft. level, with the object of cutting the Inglewood reef. A large formation has been met with about 12 ft. in thickness, composed of a number of quartz veins carrying payable gold. From a survey made this lode seems to be either the hanging wall of No. 2 or a branch of that reef. Sufficient development work has not yet been done to enable the directors to form an estimate of its value, but they consider there is every justification in anticipating it will add considerably to future crushings, both in quantity and quality. In conclusion the directors state that the various faces are looking well, and if the new formation proves as valuable as is anticipated there is a long life for the mine. Although the average quality of the stone has been good, there has been a considerable falling-off in the specimen stone, which accounts for the returns not being as high as might be expected.

Wheal Vor.—In a letter signed by the secretary of this company he informs shareholders that the Stock Exchange settlement in the shares has been fixed for the 5th prox., and that the directors will probably make the next call towards the end of the year. It appears, too, that the 96,000 shares of 10s. each offered for subscription were over-applied for and duly allotted, and as the promoters paid all expenses up to allotment, 80 per cent. of the total capital will be represented by cash available for the purposes of the company. As soon as the capital was subscribed an opportunity arose for the acquisition of other properties immediately adjoining the Wheal Vor, and, as it was thought these would be valuable, they were purchased. As it is not deemed wise to attempt to develop the whole of these properties it is the intention of the directors to sub-lease some portions of them, and they have been approached with a view to the provision of the necessary capital for their early working. One of the properties secured was the Wheal Metal mine, together with the stamps and dressing floors, and the acquisition of this will enable the company at once to begin making some returns by crushing the ore from the burrows on this and the Wheal Vor setts. Work has been pushed forward as rapidly as possible on the Wheal Vor sett and Borlase's shaft has now been cleared and put in thorough order down to the adit level. This shaft, which is vertical to a depth of 144 fathoms below the adit, is 14 ft. 6 ins. by 7 ft. A winding engine and two boilers have been bought, and the former is already on the ground. The head-gear has been designed, and is in course of construction. An arrangement has been made with the Duchy Development Association, Limited, for the supply of electrical power, by means of which high-lift, electrically-driven pumps will be worked. The rent of the installation will, it is said, be extremely moderate, and when the Duchy Association is in a position to deliver power in bulk from a central station the Wheal Vor will be able to secure electrical energy at a lower figure than would be probable with a separate unit.

Pusing Lama Tin Mines.—It is announced by the directors that they cannot issue for some months to come the accounts for the year ending June 30, and meanwhile they have decided to publish the manager's report for that period. On March 25, 1905, a trial run of two puddlers was made, and five machines were started on April 1 for a shift of eight hours per day. A full shift of 24 hours was commenced on May 27, the early part of the month being taken up with the additions and alterations incidental to the starting of a new plant. The total amount of ground trucked up to June 30, 1905, was 17,114 yards, yielding 592 piculs of tin stone, the monitor having run one month for 2,900 yards, yielding 58.55 piculs. On May 20 the battery of five heads was started, and crushed, up to June 30, 1905, an estimated quantity of 720 tons, giving 76,15 piculs. Work from July 1, 1905, to June 30, 1906, has shown a slow but continuous increase in the output of tin and in the yardage treated, with a corresponding decrease in the cost per yard. No. 1 face was started in level with the puddlers, and run out in a south-easterly direction, taking all the payable ground above that level, and reached nearly up to the boundary, a distance of 1,200 ft. at the beginning of April, when it was stopped owing to poorness of ground. A small open cut below the level of the rails was then started in the neighbourhood of bore VII., and gave good results. This is being further prospected, and will, it is hoped, give a good payable patch of ground. No. 2, on Jungle Hill line, was opened up at the beginning of June last, and has yielded the bulk of the tin mined, there being a rich bed of karang lying some 40 ft. above the puddlers. In November last this bed showed some signs of giving out, so prospecting was started on some mineral indications, and resulted in the discovery of the cap of a lode or contact deposit of extraordinary richness. This has been proved for a depth of some 50 ft. and a length of 250 ft.; the lode gets well defined in depth, and seems to show every promise of continuing downwards. A new battery of 10 head of stamps was completed on February 26, and is said to be giving every satisfaction. The monitor was run tentatively at the commencement of the financial year, but was not successful owing to the difficulty of sparing sufficient water from the puddlers. But on June 1 work was stopped on the puddlers, and the management has been running with the monitor alone since. "The work done has convinced me," says the manager, "that all the high and poor ground on the property can eventually be worked at a profit by monitor work combined with a puddler." In the last months of the year the working costs showed a material decrease, and he feels confident they will be further reduced. A favourable contract has been made with the importers of coal. The total output for the period was 12,057 piculs of tin ore, practically the whole of which was sold to the Straits Trading Company, realising $605,997. In addition, there was a profit of $10,342 from the tributors, making a total of $616,340. Running expenses amounted to $257,521, giving an approximate profit of $358,819. The manager says the outlook at the moment is brighter than it has yet been; a large area of ground of proved value is in sight, and capable of economical working," besides which we have an asset of extraordinary value in the lode. To the depth at present proved, the values in tin show no signs of decreasing, and shafts have been sunk in it for 40 ft., giving between 2 and 3 piculs to the yard. I believe the deposit to be unique in the Malay States, and it is certainly one of the richest at present being worked."

North Broken Hill Mining Company.—This was one of the Broken Hill companies that suffered from the outbreak of fire in an adjoining mine, the effects of which were partly felt during the half-year ending June 30. In fact, all mining operations have had practically to be suspended since February 16, the fire breaking out on the preceding day in the mine of the Broken Hill Junction Company. Subsequently it was decided by the Northern Mines Fire Trust to flood the mines to above the seat of the fire, so that little work of any kind was possible, production being limited to about six weeks only. The concentrates produced realised £36,595, and the working profit amounted to £16,102, to which there fall to be added £32,028 from the previous half-year, £6,250 from the sale of tailings, and over £500 from interest, &c., making a total credit of £54,891. The two dividends paid absorbed £26,000, and after deducting administration expenses, depreciation, &c., there is left £17,093 to carry forward. Liquid assets show an appreciable surplus over the current liabilities. The average prices of the metals in the six months were:—Lead, £16 6s. 9¾d., and silver 28. 8½d. The directors paid several visits to the mine in order to consult with the general manager in relation to the situation arising out of the fire, also to discuss various matters connected with the erection of the new plant, &c. They say they feel confident that with the resumption of work there is a prosperous future before the mine, and that the loss caused by the fire in the Junction mine will soon be recovered if metals remain at their present prices.

Staveley Coal and Iron Company.—A welcome increase is shown in the earnings of this company for the year ending June 30, the nett profit amounting to £121,410 compared with £109,752, an increase of £11,658. Work has been commenced on the new blast furnaces, and by-product coke ovens plant, and is said to be well in progress. The necessary formalities in connection with the raising of the additional capital required for the carrying out of the undertaking are in the hands of the company's solicitors, and will be explained at an extraordinary general meeting to be called as early as possible, when full details will be laid before the shareholders. At the Brodsworth Main Colliery sinking operations have been commenced, and are proceeding satisfactorily. An interim dividend of £4 per share on the "A" and "C" shares, and 13s. 4d. on the "B" and "D" shares was paid on February 10, and the directors now recommend a final dividend for the year of £5 per share on the "A" and "C" shares, and 16s. 8d. per share on the "B" and "D" shares, which will leave a balance of £28,287 to be carried forward.

Darien Gold Mining Company.—Under the proposed reconstruction scheme a new company is to be formed with a capital of £350,000 in 150,000 6 per cent. cumulative preference shares and 200,000 ordinary shares of £1 each, each member of the existing company being entitled to one new share credited with 10s. paid-up thereon. The present company having issued

£75,000 debentures, it is proposed to issue to each debenture holder 6 per cent. cumulative preference shares equal in amount to his debentures.

NEW ZEALAND GOLD OUTPUT.—The gold output of New Zealand for July was 42,441 ozs., of a value of £170,935, compared with 42,550 ozs., with £170,994 in the corresponding month of last year.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

BANK OF BRITISH NORTH AMERICA.

The reports of Canadian prosperity will have prepared shareholders for a substantial improvement in this bank's business, but we doubt if even they were prepared for such a fine display as that now made. Nett profits for the six months to June 30, after all current charges, providing £19,589 for rebates and applying £5,514 to writing down Consols to 85, showed an increase of no less than £27,738 at £61,761. Out of this the usual £514 is transferred to officers' widows and orphans' fund, and £639 is added to pension fund, and as the balance brought forward was £662 larger at £7,252, the amount available for distribution came to £67,861 compared with £39,505 for the corresponding six months of 1905. The directors, however, content themselves with paying the usual interim dividend of 30s. per share or at the rate of 6 per cent. per annum, and carry forward £28,356 more at £37,861, giving as their reason for this step the uncertainty which still exists respecting the consequences of the earthquake in San Francisco. No direct loss was incurred from this disaster beyond the small sum which will be payable to the staff as compensation for the destruction of their personal effects, as the premises occupied were leasehold, and the bank is free from any responsibility for their restoration. By the prompt and courageous action of the agents and their staff, all money and securities were at considerable personal risk removed from the vaults before the fire reached them, and conveyed to a place of safety. It is impossible until a final settlement has been arrived at between the insurance offices and the insured, to ascertain the financial position of the sufferers, but we may take it that the carrying forward of such a large balance indicates the intention of the directors to deal generously with those who were so ready to protect the interests of the bank. The above results are evidence of a great expansion in the business done, which is borne out by the figures of the balance-sheet. Deposit and current accounts have risen by £711,445 to £4,451,610, bills payable and other liabilities are £642,837 higher at £3,877,240, and notes in circulation come to £54,729 more at £614,009. On the other hand, cash and specie at bankers and in hand come to only £25,631 more at £917,312, but money at call and short notice is £1,039,648 up at £2,597,079, while bills receivable, loans on security, and other accounts have increased by £391,890 to £6,189,789. Investments, after writing down the holding of Consols to 85, are valued at £560,603, and bank premises stand at £172,683, or a reduction of £9,188, notwithstanding the opening of a new branch at North Battleford, Sask.

BANK OF VICTORIA, LIMITED.

This Australian bank is gradually struggling into a rather better position, and in the six months ended June 30 earned a gross profit of £77,994 or £3,324 more than in the corresponding period of 1905. The figure is arrived at after deducting all interest paid or due, rebating bills current, and providing for bad and doubtful debts. Unfortunately the increase in profit was neutralised by a drop of £4,505 in the sum brought forward, so that altogether the revenue reached £84,817 against £85,998. General expenses £38,178 were larger by £511, while bank-note and income-taxes showed a trifling reduction to £2,604, and the balance of nett profit appears at £44,035 compared with £45,588, a drop of £1,553. Nevertheless, after meeting the preference dividend, the directors propose to increase the distribution on the ordinary shares by ½ to 4½ per cent. per annum, involving a reduction in the carry forward from £13,994 to £9,738. No addition is made to reserve, which, therefore, remains at the £170,000 to which it was increased six months ago, and the paid-up capital is £1,478,010. A moderate increase to £124,417 has taken place in the note circulation, and the bills in circulation have gone up by £216,990 to £628,629. Government deposits not bearing interest stand at the trifle of £15,263, and those bearing interest show an advance of £69,296 to £608,238. Other deposits on which interest has to be paid amount to £2,997, 829, or £62,629 more, but the bank has the free use of £1,526,278, an advance of £58,312. Balances due to other banks reach £50,182, and contingent liabilities £341,028 have a *per contra* entry. On the assets side there is a good increase of £174,858 to £1,442,338 in the coin, bullion, and cash at bankers, investments remain at £186,170, and bills and remittances in transit are larger by £32,651 at £238,169. Notes and bills of other banks £60,749, balances due from other banks £51,770, and stamps £2,469, are all higher, and the aggregate of the "cash assets" is £1,981,665 compared with £1,762,698. Bank premises have been increased somewhat to £257,876, other real estate at valuation is rather less at £168,030, and bills discounted and other advances are larger by £249,775 to £5,239,261. Shares in other companies still appear at £4,050, and the aggregate of the balance-sheet is £7,991,909 against £7,494,026.

ROYAL BANK OF QUEENSLAND, LIMITED.

There was some improvement in the position of this bank during the half-year ended June 30, and the gross profit is returned at £33,677 or £3,714 more than in the corresponding period. An increase of £638 to £1,420 in the sum brought forward brings the total revenue up to £35,096 compared with £30,745, but the expenses were a good thousand pounds larger at £10,497, and interest, rebate and exchange jumped £2,303 to £13,163, so that practically all the improvement in gross profit is rubbed off. In fact the nett balance is not quite £1,000 better at £11,436, including the extra £638 brought in. The dividend will, therefore, remain at 3½ per cent., with another £1,000 to reserve, £448 retained for income-tax, and £1,968 against £992 carried forward. This contribution raised the reserve to £67,009, and the paid-up capital is £457,613. Another considerable increase of £118,373 to £986,907 has taken place in the deposits and other liabilities, notes held in reserve remain at £33,500, and bills payable show a sharp reduction to £9,121. On the credit side the bills discounted and all other debts due to the bank have gone up £78,498 to £1,143,123, indicating that most of the additional resources have gone in this direction. Coin on hand and cash at bankers has risen by £31,031 to £215,264, bullion is up £7,222 to £29,655, Treasury notes on hand are rather less at £35,895, and investments are very little altered at £76,977. One new branch has been opened during the half-year, and bank premises are somewhat higher, the aggregate of the balance-sheet being £1,564,578 against £1,450,207.

BANK OF NEW ZEALAND—(A CORRECTION).

We made an unfortunate error when publishing a few figures of this bank's report in our issue of August 18 last. The profit mentioned of £330,330 was the actual nett balance, and does not include the credit brought forward as stated. In other respects, our report was correct, the bank paying a dividend of 5 per cent. on its ordinary and preference capital, and crediting a surplus of £174,329 to the Assets Realisation Board. We relied upon a cabled summary of the figures, and that is always risky.

ALLIANCE BANK OF SIMLA, LIMITED.

This seems a flourishing institution, the gross profit for the year ended June 30 being Rs. 17,93,290. Interest on deposits absorbed Rs. 10,15,585, and general charges, &c., Rs. 4,86,501, leaving a nett profit of Rs. 2,91,204, the highest ever reached, and Rs. 45,000 more than in the previous twelve months. Including Rs. 34,386 brought in, the disposable balance is Rs. 3,25,591, from which the directors propose a dividend of 12 per cent., absorbing Rs. 1,80,000. Reserve fund then receives Rs. 50,000, raising it to Rs. 20,50,000, a sum of Rs. 25,000 goes to the bad debt fund, and Rs. 30,949 to the bank's staff, leaving Rs. 39,642 to be carried forward. The reserve is now Rs. 5,50,000 in excess of the paid-up capital. At the date of the balance-sheet the bank owed Rs. 2,48,10,350 on fixed deposits and Rs. 82,11,699 on current account, while miscellaneous accounts stand for a further sum of Rs. 1,19,657. On the other side loans amount to Rs. 79,47,518, cash credits and demand advances to Rs. 1,23,98,318, and promissory notes and bills discounted to Rs. 16,36,398. These items make up a total of Rs. 2,19,82,235, of which Rs. 2,12,66,347 are debts considered good, and for which the bank holds bills or other securities, and Rs. 7,15,888 consists of debts considered good but for which no formal security is held, being temporary overdrafts. Bank premises, &c., are valued at Rs. 8,70,103, and the investments of Rs. 87,12,365 include Rs. 20,00,000 kept on Government paper on account of the reserve. Bills receivable reach Rs. 24,000, and cash at head office, branches, and agencies amounts to Rs. 52,88,594.

CRAIGELLACHIE-GLENLIVET DISTILLERY CO., LIMITED.

This Scotch whisky company seems to have done rather well in the twelve months ended July 31, and the directors are inclined to look back a little, saying that the business has been well maintained during the last few years, notwithstanding the dull state of the trade. Their experience points to the demand for high-class whisky being on the increase, while the reduction shown by the revenue returns may be explained by the lessened demand for low-class spirit which is considered satisfactory in the best interests of the trade. We do not get a profit and loss account, but according to the report the profit for the year was £13,460, and £1,547 was brought forward, making £15,007. From this the directors write off £1,000 for depreciation of buildings, goodwill, &c., and also the last instalment of the cost of new water rights, &c., £1,034. A sum of £4,000 is then transferred to reserve, directors' fees reach £600, and income-tax paid is £581, leaving £7,792. Preference dividend requires a further sum of £2,137, and the directors pay 15 per cent. on the ordinary shares, carrying forward about £892 less at £655. The balance-sheet, while not altogether a strong one, is by no means weak. Property account is now valued at £52,651, but the new water rights £7,087 and expenditure to date on the Mosshead reservoir £3,108 have been completely provided from profits, which can be regarded as excellent policy. The bond or mortgage over the distillery given in security for payment of these water rights has therefore been discharged, so that the company is free from fixed debts of all kinds. Ordinary reserve fund is £17,000, reserve for railway carriage on undelivered whisky at distillery, the profit on which we suppose has been taken, appears at £4,765, and special

reserve for future purification scheme amounts to £1,500. All these funds, however, are locked up in the business, and a company with an undivided profit of £4,724 ought to have a larger cash balance than £77. Sundry creditors stand at £5,246 against £21,176 to come in from debtors, and stocks of whisky materials, &c., amount to £58,956, which is rather on the big side.

Smith, Garrett, and Co., Limited.

This brewery business, situated at Bow, continues to do fairly well, and in the year to June 30 earned a gross profit on brewing of £53,683, or almost £3,000 more than in the previous twelve months. The wines and spirits account, however, gave rather less, and there was a sharp drop in interest, rents, and sundry accounts of £5,563 to £23,108, indicating an inability perhaps on the part of the company's tenants to meet their obligations. Thus the entire revenue is no more than £78,695 against £81,537. There was, however, some reduction in expenses as the nett balance of £35,393 was very little worse, despite the fact that this time the compensation fund charge had to be provided. Including £9,643 brought forward, the sum for disposal is £45,036, and after meeting bonus to staff and income-tax and paying the preference dividend, the 10 per cent. on the ordinary shares is repeated with £4,000 to suspense account, £500 to repairs account, and £8,478 carried forward. Reserve fund is still £117,000, and the suspense account stands at £7,641, the addition just mentioned being partially offset by sundry accounts written off. Sundry creditors are rather extensive at £98,903, including £91,369 deposits with interest, and on the other side debtors stand at £353,763, of which loans, interest, &c., represent £323,632. It would be reassuring to hear that all these are sound and good. The brewery and other property are valued at £532,304, stocks are £42,468, and cash is small at £319.

Price's Patent Candle Co., Limited.

Competition from other illuminants has little or no effect upon this company's business. Its output is probably larger than it ever was, and profits are apparently only affected by the fluctuations in prices of raw material. These were probably considerable in the half-year to June 30, the tendency being upward, as the profits are returned at £33,891, being £2,657 less than in the corresponding period of 1905. Income-tax was a little less at £1,831, leaving £32,060 compared with £34,583. Balance brought forward was £9,130 making £41,190, a reduction of £2,777, but the directors see no necessity to reduce the interim dividend, which will again be 15s. per share, with £13,065 against £15,843 carried forward. Accounts are issued once a year only, the financial year ending in December.

Surrey Commercial Dock Company.

During the first half of the current year this company felt the effects of the depression in the wood trade in a very marked degree, wood and firewood showing decreases of 44,843 tons and 10,166 tons respectively. That, at any rate, is the explanation given in the report, although we fear the dispute with the London and India Docks Company had a good deal to do with the falling off. At the same time coal fell off by 6,319 tons, but on the other hand, grain, notwithstanding the shrinkage in the imports of grain from the Baltic ports, was 15,319 tons larger and sundries increased by 37,616 tons. The nett decrease in the tonnage entering the docks was, therefore, no more than 8,393 tons, and as this goes against an increase of 80,917 tons in the corresponding period of 1905, the position may be regarded as satisfactory. Interim dividends are declared, as usual, at the rate of 5 per cent. per annum on the ordinary and preference "A" stocks for the half-year ending September 30.

Floating Dock Company of St. Thomas, Limited.

This company's dock was employed for no less than 83 days during the year ended July 22 compared with 44 days in the previous year, and 36 days in 1903-4, but the increase in revenue was by no means commensurate. Still there was an improvement as receipts from ships docked, painted, &c., rose by £606 to £6,222, and the income from all sources was £620 higher at £6,388. At the same time a reduction of £310 to £2,722 was effected in working charges, and after providing £171 for insurance premium and £537 for administration expenses a balance of £2,957 was left. This was £923 more than a year ago, and the directors are, therefore, able to raise the dividend on the so-called first preference shares to 4 per cent. against 3 per cent. and 1¼ per cent. for the two preceding years, and to add £827 or £390 more to the reserve and equalisation of dividends fund. Dock account remains at the figure of £49,129, to which it was written down on the reduction of the capital, but investments have been increased to £2,737 by the purchase of £250 New South Wales 4 per cent. stock, and of a £10 East India Railway "B" annuity. The reserve fund is now up to £2,036, and with the renewals fund the accumulations stand at £3,081, most of which is represented by the investments. Liabilities to sundry creditors are extremely small at £292, while the company holds bills receivable for £600 and has the substantial sum of £3,347 in cash, including £2,400 on deposit.

Lloyds Bank.—The balance-sheet for August shows liabilities consisting of current and deposit accounts £62,851,683, and bills accepted or endorsed £1,196,171, and assets of cash in hand and at Bank of England £9,996,714, cash at call and short notice £6,026,476, bills of exchange £6,724,345, Consols and other investments £12,341,347, and advances to customers and other securities £32,796,029.

CONSULAR TRADE NOTES.

Writing on the trade of Nagasaki for the year 1905, Mr. Acting-Consul Barrett says that at present there is no promise of new openings for the foreign merchant. The demand for the ordinary staples of trade—metals, metal manufactures, machinery, kerosene oil, Cardiff coal, bone, and other manure—will still remain, but that is all. Imports during the year showed a decrease of £89,783 at £1,995,859, mainly due to the war and its after effects, while exports only amounted to £439,565, or an increase of £9,211. Adding in the figures for the ports of Karatsu and Kuchinotsu, the total foreign trade for the district was £3,107,394 against £3,195,107 in 1904. Both exports and imports from the United Kingdom and her colonies fell away, with the single exception of Australia, the imports from which country rose by £7,538, while trade with foreign countries, and particularly with Asiatic Russia showed a general increase. Shipbuilding is making good progress, and vessels of an aggregate tonnage of 13,989 tons were launched during the year from the Mitsubishi Yard, while on December 13 there were twelve ships on the slips, including two turbine boats of 13,500 tons each. The engines for these two ships are to be constructed entirely at the yard under licence, but the whole of the necessary plant and machinery to equip the workshops has been purchased in this country. Compared with the statistics of 1904, the shipping returns for the whole district showed a decrease of 19,723 tons, although there was an increase of 47 in the number of Japanese vessels entering the ports. The decrease, however, was confined entirely to Nagasaki, the entries at Karatsu and Kuchinotsu being higher both as regards number and tonnage. British shipping during the year increased by 15 ships, and 145,919 tons, the total entries at the three ports being 565 ships, with an aggregate tonnage of 1,417,344.

Dantzic's trade and commerce in 1905 must be described as decidedly favourable. The total volume of sea-borne trade amounted in value to £11,017,450, of which imports represented £6,237,750 and exports £4,779,700, the aggregate increase on 1904 being over £800,000. No small part of the improvement was due to the arrival of considerable quantities of iron ore from Sweden, and to a larger importation of British coal necessitated by the strikes in some of the Polish Silesian collieries, and other causes. In addition, the imports of petroleum, corn, and herrings were also greater. So far as weight was concerned the imports fell by some 23,000 metric tons, which is accounted for under the headings ironware, grain from East Russia, wood, and sugar, the supplies of the last being very much smaller, owing to the poverty of the beet harvest. Imports from Great Britain, as usual, consist chiefly of coal and cured herrings, and the exports of still corn, wood, and sugar. Of British coal 42,000 tons more than in 1904 were sent over, and even then the available supplies were not equal to the demand. One reason for this—the strikes in Silesia—has already been mentioned. But another great stimulus to British coal trade was, our Consul at Dantzic states, the destruction of enormous stores of naphtha at Baku, and the consequent need of other kinds of fuel in its place. Prices for coal remained fairly constant until the close of the year, when higher freights and an increased demand caused a rise. Cured herrings, the other article imported on a large scale from the United Kingdom, almost reached the extraordinary figures of the previous year, the number of barrels arriving in Dantzic being 219,346 out of a total of 252,886. But then the 1905 catch was an excellent one, and the number of barrels salted was only 14,000 short of the extraordinary figures of 1904, when the number was no less than 1,781,000. Therefore, so long as the sea provides herrings enough, we have little to fear from competitors in this primitive industry. Salt, which for years past has been one of the staple imports from the United Kingdom, will now be practically excluded, owing to the operation of the new tariff.

Leghorn ranks high among the Italian ports, and it is, therefore, satisfactory to learn from Mr. Carmichael, our Vice-consul, that the foreign trade of 1905 was excellent. Imports and exports together amounted to £5,675,285, a figure exceeded only by the returns for the prosperous year of 1901, and of this total £3,479,959 represented the inward and £2,195,326 the outward trade, the latter figure being the high-water mark as yet in the records of Leghorn trade. Our share in this prosperity was well maintained, 38 per cent. of the imports coming from the United Kingdom and its colonies, and 34 per cent. of the exports going to them. Leghorn as a port has much to contend with, and an excellent example of the difficulties to be overcome is afforded by the imports of jute. In the past ten years an average of 1,906 tons per annum of this raw material was landed, practically the whole of it consigned to one firm, Messrs. Balestri and Co., the proprietors of the famous jute mills of Ponte a Moriana. But last year only one ton came into the port. This was not due to any trouble at the mills, but simply to the fact that the reduction in the railway rates from Venice made it as cheap, if not cheaper, to have jute sent there, while the greater number of vessels calling at the Adriatic port on their way from the East made it much more convenient. Mr. Carmichael, in his report, suggests that a line of small steamers should be run between Irish ports and Leghorn and other Mediterranean ports, and is of the opinion that such a venture would in time prove profitable. Not only would direct communication tend to foster the sale of Irish manufactures and produce, but a considerable quantity of cargo for transhipment either at Queenstown or Belfast might be collected.

Pirates in this age of automobiles, flying machines, and electric railways seem an anachronism, yet they are none the less a real and ever present danger in the Far East, as witness the awful affair on board the s.s. *Sianam* reported this week. Occur-

rences such as this are, however, few and far between, the majority of Chinese pirates being little more than glorified river thieves, content to loot small vessels moving slowly up stream against the current. But there are still a few deep sea free-booters to be met with, and our Consul at Pakhoi states in his last report that piracy is often the cause of a native firm's failure. The whole, or nearly the whole, of a trader's capital is frequently sunk in the cargo of one junk, and should this be captured by pirates the unfortunate merchant goes smash.

The total value of the import and export trade of the Tainan district of South Formosa for 1905 was £1,527,192, or an increase of £302,995. Of this total £631,460 represented the imports and £895,726 the exports, both being considerably above the 1904 figures and the average for the preceding five years. Mr. Consul Willman states that our share in the import trade was 10 per cent., or 2 per cent. less than the year previous. But it must not be forgotten that 1904 was an exceptional year for foreign countries, since the Russo-Japanese war naturally caused a considerable decrease in the imports from Japan. It is therefore hardly surprising to find that in 1905 the Japanese trade jumped from 49 per cent. to 60 per cent. of the total, while all foreign countries dropped.

MINING RETURNS.

Abosso.—Crushed 3,757 tons, 2,332 ozs.; cyanide 3,257 tons tailings, 576 ozs.; total 2,908 ozs.

African Gold Dredging.—428 ozs., value £1,700, produced by No. 1 dredger.

Associated Northern Blocks.—Milled 3,580 tons ore; treated 402 tons slimes; yield £15,359.

Associated of Western Australia.—Milled 9,086 tons ore; treated 4,187 tons slimes; yield £18,900.

Balaghât.—4,550 tons quartz, 3,555 ozs.; 4,004 tons tailings (cyanide) 397 ozs.

Barrett.—585 ozs., value £2,350.

Bonanza.—Crushed 6,050 tons, 1,724 ozs.; cyanide and slimes 6,712 tons, 1,298 ozs.; total 3,022 ozs.

British Broken Hill Proprietary.—2,047 tons; crude ore produced 314 tons concentrates, containing 197 tons lead and 8,478 ozs. silver.

Broken Hill Proprietary.—Fine silver 294,483 ozs., soft lead 4,033 tons, antimonial lead 44 tons.

Carrington's Lion P.C.—Crushed 200 tons, for £300; concentrates stacked for treatment; trial crushing, No. 3 level, 5 tons 7 cwts., for £70; concentrates, £50.

Cecil Syndicate.—Crushed 305 tons, 255 ozs.; 600 tons tailings, £260.

Champion Reef.—15,707 tons, 9,628 ozs.; 19,118 tons tailings cyanide, 2,553 ozs.; total, 12,181 ozs.

Chinese Engineering.—Output of coal 21,000 tons; sales 19,000 tons; consumption 1,250 tons.

Clitters United.—Ore treated 1,766 tons; mineral sold or on hand, tin and wolfram 19 tons 16 cwts.; value £2,286; arsenic and copper-iron product £415—£2,701.

Coromandel.—900 tons, 333 ozs.

Durban Roodepoort Deep.—Crushed 10,990 tons, 2,971 ozs.; tons sands by cyanide 7,240, 646 ozs.; tons slimes 3,589, 242 ozs.; total, 3,859 ozs.

Eaglehawk.—Crushed 960 tons, 337 ozs., 135 ozs. from cyanide.

Ferreira Deep.—Crushed 22,504 tons, 9,418 ozs.; sands by cyanide, 15,600 tons, 2,687 ozs.; slimes, 6,862 tons, 638 ozs.; total, 12,743 ozs.

Geldenhuis Deep.—Crushed 27,330 tons, 6,713 ozs.; sands by cyanide, 17,408 tons, 2,687 ozs.; slimes, 8,979 tons, 609 ozs.; total, 10 009 ozs.

Glen Deep.—Crushed 19,100 tons, 4,905 ozs.; sands by cyanide, 12,300 tons, 1,791 ozs.; slimes, 6,721 tons, 476 ozs.; total, 7,172 ozs.

Golden Pole.—Crushed 1,450 tons, 747 ozs.; sands, 1,231 tons, 288 ozs.; concentrates, 18 tons, 90 ozs.; slimes, 400 tons, 60 ozs.; total, 1,185 ozs.

Great Fingall.—Ore, 21,868 tons, 6,407 ozs.; tailings by cyanide, 22,933 tons, 2,747 ozs.; concentrates, 299 tons, 1,450 ozs.; total, 10,604 ozs.

Hutti (Nizam's).—Crushed 2,200 tons, 877 ozs; tailings, 2,000 tons, 296 ozs.

Kalgurli.—10,973 tons, 7,881 ozs.

Kamfersdam.—1,430 carats diamonds; 26,159 loads blue-ground deposited on floors.

Kelantan Gold.—Recovered 25 ozs.

Koffyfontein Mines.—Recovered 2,474 carats diamonds.

Lace Diamond.—22,184 loads blue-ground washed, yielding 2,728 carats, equal to 12·29 carats per 100 loads; 47,260 loads blue-ground floored, making 945,189 loads on the floors.

Lancaster West.—Crushed 6,627 tons, 1,454 ozs.; 5,636 tons cyanide, 731 ozs.; total, 2,185 ozs.

Langlaagte Deep.—Crushed 22,515 tons, 5,902 ozs.; 15,950 tons sands by cyanide, 1,772 ozs.; 6,830 tons slimes, 301 ozs.; total, 7,975 ozs.

Le Roi No. 2.—Shipped 2,070 tons. Net recepts, $35,435, being payment for 2,038 tons shipped, and $1,650, being payment for 90 tons concentrates shipped.

"Lloyd" Copper.—Production 144 tons.

Mount Boppy.—Clean-up from 6,860 tons gave free gold 1,209 ozs.; cyanide 4,096 tons, 1,446 ozs.; slimes 2,487 tons, 848 ozs.; concentrates 24, 200 ozs.; total, 3,703 ozs.

Mysore.—16,350 tons, 15,123 ozs.; 13 500 tons tailings (cyanide) 1 868 ozs.; total, 16,991 ozs.

Mysore West-Mysore-Wynaad.—Crushed 1,954 tons, 336 ozs.; cyanide 2,496 tons, 149 ozs.

New Queen.—Crushed 447 tons, 540 ozs.; £400 from 759 tons by cyanide; concentrates £320.

New Ravenswood.—Crushed 1,172 tons ore, value £2,528; 135 tons concentrates, value £1,020; tailings 84 tons concentrates, value £1,210.

North Broken Hill.—2,070 tons of crude ore treated, producing 375 tons concentrates containing 262 tons 10 cwt. lead and 6,225 ozs. silver.

Nourse.—Crushed 29,620 tons, 7,511 ozs.; 19,767 tons sands by cyanide, 3,467 ozs.; 10,178 tons slimes, 926 ozs.; total, 11,904 ozs.

Nundydroog.—6,900 tons, 5,378 ozs.; 7,290 tons tailings, 702 ozs.; total, 6,080 ozs.

Ooregum.—10,222 tons, 4,727 ozs.; 8,780 tons tailings cyanide, 875 ozs.; total, 5,602 ozs.

Oroville.—Gross returns for week ending August 21, $17,000.

Oroya-Brownhill.—Crushed 10,990 tons, 12,575 ozs.

Ottos Kopje Diamond.—Debris during August. 46 carats.

Pena.—15,842 tons, shipment of ore 15,255 tons, 90 tons fine copper in precipitate.

Premier (Transvaal).—Loads washed mine ground, 411,807; overburden, 68,048, yielding 104,809 carats.

Princess.—Crushed 7,999 tons, 2,672 ozs.; cyanide, 5,150 tons, 886 ozs.; total, 3,558 ozs.

Queensland Copper.—Ore treated, 1,336 tons; production, 217 tons matte, containing 140 tons copper; shipment advised, 264 tons matte; value, £13,500.

Red Hill (Westralia).—Crushed 1,625 tons, 656 ozs.

Roberts Victor Diamonds.—5,400 loads washed, producing 3,816 carats, equal to 70·60 carats per 100 loads.

Rose Deep.—Crushed 27,100 tons, 6,390 ozs.; tons sands by cyanide, 17,600, 2,438 ozs.; tons slimes 10,507, yield 723 ozs.; total, 9,551 ozs.

St. David's.—Crushed 1,285 tons, 125 ozs.

St. John del Rey.—Gold produce, £22,180; yield per ton, ·56 of an ounce troy.

Selukwe.—Crushed 7,532 tons, 1,324 ozs. (equals 3·51 dwts. per ton); tailings assay, 1·91 dwts. per ton; cyanide, 4,982 tons, 384 ozs.; total, 1,708 ozs.

Sheba.—Output, 4,329 ozs.

South Burma Tin.—100 tons, yielding 4 cwt. black tin.

Sulphide.—Ore milled 1,388 tons, the central mine producing 278 tons leady concentrates; also 2,687 tons middlings, and 8,409 tons tailings treated, producing respectively 1,024 and 3,079 tons zinc concentrates, 418 tons leady concentrates, 329 tons residues, and 4,534 tons purchased ores smelted, yielding 1,442 tons lead, containing 122,570 ozs. silver, and 8,940 ozs. gold; also treated 378 tons zinc concentrates, producing 96 tons spelter.

Tasmania Gold.—Cyanide, 2,144 tons, 335 ozs.; chlorination plant, 198 tons, 230 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped contained 630 tons lead, 97,000 ozs. silver, 135 ozs. gold.

Tolima.—Mineral produced, 50 tons; value, £2,600.

Transvaal Gold.—Crushed 8,748 tons, 2,448 ozs.; central cyanide 3,870 tons, 913 ozs.; central slimes 2,740 tons, 484 ozs.; Kameel's cyanide 1,430 tons, 289 ozs.; Kameel's slimes 780 tons, 184 ozs.; old slimes 400 tons, 100 ozs.; Elandsdrift mine 305 tons, 80 ozs.; total 4,498 ozs.

Vereeniging Estates.—Output of coal 20,050 tons.

Vogelstruis Estates.—Quartz milled 7,000 tons, 2,030 ozs.; tailings 5,100 tons, 515 ozs.; total 2,545 ozs.

Wanderer.—Cyanide 16,554 tons, 2,413 ozs.

UNION OF LONDON AND SMITHS BANK.—Deposits and current accounts on Aug. 22 came to £36,348,177, acceptances and liabilities by endorsement to £3,810,289, and other liabilities to £582,084, while assets consisted of cash in hand and at Bank of England £6,055,160, money at call and short notice £7,314,150, investments including reserve fund £6,402,816, and discounts, loans and other advances £20,483,933.

CAPITAL AND COUNTIES BANK.—Liabilities on August 28 consisted of £32,684,230 on simple contracts and £653,119 on bills, and assets of £5,247,745 cash in hand and at Bank of England, £4,368,582 money at call and short notice, £4,986,949 Consols and other investments, and £19,481,138 bills of exchange, promissory notes and advances to customers.

Pure and Fragrant

MAZAWATTEE

TEA

Recalls the delicious Teas of 30 Years ago.

SOLD BY ALL GROCERS.

TRADE AND PRODUCE.

Wheat.—The price of new wheat has not dropped further, though supplies are now liberal all over the country, and trading, with one or two exceptions, has been slow. Mid-week quotations at Mark-lane for best reds were 28s. 6d. to 30s. 6d., and white 29s. to 31s. Foreign descriptions also have been quiet, with rates unchanged. Farmers' deliveries for last week amounted to 55,716 quarters, averaging 26s. 9d., against 92,630 quarters, averaging 26s. 11d. in the same week of last year. Imports were a little heavier compared with last week, being 439,530 quarters, but 5,320 quarters less than in the same week of last year. The quantities of wheat and flour on passage estimated this week are 2,215,000 quarters against 2,440,000 quarters last week to the United Kingdom, and 1,330,000 against 1,380,000 to the Continent. American markets only opened on Tuesday, as Monday was Labour Day. They had a slight advance at first in a light interior movement and generally adverse crop reports, but subsequently dropped with a poor flour business and indifferent cash demand. Later they grew irregular, but slightly firmer in tone. *Bradstreet's* estimates had a slightly steadying effect as they were 43,611,000 bushels, against 46,083,000 last week.

Wool.—Caution is the watchword of markets just now as no one seems to have committed themselves far into the future, and the general feeling seems to be that prices will be lower at the end of the month. As it is, Bradford topmakers are already offering fine cross-breds and merinos for forward delivery early next year at 1d. below current rates, it being thought that this class of wool will suffer the most, largely through the liberal supplies coming from Australia. Holders of English produce maintain a firm attitude, and the country prices are still above these.

Linen.—Yarn buying has not gone much beyond normal, yet values continue to harden, and each week sees some new record in one or another description, the only exception to this state of things being in the heavier end of tow lines, where prices have hardly moved at all, and, to a lesser extent, in lines of the same counts. Foreign yarns show no new feature, except also further advances and deliveries still more protracted. The manufacturing end shows an improvement in all departments, handkerchiefs and housekeeping goods having made perhaps the most headway. For bleached and finished goods cross-channel demands show a considerable increase, and foreign and colonial trade keeps up well, in spite of the increasing competition of Belgian and German houses.

Cotton (from our Manchester correspondent).—The general tone of our market during the past week has shown some little improvement. The amount of business actually done has not been important, but the outlook all round is more promising, and buyers and sellers have got to closer quarters. A number of small orders have filtered through in both cloth and yarn. If the raw material continues steadier, then we may expect more active operations. In cloth for export a fairly extensive inquiry has come through for the different outlets of India. Buyers for Bombay and Calcutta have made offers which in some cases have not been very far out. Shippers to China have not been active, but prices are fairly well tested, and the prospects are rather better than some weeks ago. Several of the smaller markets have given moderate support. Buyers for the Levant show more activity. Egypt has not been altogether idle, and the outlets of South America have dealt in a miscellaneous class of goods to a fair extent. In the well-known makes of Burnley printers, most manufacturers have a fair amount of work to go on with, but in the poorer kinds the engagements are not now at all extensive, and some slight irregularity in prices has shown itself. T-cloths and Mexicans have only moved off in small lots. Coloured woven goods and sateens have been in fair request, but sales not important. In the home trade houses a healthy demand is being met with, and for the autumn trade the turnover so far is greater than for the same period of last year. Buyers are having difficulty in getting adequate supplies from the makers. Home trade American yarns have not moved quickly, but users have been rather more disposed to make offers for distant months. Spinners can sell, and cover in cotton at a wide and remunerative margin of profit. There is still some pressure for delivery, and the margin of profit for, say, 36's twist is very satisfactory. Ring warps and beams are deeply engaged, and not easily obtained for early delivery. Export yarns have not been active for any of the various markets, although for the Continent a fair trade has transpired. Bolton spinnings in the finer numbers retain their strength with a fair trade coming round from day to day. The commoner kinds, however, are irregular, and some poducers have rather pressed for fresh contracts.

In New York the market has been fairly steady, with a tendency to weakness at times, though it rallied at the end. According to Mr. Hester, the crop of 1905-6 amounts to 11,346,000 bales, the largest on record, with the exception of 1904-5.

Coal.—With the exception of Lancashire, where the trade keeps dull not alone in house coals, but in steam shipments, conditions are everywhere satisfactory. In south and west Yorkshire owners have advanced their quotations for house coal 1s. per ton, to be ready for the autumn demand. Steams, which have been such good request all through the summer, are now stronger than ever, and owners will not book new contracts save at an advance of 1s to 1s. 6d. per ton. North of England coking coal and coke trade is also good, the heavy demand for the former from the Continent has raised its price to 11s. per ton, f.o.b., while for furnace coke 18s. 3d. per ton has been paid. Welsh trade has been adversely affected by the labour troubles, but even so is in a fair state, with hardening prices. Steams this week were quoted on the Cardiff Exchange at best, 15s. to 15s 3d.; best seconds, 14s. 6d. to 14s. 9d., and in Swansea anthracite is advancing.

Copper.—This market was not very brisk at the start, but the undertone was firm, with sellers very reserved. Quotations slightly improved, partly due to the August statistics, and when a good trade demand was experienced the advance made further headway. A small relapse followed, but firm American advices sent quotations upward once more. A little fluctuation followed, but the tone was good, with prices at £85 5s. cash and £86 2s. 6d. for three months forward. Messrs. Henry R. Merton and Co. give the visible supply as 11,932 tons, against 12,628 tons a month ago. The total supplies for August are 30,911 tons, and the deliveries 31,607 tons, against 27,387 tons and 27,034 tons for July respectively. The stocks in England and France are 7,682 tons, against 7,728 tons at the end of July. Chile charters 1,900 tons.

Tin.—Although Eastern cables were better this market opened at a big decline, apparently due to fears of aggressive realisation. Sellers, however, were not pressing, and the advent of important professional support soon brought about a rally. Cash was in particularly strong demand, and bears were inclined to cover. Later selling once more predominated, and prices ended at £183 15s. spot and £183 5s. for futures. Messrs. A. Strauss and Co. give the visible supply as 12,295 tons, against 13,013 tons a month ago. The quantities on the spot and landing are 2,966 tons, against 3,650 tons at the end of July. The monthly deliveries in London were 1,095 tons and in Holland 984 tons, making a total of 2,079 tons, against 2,275 tons for July. The Straits shipments total 4,910 tons, of which 3,015 tons are for London, 1,420 tons for America, and 475 tons for the Continent.

Iron and Steel.—Business continues brisk in all branches of the iron and steel trades, and excellent reports are daily received from manufacturers, who are as sanguine as ever as to the prospects of the immediate future; at any rate, of the next three or four months. On the whole, they are booked well ahead. A stronger tone is still exhibited by the hematite iron trade, and a large volume of business is being done on behalf of consumers. Prices consequently are firmer. Large deliveries of this class of iron are being made to the Continent, and a goodly business is reported with America. In Middlesbrough a fair trade has been done at higher rates, but sellers have not shown great readiness to book orders at the price. Fixed and forge iron are strong, and hematite has gained 6d., with mixed numbers selling at 67s., and No. 1 at 67s. 6d. In Glasgow the pig-iron market maintains its firmness, especially in response to increased German advices. The exports of pig-iron from the Cleveland district last month were far above those of any preceding August, the figure of 141,447 tons exceeding the July exports by 8,569 tons. In only five previous years have the August exports reached 100,000 tons. This was due mainly to the German demand.

Tea.—The statistical position of Ceylon tea, says Messrs. W. J. and H. Thompson's circular, is shown by last month's London figures to be steadily improving, for the stocks in bond on August 31 were some two million lbs. less than in 1905, and though imports were smaller, clearances were 400,000 lbs. ahead of the same period last year. On the other hand, heavier deliveries of Indian have not kept pace with the increase in imports and stocks at the end of last month were 8,000,000 lbs. in excess of 1905, a somewhat unsatisfactory condition when it is remembered that the poorness of quality compared with last year's standard has been more or less the cause of the 1d. per lb. drop in the average price. This week's auctions showed a reduction of about 5,000 lbs. over last, and came to 37,745 lbs., of which 33,264 were sold on garden account at an average of 7.75d., compared with 7.67d. last week. In spite of the smaller quantity offered, prices for ordinary medium grades again show weakness, and all but the best liquoring kinds were neglected. Ceylon offerings also showed a slight reduction in quantity, 25,206 packages being put up to auction, and with the recent improvement in quality more marked, buyers seemed more inclined to operate, and to pay good prices for better teas. The average for the week came to 6.98d. against 6.78d. last week. The moderate quantity of Javas brought forward, 2,227 packages, found ready buyers at about last week's rates.

Sugar.—America has not absorbed the moderate quantities offered from here, but speculation was supported at fractionally higher prices by alarmist reports from Cuba, and refiners here took in more supplies at 9s. 6¾d. up to 9s. 7½d., the Hamburg stock being over-estimated. The warehoused quantity of raw sugar there is now only 12,650 tons, with 3,550 tons in waiting lighter, and a moderate quantity amongst the 51,000 tons raw and refined in river barges. In any case, statistics, says Mr. Czarnikow, should be favourably affected, the United Kingdom consumption probably being normal, say, about 20,000 tons more than in August last year, and America consumed 221,000 tons against 209,000 tons. German exports are 98,000 compared with 60,000 tons, and the Austrian 50,000 against 20,000. The Indian crop failure and the higher purchasing power of silver are shown both in European and Java shipments. Reports from the majority of beet districts are satisfactory. In France the first sowings look well, and in Germany the crops seem to make good progress. The American market has remained very firm at 4 cents, but sellers generally hold for more money. Owing to holidays, the meltings are only 42,000 tons, and as imports were 21,000 tons, stocks are reduced to 250,000 tons.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Caledonian.—For past half-year at the rate of 3¾ per cent., carrying £11,000 forward.

Glasgow and South-Western.—For past half-year at the rate of 4¼ per cent. per annum on the ordinary stock, being at the rate of 2½ per cent. per annum on the preferred ordinary and 1¾ per cent. per annum on the deferred ordinary stock, carrying forward £6,632.

Highland.—At the rate of 1½ per cent. per annum on the ordinary stock for past half-year, carrying forward £3,869.

Horncastle.—On the share capital at the rate of 7½ per cent. per annum for half-year ended June 30.

North British.—At the rate of 1½ per cent. per annum on the deferred stock, carrying forward £10,000.

Nottingham Suburban.—At the rate of 3½ per cent. per annum on the ordinary stock for half-year ended June 30, carrying £175 forward.

Plymouth, Devonport, and South-Western Junction.—On the ordinary capital at the rate of 2½ per cent. per annum for half-year ended June 30, carrying £1,686 forward.

Wellington and Manawatu.—Interim of 3 per cent. for half-year ended Aug. 31.

INSURANCE.

General Accident Fire and Life Assurance.—Interim at the rate of 10 per cent. per annum, payable 8th inst.

Indemnity Mutual Marine.—Interim of 6s. per share.

MINES.

Durban-Roodepoort Gold Mining.—Interim on account of year ending Dec. 31, 1906, of 3s. per share (15 per cent.), payable Sept. 29.

Eaglehawk Consolidated Gold.—6d. per share.

Oroville Dredging.—12½ cents per share.

Witwatersrand Gold.—No. 4 (2s. per share).

MISCELLANEOUS.

A. F. Stoddard and Co.—10s. per share on the ordinary shares, being at the rate of 5 per cent. per annum for year ended June 30, placing £500 to special reserve, and carrying £1,406 forward.

Bath Stone Firms.—At the rate of 8 per cent. per annum for half-year ended June 30.

British Gas Light.—At the rate of 10 per cent. per annum for half-year ended June 30, payable Oct. 11.

Cardiff Junction Dry Dock and Engineering.—Interim at the rate of 3 per cent. per annum for half-year ended June 30.

Central Produce Market of Buenos Ayres.—Final of 6 per cent., making 11 per cent. for year ended June 30.

Fleming, Reid, and Co.—Interim on the ordinary shares at the rate of 10 per cent. per annum for half-year ended June 30.

Jay's.—Interim on the ordinary shares at the rate of 5 per cent. per annum for six months ended July 31.

Kayser, Ellison, and Co.—Final of 7s. 6d. per share on the ordinary shares, making 12½ per cent. for year ended June 30, placing £5,000 to reserve and carrying £6,546 forward.

Leigh Mills.—At the rate of 6 per cent. per annum on the ordinary shares for year ended July 31.

Lincoln Wagon and Engine.—Interim at the rate of 10 per cent. per annum for half-year ended Aug. 1.

Locket's Merthyr Collieries (1894).—Interim of 2s. 6d. per share on the ordinary shares, being at the rate of 5 per cent. per annum for half-year ended Aug. 31.

Palmer's Shipbuilding and Iron.—Final of 2½ per cent. on the ordinary shares, making 5 per cent. for year ended June 30.

Pearson and Knowles Coal and Iron.—Half-year's at the rate of 6 per cent. per annum on the ordinary shares, placing £10,000 to reserve, and carrying £9,323 forward.

Summerlee Iron.—£2 per share on the ordinary shares for year ended May 31, being at the rate of 20 per cent. per annum, carrying £8,765 forward.

Swansea Wagon.—1s. per share, being at the rate of 1½ per cent. per annum for year ended June 30, placing £2,500 to reserve, and carrying £658 forward.

Thomas Owen and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

United States Trust and Guarantee.—At the rate of 5 per cent. per annum on the preferred stock for half-year ended June 30.

Van Den Berghs. Interim on the ordinary shares at the rate of 12 per cent. per annum for six months ended June 30.

Witbank Colliery.—3s. per share, being at the rate of 15 per cent. per annum.

Wraight, Dumbrill, and Co.—Further of 4 per cent., making 8 per cent. for year ended June 30.

NEXT WEEK'S MEETINGS.

MONDAY, SEPTEMBER 10.

United Railways of the Havana.—Winchester House, noon.

TUESDAY, SEPTEMBER 11.

Calico Printers.—Manchester, 11 a.m.
Commercial Bank of Scotland.—Edinburgh, 1 p.m.
Egyptian Land.—Winchester House, noon.
Floating Dock of St. Thomas.—Suffolk House, noon.

FRIDAY, SEPTEMBER 14.

Vedrine and Co.—Institute of Chartered Accountants, 2.30 p.m.

The Commercial Bank of Australia has opened branches at Hobart and Launceston, Tasmania.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and September 1, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 1, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Sept. 2, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369
		10,451,487	7,430,278
REVENUE.			
Customs	32,230,000	14,081,000	14,031,000
Excise	30,200,000	11,819,000	11,838,000
Estate, &c., Duties	13,200,000	6,694,000	5,968,000
Stamps	8,150,000	3,250,000	3,296,000

Bank of England	6,256,608 / 7,373,720		
Bank of Ireland	853,610 / 794,355		
		7,110,224	8,168,075
Total		63,917,117	66,272,921

Treasury, September 4, 1906.

LONDON JOINT STOCK BANK.—Current and deposit accounts on Aug. 27 amounted to £18,208,465 and acceptances to £1,242,554, against which there were Government stock and other investments £3,472,705, cash in hand and at Bank of England £2,422,146, money at call and short notice £4,806,313, and bills discounted, advances and other securities £10,008,184.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended August 21, $3,413, increase $6.

Argentine North Eastern.—Traffic receipts for week ended August 3, $21,632, increase $4,700; aggregate from January 1, $601,823, increase $57,089.

Assam Bengal.—Traffic receipts for week ended August 4, Rs. 73 606, increase Rs. 15,398; aggregate from July 1, Rs. 3,54,990, increase Rs. 53,388.

Bolivar.—Receipts for July £2,967, increase £692.

Canadian Northern Railway.—Traffic receipts for week ending August 31, $192,300, increase $65,700; total from July 1, $1,198,700, increase $445,700.

Dominion Atlantic.—Receipts for August $164,900, increase $26,051.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 4, Rs. 18,628, decrease Rs. 4,621.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 4th week of August, $39,868, increase $5,948; aggregate from January 1, $620,148, increase $92,155.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 4, Rs. 15,333, increase Rs. 2,518.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 31 amounted to $101,811.

English.

Cleator and Workington Junction.—Receipts for week ending September 1, £1,257, increase £66; aggregate from July 1, £10,428, decrease £54.

Cockermouth and Keswick Railway.—Receipts for week ending September 1, £1,051, increase £78; aggregate from July 1, £10,103, increase £467.

East London Railway.—Traffic receipts for June, £4,017, decrease £197.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 1, £379, increase £30; aggregate from July 1, £2,682, increase £174.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Blessington and Poulaphouca. — Traffic receipts for week ending August 29, £44, increase £8; aggregate from July 1, £347, increase £64.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 31, £5,376, increase £341; aggregate from July 1, £50,472, increase £1,453.

British Electric Traction.—Receipts of all the Associated Companies for the week ending August 31, £32,301, increase £2,205; total increase from January 1, £115,478; 439¾ miles, against 428¾.

Burnley Corporation.—Traffic receipts for week ending September 1, £1,281, increase £114; aggregate from July 1, £11,341, increase £879.

Dublin and Blessington.— Traffic receipts for week ending August 29, £199, increase £7; aggregate from July 1, £1,655, increase £45.

Dublin and Lucan.—Traffic receipts for week ending August 31, £153, decrease £4; aggregate from July 1, £1,323, decrease £46.

Dublin United.—Traffic receipts for week ending August 31, £7,912, increase £2,391; aggregate from July 1, £52,763, increase £2,272.

Edinburgh and District. — Traffic receipts for week ending September 1, £5,449, increase £849; aggregate from January 1, 1906, £174,252, increase £4,473.

Hastings and District.—Traffic receipts for week ending August 30, £1,429.

Isle of Thanet.—Traffic receipts for week ending September 1, £1,763, increase £394; aggregate from October 1, £27,746, decrease £560.

London County Council.—Traffic receipts for week ending August 18, £24,519, increase £8,774; aggregate from April 1, £531,662, increase £226,086. Miles 98 against 51¼.

London General Omnibus.—Traffic receipts for week ending September 1, £22,579, increase £1,526; aggregate from July 1, £214,533, decrease £6,834.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending September 1, £3,693, increase £2,498.

London Road Car.—Traffic receipts for week ending September 1, £7 583, increase £774; aggregate from July 1, £73,775, increase £724.

Rossendale Valley.—Traffic receipts for week ending August 31, £197, increase £17; aggregate from July 1 £1,837, increase £3.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 2, £1,003, increase £230; aggregate from January 1, £29,295.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending September 2, £15,475, increase £2,162; aggregate from January 1, £518,180, increase £56,948.

Barcelona. — Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of May, 1906, £11,691, increase £776.

British Columbia Electric.—Nett earnings for July, $38,523, increase $3,600. Nett earnings from July 1 to July 31, $48,059, increase $7,669.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending August 26, £3,195, decrease £209; aggregate from January 1, £121,261, increase £6,487.

Buenos Ayres Electric. — Traffic receipts for week ending August 4, £994, decrease £122; aggregate from January 1, £42,019, increase £7,225.

Buenos Ayres Grand National.—Traffic receipts for month of August, $293,700.

Calcutta. — Traffic receipts for week ending September 1, Rs. 43,008, increase Rs. 742; aggregate from July 1, Rs. 3,93,185, increase Rs. 11,431.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,708, decrease £222. Total from January 1, £35,223, increase £11,310.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of June, $484,590, increase $92,062; aggregate from January 1, $2,554,608, increase $383,138. Nett traffic receipts, $269,046, increase $54,371; aggregate from January 1, $1,340,226, increase $208,283.

Hongkong and Shanghai Banking CORPORATION.

EIGHTY-SECOND REPORT OF THE COURT OF DIRECTORS

TO THE

Ordinary Half-Yearly General Meeting of Shareholders,

Held at THE CITY HALL, HONGKONG, on the 18th AUGUST, 1906.

To the Proprietors of the

HONGKONG AND SHANGHAI BANKING CORPORATION.

GENTLEMEN.—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance-sheet for the half-year ending 30th June, 1906.

The net profits for that period, including $1,699,777.40, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to $3,795,119.43.

The Directors recommend the transfer of $750,000 from the Profit and Loss Account to credit of the Silver Reserve Fund, which Fund will then stand at $10,250,000.

After making this Transfer and deducting Remuneration to Directors there remains for appropriation $3,030,119.43, out of which the Directors recommend the payment of a Dividend of One Pound and Fifteen Shillings Sterling per Share, which at 4/6 will absorb $622,222.22.

The difference in Exchange between 4/6, the rate at which the Dividend is declared, and 2/1½, the rate of the day, amounts to $695,424.84.

The Balance $1,712,472.37 to be carried to New Profit and Loss Account.

DIRECTORS.

Mr. E. Shellim, Mr. F. Salinder, and the Honourable C. W. Dickson having resigned their seats on leaving the Colony, Mr. D. M. Nissim, Mr. H. E. Tomkins and the Honourable W. J. Gresson have been invited to fill the vacancies; these appointments require confirmation at this Meeting.

Mr. G. H. Medhurst has been elected Deputy-Chairman for the remainder of the year in place of the Honourable C. W. Dickson.

AUDITORS.

The accounts have been audited by Mr. W. Hutton Potts and Mr. A. G. Wood.

A. HAUPT,
Chairman.

Hongkong, 2nd August, 1906.

ABSTRACT OF ASSETS AND LIABILITIES.
30th June, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 454. SATURDAY, SEPTEMBER 15, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. **Six Months - 11s.** **Three Months - 5s. 9d.**

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Our Foreign Trade in August.

Last month again beat all records with imports valued at £48,894,624, which was an increase of £2,031,633, or 4.3 per cent., upon the figures for August, 1905. Exports of British and Irish produce did still better at a total of £33,492,614, being £3,974,778, or 13.4 per cent., more than in the corresponding month. Re-shipments of foreign and colonial merchandise also rose by £496,504, or 7.7 per cent., to a total of £6,924,140. Thus all branches of our foreign business continue to expand in a fashion which must excite the envy of our rivals and competitors. Some portion, however, of the increase on both sides of the account is due to higher prices. We have been paying less for our wheat and maize, but rather more for most other articles of food and drink. Sugar is notably dearer, as well as bacon and cheese. Raw materials used by our manufacturers are also often dearer, and although there are compensations in higher prices for articles exported, we fear they do not quite balance the account. Hence it may be doubted whether the foreign trade of the country is quite as profitable as it was when the totals were lower. It is noticeable, at least, that the excess value of imports over exports, as exhibited in our summary table, shows a decline for the eight months of nearly £5,000,000 compared with the same period of 1905, and of about £13,500,000 on 1904. It may be that as time goes on the balance will again mount, but at present such statistics as are available lead to the inference that our unprecedented foreign business is now being conducted upon a narrower margin of profit than formerly ruled. Perhaps we are importing securities to make up the balance of our profits, but upon that point it is impossible to speculate with any satisfaction, because we have no facts whatever to go upon.

The trade as it stands, however, is undoubtedly stupendous, and still rapidly extending. Moreover, it is a trade which indicates the still dominant power of our manufacturers, not merely over the manufacturers of other countries who come into our home markets, but in all parts of the world. We have imported a little more of some foreign manufactures, as is natural when business is improving, and above all when the internal trade of the country is also revealing the revived capacity of the consumer to buy; but the success of the foreigner as a competitor in home markets is at best unimportant, whereas our exports of manufactured goods to foreign countries show an elasticity which certainly does not encourage the view that we should better our position by endeavouring to shut out anything the foreigner has to sell to us. Our exports of British manufactures last month increased by £3,250,000 in round figures, in spite of a decrease of about £188,000 in the value of new ships exported and of minor declines in other directions. We exported about £73,000 worth more in cutlery last month than in August, 1905, and the increase in the value of cotton yarns and textiles was upwards of £853,000. Our exports of woollen and worsted goods also rose by over £315,000, and of jute, linen, and silk threads and tissues by £167,000. We are, moreover, rapidly laying hold of foreign markets for cycles and for motor cars and parts thereof, articles which a few years ago were almost wholly in the hands of foreigners.

Looking at the imports in detail, it is worth noting that, except in wheat, the revolution in Russia does not seem as yet to have materially affected the business between that country and the United Kingdom. We, however, received last month 1,616,000 cwts. less wheat from Russia than in August, 1905, and for the eight months of the year expired the imports from that quarter have been upwards of 6,300,000 cwts.

Excess value of imports over exports	115,976,837	107,426,533	102,430,527	— 4,996,006

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

less, but that notwithstanding, our total imports of wheat show an increase, and prices are declining. The United States and Canada alone sent us last month 2,265,000 cwts. more than in the same month of 1905, thus covering not merely the serious decline in the Russian supply, but most of the smaller shrinkage in the supplies from the Argentine Republic and British India. Russia, however, sent us nearly as much oats last month as in August, 1905, although for the year to date there is a decline of nearly 4,260,000 cwts. in the total Russian supply, and maize is not now coming from Russia in anything like the quantity received two years ago, although the receipts at British ports for the past month were larger than in the same month of 1905. Russia, moreover, continues to supply us with butter and eggs almost as freely as ever.

No great progress appears to be made by the British West Indies in the supply of unrefined sugar as a result of the protectionist measures adopted by the late Government. There is progress, however, and this year we have received from the West India Islands, British Guiana, and British Honduras 1,435,423 cwts. of this commodity, as against between 800,000 and 900,000 cwts. in each of the two previous years. Germany, however, remains our main source of supply, both for raw and refined sugar, France having fallen behind to quite a remarkable extent since the way was opened to a greater consumption at home. Naturally, with the iron and steel industries of the country in such flourishing condition, we are importing metals more heavily, Spain continuing to be the main source of our supply for all kinds of iron ore, but in fibres used in our textile industries it is noticeable that Russia continues to maintain her consignments of wool, having last month sent us 1,497,000 lbs., compared with between 500,000 and 600,000 lbs. in the August of the two previous years, and the total for the eight months is also greater than for the same portion of those years. We have received much less raw cotton this month and this year from the United States than a year ago, but more than two years ago, and doubtless the supplies from that quarter will again soon begin to increase, although there are indications of competition from other regions of the world. As yet the supply from British Africa and the British West Indies does not amount to much, but it is growing, and in a few years may become important.

Our exports of coal last month were nearly 1,000,000 tons larger than in August, 1905, and the total for the present year is about 5,390,000 tons more than for the first eight months of the past year, the value being up fully £3,400,000 to £19,779,000. Our exports of pig and puddled iron rose last year by about 64,000 tons in weight and £1,442,000 in money, our principal customers for this commodity being, in the order given, Germany, the Netherlands, the United States, Belgium, and Italy. And for other descriptions of iron our own dependencies are for the most part our best customers, either these or countries like Chili, Argentina, Brazil, and Portuguese East Africa, whose resources British capital is doing so much to develop. The aggregate value of our exports of iron and steel and the manufactures thereof was last month £3,569,000, compared with £2,628,000 in August, 1905, and £2,217,000 in August, 1904. The increase, moreover, has been progressive, since the value for the first eight months of this year is at £25,501,000 fully £5,000,000 greater than in the same eight months of last year and £7,130,000 more than in the first eight months of 1904. The prosperity of our iron and steel trade is, therefore, more than on a par with that of our textile industries, although these are all prosperous, and we have still to note that the demand for cotton goods from India appears to be in no way hurt by the alleged boycott of British goods instituted in Bengal. We have sent £8,163,000 worth of these tissues to that province of India this year to the end of August, compared with £7,827,000 worth a year ago, and £7,353,000 worth in the first eight months of 1904. Altogether our exports of cotton tissues to the wide world so far this year show at £50,818,000 an increase of about £6,112,000 on the total for last year. Less progress is shown by our exports of woollen and worsted tissues, but they also indicate an expanding trade, and amongst our best customers are countries

in Europe and the United States of America, the States being specially conspicuous as a customer for worsted tissues. The linen trade is also prosperous, with the United States of North America by far the largest consumer, followed at long distances by Canada, Cuba, and Australia. Minor branches of our trade all lead to much the same conclusion: the business of the country is good and expanding in nearly all directions, in spite of tariffs and everything else. Russia even has taken more worsted yarns from us last month and this year to date than in 1905, although the value of the purchases does not amount to much altogether. Perhaps the most satisfactory point about the exhibit is that there is probably less of the stimulus of borrowed money applied to the trade than used to be the case. Our Australasian settlements, for example, are all good if not conspicuously progressive customers, and they have not been borrowing money so freely as they used to do with which to pay for their purchases. Everywhere, however, British capital is still busy creating markets and helping to develop the resources of the raw countries, as they may be called, still to be found in the world. And it is noticeable that the demand for our agricultural machinery comes largely from countries in South America. For mining machinery, however, British South Africa is still our most important outlet, although countries in Europe figure to a fair extent for such implements, as well as British India, Australia, and countries in South America. The United States continues a good customer for our textile machinery, but the largest consumption of such comes from European nations, which last month took nearly half the entire weight exported.

Economic and Financial Notes and Correspondence.

Bradford Woollens and Worsteds.

Followers of Industrials are none too well served by the newspapers with matter on which to base opinions upon the future of Textile shares. Textiles are good or bad or are indifferent is the "tip" put about. They are spoken of generally as if they were one thing and not highly differentiated things. The fact is that the commercial conditions favourable to companies in some one section of the industry are often quite inimical to other sections. Rarely does it happen that all branches prosper in harmony under the stimulus of revived trade. We have seen wool flourish at the expense of cotton and *vice versâ*. Oftener we have seen branches of the wool manufacturing business in antagonism. So it is to-day, when worsted (combed wool) is a seriously less marketable commodity than woollen (or carded wool). The latter may be cheapened to suit the pocket with liberal admixtures of shoddy. Worsted must necessarily be pure, and when wool prices make combed wool dear its place is filled to an extent with cotton. That worsted is not the extreme sufferer it has been from this natural antipathy is shown somewhat by the fair price obtained for Woolcombers' and for Isaac Holden's. Their business of converting raw wool into worsted "top" is one that is conducted at all times upon a narrow margin of profit. The indispensable condition to their success is a large and steady turnover. Wool must come freely to the combs or *fugit* profits. Work is none so bad with these concerns, and is likely to be better when and if wool comes down further and brings worsted within the compass of the popular purse. Truth to tell, tweeds or woollens for ladies' wear have become vulgarised, and a return to worsteds on a large scale is imminent whenever the wool market permits. In this country and in Australia evidences are found which seem to portend a further fall when London wool sales open on September 25. A fall probably will suit the books of the trade as a whole.

Certainly a reduction in wool values should be of some comfort and help to Bradford Dyers'. The departments in which great slackness prevails are those where worsteds should be under treatment but are not in any satisfying quantity. Cotton it is—and cotton linings — which currently supply the Bradford Dyers' Association with the means of life. Its branches for cotton dyeing have done wonderfully well during 1906, and in wool piece goods it has done really badly in some quarters. Withal the good should more than counterbalance the bad. Its business in trade-marked linings is far from unremunerative, and an improved balance-sheet may certainly be anticipated from general indications. But the spin of the wheel which is to bring prosperity to the worsted-dyeing departments of the Bradford Dyers' Association almost as certainly brings worse fortune to "Slubber's." The only dividend ever paid by the British Cotton and Wool Dyers was bred and begotten by the boom in ladies' tweeds (or woollens), which now has passed its meridian.

Of course, a very considerable bulk of business will remain with "Slubber's," who dye raw and semi-manufactured cotton and wool largely for the woollen trade. They may lose, however, by the inevitable change of fashion just so much business as makes the difference between some profit and none. Reduction in the volume of slubbing dyers' orders spells probably a revival of that internecine strife and harassing external competition that have done so much already to hold the company in check. Without pessimism, that is something like the prospect "Slubber's" has to face. Like its protagonist—Bradford Dyers—the British cotton and wool concern is faced by labour troubles. In both combinations demands are being made that may result in an addition of 10 per cent. to labour cost. If it be not more, that will be because the full demands of the men are not granted. The percentage named, taken with reduced hours of labour, is certainly not an under-estimate of the probability. Already Slubber's men limit the capacity of the expensive foreign machinery used in dyeing raw stuff, and demands made during this autumn will—for trade reasons—be difficult to resist. Any concession made by Bradford Dyers' is likely to have some *quid pro quo*, which conceivably will take the form of payment by piece in lieu of payments per hour. The Bradford Dyers' Association also is better able to recompense itself for extra cost by charging extra prices. Its competitors are not formidable, whereas in more cases than one isolated branches of "Slubber's" business have been closed down because outside rivalry was too severe. In all circumstances theirs is the more difficult and precarious business. Essentially, from the foundations upwards, dyeing of cloths is a more stable occupation than dyeing of loose materials. If the plight of British Indigo Dyers' offers nothing signal to support that contention, it must be said that their case is exceptional. The replacing of scarlet and blue by khaki in almost all the armies of the world has dealt that unwieldy concern a blow under which it can only stagger. The Bradford Dyers' Association, with its tied-house system, bars access to one field, in which otherwise Indigo Dyers might have made money. Its sails are blanketed by other smaller dyeing corporations, and, like Yorkshire Woolcombers', it may have to postpone success until a reincarnation solves some of its difficulties. All these considerations are not to be taken to militate against the prospects of various woollen manufacturing concerns whose shares are best known in Yorkshire districts. Markets in them are not so active as to respond instantly to improved conditions, nor do Leeds and Huddersfield shares present any extraordinary advantage in the way of return. Balance-sheets are likely to be good this year, if ever, and one year is not likely to see the end of their run of prosperity.

British Chambers of Commerce.

Admirable in spirit and substance was the opening address delivered at the Bristol meeting of these Chambers in the beginning of this week by Sir William Holland, M.P. He at least is not a tariffite, and by speaking out as he did we have not the slightest doubt

that much good will be done. The whole temper of the meetings of Chambers of Commerce everywhere may be changed. The hindrances, he said, to the extension of our trade are largely self-imposed, and we might derive some valuable lessons from Germany as to the best methods of removing them, which is partly true. Sir William deprecated discussions on such thorny questions as preferential trade within the Empire, and advised the withdrawal of a resolution sent up by the South of Scotland Chamber on that subject. He also announced that the British Government has been able to maintain the position of Sir Robert Hart at the head of the Chinese Maritime Customs, Sir Edward Grey having written him to that effect. All the other speakers did not please us quite so well as the President, but there was undoubtedly a practical business spirit manifested throughout, and although we are not enthusiastic about improvement in the Trade Marks Act so as to make it more stringent, believing as we do that it would be much better to sweep it altogether away, nor inclined to subscribe to the assertion of Mr. Hurrell that bankers possess enormous accumulations of unclaimed deposits, we have no doubt at all that good will be done by drawing attention to both these subjects. And there does not seem any reason why bankers should not send a certificate to depositors of the amount at their credit at regular intervals. We are glad also to note that the meeting endorsed the action of the Board of Trade in endeavouring to obtain a census of production. A resolution approving of the principle of the Bill introduced to effect this valuable improvement in our statistical information was moved by Mr. Charles Charleton, of the London Chamber of Commerce, and unanimously agreed to. Altogether, the meeting was interesting, instructive, and successful.

Associated Portland Cement Manufacturers (1900).

The report for the 12 months ended June 30 provides no more cheerful reading than any of its predecessors, and it is plainly evident that the handicap of antiquated machinery plus wind-blown capital which was put upon the company at the commencement is proving too great for the 11 managing directors to overcome. Capital is still being spent on additions to rotary and other plant, and the outlay last year came to £130,414 against which £37,629 was received for property sold, but nothing is written off the old plant, chalk and clay lands or other assets, and the total of these now amounts to the colossal sum of £6,618,660. The item of rotary patents, however, has been reduced by £12,000 to £139,514. On the other hand, reserves, including £9,375 for bad debts, only come to £147,122, or with the sinking funds for redemption of debenture stock, estate debentures, and chalk and clay land used added, to £228,177, a sum which represents less than 3½ per cent. of the capital expenditure or overburden, and even of this only £57,366 is invested outside the business. Debenture stock to the extent of £32,400 was issued during the year to replace working capital, which had been used to repay mortgages, and with the receipts from sales of property and some help out of revenue the mortgage indebtedness was reduced by £57,100. It, however, still amounts to £238,000, while the debenture debt reaches a total of £2,487,644. Certificates of indebtedness on rotary payments have been reduced by £11,124 to £129,447, and £12,282 of certificates on account of capital expenditure were also paid off, but £20,200 were issued so that this item is £7,918 up at £183,268, and the whole burden of debt seems to be a crushing one. Sinking funds of various kinds have been increased by £16,306, and depreciation and bad debts reserves by £28,561, but this is partly neutralised by the disappearance of the "reserve and provisional accounts," which a year ago stood at £19,702. As regards the current position, liabilities to sundry creditors are £9,708 up at £138,707, while sundry debtors owe £6,551 less at £335,637, cash and bills have been reduced by £7,746 to £146,750, and stocks have fallen by £146,750. According to the directors' report the profits for the sixth year should have shown an increase, not apparently from a larger business having been done, nor from the steady capital outlay, but because various economies were effected in the manufacturing departments. Unfortunately the fall in the selling price more than counterbalanced these economies, and the profits, after providing £110,335 for repairs and renewals, were a mere trifle of £1,137 up at £333,046. Transfer and registration fees produced £68 more at £437, and interest yielded £1,979 compared with £916, but the sum brought in was £4,471 smaller at £13,187, so that the disposable balance was actually £2,203 less at £348,649. Directors' remuneration was reduced by £5,334 to £17,198 through the rearrangements made a year ago, but interest charges were £1,460 heavier at £137,512, and after transferring £33,502 against £31,196 to sinking funds, and setting aside another £4,000 for bad debts £156,437 was left. This was £635 less than was available last year, and the directors, therefore, meet the preference dividend and place another £25,000 to general reserve and depreciation account by reducing the sum carried forward to £12,552. Here is the whole record, and it might be worse, will be probably in the near by and by.

A Times' "Sir Oracle" on Rand Finance.

An article, interesting in its peculiar way, from a correspondent in Johannesburg was published in last Monday's issue of the *Times* Financial Supplement. Throughout it bears traces that the writer is a willing pleader for the bosses. The arguments are quite one-sided, and lack that breadth of view which should be taken by an unbiased observer. "Four years ago, at the conclusion of the war," says the writer, "it was the general, perhaps almost universal, opinion that the Kaffir market was on the eve of a big advance in prices." Well, we are not of the multitude of the insane, but it is true enough that the general expectation was just this. The crowd of the deluded still imagined that the bosses played to enrich it, and the moment peace was signed everybody was eager to buy Kaffir shares in anticipation of a glorious boom, in which many a fabulous fortune was magically to be made. As it happened, this was contrary to the decrees of fate or the plans of the magnates, who wanted coolies, not blacks, nor white men, and who had determined to be the masters of the country and all that was therein, come what might. They promptly reduced the Kaffir "boys'" wages, and put every obstacle in the way of recruiting the natives. This was followed by the agitation for Chinese, and to persuade the "Britisher" that this way lay his fortune the bosses further went "bears" on the market.

In seeking for causes of the tremendous downfall in prices, the *Times* writer divides them under three heads:—(1) Political; (2) financial; and (3) industrial, and all three he treats with a brevity that obscures every important issue. For instance, he dimisses the alleged political causes by saying that since the introduction of Chinese the Rand has been made the shuttlecock in a political struggle by two parties, "the vast majority of whose followers on either side knew almost nothing of the real facts of the case, and possibly cared rather less." Not quite so fast friend. It was a moral struggle more than a political, and it came as a

revelation to this country to learn—even to the Jingo working-man—that the war was not waged for political liberty, but for political servitude; not to bestow upon, but to deprive the white population of a voice in their own local affairs. We paid for the war, in blood and money, not as martyrs for a righteous cause, not to deliver our fellow-countrymen from oligarchic oppression, but merely, so to our amazement it turned out, to make them more than ever the helots of cosmopolitan millionaires. As this truth gradually filtered into the mind of the nation, and the scales fell from the eyes of the frenzied Jingoes, all saw how thoroughly they had been fooled.

Hence the outburst of wrath. Even West-End gamblers have been furious against the bosses for their "bearish" tactics, for they have never had an opportunity of making a little at the expense of the mere mob.

In discussing the financial aspect the correspondent attributes the fall in prices to an alleged universal demand for a higher rate of interest on capital. The delightfully naive superficiality of this argument, in its application to the Kaffir market, is too obvious to require demonstration. Investors refuse to buy Kaffir shares now-a-days, not because the interest is not high enough, but because they have lost all faith in the management of the mines and in the honesty of the cosmopolites. "Damned thieves" is the common market description of these strenuous fortune-getters at our expense, and we have all learnt to suspect them. From one moment to another we never know what dirty trick they may be up to either to snatch away more of our money or to ensure their continued political supremacy in the Transvaal. Investors, speculators, the entire nation, one may say, have grown instructed enough to at least perceive the perils of buying Kaffir shares for dividends or as a gamble. In vain is the net spread.

Ambling along in his serene ignorance the writer further opines that a low rate of interest was formerly assumed "when capitalising at least one of the very deep-level flotations on the Rand, and in the figures obtained the controlling house guaranteed a very large amount of working capital. It is apparent from this instance, and other cases in which capital has been guaranteed by the controlling houses, that they did not at the time fully realise the risks and difficulties of deep level mining, and they are not, therefore, wholly to blame for over-capitalising their companies (sic). It was not possible for them to foresee a three-years' war, a big labour crisis, and on the top of all this a general reduction in the market value of all kinds of securities. Both the political and financial movements affecting the fall in Kaffirs may be considered to be events over which the leaders of the industry had no control, but they have been very important features in bringing the fall about." Intelligent men will not resist smiling at this ludicrous effort in fact-obscuring special pleading. If the bosses were not responsible for flooding share capitals with water who were? And if they had no control over the political and financial movements, could not foresee the war they worked like demons for, nor a labour crisis they determined to bring about, it would be interesting to know who, in this correspondent's opinion, did see these things. The man in the moon possibly.

In surveying the industrial situation, this wise man of Gotham unctuously admits that "the reduction in working costs so generally prognosticated has been very insignificant." He has also discovered that the gold values of the reefs are not uniform; that there are rich and poor patches in the best mines, and that there is accumulating evidence of the diminution of values with depth. He blames the Rand engineers largely for this. "They educated the public to believe that the gold contents of the Rand were much more evenly distributed than is really the case, and laid it down as if it were an axiom in Euclid, that did not admit of question, that the values were fully maintained with depth." This is quite true, and much to the point. But do the bosses grieve over these miscalculations? We think not. Do they suffer anguish of mind because all the rich ore has been worked out in many of the mines, and present day shareholders are suffering from the ensuing poverty? It is impossible to imagine them doing any such thing unless they have been caught "bulls." "Optimistic views held by those controlling the industry caused the mines to embark on expenditure in equipment which has in many instances not been justified by later developments." Yet the bosses were not responsible for over-capitalisation. The writer gives himself away very neatly by his inconsistency and contradictions. Biased though he is, however, the letter is valuable for this one truth it supports—ore estimates were always self-interestedly optimistic and often fraudulently concocted from the outset. And it will take a long time to work out the punishment.

The Banket Company.

The public will now probably be inclined to believe that there is no likelihood of the Banket property ever becoming a profitable concern. For at last a report has been published, covering a period of no less than 12 months, and when compared with all the rodomontade we have had to listen to during the past two years, it is egregious in its paltry details and quite ludicrous in its non-confirmation of all the vauntings of the promoters and bucket-shops. For months the directors have been vainly implored to give some authentic facts of work done and progress made. Shareholders have had merely vague statements or cables, the omissions in which were more eloquent than the disclosures. Just recently, when it was considered an opportune moment to try another rig, Mr. Garthwaite's musty report was dug out of the lumber holes and republished, to be greeted with the ridicule it deserved. If this was all the information (!) the directors could give, it was worse than useless. However, the dumb have now spoken, and their speech, after this long, unbroken silence, is almost incomprehensively incoherent. We wonder if Mr. Abe Bailey and his friends were amazed at the reception the report met with from the market! It would be instructive to know, merely in the interests of psychology, if they held the sincere belief that it would satisfy even the most modest expectations. That it can satisfy reasonable expectations is impossible. Shareholders have been encouraged to believe, from many rumours and reports, not only that development work has been progressing apace, but that very rich strikes have been made. That being so, the astonishment is all the greater, and the disappointment the keener, that the report, far from confirming these stories, really gives the lie to them. Dealers were so dissatisfied with it that they banged the price without a moment's hesitation, and there was a great scurry to sell. They could define easily enough what the public, the Press, and the shareholders would think of such a document. It is written by the manager, Mr. C. E. Parsons, and is dated July 21. Speaking of the belauded Eldorado property, he says there are in the mine some 50,239 tons, averaging 17½ dwts. On the surface there are more than 6,000 tons, the value of which is hard to arrive at, as it is intermixed with waste, but estimating it as worth 10 dwts. to the ton, it makes a total of 56,239 tons of 16½-dwt. ore, exclusive of values and widths revealed by cross-cuts and any parallel streaks. And this is all the ore available since the "discovery" was made! Instead of the ore being fabulously rich, it assays only an average of 16½ dwts., or is guessed at that, and we know from experience how misleading assays are. No wonder Mr. Abe Bailey and the other vendors have ever been anxious to part with their paper for the public's cash. For what profits can be expected from this small quantity of ore to justify the prices at which thousands of these shares have been sold to the foolish? An important question also to be decided is, will the cost of getting this ore exceed its value when got? We have no means of judging this from the report. All that Mr. Parsons practically says is that he anticipates low

costs all round, but his anticipations may never be realised. "We have sufficient ore for two years," says he, but there would not be enough for one year if a sufficient quantity were treated. The 60,000 tons could even be made to last ten years by treating only 6,000 tons a year, but it would not earn profits. If small quantities only are treated, then profits must be small and dividends will be impossible. So much for the Eldorado. The report on the Rowdy Boys claim is even briefer and less definite or satisfactory. The No. 2 incline shaft has been sunk to 96 ft.; at 60 ft. the best results were obtained, but at depth the grim news is told that the ground is unpayable! What a commentary this on all we have heard of the Rowdy Boys! In other shafts likewise either poor ground has been met with or cross-cutting has exposed nothing of value. "I may mention"—as though it were quite a casual remark—"that portion of the Rowdy Boys is still giving good values, though not high-grade—still it is persistent—has a favourable appearance, i.e., its definition is good." And in conclusion:—"Along the whole length of the Rowdy Boys the existence of Banket series has been proved, and while the average values are low, here and there the results are distinctly encouraging." This is all! But is it not enough for the wise? Is it not enough, once and for all, to settle the Banket company? This is all we get after two or three years of patient waiting! It is simply a condemnation of the property, not a conscious one, but damnation none the less. We cannot deeply sympathise with those who have bought at top prices, for they have been warned loudly and often enough. Nor can we pity those poor fellows who considered us better dead rather than living to give to readers that advice which is now thoroughly justified by events. Did the market or gamblers think there was any gleam of hope in the report or in the prospects would they have sold out in such a hurry and with such fright? Now even the credulous can understand what we have seen all along, why the directors have been so reluctant to publish authentic reports. We may be sure the best has been said that could be said, but let us be as sanguine as we may, what justification is there for the shadowiest hope?

Two Company Cases in 1905.

The points raised by J. T. Beckett, Limited, and Hobbs Bros., Limited, the two cases in question, are far from novel; indeed, they have been and are only too common, and yet the moral underlying the facts cannot be too often repeated. J. T. Beckett, Limited, was one of those pernicious products of the Companies Acts known as a "one-man company," and from its inception was created with the evident intention of perpetrating some kind of imposition on the creditors. The promoter, who was also the vendor, fixed the purchase price at £7,000, of which £3,000 was to be paid by debentures containing a floating charge on all assets, present and future, of the company, and the balance of £4,000 in shares. Beyond the shares issued to the vendor only the usual seven were issued, making the nominal capital £4,007, of which, needless to say, none represented actual cash, not even the odd £7. The amount of debentures taken by the vendor as part of the purchase price was, the Official Receiver reported, considerably in excess of the assets, existing or probable, of the concern, so that, whatever happened, the vendor remained master of the situation. In other words, it was a case of "Heads I win, tails you lose." But the addition of the magical word "limited" did not work wonders in the way of enhanced prosperity, and the first year of the company's existence showed a profit of only £144, converted in the second into a loss of £750, while in the third and last there was a further loss of £250. Then the end came, and with it a bitter awakening for the creditors. After the winding-up order was made the vendor's statement of affairs showed that there were 60 unsecured creditors, whose total claims amounted to £2,382, and assets estimated to produce £1,655. None of these assets, however, were available to satisfy the liabilities even in part, as the vendor, by virtue of his debentures, collared the lot, even the unpaid goods supplied by the wretched creditors going to swell the return to him.

The evil results in a case of this description are only too obvious, yet it is difficult to suggest any means by which a remedy can be introduced without unduly interfering with legitimate business. To abolish floating charges altogether would, as the Company Law Amendment Committee recognise, be far too drastic, and the majority of the members thought that no middle course could be found between abolition and the present condition of affairs. Because of this the Committee in their report did not recommend that floating charges should be made illegal, since, owing to the widespread use of them, honestly and dishonestly, they had come to form an essential part of our commercial system, and heroic measures might only result in greater evil. Though abolition might, and probably would, prove to be too revolutionary, still, something would be done to check the evil if a vendor or promoter were prohibited under any circumstances from taking debentures with a floating charge on the assets, existing and future, as part of his purchase money. Further floating charges should only be given for a valuable consideration, and a description of this should be filed with the Registrar of Joint Stock Companies, setting out the whole particulars. Creditors would then have only themselves to blame if they suffered loss through debenture-holders seizing the whole of the assets, since by exercising a little common prudence and searching the registers, a thing seldom done in these days, they could easily ascertain the approximate position of a company's indebtedness to mortgagees with over-riding rights.

In the case of Hobbs Bros., Limited, everything turned upon false memoranda, stating that outstanding debentures had been satisfied, when, as a matter of fact, they had not. The object of these statements naturally was to obtain a further loan, and they were of necessity filed at Somerset House. Here no creditors, however prudent, could have discovered the fraud which appears to have been to some extent assisted by the wide terms of the official form of satisfaction. At any rate, whether this was the case or not, the Board of Trade have since amended their form, and made it necessary that such form shall be verified by the statutory declaration of one of the directors and the secretary of the company, with the view of preventing a repetition of the trick.

Hong Kong and Shanghai Banking Corporation.

The report of this great Eastern bank for the half-year ended June 30 last may be said to represent a return to normal business surroundings. A year ago the aggregate figures of the balance-sheet were swollen to a total of $313,950,000, owing to the important financial operations of the Japanese Government participated in by this bank. These operations involved a large increase in the liabilities on deposits, but the money raised on loan has all been transferred to the account of the Japanese Government in the interval, and, therefore, deposits are now back to normal figures. Thus the liabilities on current account balances have come down from $76,301,000 to $68,610,000, a decrease of $7,691,000 compared with the figures of June 30, 1905. Current accounts, gold, moreover, are down by $25,369,000 to $39,480,000, while fixed deposits and silver, which a year ago amounted to $50,985,000, are now $49,822,000. There is also a decrease expressed in dollars of about $6,175,000 in the fixed deposits in gold, which are now entered at $50,327,000, but the sterling amount of these deposits is slightly up at £5,296,000. This apparent divergence is doubtless attributable to the rise in the exchange value of the dollar. Altogether the balance-sheet aggregate is brought down by $47,623,000 to $266,327,000, and there are necessarily corresponding decreases on the assets side of the account, bills discounted, loans, and

credit being less by $10,258,000 at $93,956,000, and bills receivable less by $26,067,000 at $100,839,000. There is also a decrease of $3,122,000 in the cash in hand at $41,102,000. Among the liabilities the note circulation is also lower by $1,673,000 at $14,320,000, but the coin lodged with the Hong Kong Government against note circulation in excess of $10,000,000 remains as before at $8,500,000, and the position of the sterling reserve is unaltered, the company's large holding of £598,000 in Consols, as part of it, being entered in the balance-sheet at the low figure of 82.

In spite of the diminution in the working resources of the bank, the profits appear to have been as substantial as ever, and the directors are able to declare a dividend of £1 15s. per share, or the same as that paid a year ago, which was 5s. per share up compared with the preceding year. Not only is this done, but the balance carried forward of $1,712,472 is slightly higher, that brought in being only $1,699,777. One reason for this remarkable prosperity is no doubt to be found in the improved value of the silver dollar, which is shown in the smaller amount required to enable the directors to make up the exchange value of the dollar to 4s. 6d., the rate at which the dividend is paid in sterling. To do this for the past half-year requires at $695,425 about $176,000 less than was necessary a year ago. And not only does the board pay the same dividend and carry a larger balance forward, but it increases the contribution to the silver reserve fund by $250,000 compared with that set aside last year, which means an addition this time of $750,000. Thanks to this, the silver reserve, which a year ago was only $9,500,000, is now raised to $10,250,000, and together with the sterling reserve of $10,000,000, taking the dollar for this purpose at 2s., gives the bank a magnificent bulwark of $20,250,000, or more than twice the amount of the paid-up capital. The exhibit is thus an excellent one, giving comfortable assurance of maintained prosperity.

PARAGUAY.

Some time ago the Buenos Ayres *Standard* published a glowing account of contemplated changes in the position of the Paraguay Central Railway. It has been worked hitherto on philanthropic lines, carrying passengers and goods for next to nothing, and generally behaving in an extremely benevolent manner. This is to be changed, and henceforth the railway is to be made to pay. It is even said—and we never heard of any such event before—that merchants and owners of forests have petitioned to have rates increased, so that money may be provided to pay for the rolling stock, extensions and improvements necessary for the conduct of the traffic. And some good has already been done, for the small nett revenues accruing after all the neglect and generosity of the management have been utilised to improve the property, and a little further expenditure of money may bring it into a state of efficiency productive of revenue. Paraguay indeed offers many chances to the speculative investor, and the wonder is it has not been laid hold of long before now. Almost as pleasant an account of the resources of the country as the Buenos Ayres *Standard* gives is to be found in the report of Mr. Cecil Gosling, our Chargé d'Affaires at Asuncion, just issued by the Foreign Office. What is wanted is a working population, in order to bring the wealth of the country into bearing and to market. Its resources would appear to be of the usual prodigal description—splendid land, capable of growing every description of tropical and sub-tropical produce, wide tracts of forest untouched by the axe and containing some of the finest hard woods in the world. There is no mention of gold, but wealth in the things such as Paraguay appears to possess is more permanent and valuable than the richest gold quartz the world can furnish. The country, however, suffers not merely from lack of labour, but from insufficiency of capital, from a desperately depreciated currency, and backwardness of every kind. It has no roads at all, and only about 150 miles of railway. Is all this going to be changed within the next few years? The indications are that it may be.

RUSSIAN ANARCHY.

Those who daily harrow their feelings by reading the accounts of Russian anarchy with its accompanying murders, wholesale and in detail, its courts-martial, its alleged hangings of young women, and all the other symptoms of incurable domestic confusion, will surely be thankful if they have never participated in Russian loans. At the bottom of the whole mischief lies the facility with which the autocracy has been able for so many years to draw money from the markets of Western Europe, and especially from the French people. Without these loans a Constitution would have been forced from the hands of the Tsar and his surroundings many years ago, and Russia, driven back upon her native resources, might to-day have been in the possession of a well ordered Government and of means of her own with which to bring her magnificent resources into bearing, and to work out her own salvation. There is no use bemoaning the past, but one cannot help insisting continually that the only efficient way by which those struggling for liberty throughout the Russian Empire can be helped from outside is by steadily and flatly refusing to advance any more loans to the Russian Government. The sooner that Government, as represented by the irresponsible bureaucracy and the military faction which controls the Tsar, is driven into insolvency, the better will it be for Russian liberties and for the future security of the Russian foreign creditor. The danger, indeed, is that if the present chaotic abnegation of all human rights and law continues, as it may do for several years more if fed with foreign gold, Russia will be reduced to such a state of savagery and economic impotence as will constitute her Government a helpless defaulter for perhaps a generation. At frequent intervals reports are circulated through the Press agencies to the effect that negotiations for further loans are in progress, or that new loans have been decreed by the Imperial Cabinet. In the present temper, however, of the public all over Western Europe we may be sure that no such loans can be floated abroad. The price of the scrip of the last European loan is itself sufficient to ward off any danger of this kind. Moods, however, change, and what we should like to see is some development of the moral sense amongst those who contract for and subscribe to all foreign loans. People should ask what the loans mean to the people on whom they are imposed before hurrying up with their cheques.

RAND AMALGAMATION SCHEMES.

They are coming along now at a great pace, for there seems to be a rivalry amongst the leading groups as to which shall be first in the field—not a very laudable competition. Last week we commented on the project conceived by the Consolidated Gold Fields family, whereby the South Geldenhuis Deep, the South Rose Deep, the Rand Victoria Mines, and the Rand Victoria East are to be fused in one undertaking. No more capital is wanted, we are told, and we can believe it—for the moment. But it will amaze us greatly if a scheme for raising more money is not launched by-and-bye. If cash were asked for now it might spoil the wedding, so better make sure of "yes" from the shareholders. Before details of this project are made known the Goerz group come forward with their proposed combine, foreshadowed in a vague way last November, when the chairman of the Geduld Proprietary Mines intimated the advisability of working the unfloated ground as one property, and without subfloating any portion of it. The proposal now launched is to amalgamate the Proprietary Company with its two subsidiaries—the North Geduld and the Central Geduld—because "we can work the whole ever so much cheaper, don't you know." Of the issued capitals of £325,000, in £1 shares, of each subsidiary, the parent concern holds 225,000 shares in each and these it intends generously to cancel. This leaves 200,000 shares in the aggregate held by other shareholders, and

for these 70,000 shares are to be issued ; in other words, a further 130,000 shares will be treated as waste paper. Thus the new company will have an issued capital of £490,100—whittled down from an aggregate of £1,050,000 issued—and will possess approximately £77,000 in cash. This drastic reduction of capital is to be approved of, but we may be sure the sacrifice would not be made if necessity did not compel. The companies were over-capitalised at the start, and the best thing we can now say about proposals like these is that facts so long dinned into people's minds through these columns are now beginning to be admitted by the hatchers and controllers. Besides, a slate cleaning of this kind prepares the way for a fresh series of capital creations, good for sundry pockets. This, we believe, is at the bottom of these amalgamation schemes. The magnates are now posing as thrifty men, men determined to make a shilling go as far as a couple of pounds went in the days of fortune-making. What those shareholders will think who will receive 35 shares for every 100, or a little over one for every three, we know not. They will have plenty of time to meditate upon it between now and October 31, when the meetings take place.

American Business Notes.

As they stand the figures of the New York Associated Banks for the week ended September 8 are staggering enough, and we have no doubt at all that the real situation at that date was considerably worse than the averages dealt with revealed. These showed a decrease of nearly $12,000,000 in loans and of no less than $27,843,000 in deposits, the West continuing to draw away its money for harvest purposes. Thanks to these withdrawals, there was a decline of $12,404,000 in the specie and of $4,004,000 in the legal tender currency held, so that the general reserve was reduced by $16,408,000 and the legal reserve of 25 per cent. of the liabilities on deposits by $6,961,000, the result being that such reserve was $6,577,000 below the statutory minimum on the average and for the whole of the banks. What this means in the case of individual banks we have no means of knowing, but on the 1st inst. no less than 25 banks out of the 54 in the New York Clearing-House showed reserves below their legal minimum, in some instances seriously below, and we do not see how the position is to be immediately retrieved because the banks are not able at one and the same time to meet the interior demands for currency, and to finance the blown-out stock markets or the capitalistic manipulations of the great financiers. The New York market is therefore in the throes of a crisis which might very easily develop into something irretrievably bad.

A movement has been started by merchants, jobbers, and manufacturers of the large centres in the United States to oppose the establishment by Congress of a parcels post system. The interests opposed to the plan have combined under the name of the Merchants' League of America, and headquarters in New York were opened on August 29. The League asserts that the agitation has been put on foot by the catalogue mail order firms, which are trying to put on the Government the bulk of the expense of delivering their goods to purchasers.

President Peabody, of the Mutual Life Insurance Company, has been on a trip in the Western States looking into the company's agencies. He is reported to have stated that the amount of new business during the present year would be about 90 millions of dollars, and next year, after the election of new trustees, and things had settled down, it would probably be 60 per cent. better.

A Life Policyholders' Association that has been started in the State of Ohio in connection with the New York Life Company has issued a pamphlet entitled "Who's Who in the New York Life." It contains a résumé of the disclosures before the Armstrong Committee in regard to the management of the New York Life, and prints a table showing "where millions of policyholders' money has gone." According to it, $6,097,700 of the company's funds was wasted, and improperly spent, and under the figures is printed, "and the surface has just been scratched." There are more than 40,000 members in the Ohio association, and the pamphlet is being sent to them and the policyholders of the company generally all over the country.

A decision by a judge of the Supreme Court of the State of New York, rendered August 30, obliges the Equitable Life Insurance Company and its directors to defend the suit brought against them by the State Attorney-General to compel an accounting as to the management and disposition of the funds and property of the company. The suit also demands that the directors be compelled to repay any of the society's money which may have been lost or wasted by a violation of the duties of the directors.

A Chicago report says that the Standard Oil Company has taken steps toward acquiring ownership of all the principal distilling plants in the United States. The chief reason given for this action of the Standard is the passage of the Bill by Congress at the end of its last session, exempting denaturised alcohol from excise duty. Experts employed by the Standard are said to have reported that this kind of alcohol cannot be manufactured cheap enough to compete seriously with gasolene, but that it can be used in the manufacture of mercerised cotton and other fabrics, and would be an exceedingly desirable product to control.

There was a time when the Standard Oil had a hide so thick that it seemed impenetrable to criticism. There are, however, symptoms that this is no longer the case, and that the persistent attacks from all quarters on Mr. John D. Rockefeller, his associates, and the institution with which his name is synonymous, are having their effect. The export trade of the company, according to one of its agents, has been so seriously prejudiced that a special appropriation of $500,000 has been made for a campaign of advertising in rebuttal of the statements circulated at home and abroad to the injury of the corporation, its head and directors. The foreign rivals of the Standard Oil have, it seems, been utilising the articles and cartoons against it to such good purpose that it is beginning to find it increasingly difficult to place its products abroad. As the power to compel the American public to pay it monopoly prices depends on its being able to work off its surplus products abroad, it is vital to "the Octopus," as the Standard Oil is commonly called, to keep its outlets clear. Failing that, there is bound to be a fall in price of all oil products in the United States, which, at no matter what cost, the Standard Oil is bound to avert.

It was currently understood in Wall Street that all the surplus money in hand and available having been used up in the speculation following on the rise in Pacific dividends, relief was to be asked for from the Secretary of the Treasury. A movement was under way, so latest mail advices state, on the part of "big banking interests" to make the market look scarce in order to force Mr. Shaw to "do something," arrangements having meanwhile been made abroad for gold which can be imported when it is needed. As an example of the consumption of money in some of the recent stock transactions in Wall Street, it took $17,500,000 more money to finance the transactions on August 30 in Union Pacific at 190 than would have been required to finance an equal amount of business at 140 in the first week of July. The effect was seen on August 31, when call money went up to 12 per cent.

The representatives of a number of Chicago and other meat packers called on the Secretary of Agriculture at Washington on August 30 to discuss the label requirements of the new food law. The object was to obtain a modification of the more stringent provisions, or a liberal interpretation of them. Mr. Wilson, however, refused to consent to any change which did not clearly state the material or combination of materials composing the contents of a can or package. The

elimination of certain advertising features on the labels also will be insisted on. The question of canned meats already in stock was also discussed, and it was arranged that a certain proportion should be opened and inspected, and if found up to standard would receive the Government label and certificate. At Chicago it has been found necessary to warn packers of all kinds of foodstuffs that not only the quality but the quantity of every package must be as described. A delay was given in which to meet the requirements of the law, after which prosecutions will be made against those offending.

The Federal grand jury, sitting at Jamestown, New York State, has indicted the Standard Oil Company and the New York Central Railroad for violation of the anti-rebate law. The indictment against the Standard Oil Company contains 123 counts, each constituting a separate offence. The Vermont Central Railroad, which is mixed up in the indictments, will be indicted under another jurisdiction.

Ten indictments, including 6,428 counts, were returned on August 27 at Chicago against the Standard Oil Company for violation of the anti-rebate law. This was the result of two weeks' investigation by two Federal grand juries, which also named several railway companies in connection with the matter, but made no recommendations as to proceedings against them. The possible fines that might be levied on the Standard Oil in the event of conviction on every count would be $125,560,000.

On August 28, 35 insurance companies of the 120 involved in the disaster at San Francisco had paid in the aggregate $55,103,863 up to that date. Some of the payments were particularly heavy. That of the Royal of Liverpool is stated at $3,804,000; the Hartford at $3,013,705; the New York Underwriters at $3,496,787; the Ætna of Hartford at $3,126,502; and the Liverpool and London and Globe at $3,721,258. Six other companies have paid upwards of $2,000,000 each, and the same number of others over a million each.

Mr. E. H. Harriman has notified the San Francisco office of the Southern Pacific that the work on the Cananea, Yaqui River, and Pacific Railroad from Alamos, Mexico, through Mazatlan to Tepic and San Marcas would soon be completed. The extension is being hurried because of the determination to open up that part of Mexico as a freight feeder to the Southern Pacific. Commercially and financially the three northwestern States of Mexico—Sonora, Chihuahua, and Durango—will practically be soon part of the United States.

Announcement was made on August 28 on the New York Stock Exchange that $28,842,000 of additional Chicago, Burlington, and Quincy Railroad, Illinois Division, 4 per cent. bonds, maturing in 1949, had been listed.

The statement of earnings for the fiscal year ended June 30 by the Atchison, Topeka, and Santa Fé Railroad shows that line to have kept well abreast of the other grain carrying railways in its increase of traffic and receipts during that period. Its gross earnings were far in excess of any previous year, and is attributed to the rapid growth of the West, and the way in which the company maintains and increases its rolling stock to meet the ever-expanding business coming to it. The expenditure for equipment per mile increased from $534.45 in 1897 to $1,314.19 in 1905, the total for the latter year being $10,914,864. The gross earnings of the company's system rose from $30,621,230 in 1897 to $78,044,347 in the present year, and the mileage increased from 6,443 miles in 1897 to 8,433 miles. There was some heavy loss in 1905 due to floods and the expenses incurred in caring for delayed passengers and for the use of other lines. Some prospect is nevertheless held out to the stockholders of an increase in the dividend on the common shares in the near future, as after the 5 per cent. dividend on the preferred stock, which amounts to $5,708,690, it is estimated that the common stock has earned from 11¼ to 11⅝ per cent. as compared with 5.92 per cent. in 1905.

The announced intention of the Australian Government to propose a law imposing drastic restrictions for the protection of Australian policy-holders in foreign life insurance companies is causing much comment in New York, as the three largest of the American companies are practically the only foreign companies doing business in Australia. The number of policies issued by them up to the present is 29,967, covering $55,964,750, on which the premiums amount to $2,238,590 annually.

The Missouri Pacific Railroad Company announces that it has made an arrangement with Messrs. Tailer and Co., of New York, to extend its third mortgage 7 per cent bonds, maturing November 1 of the present year and outstanding in the par account of $3,828,000, to July 1, 1938, with interest during the extended period at the rate of 4 per cent. per annum, payable semi-annually, on May 1 and November 1 of each year; interest and principal payable in gold, and the lien and mortgage now securing the bonds continuing and remaining unimpaired. The terms of extension are, that the bonds shall be presented at the office of the Mercantile Trust Company, of New York, on or before October 1, 1906, and the extension contracts and new coupon sheets will be attached to them, and a payment of $5 cash on each bond will be made. The six months' interest, due November 1, 1906, will be paid at the time of extension on surrender of the coupon representing the same.

Passing Events.

Sustained usage has made us familiar enough with the intentions of the Japanese Government to enable us to interpret that Reuter's message from Japan published in Wednesday's newspapers. It is to the effect that Mr. Takahashi, Vice-president of the Bank of Japan has started on another financial mission to Europe, and that this mission will embrace, amongst other purposes, the arrangement for the issue of the balance of the £50,000,000 4 per cent. loan created last year. This balance amounts to £25,000,000, and almost if not the whole of it will have to be devoted to the redemption of the £22,000,000 of short term Japanese 6 per cents. falling due next year. It is a perfectly legitimate operation, and one which we trust the Japanese Government will find the money markets of Europe and the United States in a position to carry through with success. It is in the interests of Japan's creditors that the loan should be successfully floated, because if these £25,000,000 can be sold on favourable terms sensible relief will be afforded to the Japanese Treasury by the consequent reduction of the charges for debt interest. If holders of the 6 per cents. could be persuaded to accept the new bonds at par the relief to Japanese revenue would amount to about £320,000 per annum. That is too much to hope for, but half that amount ought to be secured if Mr. Takahashi is not commissioned to raise additional debt, and if he "bides a wee." There was a talk recently of raising a loan of £8,000,000, to be devoted to railway and other development purposes in Manchuria, but we fear the markets of the West will not be in a favourable condition to subscribe for any new Japanese loans within at least the next 12 months.

Very pleasant was the task that Mr. Bent, the Premier and Treasurer of Victoria, had to perform in the Legislative Assembly of the colony on Tuesday last. Its past financial year brought a revenue of £7,803,958, or £658,205 more than the estimates. Excise gave £104,000, railways £275,000, and the colony's share of the revenue collected by the Commonwealth Government £190,000 more than was looked for. The railway revenue of the colony, moreover, showed a surplus of £169,000 over and above working expenses and interest on the capital. Expenditure came to £7,128,430, or slightly less than the estimate, so that the actual surplus for the year was £675,528, and of this £500,000 is to be applied in redemption of the deficit accumulated in past years.

Mr. Bent, moreover, pointed out that altogether £1,000,000 of this deficit had been wiped out, while another £1,000,000 had been set aside for railways and public works. The debt of the State, therefore, stands at £52,000,000, four-fifths of which is invested in railways. He went on to say that of the £4,000,000 of a maturing loan to be paid off next July, £500,000 will be provided from the redemption funds, while another £2,500,000 has been arranged for locally, leaving only £1,000,000 to be provided by a new issue of 3½ per cents. to be offered in the London market at par to holders of the securities falling due. With such strength in the financial position it may be possible to float the loan at that figure, especially if the exact psychological moment is hit upon, but it certainly could not be done now. The current year, however, appears to promise quite as well as the past one, although a revenue of £7,554,568 is looked for, or about £250,000 less than that just indicated in the year closed on June 30. Expenditure is to come within £4,343 of this, which seems rather a narrow margin, but possibly further economies may be effected, and meantime the colony is able to take its place alongside New South Wales as possessor of a substantial surplus. Long may its prosperity continue.

There will be difficulties in the way of the acquisition of Cuba by the United States. Events appear to be shaping that way, and the high-handed action of President Palma is not likely to conduce to internal peace. The United States, moreover, is sending a ship of war to Havana, and the Washington Government is very likely making other preparations in order to put an end to the civil strife. People here interested in Cuban railways are no doubt comforting themselves with the reflection that when the worst comes to the worst America in its own interests will enforce peace, but we are not sure that capital in Cuba will be best protected by any such action. The Washington Government has lately, in the person of Mr. Root, one of its members, been diligently courting the goodwill of Latin America. That gentleman has been touring through all the capitals of South American States and talking sweet sentiments of unity and concord. His words would find a startling commentary in the stealing of Cuba, and internal disorders would be certain to continually arise in the island to disturb its peace and inflame all Central and South America. Better leave President Palma alone to cope with his malcontents and to learn how to govern by bitter experience than to make any rash experiment of the kind talked about.

We are not at all thrilled by the news that an expedition has discovered gold in Canada on the Peace River, about 40 miles from Fort St. John. Some years ago we heard of gold discoveries at a place called Klondyke, a name that many of our readers will probably recall. This Fort St. John, we are told, will be found in 121 west longitude and 56 north latitude, so that anyone who cares to take the journey should have no difficulty in finding the place. Further down the river is a Hudson's Bay post, and the scene of the new gold discovery is "within the sphere of Hudson's Bay influence." What good news for the gamblers in "Bays"! With its help they may succeed in getting out of the pockets of the public more gold than they could hope to get from the Peace River territory. For in the event of gold or any other mineral being discovered on the Hudson's Bay Company's land, the company may claim the full benefit of the discovery. This may be good enough to base a "rig" on, but not good enough for prudent men, for who knows how much gold there is or how it got there? And in Canada itself there is any quantity of gold without going to the Peace River, only it usually costs too much to get it.

Surely we are not in for a mining boom in Tierra del Fuego? Some of us want a boom badly enough, for we are decidedly hard up, but as old goldfields have gone quite out of fashion we know not where to look for an enticing new one. Is there the faintest hope that we shall find it in Tierra del Fuego? Mr. C. Milward, Vice-Consul at Punta Arenas, writes that probably in the near future more will be heard of the gold-bearing lands of this uncivilised spot. There have been no new dredges actually started during the past year, but five have arrived, and are being put up with the greatest despatch, so that in the course of the present year there should be at least six dredges at work. "The thousands of claims that have been taken up in the past 12 months bear testimony to the boom there has been in the gold industry." We are surprised to hear it, and feel sure many people will share in the feeling. A "boom" in Tierra del Fuego! Well, well, but the echo of it has not reached this country. But the news may be good for promoters, if on the strength of it they can float without delay a few company bubbles.

Some very rich specimens of tin ore have recently been obtained at Solomon's Temple Farm, adjoining the Transvaal Consolidated Lands Company's property, and the matter has been arousing general interest. So says "Commercial Intelligence." But surely these tin discoveries are ancient news, and have proved to be of little or no value? Anyway, it appears that this farm, which is several thousand acres in extent, has been taken up by Pietermaritzburg gentlemen, who are forming a company named the Solomon's Temple Mines, Limited, with a capital of £60,000, privately subscribed. We do not think, however, the title will catch on, for attempts have recently been made to generate a boom in Transvaal tin within the faintest hopes of success. That being so, these Pietermaritzburg gentlemen will probably be allowed to exploit the property alone and at their leisure, even though, as the *South African Mines* says, prospecting work has revealed the presence of a considerable body of finely disseminated cassiterite, bearing a marked resemblance to ores worked in Cornish mines. The public would probably prefer to put their money into Cornish mines if they are at all attracted by tin mining prospects.

In Spain, it appears, there is an anxiety to emulate the United Kingdom in that grand achievement—the formation of a Salt Trust. In Spain, probably, as in England, the nation is becoming enervated by indulging too greedily in this cheap luxury, which makes the food so palatable that gormandising has become a vice even amongst those who live on charity or the smiles of the rich. To make them eschew this pungent delicacy by raising its price is the brilliant conception of impecunious Spaniards, as it is the glorious idea of ruined undertakings in this country. By mulcting the poor they shall become rich; at any rate, aspire to riches. According to the Madrid correspondent of *Le Temps*, this Spanish combine is to be effected if the sanction of the Government can be secured. There are many trusts and syndicates in existence, says the same writer, whose operations have brought them into unpopularity. And who can feel surprised at this? The Sugar Trust and others only maintain themselves by a constant attempt to crush out those producers who remain outside the combinations. And this is precisely what would happen in this country if the Birmingham prophet could only have his own way—his protective policy would foster this kind of thing. It is reported that M. Navarro Revenher is anything but a partisan of the trusts, and is little inclined to renew many of the expiring monopolies at present existing. The initiation of the projected Salt Trust may, therefore, encounter serious obstacles.

An interesting article on the position of the Cleveland pig-iron industry, written by one engaged in the trade, was published in the *Financial Times* a week ago. It is no news to readers of this Review to learn that this industry has for months past been improving so rapidly that it is many a year since its condition was so flourishing. The price of No. 3 Cleveland pig-iron has risen so rapidly that latterly as much as 55s. per ton, one month, has been paid. Thus within 16 months the price to which it was hoisted in the corner of May, 1905, has been repeated, not this time by gambling,

but by legitimate trade activity. The advance has continued, with some slight fluctuations, for a further six weeks, and prices have gone up by nearly 3s. a ton, and outside operators are as few and as far between as ever. Future prices undeniably depend upon the demand from the Continent and the reductions of the stocks in the public stores. The correspondent does not think the depletion of the huge warehoused stocks at Middlesbrough has been altogether satisfactory. At the end of July the stocks of Cleveland No. 3 totalled 600,000 tons, and on September 4 they were returned at 589,000 tons, a reduction of only 11,000 tons in five weeks. The obvious inference is that it will take a long time at this rate to bring the stocks down to their old proportions. That consumption is, however, on a very large scale is undoubted. Foreign shipments particularly are greatly increasing, and these sustain hopes of a maintenance and even an expansion of the existing activity and buoyancy.

In their great effort to depress prices in the Kaffir Circus the "bears" have, amongst other inventions, asserted that the bosses have determined to shut down more than one mine. Though such stories have been promptly denied, there is nothing ludicrous or far-fetched in them, for there is no knowing to what lengths vindictiveness will take the magnates. There are indications, however, that even they now see the futility of this manœuvre to frighten investors and terrorise the Government into abject acquiescence in their selfish schemes. They have played at the game for all they were worth, and have gained nothing by it. Their supreme object now is to woo back to the old allegiance those whom they have ruthlessly robbed, whose confidence they have betrayed over and over again. Hence the frenzied effort to hoist prices, that the temptation to buy and become wealthy might prove irresistible. It has, however, been resisted pretty well, and we are almost sorry for the wilder among the cosmopolite band. We may have to record their petitions in bankruptcy soon. "Shut down"! We should just think so; many things are about to suffer that fate.

From the annual return of the Department of Agriculture it appears that the total area in Ireland under flax this year is 55,171 acres, compared with 45,168 acres in 1905, or an increase of 19.5 per cent. Ulster, of course, leads the way, and indeed contributes the whole of the increase, since the Munster acreage remains at precisely the same figure as last year, while Connaught and Leinster have lessened their areas of cultivation. With regard to the Belgian crop advices from Ghent state that owing to the favourable weather for the saving and steeping of the flax a large proportion of the 1906 crop will be on the market during the present season.

Statistics have just been published of the world's coal production in 1905, and the figures show a considerable increase upon those for the preceding year. They aggregated no less than 929,623,000 tons, compared with 867,021,000 tons, equal to an improvement of 7¼ per cent. All the great producing countries have contributed to this advance, the two principal exceptions being Belgium and Russia. The United States occupy the premier position, their output rising from 318,276,000 tons to 352,694,000 tons, a gain of 6¼ per cent. British mines stand second position as producers, and as an exporter this country takes precedence of America. From Great Britain's collieries the output was 239,889,000 tons in comparison with 236,147,000 tons, an advance of 1½ per cent. Germany comes third with 173,664,000 tons against 169,448,000 tons, an increase of 2½ per cent. There were also goodly increases from India, Japan, Austria-Hungary, France, Canada, and South Africa. Spain practically stood still, whilst there was a falling off in the returns from New South Wales and New Zealand. The decline in Russia is obviously due to the turmoil in that unhappy country, but no such explanation can be given for the fall in Belgium's output from 23,380,000 tons to 21,844,000 tons.

Under the new Nitrate Combination the details of the quotas show that whilst the largest aggregate share is held by 30 English companies, who are entitled to 19,388,786 quintals, the most important individual producers are Messrs. Granja and Co., whose seven existing works claim 4,599,333 quintals. This firm is the owner of the port of Caleta Coloso and the railway which serves the Aguas Blancas nitrate district, in which four new oficinas have recently commenced operations and nine others are under constuction. The second largest producer is the German Nitrate Company, of Hamburg, whose participation is 3,594,005 quintals. It has sold to the recently-formed Tarapacá and Tocopilla Nitrate Company six of its older oficinas, retaining two modern ones, with a joint quota of 2,320,000 quintals. Thirdly comes the H. B. Sloman Company, another Hamburg concern, with 3,039,000 quintals. The share of eight Chilian companies now working is 7,707,544 quintals, whilst 16 others have been allotted initial quotas totalling 11,950,000 quintals not included in the current combination year's export total, as the works are not yet completed. The balance of 9,275,290 quintals is distributed amongst a large number of Italian, German, Austrian, and American oficinas, the French not being at present represented. In answer to the report that the Chilian Government intended to raise the duty on nitrate, the Chilian Chargé d'Affaires received a telegram from the Minister for Foreign Affairs at Santiago, as follows:—"Publish the fact that the Government of Chili has not thought, nor does it think, of raising the duties on nitrate."

According to the most recent advices from Johannesburg the number of coolies at work on the Rand mines on the last day of July was 52,203. During the following month the s.s. *Indravelli* landed 1,754, but the total was diminished by 76 deaths, 40 repatriated, and six "struck off the strength." Thus the aggregate at the end of August was 53,835. One day this week 163 recently-imported Cape coloured labourers employed on the New Primrose mine were arrested for refusing to work. They demanded an increased wage, which at present averages 3s. 6d. a day. The labourers alleged that their agreements with the Cape recruiting officers were not fulfilled, so they wished to give a month's notice and return to the Cape. When the case was tried they were discharged with a caution.

A new steel combine is said to have been brought into existence in this country, and great things are prophesied of it. Its organisers have joined hands with the steel producers of the United States, which does not sound very well, and the whole story prompts doubts as to the healthy position of our home trade. Why should such steps be necessary if business is as good as it appears and profits satisfactory? The only purpose of combinations is to increase profits at the expense of the consumer.

The fact that Sir Robert Hart is permitted by the Peking Government to retain his position as Inspector-General of the Maritime Customs must not induce the public here to conclude that all trouble over that service is at an end. On the contrary, difficulties are only temporarily staved off, and at any moment acute differences of opinion may manifest themselves between the Chinese Government and the representatives of foreign Powers. We sympathise fully with the desire of Chinese statesmen to get the mastery in their own house, and should not have a word to say against the displacement of foreigners by native officials in the Customs' service were it not that China has given such a hold over her resources to the foreign creditor. While her debts raised abroad remain unpaid we fear European Powers must insist upon the maintenance of foreign control over the collection of that portion of the Imperial revenue which has been definitely mortgaged to meet interest and redemption charges upon the loans. On this point, therefore, we may expect Sir Edward Grey to stand firm, and to make such representations to the Government of Peking when neces-

sity arises as will prevent any damage to the credit of China abroad.

That seems a bright idea of Senor Celevin Pera to clap a tax upon the gross receipts of railways in Argentina in order to raise money with which to expropriate them within a period of 60 years. How this worthy politician arrives at the conclusion that such a tax, a mere fraction of a paper dollar per cent., would within that time provide upwards of £160,000,000 in gold we shall not try to discover, but the proposition may be a symptom of more to come. The railways, in other words, will do well to entrench themselves in the good-will of the people by their liberality lest much more dangerous doctrines about expropriation begin to find countenance.

Critical Index To New Investments.

Harrismith Corporation 5 per Cent. Loan.

Applications are invited by the Standard Bank of South Africa, as agent for the above corporation, for £45,100 5 per cent. stock at par, of which £15,100 is the balance of a loan of £38,000 created in August, 1903, and £30,000 is a new loan authorised in March last. Out of the proceeds of this issue £15,100 will be devoted to the repayment of that sum which has been expended on electric light, waterworks, and street improvements, £27,000 will be spent on new municipal buildings, including town hall and market buildings, and £3,000 on the construction, jointly with the Government of the Orange River Colony, of a bridge over the Wilge River. On December 31 last the indebtedness of the corporation was only £57,626, while the principal assets were valued at £94,525, and the official valuation of the immovable property liable to rates was raised from £424,604 for 1905 to £441,879 for 1906. The actual revenue and expenditure for the years from 1901 to 1906 are set out in detail, and show a healthy state of affairs.

Tynemouth Gas Company.

Tenders will be received on September 15 for an issue of £15,000 new ordinary stock of this company, which supplies gas to the whole of the borough of Tynemouth and the urban districts of Whitley, Monkseaton, New York, and Murton. The stock, which is offered at a minimum price of 106½ per cent., will rank, when paid up, with the existing ordinary stock, amounting to £193,742, and will be entitled to a maximum cumulative dividend at the rate of 5 per cent. per annum. Steady progress is shown by the records of the company, the sales having risen from 257,947,900 cubic feet in 1896 to 437,129,000 cubic feet in 1905, and the maximum dividend has been paid every year without exception since 1866. The new stock should therefore be worth picking up if it can be got at anything near the minimum fixed.

NEXT WEEK'S MEETINGS.

Tuesday, September 18.

Caledonian Railway.—Glasgow, 1 p.m.
Callander and Oban Railway.—Glasgow, 3.30 p.m.
Glasgow and Renfrew Railway.—Glasgow, 3 p.m.
Glasgow and South-Western Railway.—Glasgow, noon.
Great North of Scotland Railway.—Aberdeen, noon.

Wednesday, September 19.

Associated Portland Cement Manufacturers.—Winchester House, noon.

Thursday, September 20.

Bank of England.—Bank, noon.
Buenos Ayres Cedula.—Winchester House, 2.30 p.m.
North British Railway.—Edinburgh, 12.30 p.m.

Friday, September 21.

Burmah Oil.—Glasgow, noon.
Leeds and Liverpool Canal.—Liverpool, noon.

The Bank of British North America has opened a branch at Darlingford, Manitoba.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and September 8, 1906:—

Revenue and Other Receipts.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 8, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Sept. 9, 1905.
	£	£	£
Balances, April 1:			
Bank of England	—	9,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369
		10,451,487	7,430,278
Revenue.			
Customs	32,230,000	14,750,000	14,747,000
Excise	30,200,000	12,418,000	12,449,000
Estate, &c., Duties	13,200,000	6,678,000	6,192,000
Stamps	8,150,000	3,314,000	3,449,000
Land Tax and House Duty	2,650,000	350,000	400,000

Total		66,342,117	68,753,921

Treasury, September 11, 1906.

Queensland Gold Returns.—For the month of August the returns from the various Queensland gold mining districts were:—Charters Towers, tons crushed 22,500, yield 17,900 ozs.; Croydon, 8,600 tons, 3,600 ozs.; Gympie, 18,100 tons, 7,900 ozs.; Mount Morgan, 20,500 tons, 9,200 ozs., with 3,300 from copper ores; Ravenswood, crushed 2,000 tons, yield 2,400 ozs.; other fields, 4,100 tons, and 2,500 ozs.; alluvial 200 ozs., making a total of 47,000 ozs.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended September 7, $4,054, increase $520.

Argentine North Eastern.—Traffic receipts for week ended August 10, $19,719, increase $3,284; aggregate from January 1, $621,542, increase $60,073.

Assam Bengal.—Traffic receipts for week ended August 11, Rs. 72,303, increase Rs. 12,071; aggregate from July 1, Rs. 4,27,293, increase Rs. 65,459.

Canadian Northern Railway.—Traffic receipts for week ending September 7, $144,200, increase $70,800; total from July 1, $1,342,900, increase $516,500.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 11, Rs. 16,410, decrease Rs. 5,302.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 1st week of September, $16,816, decrease $549; aggregate from January 1, $636,964, increase $91,606.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 11, Rs. 16,071, increase Rs. 7,808.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 31 amounted to $101,811.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending September 8, £1,174, increase £36; aggregate from July 1, £11,602, decrease £18.

Cockermouth and Keswick Railway.—Receipts for week ending September 8, £1,013, increase £113; aggregate from July 1, £11,116 increase £580.

East London Railway.—Traffic receipts for June, £4,017, decrease £197.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 8, £327, decrease £29; aggregate from July 1, £3,009, increase £145.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending September 5, £1,136, increase £358; aggregate from January 1, £29,972, increase £5,437.

Blessington and Poulaphouca. — Traffic receipts for week ending September 5, £30, decrease £7; aggregate from July 1, £377, increase £58.

Bristol Tramways and Carriage.—Traffic receipts for week ending September 7, £5,608, increase £493; aggregate from July 1, £56,080, increase £1,946.

British Electric Traction.—Receipts of all the Associated Companies for the week ending September 7, £32,698, increase £1,764; total increase from January 1, £117,242; 439¾ miles, against 430½.

Burnley Corporation.—Traffic receipts for week ending September 8, £1,325, increase £264; aggregate from July 1, £12,666, increase £1,143.

Dublin and Blessington.— Traffic receipts for week ending September 5, £172, decrease £8; aggregate from July 1, £1,827, increase £37.

Dublin and Lucan.—Traffic receipts for week ending September 7, £144, decrease £10; aggregate from July 1, £1,466, decrease £56.

Dublin United.—Traffic receipts for week ending September 7, £6,225, increase £948; aggregate from July 1, £58,988, increase £3,177.

Edinburgh and District. — Traffic receipts for week ending September 8, £5,312, increase £617; aggregate from January 1, 1906, £179,565, increase £5,089.

Hastings and District. — Traffic receipts for week ending September 6, £1,367.

Isle of Thanet.—Traffic receipts for week ending September 8, £1,608, increase £275; aggregate from October 1, £29,354, decrease £285.

London County Council.—Traffic receipts for week ending September 1, £26,568, increase £12,041; aggregate from April 1, £584,423, increase £248,815. Miles 98 against 51½.

London General Omnibus.—Traffic receipts for week ending September 8, £23,032, increase £336; aggregate from July 1, £237,565, decrease £6,498.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending September 8, £3,862, increase £2,667.

London Road Car.—Traffic receipts for week ending September 8, £7,884, increase £540; aggregate from July 1, £81,659, increase £1,058.

London United, Traffic receipts for week ending September 7, £7,439, increase £1,213; aggregate from January 1 £227,503, increase £15,315.

Rossendale Valley.—Traffic receipts for week ending September 7, £239, increase £37; aggregate from July 1 £2,076, increase £39.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 9, £872, increase £119; aggregate from January 1, £30,167.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 9, £15,317, increase £1,534; aggregate from January 1, £533,497, increase £58,482.

Barcelona. — Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for July, $38,523, increase $3,600. Nett earnings from July 1 to July 31, $48,059, increase $7,669.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending September 2, £3,832, decrease £56; aggregate from January 1, £125,093, increase £6,663.

Buenos Ayres Electric. — Traffic receipts for week ending August 11, £1,443, increase £176; aggregate from January 1, £43,462, increase £7,401.

Buenos Ayres Grand National.—Traffic receipts for month of August, $293,700.

Calcutta. — Traffic receipts for week ending September 8, Rs. 45,250, increase Rs. 794; aggregate from July 1, Rs. 4,38,435, increase Rs. 12,225.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,708, decrease £222. Total from January 1, £35,223, increase £11,310.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid. — Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3½ per cent. on September 13.)

Norfolk House, Friday Evening.

The expected has happened, and with a Bank rate at 4 per cent. the market is perhaps more calm. An advance was to be expected in any case this autumn, and it has only taken place a fortnight before the same move was made last year, but the step might have been postponed until later in the season but for the strong demand for gold from New York. This caused an export of £3,137,000, all withdrawn from the Bank's stock within its week ended on Wednesday, and another £400,000 went yesterday. If the demand from the United States is not at an end, and some allege that another £5,000,000 or more has yet to go, we may expect a 5 per cent. rate at no distant date. Apart, however, from the New York demand the position of the Bank of England does not give much cause for alarm. It is not particularly strong, but, on the other hand, its stock of metal is not far below the figure of this time last year, and if only ordinary requirements had to be met the market might worry through the year under a 4 per cent. Bank rate. It must not, however, be forgotten that the domestic requirements in metallic currency are certain to be heavy towards the end of the present year. Each December between £3,000,000 and £4,000,000 in notes and coin is sucked into the active circulation. If in addition to this internal drain the Bank has also to find some £5,000,000 or £6,000,000 over and above the supplies of new metal coming in from abroad to meet foreign demands, a 5 per cent. rate would probably be forced upon it before the end of the year. It cannot indeed continue to lose gold much longer, even at the rate of £500,000 a week, without bringing a higher rate upon us.

There is, however, consolation in the fact that the world's supply of gold available for credit purposes is being added to at the average rate of quite £1,000,000 a week. The entire output of gold in the current year will probably amount to quite £70,000,000, but a certain proportion of that is always absorbed by the arts and manufactures. Making ample allowance for any such wastage there still remains the amount named, which in one form or another is week by week made available somewhere for the purpose of propping credit in money markets. Our share of this supply from the South African mines may be put at about £500,000 a week, and even if this is all absorbed by foreign buyers as well as the surplus from Australia we ought to be able to escape a 5 per cent. Bank rate and still to meet usual demands for the metal from various parts of the world and domestic requirements as well. Our safeguard, indeed, is in the new gold, and but for the liberal supplies thereof these last three years we might already have had more than one panic or deadlock in the credit market approaching a panic. Will the new gold save us this year? That is the question, and it is one nobody can answer with dogmatism. We may hope that it will, but cannot be sure. The best anyone can say is that the new gold will certainly mitigate if it does not wholly avert a state of crisis this winter in European money markets, but at best it will be a state of semi-crisis.

Between the middle of September, 1905, and the end of the year the stock of coin and bullion in the Bank of England fell off by nearly £7,000,000, of which fully £4,000,000 were accounted for by the increase in the internal circulation, the balance going abroad. And the foreign demand arose in spite of the fact that upwards of £3,500,000 in gold was received by the Bank within the same time, and that the pressure upon its resources was relieved by Australian gold intercepted on its way to London, and by the supplies coming in from the mines, sold each week in the open market and not accounted for in the Bank return. If the exports are larger during the remainder of this year than they were last year, and if the domestic requirements are as great, which they probably will be, then it hardly seems possible that we can escape another advance in the Bank rate. The best way to avert it may be to "play up to it."

Nervous credit and stock jobbers comforted themselves in the middle of the week by the oft-revived story of help from the Bank of France. It was once again going to lend £3,000,000—to finance the Egyptian crops; to allow eagles in its stock to go to the United States, and any way it had 500,000 sovereigns or more lying at Marseilles which could be sent to Egypt. There is probably little or no truth in any of these stories, and assuredly the Bank of France is not in a position to lend us gold or to allow any important amount of its stock of the metal to be sold for export. Nor does the Paris cheque indicate that an operation of the kind would be easy, let alone remunerative. The cheque has not risen at all in consonance with the advance in the Bank of England rate, but came to-night weaker, if anything, than it was yesterday. So the London market will have to depend upon its own resources until something occurs to drive it to extremity. After hope, fear. No sooner was the Bank of France story discredited than the market took to alarming itself with tales of "the Bank borrowing," if not directly, then by absorbing Japanese balances. The tale seems to be as untrue as that other circulated this afternoon of "£800,000 out to New York." The Bank does not need to borrow, but money was dear to-day, indicating that balances were being somehow made scarce, and, in fact, two joint-stock banks at least were drawing off money to send to the provinces. Call loans therefore occasionally touched 4½ per cent., and were never less than 3½ per cent., generally 4 per cent. Banks also got 3¼ per cent. on seven day money without difficulty.

As for discounts, they remain difficult. In the early part of the week bill brokers were unwilling to take remitted paper of any usance under 3½ per cent., often they talked of 3¾ and 3⅞ per cent., and on Wednesday they sometimes asked 4¼ per cent. on six months' bank bills. So firm, indeed, was the open market that after the Bank rate did go up scarcely any change took place in current quotations, and we may give 3⅞ to 4 per cent. as the rate on bank paper of all dates up to this afternoon, when some leading houses quoted 4 per cent. as a minimum. Except in the finest bills, business was difficult under 4 per cent. at any time, and the Bank accordingly did a quite moderate business to-day in both discounts and loans. Paper running over three months' usance was often refused at 4 per cent., and some houses asked 4¼ per cent. on four and six months' bills. Even when it became known that no gold had gone to New York, there was no weakening, for everybody expects further withdrawals. Hence the exaggerated rumours current.

Nothing excites remark in this week's Bank return, which, however, showed that the open market had to bear the brunt of the whole drain of gold. £3,137,000 in the metal was withdrawn for export, and other deposits were £3,178,000 down. The nett loss of gold,

however, was only £2,965,000, because a little came back from the internal circulation. Next week's calls aggregate about £1,106,000, the heaviest being £1,050,000 due on Irish Land stock next Wednesday. Other calls are—on Monday £24,500 on British Guiana stock, on Friday £6,000 on Tasmanian Income bonds, and on Saturday £25,000 on Alliance Motor 'Bus shares.

SILVER.

A good demand came from the Indian bazaars, and as a French tender for 20,000 kilos of the metal had also to be sent in this week, the market has been firm. Quotations advanced to 31 11/16d. for cash and 31 5/8d. for delivery two months forward, but with Bombay closed on Thursday and Friday for the Parsee New Year holidays, a reaction set in which left the final figures at 31 7/16d. and 31 5/16d. per oz., or unchanged and 1/16d. up respectively compared with a week ago. Applications for the Rs. 1,00,00,000 Council drafts on India on Wednesday amounted to Rs. 5,10,15,000 in bills, and Rs. 1,31,20,000 in telegraphic transfers. Of these, Rs. 78,18,000 were accepted in bills, and Rs. 21,82,000 in transfers, tenders at 1s. 4 1/16d. and 1s. 4 3-32d. receiving about 16 per cent. Next week another Rs. 1,00,00,000 will be offered.

BANK OF ENGLAND.

Stock Market Notes and Comments.

Really people who have money invested or to invest are having a weary time of it just now. They may be said to have suffered for the last seven years, with only brief intervals of watery sunshine. At the present moment, however, the long-clogged stock markets everywhere are beset by a conjunction of adverse and warring circumstances most perplexing to deal with. We have the anarchy in Russia, which does not in any way diminish, but, on the contrary, promises to develop energy of a destructive kind at an increasing momentum during the coming winter. There have been earthquakes in San Francisco and Chili, involving great loss of capital to corporations of all kinds, and especially to insurance companies. To meet these losses sales of securities have had to be effected on a large scale, thus adding to the embarrassments of the already overloaded markets. There is the impending demise of the Sultan of Turkey, now said to be dying of cancer, and a possibility of trouble at Constantinople over the succession. Every now and then the Kaiser and his War-God make us shiver. Everywhere, moreover, a shortage of real money, of genuine free capital, is to be noted. All great markets are hard up, because all have engaged their credit beyond their resources. They may disguise their condition by new and ever more dangerous credit expedients, but this does not alter the fact that the whole structure of markets is unreal, a product of bolstering.

In Europe, too, we are troubled by the deadly burden of militarism which is steadily pressing some of the greatest Powers on earth down into financial impotence of the most disquieting kind, and in America the great masters of monopoly are playing a game of the utmost daring, which involves a consumption of capital paralleled only, if paralleled at all, by the outlay on a great war. The immediate cause of our market unrest is this American suction of banking capital. We have been losing gold at a dangerous speed this week, and its departure has excited the wonted apprehension in the public mind which finds expression in lower prices, not for the common or speculative descriptions of securities, but for those of the best type. It is so all over Europe, because all markets are over-committed, have too many losses to conceal, too many locks-up to nurse. There are no great free markets at the present time in the "Consols" of any State, and if it be difficult to deal freely in large lines of French Rentes, in German and Prussian Government stocks, or in Consols, we may

be quite sure that ready markets are not available for less bulky securities of the same class. A kind of paralysis is thus visible in all markets, a paralysis due to the over-absorption of capital, or, if you like to put it that way, to an excessive creation of credit beyond the means available in any country for investment. Credit is thus devouring wealth instead of calling it into existence, and the present abnormal demand for gold is an indication of this wealth consumption. If everything were healthy, if speculation were not carried to dangerous extremes, or if there had been no creations of new securities far and away beyond the available means of investment, we should have had quiet, steady, perhaps active markets, and there would have been no gold hunger to speak of developed in any quarter. Our free bullion market would have had to find the usual quantities for commercial purposes during the autumn and winter months, but a finance demand for gold such as New York instituted would not have arisen. It is a demand produced by the fury of the struggle to avoid insolvency on Wall Street, and it is rendered embarrassing to us by our past losses, by the down-dragging effect of stale accounts carried from year to year at exhausting cost, because we cannot escape or have not the courage to definitely face further losses.

The Week's Stock Markets.

In addition to this being the week of the settlement when little new business is looked for markets have suffered from the American gold hunger, and the large withdrawals of "eagles" from the Bank gave a heavy tone to everything. Fears of a rise in the Bank rate had led dealers to expect that they would be charged from ¼ to ½ per cent. more for money to the end of the month, but bankers evidently felt that they had asked too much at the previous settlement. The Stock Exchange, therefore, was pleasantly surprised to find that current loans could, as a rule, be renewed at the same figure of 4 per cent., while most of the new money required could be had at 4¼ per cent., and it was only here and there that 4½ per cent. was demanded. Inside the House the arrangement of the account presented little difficulty as, except in Americans, the positions open were small. Even in that department the carry-over, although larger than last time, was not of such dimensions as had been expected, and as it was known that Wall Street had shifted a good deal of their burden to this side, owing to the high rates for money ruling there, it was concluded that the accommodation required had been provided outside. In spite of this indications are not wanting that the account open for the rise is dangerously inflated, and bankers were said to be increasing the margins required for loans on such shares.

The uncertainty as to how much longer the drain of gold to America would continue caused Consols to dwindle until prices touched 86 for money and 86⅛ for the October account, but they rebounded to 86 5/16 and 86 11/16 on rumours of the intention of the Bank of France to come to our help. Stories varied as to the manner in which this assistance would be rendered, one report having it that anything up to £3,000,000 would be released for New York if necessary, another asserted that Egyptian requirements would be provided from Paris, and a third that £3,000,000 would be lent to the Bank of England on condition that the latter raised its rate to 4 per cent. These rumours took definite shape on Thursday, when it was stated on high authority that £1,500,000 would be let out for America, while as far as Egyptian affairs were concerned it was believed that the relief would not extend beyond some £500,000 to £600,000 in sovereigns now lying at Marseilles. All this, however, was largely gossip, but the lack of a definite announcement did not prevent markets from assuming a more comfortable appearance. Consols slipped back 1/16 on the rise in the Bank rate, and then recovered, only to give way again, and they closed with a nett loss of ¼ on the week. Other British Funds followed in the wake of Consols, but Bank of Ireland stock was marked down 8 from political motives. In domestic Trustee securities several Metropolitan and London County stocks dropped ½, while Birmingham and Liverpool 3 per cents. were £1 lower, and amongst colonial securities several Canadian and Australian issues dropped ½ to 1.

In the Foreign Bond market dealings were mainly confined to Japanese things, in which liquidation was rather marked in the beginning of the week. They rallied sharply, however, and final prices of most issues showed gains of ¼, while the new 4 per cents. were ¾ better. Russian scrip dipped at one time to 11⅜, but recovered to 11 purely on political impulses, and other Continental Government securities were practically steady, because undisturbed by business. Cuban bonds were swayed by the reports of the revolution or rebellion, but the fluctuations resulted in the quotation being unaltered on the week. A strong demand was experienced for Chinese Silver loan of 1894, and it advanced 1⅛, but South American issues were hardly mentioned. Contangos on Tuesday were, if anything, a shade harder than last time, but it was still difficult for lenders to employ their funds at a decent profit. Movements on the account consisted chiefly of fractional improvements, but several of the Argentine Cedula issues advanced from 1 to 2, Brazilian 1888 and Funding loans and most Chilian stocks gained 1, Costa Rica bonds were 2 higher, and both Honduras loans 1⅜ up. The nett change in Russian scrip was a drop of no more than ⅜, and that was also the extent of the fall in Cuban 5 per cents., notwithstanding the alarmist stories of the progress of the revolution.

Home Railway stocks are still left out in the cold, and quotations naturally dwindled at first on the continued loss of gold. Bear closing before the settlement caused Great Northern deferred and South-Eastern deferred to rally in the beginning of the week, but they were about the only bright spots in the market, and the general run of changes was adverse. A rally partly in sympathy with Consols and partly on the satisfactory traffic returns proved only a fleeting mood, and the market again eased off, with Metropolitan especially weak. North-Western and North-Eastern were amongst the very few stocks where the earlier losses were recovered, and Brighton deferred and South-Eastern deferred also showed no change, but Metropolitan was as much as 2½ down, and losses of ½ to 1 struck South-Western ordinary and deferred, Brighton ordinary, South-Eastern ordinary, and Furness and Caledonian ordinary and deferred fell 1½ and ¾ respectively. The persistent weakness of the past fortnight left its mark on making-up prices in the shape of a series of heavy declines, broken only by a slight gain of ¼ in District. Of the "heavy" lines, North-Western and North-Eastern fell 2½ each, Midland issues were 2 and 3 down and Great Western lost 2. Brighton ordinary and deferred, Great Central preferred, Great Eastern, South-Eastern ordinary and deferred and Metropolitan also declined 2 to 2½, and Furness dropped 4½. Scotch stocks were naturally heavy as the result of the disappointing Caledonian dividend, and the ordinary and deferred stocks of that company were 4½ and 4⅛ lower, while North British deferred receded 1⅝. Money in this market cost from 5 to 6 per cent. at the start, but rates ran off a little during the day, dropping to about 4 per cent. on North-Western and from 6 per cent. to "even" on South-Eastern deferred.

The Secretary of the Treasury's action in prohibiting the use of Government deposits for propping up speculation rather damped the enthusiasm of Wall Street for an hour or two on Saturday last, and prices were allowed to sag. It was, however, too dangerous to let them go back too far, and although the return of the Associated Banks showed the largest deficit in surplus reserves known for 13 years, the cliques did their utmost to push things up. They managed to lift Atchison by a revival of the rumours of a 6 per cent. dividend, and Eries by reports of buying for control,

but another cold douche was administered by the discovery that the promised advances on gold imports applied only to shipments made this week, and that no help would be given in connection with last week's shipments. Heavy liquidation followed, owing, it was said, to a desire on the part of some of the groups to force out a prominent operator, although it was more probable that big operators had come to the conclusion that the announcement of large gold engagements gave them the required opportunity to sell out without undue risk of smashing the market. The big operators, however, are believed to be still bullish, and a new pool was formed to come to the support of the market, with the result that quotations of picked things turned round once more and began to climb upwards again. Naturally some story had to be told to account for this change of mood, and accordingly the old rumour of a bonus to Great Northern stockholders of a 3 per cent. stock in the new ore company was once more pressed into service. The very large shipments of gold, amounting to some £3,000,000 sterling by Wednesday's boat, sent prices moving up still further, but the unloading process began again by Thursday afternoon, and the market at the close had a tired appearance. Still the changes on balance were about equally divided, Atchison showing a gain of 1½, Erie being 1¼ and Louisville 2 up, and Ontario and Reading, amongst others, rising a few fractions, while Baltimore, Milwaukee and Union Pacific were from 1 to 2 lower. Rates for money opened about 4½-5 per cent., but the account to be arranged proved decidedly larger than had been thought, and the charge rose to 5-5½ per cent. Apart from a gain of 16 in Great Northern preferred, the largest improvement on the fortnight was in Union Pacific, which rose 7½, but Atchison and Baltimore were both 3¼ higher, Reading advanced 2¾ and Chesapeake, Erie, New York Central, Norfolk common and Southern Pacific put on from 1½ to 2½. Milwaukee, on the other hand, relapsed 16½ and Ontario dropped 3¼.

Canadian Pacific shares have moved with Yankees, as usual, and the daily fluctuations were consequently fairly wide. The price has ranged between 184⅜ and 182½, but the nett loss on the week is only $1½. Grand Trunk stocks, on the other hand, went steadily back during the first day or two, but hardened on the traffic increase of £15,000, although the market, after its experience with the July statement, is not disposed to attach much importance to the weekly figures. The making-up price of Canadian Pacific shares shows an advance of 8¾, but a dividend has been deducted in the meantime, and allowing for this the gain is actually 11¾, while Grand Trunk ordinary stock was only ⅛ better and the first and third preferences rose ¾ and 5/8.

The Argentine group of railways has been very much left to itself, and the same may be said of practically the whole of the Foreign Railway market. Cuban lines have not suffered appreciably from the revolution, United Railways of the Havana ordinary stock and Cuban Central shares being unchanged, while the second debentures of the latter company actually rose 4. Mexican railway stocks were also steady, and Interoceanic preferred shares put on ¼. Guayaquil and Quito junior bonds, however, were sold, and liquidation was also noticeable in Paraguay Central debentures. Still prices on the account were decidedly steady throughout the list, Mexican stocks being prominently firm, with gains of 2¼ in the ordinary and 2½ to 3½ in the preferences, while Interoceanic preference and "B" debenture stocks gained 1¼ and 1. Amongst Argentine issues Great Western ordinary, North-Eastern ordinary debenture, Buenos Ayres Western, East Argentine and Entre Rios ordinary and first preference were from 1 to 2 higher, and Cordoba Central first preference and debenture stocks improved from 2 to 2¾. Antofagasta preferred and deferred rose 3½, Guayaquil and Quito railway bonds 1 and Paraguay Central debentures 2, while United Railways of the Havana ordinary was unaltered, but the debenture stock fell 2. Carrying over charges ruled from 5¼ to 5¾ per cent.

In Miscellaneous securities the most notable events of the week have been the strength of Nitrate shares, and the pronounced weakness in Waring and Gillow issues. All nitrate things were in request, and prices moved up steadily on the terms of the new agreement published early in the week, and although there was a slight setback on Thursday on profit-taking, closing values were not far off the best. The attack on Waring and Gillow's shares caused quotations to drop sharply, and the debentures have lost as much as 5. Caterers were steady as a whole, and Aerated Bread finished ¼ higher, but Textiles were inclined to give way. Paquins were in demand on talk of an increased dividend, and Gramophones were also an object of popular favour. Amongst Breweries, Bieckert's ordinary stock was lifted 11, the new shares following with a gain of 1¼, and Allsopp preferred gained 1, but Watney, Combe ordinary and McCracken's City debentures lost 2 each. National Bank of Egypt lost part of their previous week's advance, but Anglo-Egyptian were higher, and Imperial Ottoman also put on 15s. Selling again predominated in Pekin Syndicate shares, but Peruvian Corporation stocks met with support, and Hudson's Bay shares, as well as several Argentine Land companies' issues, were also in some request. On the account Santa Rita Nitrate were 1¼ higher, but the other gains in this group consisted of ⅛ to ¼ only. Bieckert's Brewery ordinary advanced no less than 23 during the fortnight, Peruvian Corporation stocks put on from 3/8 to 7/8, but Hudson's Bays only rose ¼, and Pekin Syndicate ordinary and deferred relapsed 2 and 15 respectively. A decline of 1½ in Anglo-American Telegraph deferred, and rises of 1 each in National Telephone preferred and deferred were the only other movements worth recording here.

Markets are quite frozen up by the money scare. Consols were put down on the yarn about another lump of gold out to New York, and when that proved false there was not energy enough to lift the price again. Business, in fact, is dead for the time being everywhere, and quotations mostly stuck as before. The publication of the scheme for redeeming Buenos Ayres Cedulas has been received in the market with complete indifference, and the price was neither put up nor down. Dead also is the Kaffir market, and none of the schemes of amalgamation being lodged have had any effect in stirring things to activity. Paris, however, has been buying, and London sells to balance, so that things remain where they were. The Yankee market has to-day been as uninteresting as all the rest, even the professional players finding no scope for their energies. Prices were heavy throughout the day, but closed with a show of strength.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Fall: Irish Land Account ¼, to 88-88½, do. scrip ¼, to 48-48½, Transvaal 3 p.c. Account ½, to 98-98½, Bank of Ireland 8, to 320-325.

CORPORATION STOCKS.—Rise: Rhyl 1, to 94-96. **Fall:** Metropolitan 3 p.c. ¼, to 93-94, London County 3 p.c. 1920 ½, to 88-89, do. Account ½, to 88-89, Birmingham 3½ p.c. 1, to 102-104, Liverpool 3 p.c. 1, to 88-91, Middlesex ½, to 89-90.

COLONIAL AND FOREIGN. — Rise: Auckland 5 p.c. Debs. 2, to 107-109. **Fall:** Copenhagen 1, to 91-94.

COLONIAL GOVT. STOCKS.—Fall: Canada 3½ p.c. Reg. ¼, to 101-102, Cape 4 p.c. 1923 1, to 104-106, do. 3 p.c. 1, to 83-84, Ceylon 3 p.c. ½, to 93½-94½, Natal 3 p.c. ¼, to 84-85, New South Wales 3 p.c. ½, to 86½-87½, Ontario ½, to 96-97, Queensland 3½ p.c. ½, to 99-100, do. 3 p.c. 1, to 86-87.

FOREIGN GOVT. SECURITIES.—Rise: Argentine 5 p.c., 1890, ½, to 100½-101½, do. Treasury ½, to 101½-102½, do. Port of B.A. ½, to 103-104, Chinese, 1894, 1½, to 101-102, do. 1896, ½, to 103⅝-104⅛, Colombian ¼, to 42⅜-43⅜, Japan 4 p.c. ¼, to 90-90⅜, do. 6 p.c. ¼, to 103¼-103¾, do., 1905, ⅜, to 88-88⅛, Russian, 1867-9, 1, to 72-75, San Paulo (Brazil) 1, to 98-100, do. (State of) 1, to 97-99. **Fall:** Argentine, 1897, ¼, to 90¼-90⅜, do., 1900, ¼, to 90¼-90⅜, Brazilian Guar. ½, to 87⅜-88¼, do. Scrip ½, to 68¾-69¼, Chinese, 1896, Reg. 1, to 100-102, do., 1898, ¼, to 98-98½, Greek, 1881, ¼, to 53¼-53⅜, do., 1884, ¼, to 52⅜-53¼, do. Rentes ¼, to 42-42½, do. Rlys. Loan ½, to 93-93½, Russian Scrip ¼, to 11¼-10¾ dis., Spanish ¼, to 96-96¼, Turkish Unified ½, to 96⅞-97⅛, Uruguay 3½ p.c Bds. ½, to 70-70½.

HOME RAILWAYS.—Rise: Waterloo and City 2, to 103-106. **Fall:** East London ¼, to 3⅝-4¼, Glasgow and S.-W. Def. ½, to 39½-

40½, Hull and Barnsley ½, to 47-48, Brighton Pref. 6 p.c. 1, to 150-152, S.-Eastern Pref. 6 p.c. 1, to 125-127, Taff Vale ½, to 78-79.

Debentures.—Rise: Lancs. Derby 4 p.c. Stk. 2, to 107-110. **Fall:** Furness 3 p.c. 1, to 86-88, Gt. N. Piccadilly 4 p.c. ½, to 86-88, Gt. Western 4½ p.c. 1, to 135-137, Hull and Barnsley 2nd Stk. 1, to 108-110, Lancs. and Yorks. 3 p.c. Stk. 1, to 90-92, Nth. Wstrn. 3 p.c. Stk., 1, to 91-94, Sth.-Wstrn. 3 p.c. "A" 1, to 91-93, do. 3 p.c. Cons. 1, to 91-93, District 6 p.c. Stk. 1, to 147-150, do. (1905) 1, to 95-97, Midland 2½ p.c. 1, to 76-78, Nth.-Eastn. 3 p.c. 1, to 90-92.

WATERWORKS.—Rise: East Surrey Deb. 3, to 115-120, Tarapaca ½, to 11-11½.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Caledonian Railway Company.

Traffic receipts for the six months ended July 31 amounted to £2,084,982 or an increase of £42,312, and the income from the Forth and Clyde boats rose by £5,327 to £63,942 and with £4,880 more from rents of property, &c., and small improvements in miscellaneous items, the total revenue was £52,111 higher at £2,200,017. First-class passengers showed a small reduction of £1,220, but third-class passengers accounted for £9,167 more, season tickets gave £381 and parcels and mails £888 more, while merchandise, less cartages, yielded an increase of £19,319, and minerals one of £12,131. On the other hand maintenance of way cost £6,188 more, locomotive power, owing to a heavier outlay on coal and coke, absorbed an extra £23,220, traffic expenses were £7,934 heavier, and general charges £4,342 up, against which there was a saving of £6,010 in carriage and wagon repairs. Compensation charges increased by £8,557, rates and taxes by £1,844, but law and Parliamentary expenses were slightly less, and as the remuneration for working other lines yielded £5,419 more, the expenditure in connection with the railway showed an increase of £40,071 at £1,141,004, the proportion to revenue being 54.72 per cent. against 53.90 per cent. Navigation expenses at the same time were £2,538 up at £23,152, or 36.21 per cent. of the receipts compared with 35.17 per cent. a year ago, so that the improvement in nett revenue was only £9,502 at £1,035,860. A large balance of £20,262 more was brought forward, but dividends on shares held were £1,630 down at £33,148, and as fixed charges absorbed an extra £3,454 the nett increase in the amount available for dividend, after reserving £10,000 or £5,000 less for bridge renewals, displacements and contingencies, was no more than £14,745 at £719,612. Out of this, however, an extra £24,457 had to be provided for dividend on the 1906 4 per cent. convertible preference stock, and in order to repeat last year's distribution on the ordinary stock at the rate of 3¾ per cent. per annum, giving 3 per cent. to the preferred and ¾ per cent. to the deferred ordinary stock, the balance carried to the new account is reduced by £9,718 to £11,291. With regard to capital outlay the directors do not appear to have made any great endeavour to keep within their estimates, and instead of the £338,000 put down in January last they have spent £515,106. Of this £161,458 was on lines open for traffic, £11,577 on the Clydebank Dock branch, £88,080 on working stock, and £98,847 on the Grangemouth Harbour extension, &c., while £153,500 was represented by subscriptions of £150,000 to the Callander and Oban Railway and £3,500 to the Glasgow and Renfrew District Railway. The Grangemouth Dock, however, is nearing completion, and will be opened on October 8, so that further outlay on that account should be trifling. During the current half-year it is proposed to spend £383,000, and for subsequent half-years the expenditure is put down at £486,000, making £869,000 in all. Receipts on capital account in the six months, including £115,814 from premiums, amounted to £1,349,276, but the debit balance in spite of that is still very heavy at £1,107,981, and the savings bank deposits, superannuation and other funds of the employees have had to be utilised in the usual way. The dividends are payable on October 1.

North British Railway Company.

In its half-year ended July 31 last this company earned gross £2,297,334, being an increase of £63,318 on the corresponding half of last year. Of this increase merchandise gave £26,339 and minerals £42,490, there being a decrease of £2,048 in the receipts from passengers, parcels, mails, &c., and of £3,781 from miscellaneous sources. Working expenses went up by £57,199 to £1,247,529, and their proportion to receipts is given by the directors at 51.16 per cent., compared with 49.83 per cent. a year back. We do not quite know how this proportion is arrived at, but it may be that rates and taxes are not included; at any rate, the gross expenses as given work out at 52.85 per cent. for the past half-year. Be that as it may, the exhibit is not so pleasant as we should like to see it, and about the only consolation offered is the evidence given by the accounts that working expenses seem to have been well maintained, so as to keep the property in a creditable state of efficiency. Maintenance of way shows an increase of £15,441, and locomotive power has gone up £17,990, while traffic expenses are £18,719 more. What, however, is to be regretted is the small result produced by the larger work done. The company, for instance, ran about 246,000 more train miles in the past half-year, including steamboats and other lines worked over, and as will be seen, the greater part of the additional gross earnings disappeared in working expenses. The result is that practically nothing adequate has been earned in the way of additional nett revenue—a mere £6,000 or so—and meantime preferential charges steadily expand. It took £12,852 more to meet the interest and rental charges of the company in the past half-year than in the first half of 1905, and the balance available for dividend on the preference and ordinary stocks is little more than £1,000 up. The company, however, is able to pay the same dividend on the ordinary preference and ordinary stocks, as the doubled old stock is designated, and to carry forward £10,387, or about £163 more than in the corresponding half-year. It took £8,193 more to do this, thanks to the continued reduction of the convertible preference stocks of 1888 and subsequent years, through their conversion into what we may call preferred and deferred ordinary. The reduction of interest in this way brought about amounts to £7,084 compared with a year ago, and hence the increase in the sum required for the ordinary dividend. Capital expenditure was pretty heavy in the past half-year, and no less than £199,635 of it went into lines open for traffic, besides £114,986 laid out on additional working stock. Altogether the capital outlay amounted to £372,467, against an estimate of £365,555, and in the current half-year a capital expenditure of £534,920 has to be provided for. The capital account was also swollen out during the six months by the above-mentioned conversion operations, which added another £292,568 nominal to the company's total capital. As the balance-sheet shows an overdraft on capital account amounting to £1,760,037, while the total trust funds in hand come to only £1,283,065, a further issue of stock by the company would seem to be due. What form this new stock will take we may not venture to guess, but it is wanted, and when we remember that the total capitalisation of Scotch railways comes to about £150,000,000 without reckoning in the water or ornamental additions, this steady outpouring of capital by powerful companies like the North British is not a satisfactory incident in their current history. The dividends are payable October 4.

Glasgow and South-Western Railway Company.

Gross revenue for the six months to July 31 was £29,678 higher at £902,515, and expenses rose by £15,058 to £485,830, or with the cost of working the steamboats included the increase was £17,442 at £517,108. First-class passenger traffic showed a slight falling off, but third-class receipts came to £7,208 more and season tickets were £461 up, so that there was a nett increase of £7,404 in this section. Parcels and mails yielded £1,302 and live stock £339 more, while merchandise and minerals improved by £5,727 and £13,740 respectively, and amongst miscellaneous items rents gave an extra £2,743. Payments for mileage and demurrage, however, exceeded the receipts by £3,126 against £1,528 a year ago, leaving a total income as above stated. The increase in expenditure was spread over all items, advances being shown of £3,646 in maintenance of way, £8,084 in locomotive power, £795 in carriage and wagon repairs, and £2,403 in traffic expenses. General charges were £325 heavier and Parliamentary expenses £838 up, but there was a satisfactory reduction of £1,127 in the sums paid for compensation. The nett revenue was consequently £12,236 better at £385,407, and a larger balance of £6,313 was brought in, but with a small loss on the Portpatrick and Wigtownshire Railways, the improvement was reduced to £11,539 at £391,174. Interest and other charges required an extra £2,473 at £130,479, and preference dividends took £1,321 more, but the company is still able to increase the dividend on the consolidated stock

from 4 per cent. to 4¼ per cent. per annum, giving the deferred ordinary 1¼ per cent. compared with 1½ per cent., and to carry forward a slightly increased balance of £6,633. During the half-year the company raised £115,181 by an issue of debenture stock, this amount including £20,181 received as premium, but spent £126,093, of which £71,860 was on the Maidens and Dunure Light Railway, so that there is still a debit balance of £701,100. Dividends payable September 29.

Great North of Scotland Railway Company.

For the six months ended July 31 the gross receipts were £247,668 or an increase of £4,534, and as working expenses were £88 smaller at £121,390 the nett revenue showed an improvement of £4,622 at £126,278. Passenger traffic rose by £1,239, the advance being due entirely to third-class traffic as receipts from first-class and season tickets were both slightly lower; parcels, mails, &c., gave £1,058, merchandise £1,158 and live stock £246 more and miscellaneous receipts were £1,645 up, but minerals yielded £812 less. The small saving in expenditure was due entirely to a reduction of £1,788 in rates and taxes, as locomotive power cost £1,470 more and carriage and wagon repairs were £490 higher, while maintenance of way and traffic expenses showed only trifling decreases. Then compensation absorbed £853 against £442, and a drop of £306 in law charges was offset by an advance of £324 in Parliamentary expenses. Adding £3,972 brought forward and £63 from general interest, the amount available was £4,629 up at £130,313, and after paying fixed charges the balance available came to £94,193, compared with £89,901. Out of this the preference dividends are paid, together with 3 per cent. per annum on the preferred ordinary stock, and the directors are then able to raise the distribution on the deferred ordinary from ⅜ per cent. to 1 per cent. and to carry forward £4,098 or £1,376 more. Only £7,418 was spent on capital account during the half-year, of which £2,827 was on lines open for traffic and £4,591 on rolling stock, the latter including £2,607 for road motor cars and £1,132 for railway motor carriages. There is, however, a debit balance on this account of £219,189, so that in addition to using the saving bank deposits and contingent and other funds £63,000 has had to be obtained on temporary loans. Dividends payable October 3.

Callander and Oban Railway Company.

With the exception of mails and rents, which produced £1,407 and £142 less respectively, all branches of income for the six months ended July 31 showed increases, and the improvement was particularly marked in passenger, minerals, and parcels receipts. Passenger traffic rose by £2,121, minerals by £1,170, and parcels, &c., by £1,250, and with small increases of £378 in merchandise and £377 in live stock, the gross revenue came to £44,015, or an advance of £3,801. Expenses at the same time were £1,723 up at £22,164, mainly because £1,425 more was spent on maintenance of way, as other items show exceedingly little change, and the nett revenue, including £90 brought forward, was £2,123 higher at £21,941. Debenture interest, however, required a trifle more at £5,107, interest account took £2,471 or an increase of £1,933, and interest on temporary loans was £174 up, so that after providing for dividends on the preference shares the balance to be carried to the new account was slightly smaller at £49. During the six months £150,820 was raised by an issue of ordinary shares, and expenditure reached a total of £32,240, of which £23,494 was in payment of the final instalment for the construction of the Ballachulish branch. The debit balance on capital account was, therefore, £94,589, and as there was £19,342 due to other companies the company is hard put to it for funds and has had to obtain £115,127 on temporary loans.

Denver and Rio Grande Railway.

In the past year this important property earned gross $19,686,115, or $2,654,607 more than in the previous year. Working expenses went up $1,935,212 to $12,104,172, so that there was an increase of $719,396 in the nett income of $7,581,943. The percentage of increase in gross earnings was 15.59, and in expenses 19.03 per cent., leaving 10.48 per cent. as the proportion of increase in the nett revenue. After meeting all fixed charges, including 5 per cent. upon the preferred capital and $120,000 contributed to the renewal fund, there was a balance of $1,306,839 left, of which $1,000,000 was set aside to help towards covering the cost of additional standard gauge equipment and $150,000 to help to pay for the cost of new engine houses at Denver and Pueblo. The company appears to be making steady progress with the conversion of the line from narrow gauge to standard, and it is also pushing forward the construction of the Western Pacific Company, in which it has an interest—on paper, at least—to the amount of $75,000,000 of the company's capital stock. What it has done or is doing in exchange for this capital we do not quite know, because the accounts do not tell us, but the directors are evidently full of confidence that the investment is going to pay. Mr. E. T. Jeffery, the president of the line, waxes quite eloquent on the prospects of traffic with San Francisco. "Faith in the future of the Western Pacific Railway," he declares, in the report, "is just as strong as it was before the San Francisco disaster. The city will be rebuilt on finer, more attractive, and better engineering plans. The great harbour will continue to hold and increase its ocean commerce, the navigable waters of the Sacramento Valley will always attract and sustain inland navigation. San Francisco as a financial centre will maintain her supremacy on the Pacific coast; trade and commerce by land and water will pay tribute in greater volume than ever before to her merchants, manufacturers, and citizens generally." We are disposed to agree with this optimism, but at the same time the capital expenditure involved is by no means light, and the balance-sheet of this company now foots up to $171,187,000.

Ottoman Railway from Smyrna to Aidin.

Last half-year to June 30 was not a favourable time for this company. Its gross receipts fell off by £16,707 to £104,707, and had not £6,594 been saved in working expenses, which were lowered from £53,365 to £46,771, comparing the past half-year with the June half of 1905, the decrease in the nett profits would have been embarrassing. As it is they have fallen off on the same comparison by £10,113, and amount to only £57,936. Still the directors are able to recommend an interim dividend of 8s per share, or at the permissible maximum rate of 4 per cent. per annum on the ordinary shares, leaving £33,251 to be carried forward. Capital expenditure on pier and warehouses amounted to £40,889 in the six months, but the pier is now finished and certified fit for traffic. The poor results of the half-year are asserted by the general manager to be due to the small grain harvest and reduced quantity of produce remaining to be carried, but the figures of income for the current half-year display some increase. No addition has been made to the reserve fund, which therefore remains at little more than £20,000. Shareholders are consequently a long way yet from an increase in their dividend, and yet the property ought to be prosperous, and with better government in Turkey, would be.

Australian Joint-Stock Bank, Limited.

Less progress was made during the six months ended June 30 with the repayment of the fixed deposits "A" and "B" series still outstanding as a legacy from the present concern's predecessor, and these were only £8,159 down at £3,286,165, while inscribed deposit stock rose by £800 to £791,805. The bank, however, seems to be making a little headway in its present business, as notes in circulation come to £6,375 more at £62,165, bills in circulation are £6,417 up at £106,972, and current accounts and new fixed deposits show an increase of £107,280 at £1,165,776. On the other hand, a reduction of £87,805 to £398,356 in coin and bullion is off-set by an advance of £101,904 in cash at London bankers, which the directors say has been earning a good rate of interest, and with investments, notes of other banks, &c., the cash assets are £18,802 higher at £1,023,304, while bills discounted and all other assets have risen by £100,056 to £4,276,161. Gross profits for the half-year, however, were £2,704 down at £110,745, and with £1,435 less at £3,988 brought forward the total revenue was only £114,733 compared with £118,873. Management expenses in Australia and London, note tax, &c., required £41,290 of this, and interest on deposit stock and fixed deposits £67,932, the savings in these items being £770 and £1,313 respectively, so that the sum carried to the new account was reduced by no more than £2,056 to £5,511.

Palmer's Shipbuilding and Iron Co., Limited.

In its working year ended June 30 last this company earned £80,570 nett, making with £18,301 brought forward £98,871 available for distribution. After providing debenture interest £8,557, and the 5 per cent. dividend on the preference and ordinary shares £30,165, half of which has already been paid, the board wisely decides to write off as depreciation £39,691, being the balance of cost of extensions to date. This will leave £20,459 to be carried forward. The directors say in their report that competition has been exceedingly keen in the shipbuilding trade, and orders at remunerative prices are still difficult to obtain, the temporary improvement visible some months ago having failed to endure. It was, moreover, neutralised by a rise in wages. In the result the company's shipyard and engine works have not been employed to the full extent of their capacity, but good progress has been made with the Government contracts. The iron and steel departments, moreover, have been prosperous, so the profits for the year are only reduced by £9,257, against which there was an increase of £14,895 in the balance brought down. Thus the board was able to write £4,843 more off cost of extensions, making the above-given total so allocated £20,682 more than the amount actually spent within the year, and still the balance carried forward was larger by £2,158. The further expenditure on improvements will, however, be large, as the decision of the board to adopt the Talbot process involves an entire reconstruction of the melting shop. In the balance-sheet the amount due to creditors other than debenture holders, to whom £177,963 nett is owing, is shown at £25,445, but there is £363,063 either owing to the company on works in progress and by sundry debtors or sunk in stock of materials. This is exclusive of £29,955 represented by cash and bills receivable. The reserves stand at no more than £32,474. Depreciation is therefore still a vital matter for the company.

Pearson and Knowles Coal and Iron Co., Limited.

The directors complain that the prices of coal during the year ended June 30 continued to rule on a very low basis, and that the higher values established in the iron and steel trades were fully counterbalanced by a rise in wages and raw materials. Nevertheless, there does not seem to be very much the matter with the company's business, as the output of coal was well maintained, the iron and steel works were fully employed, and the orders and contracts on hand in the engineering branch are likely to provide plenty of work for some time to come. Nett profits for the 12 months showed a further improvement of £5,681 at £62,867, this gain coming on top of one of £10,438, and with £1,726 more at £8,081 brought in the amount available

was £7,407 larger at £70,948. Preference dividend having been paid, £10,000 is again placed to reserve, and, as usual, capital expenditure incurred during the year amounting to £6,875 is written off, while the dividend on the ordinary shares is further increased by 1 per cent. to 5 per cent. and £1,242 is added to the balance carried forward, making it £9,323. This is excellent progress, and the balance-sheet shows that it is genuine progress and not merely a good display at the expense of prudent management. Colliery leases and goodwill of collieries and ironworks, valued at £315,560, have been entirely written off out of past profits, and against freehold and leasehold land, buildings, collieries, ironworks, &c., valued at £561,466 there is a reserve fund of £130,000, of which £81,660 is separately invested. Liabilities to sundry creditors and on bills payable have risen by £19,624 to £67,616, while sundry debtors are only £2,502 up at £108,864 and cash and bills in hand show a decrease of £15,394 at £75,047, but these changes are accounted for by the big addition to stocks, which stand at £263,127 or £36,919 more.

Leeds and Liverpool Canal Company.

During the half-year ended June 30 the revenue from freights and tolls amounted to £79,645 or an increase of £4,211, and as £239 more at £10,567 came in from rents and sundry receipts, the total income was £4,450 up at £90,212. Expenditure, however, was £3,847 heavier at £6,724, owing to advances of £2,899 in traffic expenses, £1,397 in law and Parliamentary charges, and £343 in rates, as maintenance charges were £777 less. The nett profits consequently showed an improvement of no more than £603 at £22,488, and as the balance brought in was £852 down at £1,094 while general interest produced £58, or £463 less, the available total was only £23,640 compared with £24,352. Interest on debenture stock and terminable loans again required £7,422, but general interest was £482 lower at £142, and after putting another £4,500 to "subsidences and special expenditure account," a surplus of £11,576 was left, of which preference dividend takes £1,985 and £9,591 is carried forward to be dealt with at the end of the financial year. Capital expenditure came to £4,536, of which £2,949 was on subsidences, and the whole of this sum has, in the usual manner, been written off the special expenditure fund, leaving the credit to capital account untouched at £14,827. Working stock is valued at £37,205, plant at £6,447, and materials on hand at £5,553, against which there are an insurance fund of £12,000, a contingent fund of £15,000, and the balance of £2,014 remaining on special expenditure account. Liabilities of creditors amount to £39,241, and £7,051 is due for interest accrued, but the company is comfortably enough off, as to meet these it has £42,098 to come in from sundry debtors and £10,699 in cash.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The past week opened with the carry-over in the mining market. On many of the leading shares contangoes were lighter than a fortnight ago. Gold Fields, for instance, were continued at 4-5 per cent. against 5-6 per cent., and East Rands at 3-4 per cent. compared with 4-5 per cent. On Rand Mines and Modderfonteins, however, the rate was about 1 per cent. higher at 5¾-6¼ per cent., whilst on the majority of the shares it was again 6-7 per cent. On Premier Diamonds the charge hardened from 3-5 per cent. to 5-7 per cent., but there was no change in the contangoes on De Beers and Jagersfontein of 4-5 per cent. Rhodesian shares, as a rule, were also continued at 6-7 per cent., the two outstanding exceptions being Tanganyikas and Zambesia Explorings. On the first-mentioned the rate ranged from 10 per cent. to 20 per cent., and was almost as high on the latter, thus revealing the extent of the "bull" position in these. West Africans and Egyptians were done at 6-7 per cent. and 6-8 per cent. respectively, but on West Australians the rates were, as usual, very irregular. Some were negotiated at 6-8 per cent., but on Great Fingalls 5-7 per cent. was charged, against 4-6 per cent.; on Horseshoes and Oroyas the contango was 3-5 per cent. and 4-6 per cent. respectively, but in both cases went off to "even," whilst on Cosmopolitans 7-9 per cent. was given.

The making-up list revealed, as was to be foreseen, a great preponderance of declines on the fortnight, such as £1 in Central Minings, ¾ in East Rand Proprietary, ⅝ in Welgedacht Exploration, 19-32 in Bankets, ⅞ in H. E. Props., Modderfonteins, Apex, and Witwatersrand Townships; ½ in Rand Mines, Gold Fields, Gold Trusts, and Premier deferred; ⅜ in Anglo-French Exploration, South African Gold Mines, T.C.L.'s, Lace Diamonds, and Rose Deeps; 1/16 in East Rand Mining Estate, Jagersfontein deferred, and Rhodesia Explorations; with any number of losses ranging from ¼ to 1/16. The only gains in the whole South African list that need be mentioned were 1¼ in Tanganyika and ⅜ each in Zambesia Explorings and Northern Coppers, the result of the frenzied gambling in these. There were two or three rises even in the Jungle, whilst amongst West Australians Kalgurlis made up ⅞ higher and Oroya-Brownhills ⅝, but Ivanhoes lost to the latter amount. Elsewhere a prominent movement was a decline of ⅝ in Esperanzas, despite the much-talked-of discoveries in the district. Copper shares were strong throughout the account, Rio Tintos advancing 1¾, Anacondas ⅛, Tharsis ¼, and Cape Coppers ⅞.

For the new account the market opened in anything but a promising manner, all the leading Kaffir shares showing appreciable declines on balance. Even when the figures of the Rand output for August were known they failed to arrest the decline, the falls ranging up to as much as ⅜ on the day, the latter being lost by Modderfonteins. The dividend of 110 per cent. for the past half-year on Crown Reefs likewise passed unheeded. A failure in Glasgow particularly affected Bankets and Tanganyikas, but they have recovered since, not because the public are buying them, but they have been put higher on the momentary better feeling elsewhere. The two large amalgamation schemes announced during the week have helped the market in no way, for they do not make the bulk of gold shares any the more tempting to outsiders. It is stated in the Circus, with quite strong conviction, that one of the leading controlling houses has been selling very freely of late, presumably the large quantities of shares held by the late Mr. Alfred Beit.

In the diamond group, after receding for some days, Premier deferred have again been taken in hand by the "bulls," with the result that heavy losses have been materially reduced. This is no indication, however, that the recovery will last longer than other upward changes, the market is too completely in the hands of the gamblers.

West Africans and Egyptians have been utterly neglected, and are practically dead, and there is but the faintest symptom of vitality in the West Australian market, the movements here being very spasmodic and insignificant. Amongst Egyptians, El Oros and Esperanzas have been suspiciously weak, the cause of which is not apparent on the surface; nor can the market see behind the scenes. Indians keep steady. Tin shares are firm on the strength of the metal market, but coppers have been somewhat irregular. Recently many thousands of Rio Tinto shares have been sold by the French and sent over to this country, they having made a handsome profit by their operations. The market here has not yet absorbed the shares, but the price keeps very strong.

Transvaal Gold Output.—Another "record"! The glorious figures for the month of August were published simultaneously with the commencement of the new account, but failed to check the continued downfall of prices. They are good to gaze on, if nothing else, for they picture wealth in the midst of poverty. From the Witwatersrand district the output was 489,787 ozs., and from the outside mines 19,328 ozs., making a total of 509,115 ozs., of a value of £2,162,583. Compared with July—the two months being of equal duration—these figures show increases of 17,322 ozs. in weight and of £73,579 in value, and exceed those of August, 1905, by 80,500 ozs. and £342,000, whilst the output per diem is nearly 560 ozs. more than it was in the preceding month, *i.e.*, 16,423 ozs. against 15,864 ozs. This was achieved although there was a net loss of 749 in natives. It follows that more Chinese must have been at work and more stamps crushing. Why does the Chamber not publish each month with these figures the number of stamps at work, and also statistics of coolies? It used to give the coolies at one time, but has long since discontinued the figures. Such data would enable one to apply better tests than haphazard guesswork to the monthly records.

Salisbury Gold Mining Company.—This company's operations in the 12 months ending June 30 were not so favourable in their results as were those in the preceding year, owing to the faulty nature of the ground worked. The total quantity of ore crushed was 69,177 tons, for an aggregate production of 21,981 fine ozs., equal to 6.35 dwts. per ton, which is .38 dwts. lower than the yield of the preceding year. With sundry revenue of £2,080, the income amounted to £95,061, and as the working costs were £75,208, the working profit was £19,853, equal to nearly 5s. 9d. per ton. With a balance of £23,478 from the previous accounts, the directors pay two dividends of 10 per cent. each, and carry forward the much-reduced credit of £13,548. The ore reserves are equal to slightly more than two years' milling. In conjunction with the Jubilee Company the directors put down a borehole from the 600-ft. level in the Salisbury mine to a total depth of 2,614 ft. The object was to intersect the reef known to be slightly at the north of the main reef, but it did not meet with success. The life of the Salisbury is about six years, but it may possibly stretch out a little longer if working costs can be so reduced as to enable the low-grade main reef to be worked profitably.

Selukwe Gold Mining Company.—The Selukwe is a Rhodesian company doing better than most, but it is too much to expect shareholders to feel satisfied with the position of affairs at the end of the past financial year, March 31. In the 12 months the 40 stamps crushed 72,923 tons of ore, and the total production was 26,053 ozs. of bullion, realising £90,289, other receipts making up the income to £91,311. A gross profit of £20,304 is shown, but this and more is swallowed up in the provision of £18,976 for depreciation, £17,055 for development redemption, and £1,103 for income-tax, so that the nett result is a loss of £16,740. As there was a credit balance of £16,491 in the previous balance-sheet, shareholders were thereby encouraged to look for a dividend, instead of which they find that a small debit of £249 has to be carried over. Nor can the mine prospects be considered very promising. The ore reserves are estimated at 75,504 tons, of a value of 7.82 dwts. per ton, and the consulting engineer admits it is possible that about one-third of this may not pay for the cost of working.

However, this, with ore from other sources, will keep the mill going for another year, by which time, he says, work on the 11th level north on the Tebekwe Main Reef, which is the principal stay of the mine, should have decided the future one way or the other.

ANOTHER RAND AMALGAMATION.—A third Rand fusion in one week is that now announced between a couple of the deeper deeps, the South Wolhuter and the Klip Deep. The former is to absorb the latter for 312,500 £1 shares, the capital to be increased from £600,000 to £912,500. Such a scheme has been tentatively hinted at for many months past by the officials of each company. Both properties are in the early stages of development, and nothing can yet be said as to their prospects.

GLENCAIRN MAIN REEF.—In the quarter ending June 30 this Barnato outcrop company crushed 42,926 tons for a yield from all sources of 11,857 ozs., for a profit of £13,744, equal to 6.40s. per ton. There was a reduction of 1.53s. per ton in the working costs, but the grade fell off to a much greater degree, the recovery being only 23.67s. per ton milled, compared with 26.06s. per ton in the preceding quarter. Still, there is some little comfort in the news that the mine is looking well; at any rate, the directors say it is, and they believe the profit would increase if they could get more labour. Considerable improvements have been made in the plant, and have been paid for out of working costs.

BULUWAYO AND GENERAL EXPLORATION COMPANY.—This Rhodesian concern, which has experienced many vicissitudes of fortune, all bad, and actually has a property in Idaho, U.S.A., as well as another in the Heidelburg district of the Transvaal, is about to go through another reconstruction. Out of its present nominal capital of £500,000, £188,137 is issued, to be raised to £200,000 as the capital of the new company. The assessment will be 4s. per share, and will provide £40,000, the directors saying they are not paying for a guarantee. Perhaps they could not get anyone to undertake a guarantee? We shall be much surprised if they can persuade the shareholders to subscribe the whole £40,000, for it looks very much as if it would improvidently be throwing good money after bad. The directors express their belief that the properties will justify this further outlay, but we doubt it, whilst past experience advises that it would be a very great risk, indeed, to put more money into this distended concern.

TANGANYIKA CONCESSIONS.—Under date September 10, the secretary of this company writes:—"Mr. Robert Williams, representing the Tanganyika Concessions and the Benguella Railway Company; Baron Baeyens, Governor of the Société Générale; and M. Droogmans, representing the Congo State and the Special Katanga Committee, met in Brussels on Tuesday last and agreed to form a mineral company, with a large working capital, half of which will be guaranteed by the Société Générale and the other half by the Tanganyika group. The president and vice-president of the new mineral company will be respectively Baron Baeyens and Mr. Williams. With reference to the financial arrangements which have also been negotiated by the board, I am instructed to inform you that they have accepted an offer to underwrite £2,000,000 5 per cent. debentures, convertible for five years into shares of Tanganyika Concessions, at £8 per share, subject to certain conditions, and to the approval of the shareholders. The formal agreement for submission to the shareholders is now being prepared, and a notice convening a general meeting of the company will be issued at the earliest possible moment." This is official confirmation of a rumour that has had currency for a long time. There is no mention here of Rockefeller or any other Yankee magnate taking an interest in the company.

CLITTERS UNITED.—According to recent progress reports from the manager of the Clitters United Mine, promise is given of a great improvement in forthcoming working results. A start has been made with the unwatering of the Hingston Mine below the 140-fathom level, with the electric pumping plant, and it is expected that work will be sufficiently advanced during the current month to enable the examination of the 150-fathom level to be carried out. The ore raised during August showed an improvement over that got in July. The announcement is likewise made of the conversion of the five-stamp battery from 800 lbs. to 1,000 lbs. falling weight, which has effected an improvement of 13 per cent. in the crushing capacity of these stamps, whilst the remaining 20 will be converted as soon as the new heads are delivered at the mine. Thus we may expect a material improvement in the metal recovery and mine profits.

AKROKERRI (ASHANTI).—By the last mail the manager of this West African company's mine reports the far from welcome fact that at the present time it is exceedingly difficult to maintain an average grade of ore for the mill, as the high-grade stopes in the southern workings are now in a zone of very decomposed ground, and require such careful handling and so much timbering that it is impossible to take the ore out as rapidly as is necessary to obtain a proper grade. "Provided we have no break-down with the plant," he adds, "we shall be able to improve on present returns." So it looks as if he is somewhat doubtful of the probabilities of the immediate future.

TAQUAH AND ABOSSO GOLD MINING COMPANY.—The sinking of the main shaft on this property has been resumed, and on the 31st ult. it reached a depth of 790 ft. Prospecting work on the second reef is being actively carried on, but the general manager advises that more development is necessary to prove its value before he can make any definite statement. The small 10-head mill continues to treat unsorted stone broken during development, and the returns from this source and from the tailings treated have been as follows during the months mentioned:—

	June. Tons.	June. Ozs.	July. Tons.	July. Oz.	August. Tons.	August. Ozs.
Ore treated	649	441	533	463	427	269
Tailings cyanided	100	38	240	30	216	17
Old tailings	320	79	340	68	340	47
Totals	—	558	—	501	—	332
Values		£2,011		£2,142		£1,390

BOULDER DEEP LEVELS.—The directors ask the shareholders to approve of a scheme of reconstruction, as the working capital is nearly exhausted. It will be recalled that this was one of the companies into whose affairs a Royal Commission made an investigation some eighteen months ago, owing to alleged "salting." So badly has it seemingly done since, and so patchy does the mine appear to be, that shareholders would probably be acting very foolishly in putting more money into it. The assessment is fixed at 3s. per share, the shareholders to be entitled to one new share for each old one. This will provide about £40,000, if it be all subscribed, but the ore reserves have a value of only about half this sum.

GREAT FINGALL CONSOLIDATED.—According to the latest news from the mine, the lower levels continue to improve in value. On the 13th level the assay value of the ore has risen from 5s. 5d. to 8s. per ton. On the twelfth level the continuation of the winze to the thirteenth level shows an average assay value of 41s., against the last return of 38s., and a new crosscut has given an assay of 40s. These improvements are, of course, hopeful and are needed, for shareholders are getting very anxious in regard to the future of the mine. But it would not do, as yet, to conclude that they are permanent.

INDIAN GLENROCK (WYNAAD) COMPANY.—After waiting patiently for some information from the mine, the shareholders in this company have at last received a lengthy report from the manager, Mr. Bawden, but it is questionable whether it will give much satisfaction. The great point of interest in the property, it appears, is Kurrumber No. 1, which is regarded as a most important and encouraging find. In July last this lode was 8 ft. wide, and the hanging wall had not been reached, but on August 6 Mr. Bawden gave the thickness as 12 ft., and still the hanging wall had not been found. Apparently, the directors attach considerable importance to this, seeing that the references thereto are printed in large type. Work is said to have proceeded satisfactorily in the north drive on the Phœnix reef, and the manager infers that "you have a very promising property, which, in a very short time would develop into a valuable mine." He remarks that the reef cut in Kurrumber No. 1 south-east level is entirely new, and its developments, if present values continue, would warrant further expenditure. When is this further expenditure to cease? He confidently anticipates the results of later work, and advocates a vigorous development policy, but advises that more of it should be done before crushing operations are commenced. The directors have now decided to issue the forfeited shares, and do so by offering them at the price of 3s. each credited with 9s. 9d. paid to the shareholders. The whole issue has been underwritten, so if by September 24 applications are not received the underwriters will take the balance of shares left. Probably the wisest shareholders would be those who would let the underwriters have the lot.

AVINO MINES OF MEXICO.—The secretary announces that providing the annual report and the new plans, now being prepared under Mr. Nichols' supervision, come to hand in sufficient time, it is the intention of the directors to issue the accounts up to June 30 last, and to hold the annual meeting about the end of next month. Meanwhile, Mr. Nichols writes to say that the development work he suggested last April has since been undertaken with the exception of the sinking of the Donoughmore shaft. He does not advise the starting of this shaft for the present, in view of the additional development undertaken since his first recommendations. This work should be taken up later, when it can be done without retarding other important work on the 8th and 9th levels. In consequence of results obtained in the Tolosa shaft, and from information he was able to glean in regard to developments in the San Luis mine, near the Avino boundary, he located and started a new shaft, which has been named the San Nicholas. This shaft has already been sunk to a depth of over 100 ft., and he expects to crosscut the two lodes known to exist in the San Luis mine when a depth of 200 ft. is reached. This work of sinking is progressing satisfactorily, he says, and should there be no marked change in the character of the rock in the shaft, crosscutting should be started early in October. He adds:—"This shaft is one of the important points to push development work upon, as we know the importance of the ore body disclosed in our neighbour's property, and it is fair to assume from what we have learned thereof that the ore-shoot will continue in our property. Besides the development work near the San Luis boundary, we have every reason to hope for good results at the other points where development work is now being prosecuted in known ore bodies."

ORSK GOLDFIELDS.—A fairly encouraging report is sent by the manager of this company for the month ending August 12, during which period the tributers' ore and the alluvial deposits on the Siberia claim produced 1,050 ozs. of gold. The total revenue to the company from the tributers for the month, after deducting the working expenses of the six mills, was £1,694. The new reef mentioned in the previous report has since been opened up for a length of 400 ft., and has been found to double in width at a depth of 14 ft., trial crushings of 153 tons of ore

yielding 89 ozs. It is added that the main shafts on the Safonofsky, Miaski, and Nouvgarodov reefs have been sunk to depths of 93 ft., 77 ft., and 87 ft. respectively. An office note explains that the falling off in the output is due partly to the fact that two of the Chilian mills were only working for eighteen days, as it was found necessary to replace two previously in use. Moreover, many of the tributers, as is usual at this season, have temporarily ceased work for the purpose of getting in their harvests. This company is a subsidiary of the Siberian Proprietary Mines, and was formed as recently as March last. It acquired as a going concern a lease for three years of the Orsk Goldfields, embracing an area of 16,000 acres, at a rental of 150,000 roubles, with an option to purchase. The consideration for this lease and option was £375,000, payable in 500,000 shares credited with 15s. paid, and if the option is exercised the consideration for the property is to be one and a half million roubles, say £150,000, less all sums paid as rent and for ore at grass, &c. Six Chilian mills are at work for tributors, and instructions have been given to erect six more, which it is estimated will earn a profit of about £4,000 a month. Working has been carried on for some years now, with more or less promising results. Six shafts are to be sunk on the three principal reefs, and it is intended to erect a mill of 100 to 150 stamps in 1907. The authorised capital is £600,000 in £1 shares, and 500,000 shares have been issued to the vendors. Messrs. John Taylor and Sons have made a report upon the property, and seem to think very well of its possibilities, the prospect of opening up ore bodies of value being regarded by them as decidedly encouraging. The work being done is mainly that carried out upon their recommendations.

Mining in Charters Towers.—For some years now very little interest has been taken in the gold mining industry of the one-time world-famed Charters Towers field, and this neglect, it must be admitted, is largely justified by the poor and disappointing results from many of the mines, even from those that in years gone by paid large dividends. According, however, to the recent report of Messrs. E. D. Miles and Co., the output of the field is maintained above the past average, and may be expected still further to increase. It is declared that the Brilliant Extended and the Mill's Day Dawn United will both increase their output during the next few months. The Golden Alexandra is now approaching the stage of regular output, and Kelly's Queen Block, where considerable development work is being done, is also doing better, with good prospects in the deeper ground. The levels in the New Dawn reef in the Day Dawn P.C. are now clear of the dyke, with a strong body of payable stone showing in the north drive. Operations in the deeper levels of the Brilliant Block are stated to be more favourable, whilst in the New Brilliant freeholds a footwall crosscut has revealed one foot of mineral stone, a vein that appears to be distinct from either the Brilliant or Day Dawn reefs. Marshall's Queen has won a dividend, chiefly from the cross reef. One of the chief events recently has been the successful tapping of the water in the old workings in the Queen Deep mines, which will shortly permit of the unhampered extension of development, and an increase in output with a decrease in calls. But despite all these events, developments and indications it is most unlikely they will arouse much interest amongst investors here, or even locally. Unhappily this goldfield seems practically to be played out, and unless some very wonderful event happens it will be impossible to attract fresh capital, in any amount to speak of, to Charters Towers. Gold mining is not in the fashion anywhere for the time being, for it has been found a very costly fashion of recent years.

British Guiana's Mineral Resources.—The report of the Institute of Mines and Forests of British Guiana for the year ending June 30 last observes that in the report for 1904-5 it was possible to point to an increase of 10,469 ozs. over the output of the preceding year. In the past year there was a decrease of 5,986 ozs., though it is 4,583 ozs. in excess of the production for 1903-4. The export of gold returned by the Customs Department amounted to 91,865 ozs., of a value of $1,627,665. This brings the colony's yield since 1891 to a total of 1,588,667 ozs. from quartz mining, dredging, sluice-working, and hydraulicking. As for the future, it appears that hopes are centred on mining proper and dredging. There has been much activity in Dutch Guiana, largely due to the extension of the railroad to the Mindranetti mining industry, the production for the current year being the largest in 10 years. For various reasons, one of which is possibly the drop in the price of small stones, very little has been done during the past 12 months in the direction of diamond working. Altogether, 68,701 stones were declared. No discoveries of minerals other than gold have been reported during the year.

Mining in the Federated Malay States.—According to the annual report for 1905, by the Resident-General of the Malay States, Sir William Taylor, K.C.M.G., there was in that year an aggregate increase in raw materials of $3,077,000, towards which tin and tin ore contributed $2,029,000, Para rubber $499,000, and unmanufactured metals, chiefly wolfram, $450,000. The recorded values of tin and tin ore exported amounted to $69,460,993. The Acting Senior Warden, in his report on the working of the Mines Department for the same year, gives the total mining revenue from all sources at $9,689,501, against $9,349,189 in 1904, an increase of $447,312. Of the total amount collected, the export duty on tin accounted for $9,249,627, an increase of $434,939; the export duty on wolfram gave $2,213; and the royalty on gold produced only $11,439, compared with $28,148 in 1904. The output of tin was 856,660 piculs, a decrease in quantity of 12,468 piculs; 548,371 piculs were exported in the form of tin ore, and 308,289 piculs as block tin. The quantities and values from the various States were:—

	Piculs.	Value. $
Perak	446,781	36,086,512
Selangor	289,867	23,412,558
Negri Sembilan	85,133	6,876,192
Pahang	34,879	2,817,166

The market rate was subject to less fluctuation in 1905 than in 1904, the highest figure reached being $88.75 and the lowest $76. As the average rate of exchange was higher, the value of the output in sterling was £7,063,407, at the rate of £138 10s. 5d. per ton. The Acting Senior Warden says he sees no cause for alarm in the decreased output, and is of the opinion that no evidence is forthcoming to show that the stanniferous deposits of the country are nearing exhaustion. As regards labour, the number engaged in tin mining is estimated at 230,000, which is deemed a conservative figure. The past year was not a prosperous one for the gold-mining industry. There were exported in all 9,972 ozs., of an approximate value of £39,888, the quantity crushed being 67,421 tons, of which all but 200 tons was operated in Pahang, yielding 9,073 ozs. of gold. The only mines that continued working in Pahang at the close of the year were the mines of the Raub Australian Gold Mining Company, where operations were carried on vigorously throughout the year, a labour force of some 800 men being employed. The only other gold mine in these States not now closed down is the Batu Bersawah mine in the Negri Sembilan, where, owing to difficulties experienced in dealing with water, the operations were somewhat restricted.

United States Diamonds.—The Department of Commerce and Labour at Washington has published the following figures of the values of the imports of cut and uncut diamonds into the United States during the twelve months ending June 30, 1906:—

	Uncut. $	Cut. $	Total. $
United Kingdom	6,964,543	4,307,811	11,272,354
France	567,572	5,007,792	5,575,364
Netherlands	944,576	10,192,821	11,137,397
Belgium	2,079,136	4,578 361	6,657,497
Other countries	23,827	196,112	219,939
Total	10,579,654	24,282,897	34,862,551

This value of nearly £7,000,000 in sterling materially exceeds the figures of any preceding year. In addition to the above, there were brought into the United States other precious stones, cut but not set, including natural pearls, to the value of $5,258,412, against $5,624,701 in 1904-5.

Mining in Brazil.—It is not generally known that Brazil is a fairly rich country in certain minerals and metals, but these are still undeveloped, and are likely to remain undeveloped if they are awaiting the necessary capital to exploit them. A special agent of the United States Department of Commerce and Labour has recently made an investigation into the mineral resources of Brazil, and his report has been presented to Congress. In this document he says Brazil possesses great mineral resources, especially in the State of Minas Geraes and parts of Bahia and Sao Paulo. Some of these minerals—iron, for example—are not likely to be extracted in large quantities, because of the lack of fuel near the mines and the impossibility of carrying the ore to the fuel, or *vice versâ*, in a country where transportation facilities are so little developed. With gold and precious and semi-precious stones, however, and even with manganese, the difficulties are much less serious. The minerals exist and are being taken out on a small scale and by crude methods, and there is every reason to believe that operations on a large scale would be richly rewarded. Monozite sand, which has recently attracted so much attention, is found mainly on the coast, and the transportation difficulties are reduced to a minimum. The President of the Republic, in his message to Congress recently, gave expression to the following views and sentiments:—"It is my duty to insist on the necessity of a law which shall assure to the capital employed in mining the peace and quiet which attracts and retains it. We possess mining districts of sufficient value to employ large sums of money which will be forthcoming if the law assures facilities for acquisition and freedom from subsequent disputes. The Government is continuing the exploration of the coal areas of the south, the industrial value of which has been conclusively proved. Besides the exploration of the coalfields of Rio Grande do Sul and Santa Catharina, soundings will within a short time prove whether or not we can count on veins of petroleum, especially in Parani, as the distinguished foreign expert in charge of the works expects." These sentiments are, indeed, admirable, and if they can be embodied in practical legislation this may eventually attract more capital than the Republic could otherwise hope to get.

Victorian Gold Yield.—The Agent-General for Victoria has received a telegram from his Government stating that the gold yield of Victoria for the past eight months amounted to 555,641 ozs., of the value of £2,222,564, being an increase of 47,123 ozs., valued at £188,492, compared with the corresponding period of last year.

TRADE AND PRODUCE.

WHEAT.—The general condition of the Baltic this week was dull. Holders of cargoes were unwilling to sell below previous rates, which buyers were just as unwilling to pay, with the result that business each day was confined to narrow limits. Farmers' deliveries last week amounted to 79,579 qrs. averaging 24s. 9d. per qr. compared with 78,589 qrs. and 27s. 1d. in the corresponding week last year; imports into the United Kingdom totalled 664,860 qrs. for the week as against 524,416 qrs. twelve months ago. In the States quotations have on the whole ruled steady, though there was a strong "bear" influence always apparent, assisted by a tendency on the part of holders to scalp the market. In its circular for September, the Canadian Bank of Commerce states its Winnipeg advices give the following estimate of the acreage under cereals and the crop returns for Manitoba and the North-West Provinces:—Wheat, 4,614,000 acres, to yield 91,814,000 bushels; barley, 591,000 acres, to yield 17,735,000 bushels; oats, 2,021,000 acres, to yield 80,854,000 bushels. These figures, it need scarcely be added, are based entirely on the continuance of good weather.

WOOL.—At the sale of low foreign wool held on Wednesday at the Wool Exchange, the catalogue represented over 11,000 bales, or double the quantity offered at the preceding sale on June 27. A good number of buyers, home and foreign, were present, but the demand throughout was restricted, business being checked by the large offerings and the high limits demanded by sellers, with the result that two-thirds of the quantity catalogued were withdrawn. The lots sold, however, went at prices equal to or a little above those of the last sale, with the exception of the poorer descriptions of Persian, which disclosed an occasional loss of ¼d. per lb. Manufacturers generally are busy. Many of the Leeds mills are working overtime, while some are running night and day to cope with orders from the Continental and South American markets for medium and better-class qualities, and the pressure in this branch has resulted in comparatively long periods being asked for delivery with all new orders. Everywhere holders are unwilling to press business, for stocks are low and prices show signs of stiffening rather than weakening. In crossbreds business is still very dull, and 40's are quoted at about the same rate as a fortnight ago. In fact, the only business doing is for forward delivery.

LINEN.—The volume of business passing at present on the Belfast yarn market is considerably in excess of that for some time past, while the trend of prices is still distinctly upwards, perceptible advances being realised in many numbers and descriptions. It is difficult, the *Linen Market* states, to say precisely what department has been the most active, as with the solitary exception of coarse yarns all have improved, but perhaps warps for 38 in. boiled linens and the wefts for the same have led the way. For the moment the problem to be solved by spinners is the enormous and unwieldy volume of oversales, which in the case of many makers has assumed a magnitude they cannot but view with misgiving. With some, indeed, there is a strong inclination to shut down for the present on any further commitments, and the last thing they desire is to contribute in any way towards forcing prices higher. At last it has been realised that yarn stocks are practically non-existent, and the utmost output of the present spindles is quite insufficient to keep present looms working. This has been and is the strongest if not the sole buttress of the market movement these two years past, and those who realised, believed, and acted on it promptly have in the end come off best. No change of any moment has taken place as yet in the manufacturing end of the market, but there is still an improving tendency apparent which, unless something totally unexpected happens, should develop as the season advances. Buyers must, therefore, be prepared to pay very full prices, and present quotations do not by any means mark the limit of the advance. So far as current business is concerned little that is fresh has taken place in the various individual departments. Brown power-loom bleaching cloths have been sold to a full average extent, though fractional concession would have undoubtedly brought out more orders. Hand-loom production moved off easily, and an increase in the turnout may shortly be looked for, while union goods were in steady request without much change. All the other branches were likewise active, with the exception of paddings and elastics, which were perhaps a shade quieter, but in every other instance business, where it did not increase, at least held its own. Foreign trade presents no new features, though the outlook in most directions must be regarded as satisfactory.

COTTON (from our Manchester correspondent).—Our market has been steady during the week under review, and although the business has not been very important, yet the inquiry has shown some improvement, and on the whole a fair trade has transpired in small lots. Raw American cotton is still uncertain, and although the fluctuations in Liverpool have not been very great, buyers of cloth are not disposed to operate freely or anticipate future wants. The general outlook for most of our markets abroad is encouraging, and the prospects for more business are brighter than a little time ago. Owing to a very satisfactory monsoon in India the crops there are doing well, and the inquiry for cotton piece goods has shown some improvement during the last week or two. China is not now quite so dull as a short time ago, but the bids in most cases are too far out to be entertained by manufacturers. Several of the smaller markets have given support in goods of a miscellaneous character. Healthy advices have lately been received from the Levant, and numerous small orders have been booked this week. Manufacturers are variously situated as to engagements. Burnley goods continue to move rather slowly. T-cloths and Mexicans have met with a little better demand, and remain firm, owing to extensive engagements in most cases. Coloured woven goods have been in fair request. The home trade houses are very busy dealing with the autumn trade, which on the whole is promising and satisfactory. Cops made from American cotton for home use have been in rather improved demand for distant months. Pressure for early delivery is still a marked feature. Spinners only sell at a wide and remunerative margin of profit. The medium numbers in twist are very strong indeed. Coarse weft is doing much better, the demand and the margin having improved considerably during the last few weeks. Shipping bundles have continued generally quiet. Doubled yarns are very firmly held owing to extensive order lists. Egyptian yarns in the commoner marks are still poor in demand, the tendency being for producers to turn on to American. The finer numbers in the better qualities are healthy.

In New York the cotton market opened with a firm tendency, the weekly Government crop report proving bullish, and inducing shorts to cover. Subsequently some "bear" pressure was applied and values receded, only to advance again at the end.

COAL.—A substantial improvement is noticeable in all branches of the coal and coke trade. In the North the collieries can scarcely satisfy the demand for gas coals, and consumers had to pay 11s. per ton for next year's f.o.b. delivery. There is likewise a very great demand in some ports for steam coal. Inquiry for household fuel is decidedly more active, and prices are very firm. The feeling amongst producers is refreshingly optimistic. In Cardiff prices for best large steam are 15s. to 15s. 3d., seconds 14s. 3d. to 14s. 9d.; ordinary large steam 13s. to 14s. Best house coal, 15s. 6d. to 16s.; seconds, 13s. 6d. to 14s. 6d.

COPPER.—Messrs. Henry R. Merton and Co. report that the Amalgamated Copper Company is now unable to supply any more copper for delivery in September, October, and November, and that the other leading producers are in a similar position. Those consumers, and there are a good few, who still require supplies for these months will therefore experience considerable difficulty in obtaining them, since the supplies in dealers' hands are very small. The position is rapidly becoming complex, and one in which extreme caution will be required. The world's consumption is increasing at a rate far out of proportion to the increase in supplies, that for the United States alone being estimated at 20 per cent. more than last year, while the output of the mines has only risen 6 per cent. Under these circumstances it is not surprising that quotations have ruled firm all the week, and though occasionally profit-taking sales brought about a slight drop, it was only temporary. Displaying firmness right up to the close cash and three months are quoted at £86 17s. 6d.

TIN.—In sympathy with the advices from the East the London market was rather weaker in the beginning of the week, and quotations for forward delivery easier. Later Eastern cables showed an improvement in the position, which was quickly reflected in prices here, but with business almost at a standstill in the middle of the week prices for three months sagged a little and a loss of 5s. at £183 10s. was marked at the close of Wednesday's market. Later prices came lower from the East, and the dulness here became more pronounced, with a further decline in three months' metal to £183, whilst cash is quoted £184 5s.

IRON AND STEEL.—The demand for pig-iron is just a little quieter in one or two districts, but is still brisk in other places, with more business reported. Thus the tendency of prices continues upward, and producers and consumers alike hold very hopeful views of the future. In fact, it is the general opinion that next year will be every whit as active as the present one. The rates obtained for Cleveland pig-iron are better than they have been for six years, and they look like going still higher. Connal's store is slowly diminishing, but there are still over 600,000 tons in the warrant stores. Makers hold little iron of any kind, for all they produce is readily absorbed. There is likewise a substantial improvement in the hematite iron trade, and manufacturers have been able to advance prices by another 6d. Prospects of increased demand are good. The condition of the market in Scotland is likewise firmer all round, advices from abroad being still very favourable.

TEA.—The quantity of Indian tea offered this week was decidedly heavier at 46,009 packages, but with strong competition for good liquoring qualities prices for these were rather better. Medium and common teas, however, showed a weak tendency, which became more pronounced when it was known that next week's supplies would again be large at 46,692 packages. Of the total available, 43,113 packages were sold, but the average realised dropped to 7.68d., compared with 7.75d. a week ago and 8.07d. last year. While Indian teas have been increasing in quantity, supplies from Ceylon have fallen off, but the arrivals are better in quality, and all descriptions showed improvement. At this week's auctions 22,590 packages were offered on which the average came to 7.19d. against 6.98d. a week ago and 7.10d. in the corresponding week of 1905.

SUGAR.—Mr. Czarnikow observes that operators here have become so impressed by the serious state of affairs in Cuba that the May quotation rose almost without any break from 9s. 4¾d. to 10s. 0½d., when a temporary reaction of 1⅛d. per cwt. set in. Some larger beet purchases by American refiners contributed to the improvement, as well as reports of drought in France and part of Bohemia. Moisture seems to be wanted almost everywhere. The hot weather has improved Licht's polarisations considerably, but last year's large crop was principally due to heavy roots owing to rains early in September, which are lack-

ing this year. Refiners have bought moderately, the quantities offering never being very large and the advance being too rapid for consumers to follow, though the trade evidently is not overstocked. The American demand advanced from 4 to 4 3-32 cents. Meltings are 48,000 tons, imports 39,000 tons, reducing stocks to 242,000 tons.

MINING RETURNS.

Akrokerri.—Crushed 1,940 tons, 1,350 ozs. by amalgamation; assay of tailings 3 dwts.; sands by cyanide 1,050 tons, 115 ozs.; total 1,475 ozs.

Alaska Mexican.—Ore crushed 21,304 tons; value, $35,845; saved 358 tons sulphurets; value $28,801.

Alaska Treadwell.—Crushed 87,283 tons; value, $75,793; saved 1,418 tons sulphurets; value, $65,289.

Alaska United.—Crushed 19,540 tons; value, $23,193; saved 359 tons sulphurets; value, $11,355.

Angelo.—Milled 24,600 tons, 8,007 ozs.; sands, 13,061 tons, 2,924 ozs.; slimes 9,005 tons, 1,376 ozs.; total 12,307 ozs.

Antenior.—Crushed 1,241 tons, 480 ozs. 8 dwts.; cyanide 800 tons, 125 ozs.

Ashanti.—Recovered 271 ozs., value £1,084.

Ashanti Goldfields.—Crushed 4,393 tons, 3,609 ozs.

Associated Queensland.—London, 170 tons £847; South Glanmire, 1,214 tons, 452 ozs.

Ayrshire.—1,043 ozs. produced from 7,028 tons crushed; 639 ozs. from 6,480 tons cyanided, 920 tons reserve tailings cyanided.

Bernheim (Mazoe).—Crushed 1,440 tons, 602 ozs. (equals 8.36 dwts. per ton); tailings assays, 3 dwts. per ton.

Bibiani.—Crushed 3,354 tons, 1,553 ozs.: 3,870 tons tailings by cyanide £3,364.

Brilliant Block Gold.—630 tons quartz, 262 ozs.; residues (tailings and concentrates) value £2,300.

Briseis Tin.—Black tin cleaned up 87 tons 13 cwt., in addition to New Brothers Home No. 1 Company, 27 tons 2 cwt. Briseis proportion of the total output 104 tons 7 cwt.

British Broken Hill.—2,467 tons crude ore produced 326 tons concentrates, containing 215 tons lead and 9,128 ozs. silver.

Broomassie.—Crushed 310 tons average ore, 165 tons low-grade ore from East Reef, and 295 tons wall rock, yielding 452 ozs. bullion on plates; 3¼ tons concentrates, value £22 5s. per ton.

Burbank's Birthday Gold.—Crushed 856 tons, 1,083 ozs.

Burbank's Main Lode (1904).—Crushed 760 tons, 537 ozs.; 720 tons cyanide, 98 ozs.; total, 635 ozs.

Burma Ruby.—161,000 loads washed, producing rubies valued at Rs.119,000; royalties, Rs.21,000.

Cape Copper.—Ookiep—937 tons of 16 per cent., equal to 150 tons fine copper. Nababeep—4,464 tons of 4 per cent., equal to 200 tons fine copper.

Cason.—Milled 35,200 tons, 10,639 ozs.; sands, 20,433 tons, 3,785 ozs.; slimes, 13,381 tons, 2,564 ozs.; total output, 16,988 ozs.

City and Suburban.—Crushed 25,800 tons, 10,219 ozs.

Consolidated Gold Fields of New Zealand.—Progress of N.Z.—Crushed 5,230 tons, value, £9,848. Golden Fleece—Crushed 965 tons, value, £1,449. Wealth of Nations—Crushed 1,120 tons, value, £2,050.

Consolidated Langlaagte.—Treated 19,386 tons, 6,332 ozs.

Consolidated Main Reef.—Crushed 18,853 tons, 4,001 ozs.; sands and concentrates by cyanide 18,853 tons, 2,680 ozs.; total, 6,681 ozs.

Crown Deep.—Crushed 29,011 tons, 8,341 ozs.; sands by cyanide 19,200 tons, 2,351 ozs.; slimes 9,885 tons, 743 ozs.; total, 11,435 ozs.

Crown Reef.—Crushed 20,000 tons, from mill 6,379 ozs., from sands and concentrates 2,977 ozs.; from slimes (current and accumulated), 1,312 ozs.; total, 10,668 ozs.

Croydon Consols.—Kulamadau 490 tons, for 337 ozs. gold and £280 residues; Ruby 113 tons for 463 ozs. ex residues.

De Lamar.—Crushed 850 tons, $7,200.

Driefontein.—Milled 18,000 tons, 3,435 ozs.; sands 13,008 tons, 2,175 ozs.; slimes 4,584 tons, 534 ozs.; total, 6,144 ozs.

Durham Prospect.—Crushed 800 tons, 309 ozs.

Durban-Roodepoort.—Quartz milled 11,225 tons, 3,274 ozs.; tailings 7,615 tons, 976 ozs.; slimes 3,245 tons, 197 ozs.; slags 48 ozs.; total, 4,495 ozs.

East Gwanda.—East Gwanda, crushed 5,747 tons, 2,589 ozs.; concentrates: 220 tons produced 640 ozs. Geelong, cyanide 4,000 tons, 255 ozs.; total, 3,484 ozs.

Ferreira.—Crushed 20,800 tons, 8,801 ozs.; sands 15,960 tons, 3,442 ozs.; slimes 7,379 tons, 870 ozs.; total 13,113 ozs.

Forbes Rhodesia.—Crushed 587 tons, 325 ozs.; cyanide 950 tons, 176 ozs. Dumbleton, 569 tons, 404 ozs.

French Rand.—Crushed 18,600 tons, 4,436 ozs.; tailings and slimes 19,127 tons, 2,316 ozs.; total, 6,752 ozs.

Gaika.—643 ozs. from 1,428 tons crushed.

Giant of Rhodesia.—4,516 tons, 2,498 ozs.; slimes 3,893 tons, 107 ozs.; total, 2,605 ozs.

Geldenhuis Estate.—Crushed 17,195 tons; from mill 4,464 ozs.; from tailings by cyanide, 2,100 ozs.; from slimes, 717 ozs.; total, 7,281 ozs.

Ginsberg.—2,464 ozs., 7,798 tons treated.

Glencairn Main Reef.—4,539 ozs., 15,100 tons treated.

Globe and Phœnix.—Crushed 6,680 tons of ore, 3,085 ozs., equal to 9·38 dwts. per ton; tailings, average assay value per ton, 2·77 dwts. Cyanide: 4,200 tons, 549 ozs. bullion, equal to 2·03 dwts. per ton; total, 3,634 ozs.

Glynn's Lydenburg.—Crushed 2,100 tons, 476 ozs.; cyanide, 1,495 tons, 645 ozs.; slimes, 605 tons, 232 ozs.; total, 1,353 ozs.

Golden Gate.—South Great Eastern, 205 tons for 130 ozs. gold; North Smithfield, 155 tons for 196 ozs.

Golden Horse-Shoe.—Ore treated, 23,043 tons, 12,515 ozs.

Great Boulder Perseverance.—Treated, 15,871 tons, 6,946 ozs. gold and 868 ozs. silver.

Great Boulder Proprietary.—Crushed 12,745 tons, 12,095 ozs.; tailings (old), 2,148 tons, 351 ozs.; total, 12,446 ozs.

Great Fingall.—21,868 short tons, 10,604 ozs.

Hainault.—Crushed 5,205 tons, 1,601 ozs.

Hannan's Reward.—Crushed 1,815 tons, 426 ozs.; royalties from tributors, £272.

Ivanhoe.—17,560 tons, 2,315 ozs.; sands, 8,190 tons, 1,717 ozs.; slimes, 7,540 tons, 2,724 ozs.; concentrates, 1,830 tons, 3,282 ozs.; total, 10,038 ozs.

Jubilee.—Crushed 5,581 tons, 1,266 ozs.; cyanide, 3,907 tons, 610 ozs.

Jumbo.—Crushed 1,705 tons, 1,032 ozs.; cyanide, 732 tons, 363 ozs.

Jumpers.—Crushed 11,100 tons; from mill, 3,299 ozs.; from tailings by cyanide, 1,697 ozs.; total, 4,996 ozs.

Jumpers Deep.—Crushed 18,832 tons, 4,815 ozs.; sands by cyanide, 12,320 tons, 1,357 ozs.; slimes, 7,458 tons, 484 ozs.; total, 6,656 ozs.

Kelantan Dredging.—Nos. 1 and 2 dredges recovered 81 ozs. gold.

Killarney Hibernia.—Crushed 4,367 tons, 1,447 ozs.

Knight's Deep.—28,579 tons, 9,890 ozs.

Lake View Consols.—11,266 tons, 3,432 ozs.

Lancaster.—Crushed 16,190 tons, 3,064 ozs.; cyanide 10,926 tons, 1,577 ozs.; total, 4,641 ozs.

Langlaagte Estate.—Ore crushed 29,260 tons, 5,255 ozs.; concentrates, cyanide 570 tons, 807 ozs.; tailings, cyanide 19,719 tons, 1,934 ozs.; slimes, 13,369 tons, 1,304 ozs.; total, 9,300 ozs.

Lancelot Freehold Tin.—150 tons Lancelot tin stone crushed, producing 8 tons, 65 per cent. tin bismuth ore; 4½ tons shipped.

Le Roi.—Shipments: 11,720 tons, containing 4,682 ozs. gold, 5,400 ozs. silver, 228,200 lbs. copper.

Luipaards Vlei.—Crushed 13,299 tons, 3,023 ozs.; tube mill, 301 ozs.; cyanide, 9,794 tons, 1,255 ozs.; slimes, 3,505 tons, 224 ozs.

Matabeleland Reefs.—Blanket—crushed 2,065 tons, 541 ozs Alice—crushed 641 tons, 278 ozs.

May.—Crushed 14,350 tons, 3,654 ozs.; cyanide, 10,135 tons, 2,043 ozs.; slimes, 4,085 tons, 247 ozs.; total, 5,944 ozs.

Meyer and Charlton.—Crushed 12,530 tons, 2,292 ozs.: cyanide, 3,603 ozs.; total, 5,859 ozs.

Mills Day Dawn.—Crushed 2,097 tons; value, including residues, £8,600.

Montana.—Drumlummon: Treated 4,000 tons of tailings and fines producing cyanide precipitates (represented by 380 ozs. gold and 5,200 ozs. silver), value $10,000. Lucky Girl: Crushed 2,140 tons of ore, producing bullion bars and cyanide precipitates (represented by 640 ozs. gold and 690 ozs. silver), value $13,400.

Morven (Rhodesia)—Crushed 1,708 tons, 504 ozs.; by cyanide 1,341 tons, 158 ozs.

Mount Morgan (Queensland).—Chlorinated 20,400 tons, 9,708 ozs.; Blister copper convertors produced 323 tons.

Mount Zeehan.—Output 400 tons of silver-lead ore, containing 250 tons lead and 28,000 ozs. silver.

New Comet.—Milled 19,600 tons, 3,908 ozs.; sands 13,917 tons, 2,966 ozs.; slimes, 5,046 tons, 624 ozs.; total, 7,498 ozs.

New Goch.—2,448 ozs. from 21,074 tons crushed; 4,750 ozs. cyanide; total, 7,198 ozs.

New Heriot.—Crushed 9,700 tons, 4,335 ozs.

New Hillgrove.—Crushed 182 tons, 490 ozs.; and 2·2 tons concentrates, value 5·8 ozs.; the value of the tailings is 2 dwts. 19 grs. per ton. Eleanora section—Crushed 180 tons, 70 ozs. gold; and concentrates value £268; average value of the tailings is 3 dwts. per ton; antimony value £569.

New Kleinfontein.—Milled 33,105 tons, 8,397 ozs.; sands, 23,021 tons, 3,340 ozs.; slimes, 9,252 tons, 647 ozs.; total, 12,384 ozs.

New Modderfontein.—Crushed 18,450 tons, 5,122 ozs.; tailings, 9,603 tons, 972 ozs.; total, 6,094 ozs.

New Primrose.—Treated 17,182 tons, 7,544 ozs.

New Rietfontein.—Treated 15,119 tons, 7,750 ozs.

New Unified Main Reef.—Treated 8,753 tons, 2,787 ozs.

New Zealand Crown.—Crushed 1,996 tons; value, £3,833.

Nigel.—Crushed 7,920 tons, 3,816 ozs.

Nigel Deep.—Crushed 3,292 tons, 1,819 ozs.

No. 1 Gold Mines.—Clean-up, 734 ozs. from 150 tons.

No. 2 South Great Eastern.—5,220 tons for 1,930 ozs.

North Broken Hill Mining.—Treated 2,120 tons of crude ore, producing 400 tons concentrates, containing 276 tons 16 cwt. lead and 6,080 ozs. silver.

North Randfontein.—Crushed 15,345 tons, 3,514 ozs.; concentrates, cyanide, 1,645 tons, 509 ozs.; tailings, cyanide, 9,165 tons, 1,775 ozs.; slimes, 4,825 tons. 569 ozs.; total, 6,367 ozs.

North White Feather.—Crushed 1,800 tons, 848 ozs.; cyanide, 1,288 tons, 117 ozs.; total, 965 ozs.

Oroville Dredging.—Returns, $17,500.

Penhalonga Proprietary.—Crushed 7,600 tons ore, yielded over plates 920 ozs.; concentrates, 135 tons, 729 ozs.; total, 1,649 ozs.

Porges Randfontein.—Crushed 14,698 tons, 4,037 ozs.; concentrates, cyanide, 1,536 tons, 615 ozs.; tailings, cyanide, 9,324 tons, 1,295 ozs.; slimes, 4,310 tons, 380 ozs.; total, 6,327 ozs.

Rezende.—Crushed 3,600 tons, yielded over plates 711 ozs.; sands treated 2,650 tons, 370 ozs.; concentrates 25 tons, 144 ozs.; total, 1,225 ozs.

Rhodesia.—Colleen Bawn: Crushed 707 tons, treated by cyanide 337 tons, concentrates 15 tons, yielding together 478 ozs.

Rhodesia Consolidated.—Nelly: Crushed 1,760 tons, 1,148 ozs.; cyanide 1,000 tons, 422 ozs.; total, 1,570 ozs.

Rhodesia Goldfields.—Crushed 1,535 tons, 315 ozs.; cyanide 809 tons, 347 ozs.

Rice Hamilton.—Sabiwa: Crushed 5,450 tons, 795 ozs.; cyanide 3,125 tons, 560 ozs.

Robinson.—Crushed 32,153 tons, from mill 15,164 ozs., from tailings (by cyanide) 4,436 ozs.; from own concentrates (by chlorination) 239 ozs.; from slimes 1,575 ozs.; total, 21,414 ozs.

Robinson Deep.—33,175 tons, 16,473 ozs.

Robinson Central Deep.—Crushed 16,495 tons, 8,210 ozs.; sands and concentrates by cyanide 10,800 tons, 2,284 ozs.; slimes 5,382 tons, 540 ozs.; total, 11,034 ozs.

Robinson Randfontein.—Crushed 15,297 tons, 3,430 ozs.; concentrates, cyanide, 1,360 tons, 426 ozs.; tailings, cyanide, 9,030 tons, 1,649 ozs.; slimes 5,141 tons, 507 ozs.; total, 6,012 ozs.

Roodepoort Central Deep.—Crushed 7,721 tons, 2,163 ozs.; cyanide 5,106 tons, 997 ozs.; total, 3,160 ozs.

Roodepoort United.—Crushed 10,680 tons, 2,991 ozs.; cyanide 1,516 ozs.; total, 4,507 ozs.

Sansu Mine.—Crushed 1,230 tons, 550 ozs (this includes 70 ozs. from cyaniding).

Simmer and Jack East.—Crushed 35,857 tons, 9,616 ozs.

Simmer and Jack Proprietary.—Crushed 60,700 tons, 23,110 ozs.

Sons of Gwalia.—Crushed 11,546 tons, 2,874 ozs.; tailings by cyanide 6,120 tons, 877 ozs.; concentrates 233 tons, 668 ozs.; total, 4,359 ozs.

South Randfontein.—Crushed 14,961 tons, 3,518 ozs.; concentrates, cyanide 1,470 tons, 490 ozs.; tailings, cyanide 8,810 tons, 1,431 ozs.; slimes 4,734 tons, 456 ozs.; total. 5,895 ozs.

Surprise.—Crushed 3,066 tons, 1,088 ozs.; cyanide, 4,000 tons, 747 ozs.

Talisman.—Treated 4,078 tons, value £13,163.

Tanganyika Concessions.—Ruwe—Output by sluice-boxes, 1,013 ozs.

Taquah and Abosso.—Treated 427 tons ore, 268 ozs.; tailings yanided, 216 tons, 17 ozs.; old tailings cyanided, 340 tons, 47 ozs.; total, 332 ozs.

Theta.—Crushed 1,505 tons, 1,030 ozs.; 630 tons by cyanide, 187 ozs.

Tomboy Gold.—Crushed 7,400 tons, value $67,000; concentrates shipped, 255 tons,

Transvaal and Delagoa Bay Colliery.—Output 34,658 tons.

Treasury.—Crushed 8,726 tons, 1,765 ozs.; 8,726 tons sands and concentrates by cyanide, 1,018 ozs.; total, 2,783 ozs.

Tyee Copper.—Tyee ore 2,038 tons; customs ore, 516 tons; total, 2,554 tons. Matte produced from same 278 tons.

Um Rus.—Crushed 692 tons of ore, 636 ozs.; 554 tons tailings stored of an average assay value of 3 dwts. per ton.

Van Ryn.—Crushed 22,590 tons, 6,768 ozs.; cyanide 51,000 tons sands, 2,696 ozs.; 7,628 tons slimes, 671 ozs.; total 10,135 ozs.

Victoria Proprietary.—Crushed 430 tons, 177 ozs.

Village Deep.—Crushed 27,978 tons, 4,816 ozs.; 20,250 tons sands and concentrates by cyanide, 2,950 ozs.; 7,501 tons of slimes, 679 ozs.; total, 8,445 ozs.

Village Main Reef.—Crushed 37,750 tons, 9,861 ozs.; cyanide 26,271 tons of sands and concentrates, 4,348 ozs.; slimes 11,730 tons, 750 ozs.; total, 14,959 ozs.

Vivien.—3,007 tons ore, 532 ozs.; 1,900 tons tailings, 189 ozs.

Waihi Grand Junction.—Crushed 450 tons, £975.

Westralia Mount Morgans.—Crushed 6,300 tons, 748 ozs.; cyanided 3,200 tons, 503 ozs.; slimes 1,995 tons, 269 ozs.

West Rand Central Gold.—Crushed 2,425 tons, 461 ozs.; 1,940 tons cyanide, 537 ozs.

Willoughby's.—Crushed 1,496 tons, 650 ozs., equivalent to 8·69 dwts. per ton; cyanide 940 tons, 265 ozs.

Windsor.—Crushed 5,050 tons, 691 ozs.; cyanide 4,115 tons, 743 ozs.; total, 1,434 ozs.

Witwatersrand.—Treated 32,400 tons, 10,448 ozs.

Witwatersrand Deep.—Crushed 28,770 tons, 7,855 ozs.; sands and concentrates by cyanide 29,303 tons, 3,501 ozs.; total, 11,356 ozs.

Wolhuter.—Crushed 17,700 tons; sands and slimes 17,700 tons; from mill, 3,388 ozs.; from sands, 2,675 ozs.; total, 6,063 ozs.

Worcester.—Crushed 2,580 tons, 908 ozs.

Zeehan-Montana.—435 tons silver-lead ore, containing about 282 tons lead and 32,650 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Central of Georgia.—Interest at the rate of 5 per cent., being $50 on each bond of $1,000 on the first, second, and third preference income bonds, payable on presentation of the bonds for marking, on October 1, at the current rate of exchange, by the Guaranty Trust Company of New York, 33, Lombard-street, E.C.

Lanarkshire and Ayrshire.—For the past half-year at the rate of 3½ per cent. per annum on the ordinary shares, carrying forward £192.

Southport and Cheshire Lines Extension.—At the rate of 2½ per cent. per annum on the preference stock for half-year ended June 30.

INSURANCE.

Atlas.—Interim for 1906 of 2s. per share.

Ocean Accident and Guarantee.—Interim at the rate of 15 per cent. per annum for half-year ended June 30.

MINES.

Crown Reef.—110 per cent. (22s. per share) for half-year ending Sept. 30, payable Nov. 5.

Globe and Phœnix Gold.—Second interim of 1s. per share in respect of 1906, payable Oct. 5.

Great Fingall Consolidated.—Quarterly interim (No. 20) of 5s. per share.

Kalgurli.—Interim (No. 18) of 7s. 6d. per share, payable Oct. 6.

No. 2 South Great Eastern Gold.—6d. per share.

Pusing Lama Tin.—Seventh interim of 1s. per share.

MISCELLANEOUS.

African City Properties Trust.—Interim on the ordinary shares of 6d. per share, being at the rate of 5 per cent. per annum for six months ended June 30, payable 26th inst.

Jones and Higgins.—Interim on the ordinary shares for half-year ended Aug. 20 at the usual rate of 7 per cent. per annum, payable Oct. 1.

Monte Video Waterworks.—Interim at the rate of 6 per cent. per annum for half-year ended June 30.

P. and W. MacLellan.—8s. per share on both preference and ordinary shares, payable Sept. 29.

Penriwkybir Navigation Colliery.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

Railway Investment.—£1 19s. 1d. per cent. on the preference stock for past half-year.

Robert Ambrose.—At the rate of 7 per cent. per annum for past year.

Robertson, Ledlie, Ferguson, and Co.—Of 5 per cent., making 10 per cent. for year ended July 31.

South African Real Estate Trust.—No. 4 of 5 per cent. (1s. per share) for year ended June 30, payable Nov. 6.

Is a settlement of the wrangle over Buenos Ayres Cedulas at last to be effected? We hope so, and Messrs. Baring Bros. and Co. announce they will receive the voting certificates of those who assent to the scheme now proposed by the Governor of the Province. Under this, holders of Cedulas coupons and securities of the Mortgage Bank of Buenos Ayres are offered in exchange for the existing securities and complete settlement of the debt the following terms:—For each $100 currency of Cedulas with coupons from January 2, 1907, attached, £6 12s. in bonds of the Province of Buenos Ayres, and for each $100 of currency coupons falling due up to and including January 1 next, £3 6s. in like bonds, gold Cedulas and their coupons, and that portion of series "E" domiciled in Europe to be treated as of double value. The new bonds will be sterling bonds of the Province, bearing interest at the rate of 3 per cent. per annum for the first five years and 3½ per cent. per annum thereafter, with ½ per cent. sinking fund applicable after 10 years. These terms are said to represent 75 per cent. of the face value of the Cedulas converted into a gold bond, and half that rate for coupons up to and including January 1, 1907. On this basis the offer does not seem to be an unreasonable one, although it looks a small thing to give from £3 6s. to £6 12s. for $100; but then it is only paper dollars, and of the province, which used to be worth about 2½d.

COAL MINING IN CHINA.—Rumour has it that the Chinese Government is seriously contemplating competing with the Kaiping Mines by producing coal in North China. The "expectant" Taotai Kwoh has secured from the Viceroy authorisation to export coal from the district of Paitaitze, between Kaiping and Linsi, and 45,000 taels have been provided to work the existing native shafts. As soon as the Viceroy has satisfied himself that the prospects are favourable, extensive modern mines are to be opened up with the help of outside capital, if, of course, it can be got. Conjecture is rife as to the motive behind this action, but inquisitive persons are hardly likely to be enlightened upon this.

Letters to the Editors.

Sirs,—In your issue of August 25, in answer to my query of proper commission for £496 5s. Russian 5 per cent., £48 6s. 8d. paid, you said it was usual to charge on the fully paid up amount, which the local brokers had done. This morning's post brought me a bought note from a firm of London brokers with whom I have done business for years. They charge me 12s. 6d. per £496 5s. bond, just half what the local firm had done. I have written them, telling them this. Again, in reckoning amount, both local and London reckon as £500 in making out account, but in dealing with the discount they only reckon as to £496 5s. When the bond is fully paid up or redeemed, is the value £500? If not, why reckon it different?

Probably there may be others of your subscribers who may be worried similarly, and who would, with myself, welcome a little light on the subject in your paper when you have a few lines of space.

Yours truly,

Perplexed.

Scarborough, September 5, 1906.

[There seems to have been some clerical blunder over your Russian stock. If you bought £496 5s. nominal stock, at present £48 6s. 8d. paid, the calculation should be as follows:—Five bonds of £48 6s. 8d. nominal, £241 13s. 4d.; 10 per cent. discount on £496 5s., £49 12s. 6d.—£192 0s. 10d. As to the commission, brokers differ in their charges. Some in London charge ⅛ per cent. on foreign bonds below 100 and ¼ per cent. over 100, but others charge ¼ per cent. on all small amounts.—Eds.]

Dear Sir,—Owing to numerous inquiries as to the names of the committee, I have much pleasure in sending them to you for publication as hereunder:—

Herbert T. Scharrer, Esq. (chairman), 34-5, Milton Street, London, E.C.

S. W. Cawston, Esq., Warnford Court, E.C., and Stock Exchange.

William Hope Dodgson, Esq., 26, Royal Exchange, E.C., and Stock Exchange.

Charles H. Cobbold, Esq., Needle Wood, Barnsley.

B. Brookman, Esq., 28, Throgmorton Street, E.C.

W. J. Byrne, Esq., 1, Colville Mansions, W.

Henley F. Dodgson, Esq., 26, Royal Exchange, E.C., and Stock Exchange.

Oscar Scholzig, Esq., Dashwood House, 9, New Broad Street, E.C.

Dr. J. Foulerton, 44, Pembridge Villas, Bayswater, W.

E. Springmann, Esq., 7, Alexandra House, Blumelsands, Liverpool.

As your readers will have seen advertised in the Press, the meeting is to be held at Winchester House, Old Broad Street, E.C., at 2.30 p.m. on Thursday, 20th, and I ask them to please remember that we are simply fighting for honesty and the just rights of the Cedula holders, and the latest advices from Buenos Ayres are all in our favour and to stand firm.

I am, yours faithfully,
Herbert T. Scharrer, Chairman.

London Offices of the Buenos Ayres Cedula Defence Committee.
34, 35, Milton Street, London, E.C.,
September 12, 1906.

Dear Sir,—The following has just been received by me from Senor Juan Dumas, who is now in Paris. He writes as follows:—

"I share your opinion that it is the best moment for the Cedula holders to do what they can to be represented at the meeting of November 26th.

"*The Committee of Buenos Aires stand by you*, therefore it is unnecessary for me to send another wire.

"Our claim is on the basis of the total debt, together with all coupons due, including those of January 1, 1907, for which the Government must give us a further title, the interest on the new bonds which will start from January 1, 1907, and it is the interest alone which is to be the matter to be discussed. This goes precisely in keeping with your own suggestion, and thus the Province of Buenos Aires will have paid everything. We will have made them an allowance on the interest, and in a year or so those who do not consider the thing in the same sense as we understand it will be the first to recognise that for a few millions more or less, which this liquidation will cost to the country, they will have the satisfaction to proclaim that the Province of Buenos Aires has not failed, and that she has paid all that she owed, and that its credits for the future will be better considered, and although the Argentines will admit they have gone through a bad past, still after it all they have held up and will show to the world the flag of honour.

"I have just received a wire which I cannot translate on account of one word which is crippled, but I will communicate its contents to you in a day or two.

"Yours faithfully,
"(Signed) Juan Dumas."

I am, yours faithfully,
Herbert T. Scharrer, Chairman.

September 13, 1906.

Answers to Correspondents.

Mithra.—(a) These are only 4s. shares. (b and c) We do not think it likely that there will be a reconstruction, but cannot regard the shares as worth buying for a lock-up. The company did well last year, it is true, but still has heavy arrears of preference dividend to make good, and ordinary dividends are to be restricted to 5 per cent. until a special reserve of £25,000 has been accumulated.

W. G.—(1) The position seems so hopelessly involved that the stock is not even a fair speculative security. (2) This is better, but still very far from being first-class. The increase in revenue for the current year is not very encouraging. (3) These bonds, which are for £20 each, only receive 80 per cent. of the nett profits as interest, and arrears are not cumulative. They have had a good rise this year, in view of the improved business shown by the report in March last, and seem fully priced at present figures.

Edina.—(1) We haven't a high opinion of the prospects of this company, which has had so far a chequered and unprofitable career. They are not shares we can recommend. (2) This company continues to do very well, and the purchase of a few shares might prove a good investment. It is doubtful, however, if it is possible to buy such shares on the market. You might try.

O. E. A.—(1) We would rather not advise a purchase of these shares, for we do not like the way the market has been manipulated the past week or so. (2) These are persistently talked to higher prices, and perhaps you would find the purchase of a few shares a profitable spec., not an investment.

Olive.—We think you may safely hold the securities, only if you have a profit prudence says "Take it."

Acciones.—(1) The position of the company is none too strong, and the ordinary shares would be a decidedly risky speculation. (2) We believe this company is doing a little better now, but the improvement is not very great, and we should not care to advise a purchase just yet.

H. K.—We fear the best advice we can give you is to cut your loss on any appreciable recovery.

Magog.—(1) Only second-rate. As you say, the valuation of the goodwill is heavy, and the company has so far fallen short of its prospectus promises. Thanks for sending us the balance-sheets, which the company has so far taken care to keep out of our hands, but it is, of course, too late now to deal with them. (2) The company is too waterlogged, and the attempt made in the end of last year to lighten the load was not sufficiently drastic for any of its securities to be described as fair. The yield seems good, but there are plenty of much better stocks to be had at a price giving the same return with less risk.

C. B. V.—(1) The shares have had a considerable rise lately on possibilities of larger dividends, and the price is at a point at which it is as likely to go back as forward. Still, the shares are good to hold on prospects. (2) This company's business rests on nothing more stable than public fancy, and as you have a considerable profit on the shares you should take it.

INDIAN GOLD MINES.

It is again a poor return from the Indian gold mines, the production for the month of August totalling 45,644 ozs. compared with 46,094 ozs. for July, a decrease of 450 ozs., although the months were of equal duration. Compared with the corresponding month of last year there is a decline of 5,156 ozs. The falling off is due mainly to lower returns from the Mysore and the Champion Reef.

Name of Company.	May		June.		July.		August.

Mr. D. Cameron Walker, local manager of the Central Insurance Company at Glasgow, has now been appointed resident manager for Scotland.

Messrs. Waring and Gillow, Limited, have commenced proceedings against the proprietors of the *Daily Mail*, and Mr. Charles Duguid, the City Editor of that paper, claiming damages for libel in respect of a paragraph which appeared in the *Daily Mail* on Wednesday last. Damages are laid at £100,000.

The Times

WEEKLY EDITION.

Every Friday. Price 2d.

CONTAINS A CAREFUL

Epitome of the Events of Interest

DURING THE WEEK.

TOGETHER WITH THE MOST IMPORTANT

LEADERS AND SPECIAL ARTICLES FROM "THE TIMES"

IN EXTENSO.

1. Parliament (when sitting) and Politics.
2. Colonial and Foreign News.
3. Naval and Military matters.
4. Trade, Money, and Stocks.
5. Ecclesiastical and Social Notes.
6. Law and Police. Reviews of Books.
7. Home and Domestic Events.
8. Correspondence. Chess by Special Expert.
9. News Interesting to Every Class of Reader.

And a SERIAL STORY by a popular and well-known Author.

SPECIAL EDITIONS for India and Australasia, for Canada and the United States, and for South Africa, containing, in addition to the above, matter particularly interesting to dwellers in those countries.

The Times issues three Supplements every week, viz.:—

THE FINANCIAL & COMMERCIAL ON MONDAYS;
THE ENGINEERING SUPPLEMENT ON WEDNESDAYS;
THE LITERARY SUPPLEMENT ON FRIDAYS.

Purchasers of THE TIMES WEEKLY EDITION residing abroad can have *any one* of these Supplements as an inset with the Weekly Edition.

MAY BE HAD OF ALL NEWSAGENTS.

ORDER FORM.

THE PUBLISHER

The Times Weekly Edition,

PRINTING HOUSE SQUARE. LONDON, E.C.

Herewith remittance for £ : : Kindly forward regularly THE WEEKLY EDITION of THE TIMES with the _____ Supplement to the following address for _____ Month.

Printed for the Proprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by CLEMENT WILSON, at Norfolk House, Norfolk Street, Strand, W.C.—SEPTEMBER 15, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 455. SATURDAY, SEPTEMBER 22, 1906. (Registered as a Newspaper.) **Price 6d.**
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Some Notes Upon Scotch Railways.

All the five Scotch railway companies have now issued their reports for the half-year ending July 31, and we are sorry to say they do not in the mass indicate that elasticity which the steady increase in the capital account would lead us to expect. In the six months the outlay of new capital by the five together, including subscriptions to other lines, came to £1,320,514, and of this amount no less than £474,000 went into lines open for traffic, while another £229,828 was absorbed by additions to the working stock. There was very little increase in the mileage of the entire Scotch system, only in fact about 76 miles all told, compared with the first half of 1905, and the aggregate increase in gross receipts was only £147,000, of which £107,000, or nearly 73 per cent., disappeared in additional working expenses. The gross receipts of the five companies came to £5,966,000, and the working expenses to £2,198,000. These figures, perhaps, indicate economy in working, but we can never be sure that this economy is not to some extent practised at the expense of the capital account, and the total amount spent on these systems, the aggregate length of which is little more than 4,700 miles, is now about £161,000,000, including capital overdrafts. We cannot, however, be quite certain of the actual money laid out because all the companies do not state to what extent duplication or "water" enters into the composition of their lower grade stocks. The Caledonian Company does carefully indicate the duplication of its ordinary stock caused by converting it into preferred and deferred, but the North British Company wraps it up, and we can only estimate the additional water in its aggregate at about £9,500,000. Altogether the additions which appear in the statement of capital receipts and expenditure amount to about £10,400,000, excluding the doubled Caledonian figures, which are very properly put in an illustrative exhibit, and not included in the regular accounts. Against this, however, the various companies have received in all upwards of £7,000,000 in the shape of premiums on stock issues, so that the round figure of capital expenditure given above cannot be far from the truth, and it is a very large total for a country whose population is less than 5,000,000 to have to earn interest and dividends upon. From this point of view it is an eloquent testimony to the energy and resources of the Scottish people that the gross and nett revenues should be so large as they are. All the companies, however, are in want of more money. Their trust funds to the amount of about £3,309,000 have been absorbed in the capital account, and there is still an overdraft of upwards of £600,000 which has to be financed. In this respect the North British Company is in the worst position, its capital overdraft on July 31 last being £1,760,000 against trust funds totalling only £1,283,000. It therefore appears to be under an imperative necessity to raise more money, and we really do not see how this can be done with a prospect of benefit to the ordinary stockholder.

Is there room for much further expansion in Scotch railway traffic? We begin to doubt it. If it were possible to re-people the Highlands and to so develop the agricultural or forestry resources of many parts of the country now given over to game and the pleasures of the Southern tourist, we might have greater

faith in the future of these railways. But apart from any such change, which could only come gradually and might not at first benefit but rather hurt railway traffic, there are only the great Scottish industries, lying principally in the west and south of the kingdom, to rely upon for steady development, and symptoms abound that expansion therein has well nigh reached its maximum. At any rate the railway companies had last half-year to work harder in order to earn the slight addition to their gross receipts exhibited in their reports. They ran in the aggregate nearly 670,000 more train miles; that is to say, while the increase in the actual mileage worked was little more than 1¼ per cent., the increase in the train mileage was nearly 3 per cent. upon the figures for the first half of 1905. Hence probably the reason why the increase in working expenses was in undue proportion to the increase in gross receipts. In a good tourist season, when England is prosperous and the letting of shootings excellent, we may see further increases in passenger and mail receipts, perhaps also to some extent in the income from goods and minerals, but in a year bad for the tourist, sport, and sybarite kind of traffic we must look for stagnation if not decline, because we cannot divine where further developments in the trade of Scotland are to come from. Glasgow and the region around it, all the navigable valley of the Clyde, is now one of the busiest and most enterprising centres of industry in the world, but the limits of development may have been well nigh attained, for competition every year becomes more acute in the shipbuilding trades, in the iron and steel industries, in the coal trade, and in the textile and cognate trades, not to speak of a variety of smaller industries. Rival nations are more and more building their own mercantile navies and ships of war, more and more becoming their own spinners and weavers. A considerable stimulus was given to the shipbuilding industry in recent years by the orders of Japan for ships of war, but these must now be nearly at an end, Japan having captured so many of the Russian ships, and being, besides, in no position at present to give out further expensive contracts of the kind, though merchant vessels she may require. For reasons like these we should have been glad to see the capital accounts of these Scotch railways closed on lines open, even if some transitory diminution had thereby taken place in the dividends paid upon their ordinary stocks, but instead of this we have a prospect of perpetually extending outlays, the result of which must be hurtful to stockholders in time and not improbably permanently injurious to the credit of the various companies.

We analysed the individual accounts as they appeared so fully in the usual way that it seems unnecessary to go over them in detail again, but we may at least indicate their incompleteness in one or two particulars, although in this respect the Scotch companies merely imitate the English ones. The North British Company, for instance, has spent a great deal of money on its Waverley Station Hotel, in Edinburgh, but we do not get any statement as to what results have flowed from this expenditure. In the past half-year, for example, about £22,000 in fresh capital was laid out on the Waverley Station and hotel—but how much was station, how much hotel, the figures do not indicate. Nor is there any statement of the receipts from this enterprise. We cannot imagine where the figures come in. Is it under "rents of property," or where? The North British Company also runs ferry boats on the Forth and Tay, and steamers on the Clyde and Loch Lomond, but the receipts of this portion of the enterprise are not exhibited, although we have in Abstract "G" an account of the expenditure, which amounted to £23,438. What was the income? Is it wrapped up in the ordinary revenue of the railway? Probably so, but that is not a wise proceeding, or one conducive in any way to economy. In this respect the Caledonian Company is deserving of a word of commendation, for its revenue account gives the receipts from the Forth and Clyde Canal and the expenses as well, but then this company is able to make a tolerably cheerful, if not very remunerative, exhibit under this head, for the expenses came to no more than 36.21 per cent. of the income, the figures being, income £63,942 and working expenses £23,152, but this company also gives no particulars about its hotel enterprises, nor does the Glasgow and South-Western, whose accounts are imperfect like the North British in that the working expenses of the steamboats are set forth, but not the receipts therefrom. These are, perhaps, minor criticisms, but we feel sure that it would be good for economy in working if an abstract of the results of every branch of the business were supplied each half-year. Happily none of these Scotch companies are deeply committed to water carriage adventures of any description, true though it be that the Caledonian Company has now £3,191,499 of capital sunk in its Forth and Clyde Canal, including £98,847 spent thereon in the past half-year. The capital of the "Ayrshire" company, the Glasgow and South-Western, sunk in its steamboats amounts to a mere trifle of £128,250, and the North British Company has but £66,082 laid out in the same way. But insignificant though the items are, it is still important that the product of such outlays should be periodically laid before the proprietors. As to the general results of the working we have nothing further to say beyond what has been already printed, but we hope the day is not distant when the outlay of further moneys drawn from capital account upon working stock will be at an end. It is really appalling to note how this item mounts up. At the end of the past half-year the aggregate capital sunk in this direction alone was almost £20,000,000, all in an asset continually undergoing deterioration, and the bulk of which may be consigned to the scrap heap long before it is worn out by the advent of electricity as a propelling force.

Economic and Financial Notes and Correspondence.

Our Drink Revenue.

It is falling off, whether from poverty or the increase in sobriety amongst the people we cannot yet say. In the total income collected by the Commissioners of Inland Revenue for the year ended March 31 last the beer and spirit duties stood for contributions of respectively £12,983,000 and £17,765,000, and both showed decreases, of no great importance, it is true, but still progessive decreases. In the beer duty, for instance, there is a decrease of £958,000 in the receipts compared with that glorious year of patriotic thirst, 1900-1, and in the spirit duties the falling off from still more splendid 1899-1900 has been no less than £2,538,000. Even for the past year the declines more than account for the reduction in the entire revenue collected by this Department. Its total was £94,976,000, which was only £156,000 less than that of the preceding fiscal year, but the decrease in the beer duty alone was £118,000, and in the spirit duty over £370,000. In the insistent duty of patriotic drinking it must be, from the point of view of our world-aspiring classes, a serious charge against Scotland that it is not doing its duty in the matter of swilling beer. As recently as 1900-1 this part of the kingdom supplied about £747,000 to the revenue by the consumption of this sort of coloured fluid, and last year the total was down to barely £639,000. Ireland in this respect makes a much more satisfactory display, for although the past year's receipts from beer duty in that kingdom were not quite so heavy as in either of the two years ended March 31, 1904, they were larger than in the year ended March 31, 1905. The only thing that can be said in extenuation of the Scotch dereliction of drinking duty—the duty of upholding the Empire and contributing excessively to the furnishing of rapacious naval and military wants—is that England appears to be well nigh as bad, for since 1900-1 the decline in the income provided by English beer-

drinkers has been fully £900,000, and there was a slight falling off last year compared with 1904-5, whereas Scotland—to her honour, shall we say?—gave an increase of almost £20,000 on that year, in spite of the large decline shown over a series of years.

When we come to the spirit duties we find the same story told, with significant variations. All parts of the United Kingdom show declines, and the aggregate falling off from Scotland since 1899-1900, the year when the duty was raised to 11s. per gallon in order to help to pay for the South African war, has been £992,000. In the aggregate the three kingdoms together furnished £2,538,000 less to the revenue by spirit-drinking last fiscal year than in the year when the extra duty was imposed, for England, too, is drinking less and Ireland is nearly as bad as Scotland, if not worse, Ireland's consumption of spirits having fallen off by £1,113,000 since 1899-1900, while the English contribution has only declined £637,000. How long is this going to continue? Is the country really becoming sober? Not if we can believe tales such as that provided by the records of the Glasgow police-courts, and yet the country or the habits of the people must be changing for the better, as we should call it from our point of view, however desperate its case may appear to those who rejoice in the destruction of wealth through extravagant armaments, to dreamers of invasions and Armageddons in various parts of the world where England must get beaten.

Perhaps, however, the most interesting question of the moment still is the position of the spirit trade and its capitalists. What is happening in Scotland amongst the banks there still up to the chin in whisky? Their position may be considered to have improved slightly in the past year, since the stock in Scotch warehouses actually declined by 1,536,000 gallons during the fiscal year, but it was none the less 120,242,000 gallons on December 31 last against 31,995,000 gallons held in Ireland and a mere 11,283,000 gallons in England. The Irish total is up at about 234,000 gallons and the English down by 564,000, the result being that the entire stock held in the three kingdoms is about 1,866,000 gallons smaller at 163,520,000 gallons. It remains a formidable total enough, but one hopeful symptom is visible in that the production of spirits appears to be falling off, in spite of last year's slight increase here and there. Going back to those glorious years in the end of last decade and the beginning of the present, we find the high water mark of production reached in 1898-9 with 63,538,000 gallons, of which Scotland provided 35,769,000 gallons. Since that date the Scotch output has fallen off by nearly 12,000,000 gallons to 23,813,000 gallons for the past year, and the Irish production, notwithstanding last year's increase of 862,000 gallons, is less than it was that same year by upwards of 2,100,000 gallons. Even the English production shows a decline on that and the following riotous years, its maximum having been 12,967,000 gallons in 1899-1900, while last year, although it showed an increase of 594,000 gallons on the previous one, gave only 12,751,000 gallons. The number of distilleries has also fallen off in all three kingdoms, in Scotland by eight and in England and Ireland by three each. For all that, the position of the Scotch banks who are carrying whisky for the distillers and bonders is still a ticklish one, and we do not yet see how they are to escape bitter losses in the course of bringing the trade back to a healthy position. In one sense it may be said that the value of the stock on hand increases, inasmuch as old whisky commands, or should command, a higher price than new. At the same time, however, there is wastage going on—though now concealed in the returns—which must tend to diminish the possible profit from the liquor when it is sold, and the ugly fact stares the holders of whisky in the face that the consumption in the past year of 32,487,000 gallons compared with 1899-1900 has fallen off by 6,230,000 gallons. There will have to be a much more drastic curtailment of output if in the face of this decline in consumption stocks are also to be reduced. But curtailment of production means loss on the distillery buildings and plant, and we should like very much to know upon whom such a loss will ultimately fall. Some may rely upon enlarged exports of whisky to pull them out of the vat, but there is not much consolation to be drawn from the figures of exports either, although nearly 1,000,000 gallons more at 7,050,000 gallons was sent abroad last year than in 1898-9. The foreign trade, indeed, was last year nearly 2,800,000 gallons larger than in 1895-6, and evidently considerable success is attending the development of this branch of trade, but even so, production is still excessive in view of the magnitude of the stocks held. How many millions of Scotch banking deposits are at present inextricably engaged in the whisky trade? Is it £20,000,000 or £30,000,000, or how much?

Once More the "Times" Book Club.

All sorts of stories reach us about this wonderful enterprise for making money out of nothing, but we can pay little attention to them. It is the American way to do business for a time at a loss in order to kill competition and grab monopoly, but it is not a way likely to succeed in the long run in a free trade country like our own, and the magnificent splashes now and again made by the conductors of this Yankee enterprise do not seem to us to have been very wisely set about hitherto or productive of profit. How much was gained, for instance, by that great rummage sale of publishers' waste-paper which was advertised so widely a few months ago? Enough to pay the rent of the spacious premises occupied? We may never know and it does not much matter since it is not our money that is going down the drains. Two reports, however, are of present interest. One is that the publishers are endeavouring to put a stop to some moves said to be in contemplation by these bold men by refusing to sell their new books, except at full retail price, to Messrs. Hooper and Jackson, or the Clark Publishing Company, or whatever the people call themselves who run this big show. The main quarrel arises over "nett" books, a system of vending which has undoubtedly been of immense benefit to the retail bookseller, and through him to the publisher. We are told that the *Times* Book Club threatens to cut the price of these nett books by 10 per cent. if publishers do not submit to its terms, and some publishers are said to be in a position which prevents them from resisting. Others, the majority, will be free in October to follow what course they may decide upon, and they are said to be considering whether the full price should not be charged to the *Times* Book Club people for all nett books unless a pledge is given that they will not be retailed except at a non-discount price.

In the meantime the retail trade is rather in a quandary for another reason. The story goes that the *Times* Book Club contemplates another rummage sale, this time of waste juvenile literature. "What are we to do?" one of the leading booksellers in London said to us the other day. "You know our Christmas sales of juvenile literature and presentation books of all kinds, but especially juvenile books, is an important source of revenue to us, and that it may be seriously interfered with should the *Times* Book Club start a rummage sale of publishers' waste-paper in this form just when the Christmas season is coming on." We quite sympathise with the alarm thus expressed, and with the determination, also emphatically expressed, that unless the publishers came to the help of the retail bookseller in this matter, large orders for new Christmas books would not be forthcoming. "We cannot possibly order freely of new literature if a competition of this unwarrantable description is set up against us with old and waste stuff." It will be a case of buying for the daily wants, and the publisher may soon find that he loses much more by sacrificing his usual Christmas trade than he can possibly gain by clearing out his cellars and warehouses of dead stock to be put upon the market at a few pence a volume or at whatever fancy figure the *Times* Book Club people think they can

foist it on to the public at. Thus there promises to be a pretty coil of trouble in the publishing and bookselling trades during the closing months of this year, and neither branch of the business has been so very prosperous during the past few years, so that a rummage sale of juvenile books by the Yankees who seem to control the destinies of the *Times* might be the last straw, weighty enough to send more than one publishing house and large bookseller into the bankruptcy court. As for the great subscription libraries they have had, and continue to have, a bitter struggle of it. Mudie's, we believe, have managed to pay their way, but can give their shareholders no dividend, and the management is to be congratulated on even this result, for the attraction of books *ad lib.*, lent for nothing, and sold, if you can get them, at the lowest second-hand prices naturally hurts old-established businesses organised upon fair, give and take lines. We said, "if you can get them," and our experience is that you may order but are not always supplied. Just by way of experiment, some 15 months back, we did order two copies of a rather important book, to be delivered when it passed into Class "D" in the *Times* list, i.e., into the usual second-hand category. This, it was said, would be within about six months, but we have never seen the books yet, and if a mere sediment of the stories that reach us is true people frequently get books they do not want in fulfilment of orders given. These incidents, however, cannot be habitual else the *Times* Book Club shop would have been shut up before now, yet enough mischief has unquestionably been done to the ordinary book trade and the ordinary librarian to put both producer and vendor in a serious position. It has been suggested that publishers capable of acting independently should boycott the *Times* with their advertisements, thus meeting offensive war with defensive, and in some instances this may be done, especially when there are so many other channels of advertisement now open equally effective and often probably much more so. But it is not for us to suggest any such course. Each publisher must act in a way that seems most conducive to the furtherance of his own interests. Still the exasperation is so great throughout the trade that an extreme step of this kind seems to be quite within the range of probabilities. And how long will the *Times* Book Club prolong its beggar-my-neighbour altruism, continue to court insolvency for the love of monopoly? *Quien sabe;* but we should not like to be a large creditor.

The District and its Fares.

To judge by the statements made at the public meetings and by the Press, not only would it appear that the District Company has exceeded its powers, but that its action is little short of a crime, and all because it has raised its fares on non-competitive routes in the hope of gaining additional revenue with which to make ends meet. On the completion of electrification the then directors indulged in sanguine hopes of a considerable reduction in working expenses and a big increase in traffic, and in a generous mood cut down season ticket and ordinary fares. When doing this they forgot apparently that the change from steam to electricity, with the incidental expenses of rebuilding stations, relaying tracks, and installing automatic signalling, had added close on two millions sterling to the capital account to earn interest on which would require a very substantial increase in revenue. Experience has shown electricity to be very little cheaper than steam, and though the number of passengers has certainly increased, the net revenue has not benefited to the extent expected, partly owing to the low rate per mile charged. Consequently at the close of the financial year the company found itself with a deficit of some £100,000 on its fixed charges, and means had to be sought to remedy this. Expenses were still further cut down by reducing the number of cars on the mid-day trains to three, and on some sections to less, but even this and sundry other small economies did not promise to bridge the gap, and there was nothing for it but to increase the fares in the hope of swelling the revenue. It was a desperate remedy, and one we feel sure Sir George Gibb and his directors considered well before adopting. The District Railway is for all practical purposes an urban passenger line pure and simple, which means that though the class of traffic it caters for is perhaps the easiest a railway is called upon to deal with it is also the most independent and costly. If a regular traveller finds his fare raised he simply casts about to find another route. In the case of the District competition is to a great extent furnished by the omnibus routes that tap its system at various points, and the competition of these, owing to the introduction of the motor 'bus, has of late become keener than ever.

A noticeable point in the agitation is the entire disregard for the shareholders of the company and their claims. The inhabitants of the various suburbs whose fares are altered seem to regard the railway as a philanthropic institution run solely for their benefit. But they might well remember that unless the existing deficit is made good somehow the railway must inevitably drift into a state of bankruptcy to the advantage of nobody. What the end of the agitation now raging will be it is impossible to say, but we are inclined to think it will result in the defeat of the agitators, or at the best, a compromise on terms favourable to the railway. If as the company contend, and there is no reason to doubt the statement, the fares, workmen and ordinary, now charged are well within those authorised by its special Acts, the Railway Commissioners have no power to interfere, while the question as to what is or is not proper and sufficient accommodation is to a large extent a matter of opinion of which over-crowding on a particular train or trains is not an absolute test. Furthermore, the present fares are, it is said, in many cases less than those charged when the line was worked by steam, and should this be so, the agitators will find it difficult to persuade either the Board of Trade or the Commissioners that the company has acted unjustifiably in remodelling the scale.

Mr. Haldane's "Citizen" Army.

What does he want it for? We are curious because no member of the present Government has been more cordial in his attitude towards great nations like France and Germany. Germany especially is a favourite with our War Minister, and he has recently been hob-nobbing with the Kaiser on the most amicable footing, studying the art of war at Berlin and elsewhere in Germany, and altogether behaving as we like British Ministers to do towards other Powers great and small. Why, then, this Prussian-like agitation for a great development in the study of the art of wholesale murder by the young of the present generation? Does Mr. Haldane mean to do away with the standing army, to have merely a "General Staff" with a Militia and Volunteers as butcher's material? If so, we again admire him and wish him the utmost success. We could have a "citizen" army thus composed which might be excellent for all defensive purposes—assuming that our Fleet, as the blue funkists keep wailing, was unable to keep the foe out of the country—and at a much less cost than we now have to bear. If, however, these local musterings and target practisings are to be super-added to the cost of our standing army as it now is, then we cannot look for any decrease in the Army Budget. An intolerable load will still be laid upon our backs for us to bear and curse at, and we shall not admire Mr. Haldane at all any more.

From this point of view, indeed, Mr. Haldane is far from being so lovely, and we should really like to know what he means this popular army of his, this nation of fighters for? Does he, after all, fear the Kaiser, and dream o' nights of uhlans and cuirassiers and black mobs of German infantry marching through the land, looting everywhere, annexing everything; or is he afraid of France or of Russia? We wish he would tell us, because so far as we can see there is no danger of any kind to the people of this country from any Continental

point. Every day that passes increases the power of pacific interests in binding all civilised peoples together by mutually conducted enterprises to which an outbreak of war would be utterly destructive. But if there is no danger from Europe or from the United States, does Mr. Haldane fear an inroad by the dying Turk, or fresh hordes of savages bred in Caucasia or swarming up from the lone steppes and mountain fastnesses of Central Asia to overrun Europe as Attila and his Huns did? Or does he think the black populations of Africa are going to muster in their millions and in return for our sporadic butchering and systematic harassing with taxes surge over Europe, or land on our shores seeking rest there? We really cannot imagine, but it is obvious enough that if such danger exists anywhere the sooner we have a great army of deft man-killers always on the alert the better. Only what could the far-off savage hope to gain? When the ancient Roman Empire was assaulted and its frontiers breached, the savage hordes usually settled in one or other of the provinces overrun by them. They were graciously permitted by the impotent and beaten but still awe-exciting Imperial Court to become citizens of the Empire in these provinces, and given lands—lands torn away from their owners—to cultivate and earn a living upon. But we have no land to spare—unless, indeed, it were the parks attached to the mansions of our nobility and gentry—and the savages, if they came, could, therefore, find nothing except loot, mostly mortgages, bills of exchange, and other paper, to carry away. This is hardly enough to tempt them, and in the circumstances we really think our War Minister might allow us to have a little peace from war alarms. Do you want to kill anybody, good reader?

Chile in 1905.

According to the commercial statistics recently issued the gross trade of Chile in 1905 amounted to £34,035,420, an increase of £6,049,180 over that of 1904; of this increase £2,358,325 was in the value of the imports and £3,690,855 in the exports. The total value of the import trade was $188,596,418, of which 37.71 per cent. was contributed by the United Kingdom, Germany coming second with 25.23 per cent., while of the export trade, valued at $265,209,192, 38.20 per cent. was taken by this country and 27.58 per cent. by Germany. It is impossible at present to estimate the injury done to the commercial and economic prosperity of the country by the recent seismic disturbances, but until they occurred everything pointed to the present year giving an improvement on last. The above figures certainly show that 1905 was considerably better than 1904, both as regards home and foreign trade. It is early yet to pronounce positively on the stability of the various enterprises started some two years back, but Mr. Rowley, our acting Consul-General, states that the majority of them seem to have passed successfully through their earlier stages, and at the close of 1905 were reaching the position of paying concerns. The steady range of high prices ruling for copper, nitrate, and wool during the period under review did much to strengthen companies interested in these industries, and encouraged them to further ventures. The Government also did a good deal by giving facilities for obtaining possession of the unexplored nitrate lands of Antofagasta, and by granting concessions of pastoral and agricultural land in the southern districts of the Republic. Farming and mining both showed signs of considerable progress during the year, though hampered in their development by a scarcity of labour. Wages and salaries consequently rose sensibly, since all employers were anxious to secure hands for their work, and competed keenly against each other for hands. Unfortunately, among the lower wage-earning classes, which were most in demand, the ease with which money could be earned only augmented their thriftlessness and drinking habits, and the conditions of life among them, even in the towns, are far below European standards. Clean and comfortably furnished houses of the artizan type are unknown, in spite of the terrible warning given by the severe epidemic of small pox that devastated Valparaiso last year.

The tonnage of shipping that entered the Chilian ports during the twelve months was considerably greater than that of 1904. But at many of the ports lack of accommodation prevented vessels from clearing promptly, as more often than not days elapsed before they could get alongside the berthing wharves, or even get cargoes lightered. This, Mr. Rowley states, was particularly noticeable at Antofagasta, where steamers had to lie for months waiting to unload their cargoes, which consisted principally of machinery for the new nitrate works. And much the same state of things prevailed at Valparaiso when the moles were congested with cargo. Steps, however, were taken to commence the new docks at the close of the year, and tenders were called for, but as none of those presented conformed with the authorisation required by law the Government was unable to accept any of them, and the scheme, therefore, has been dropped for the time being. So some time must elapse before the port accommodation of Valparaiso is improved. In view of the increased tonnage to be handled, both on the coast and the straits line, all the steamship companies trading to Chilian ports from Europe and North America were compelled to increase their fleets. The Pacific Steam Navigation Co. ordered three new vessels of 9,000 tons dead weight capacity to be used for the mail service, and in addition built four cargo boats of 6,000 tons specially fitted for the coast trade between Liverpool and Peruvian ports, besides calling at Chilian and East Coast ports as well. The special coast services of the same line were also augmented, two boats being transferred from the Straits Mail Line, while two others of 4,000 tons were built to run between Chilian ports from Port Monti to Pisagua. Even these additions were not considered sufficient, and two cargo steamers of 6,000 tons formerly running between Liverpool and the West Coast have been retained to assist in dealing with the increased cargoes moving up and down the coast. The two German lines, the Kosmos and the Roland, a new company, the chief competitors of the British, also added to their respective fleets, and the Merchants' Line running from New York followed suit. But with the increase in the tonnage of merchandise handled has come an increase in the landing charges, especially at Valparaiso, where the scale now in force is 45 per cent. higher than in 1904 and 15 per cent. more than 1905. In these circumstances it is not surprising that living in Valparaiso becomes dearer each year, since to pay for the increased discharging dues the importers and storekeepers must of necessity charge the consumer more for imported articles, and this in turn affects the price of the home-grown or home-made goods that compete with the foreign. All articles of food imported have risen at least 30 per cent., with the result that those drawn from Chile itself show an increase of nearly 20 per cent.

But while the steamship companies have taken steps to deal with increased trade, the railways are in a state of hopeless confusion and utterly incapable of dealing with the larger traffic demanding to be sent over the lines. The rolling stock is in a miserable condition and insufficient, and produce and merchandise are consequently left for months at all the stations, important as well as wayside, to rust and perish. Moreover, the high wages to be earned in private employment has tempted many of the best of the Government servants to leave the State railways in order to take up better paid positions elsewhere, and this also does not tend to increased efficiency in the working of the State lines. Two private companies, however, have obtained concessions from Congress to build two separate lines, with electrical equipment, between Santiago and Valparaiso, and it is hoped these will soon be constructed, as at present the railway is utterly incapable of dealing with the traffic. Still, in spite of all these drawbacks, Chile undoubtedly made remarkable progress during 1905. The deliveries of nitrate amounted to 35,568,156 quintals, an excess of 2,809,529 quintals

on those of 1904. At the same time the world's consumption is steadily growing, and already the deliveries in the months outside the consumption period are greater. So there is every reason to believe that the figures for 1905-6 will exceed those of 1904-5 by some two and a-half to three million quintals, and it may be that the demand will exceed the quantity fixed by the Associacion Salitrera de Propaganda for exportation. The shipments of fine copper were also greater in 1905 by 9,601 quintals at 263,313 metric quintals, and of bar copper 238,934 quintals, or an increase of 17,070 quintals were shipped. In addition, 15,683 metric quintals of copper regulus were sent abroad, as compared with 6,654 quintals in 1904, while the total amount of the copper ores exported equalled 41,696 quintals, or, roughly, 1,560 quintals less than the previous years. Mining in and around Caldera was seriously interfered with by the heavy inundations that occurred at the close of last year and the beginning of this. These cut up the railway and the mining roads, rendered work impossible from October until February, and generally worked havoc throughout the district. New mines at Puquios are to be opened up and exploited by a syndicate formed in Valparaiso, and the work of development is being rapidly pushed on, the scheme in its entirety including the erection of a smelter when the output of the mines warrants its construction.

The Japanese Conversion Loan.

Our Stock market is uneasy about this contemplated operation, and hardly a day passes but what we are told by one jobber or another that preparations are already being made for an issue which they one and all deprecate at the present time. The motives which impel the Japanese Government to hurry out the loan immediately are most laudable. A sense of pride in the national honour and an anxiety to do something towards lessening the debt load to the Japanese people may be regarded as the chief impulses conducing to the step. It is one to be deprecated none the less, and if the loan is hurried out in time to allow the Japanese Government to give the necessary six months' notice which would enable it to redeem on April 5 next the £22,000,000 of 6 per cent. bonds now running, we fear it will be a disappointment, if not a failure. The only solid reason for launching the loan immediately is to be found in the ability to sell a 4 per cent. stock at a price which would mean an important saving in interest to the Japanese Imperial Treasury, but there is no such hope just now. A £25,000,000 4 per cent. loan could not be sold by Japan at anything like 90. It might not be possible to get more than 85 for it; indeed, if the Bank of England rate has to be put up to 5 per cent. within the next two or three weeks, as is probable, we doubt whether such a large issue could be fully underwritten here next month on any terms, and it would be useless to look for assistance of an effective kind either in Paris or New York. Much better, therefore, abandon the attempt. It would be more injurious to the credit of Japan to issue this loan at a low price or to see it a fiasco than to allow the 6 per cent. debt to run to maturity. There is no imperative necessity for Japan to pay this debt off in April next. The first series of the 6 per cent. bonds runs until April 5, 1911, and the second till October of the same year, so that but for the high-spirited pride which dictates the attempt now to redeem the whole debt at the earliest date allowable, there is no need to issue now the second half of the £50,000,000 4 per cent. loan created last year. It is doubtless an untoward fact that Japan should be unable to take advantage of the opportunity provided by the original contract governing the issue of these 6 per cents. so as to reduce by a sensible amount the debt charge borne by Japanese revenues, but better suffer disappointment than encounter defeat, or even a serious check, upon the London Money market. This market cannot help itself because of the extent to which its resources are already pledged and over-pledged in all directions. There is no money to spare here at present with which to subscribe for any loan, even a mere conversion loan. "But the 6 per cent. bondholders may be willing to convert," it is argued. They will need to be powerfully tempted by all sorts of bribes if they prove to be so, and we doubt whether any such disposition exists, or if existing, it would pay just now to put it to the test.

Mr. Wybergh's Statistics.

At the inaugural meeting of the Johannesburg Reform Club Mr. Wybergh quoted some interesting statistics in regard to Rand dividends and capitals. According to the correspondent of the *Daily Chronicle*, he is reported to have declared that in the year 1904-5 33 companies paid dividends to the amount of £4,000,000 on an issued capital of £16,000,000, representing an interest of 24 per cent. Out of this £16,000,000, however, only £3,300,000 was working capital, and the rest paper representing promoters' and vendors' shares. As the working capital was in many cases issued at a premium, this capital, he argued, was increased by £6,000,000, with the result that "the total amount which had to be put into the ground to produce the income of £4,000,000 per annum was £9,000,000. This returned a still more opulent rate of interest—42 per cent. So that it was open to any person when such mines were floated—to any person who owned a mine—to put in £9 and make £4 a year." According to the correspondent these statistics came as "a revelation to his audience and the public," and this we can well understand. For we cannot but feel that Mr. Wybergh has unwittingly miscalculated. It is impossible to apply a strict test to his figures, because one cannot guess which were the 33 companies selected by him. But it is doubtful if there are so many dividend-paying companies whose aggregate issued capital is only £16,000,000; probably it would total to three times as much. True, a large portion even of the £16,000,000 may be water, for the capital of nearly every company has been deluged with that element; but why ignore the colossal millions—that mixture of a little cash with oceans of water—on which no dividends are paid? For every sovereign received from mining investments by shareholders they have probably sunk from 25 to 50—sunk and irretrievably lost. This is because the water of promotion is so ruinously dear, because so many worthless mines have been floated, because many a finance and promoting company has gone under, and because the richest ore has been worked out when the bosses were reaping their harvests at the public's expense. If the Rand mining industry is to pay the dividends should be annually thirty or forty times the £4,000,000 quoted by Mr. Wybergh, which is probably not equal to 1 per cent. upon the aggregate moneys sunk in the mass of South African companies. Either Mr. Wybergh made an arbitrary and confusing selection, or he unwittingly erred in his calculations.

Union Pacific Railroad Finance.

An effort was made some weeks ago by the New York *Commercial Chronicle* to demonstrate how wise and prudent the Standard Oil group, which controls this vast monopolist system of railroads, was in declaring a 5 per cent. dividend on Southern Pacific common stock, and 10 per cent. upon the Union Pacific Company's own stock. The tale it unfolds is certainly dazzling, and when one looks back to the time, only some eight years ago, when the Union Pacific seemed in a position of well nigh hopeless involvement, it becomes almost impossible to realise that such a change can have taken place in a genuine way. The figures are so good indeed that we cannot help doubting their complete harmony with facts. At the very best it seems fair to say that if the profits are so enormous now, the inference must surely be either that the company was grossly plundered in the past or that it is now, by reason of its monopolies, exacting far too much from the public for the services rendered. Taking the figures, however, as they stand, and interpreting

them by the statistics offered through the *Chronicle*, there is no gainsaying that it seems to have been easier than lying to pay the dividends just mentioned. The Union Pacific holds $90,000,000 nominal of Southern Pacific common stock, and accordingly the 5 per cent. dividend declared on that stock adds $4,500,000 to its income from investments. A calculation is moreover entered into that as a result of the company's transactions in the stock of the Northern Securities Company, it will nett a profit of $70,000,000. Through the Oregon Short Line Railroad, a dependency of the Union Pacific, it originally held $82,492,000 nominal of Northern Securities common stock. That audacious combination was declared illegal, and the companies that formed it have been obliged to take their proportions of the Northern Pacific and Great Northern Railway Company's stocks so as to facilitate the dissolution of the illegal corporation. It is on the Union Pacific Company's share in these stocks, which it will presumably sell, that a profit of this magnitude is calculated, and reckoning the earnings upon this profit at only 4 per cent., the New York *Chronicle* comes to the conclusion that another $2,800,000 may safely be added to the company's income from investments over and above what the figures in the annual report show. This report for the past year showed a nett income of $32,524,380, including $2,206,610 set aside to reserve. The rentals income beyond this came to $7,769,491, and if we add thereto the $4,500,000 now received on the company's holding in Southern Pacific stock, together with the estimated income from the profit upon the Northern Securities deal, the total free income of the Union Pacific Company is brought up to $47,593,871. Fixed charges and rentals take away only $8,883,416 from this, and the dividend on the preferred stock absorbs another $3,982,032, so that the free balance left is still $34,728,423, and the 10 per cent. dividend on the company's own common stock requires only $20,000,000, or £5,000,000. Therefore, according to this reckoning there was $14,728,423 of free surplus left undistributed. In other words, the company might have paid 17.35 per cent. upon its common stock without courting bankruptcy, and this is not all, for the Southern Pacific Company itself is said to have a surplus of $10,908,120, after paying its 5 per cent., making the combined overplus possessed by the two companies at the end of its fiscal year, after meeting the dividends, a dazzling total of $25,636,543. There must be something behind all this, which we are at present in no position to interpret, and after all it was the way the dividend trick was played not the ability of the monopoly to pay it which formed the basis of the criticism offered. People will go on expecting honesty in the leaders of finance, whereas they are merely freebooters who live by rapine.

The Gold Fields Amalgamation Scheme.

As we announced a week ago, the four companies in the Gold Fields group to be consolidated into one are the South Geldenhuis Deep, the South Rose Deep, the Rand Victoria Mines, and the Rand Victoria East. The new concern will be called the Simmer Deep, Limited, and will have the modest (?) authorised capital of £1,750,000 in £1 shares, 396,830 of which are to be kept in reserve. For the purpose of taking over the existing debenture issues of the South Geldenhuis and the South Rose Deep £1,055,000 of debentures will be issued, viz., £755,000 first 5½ per cent., guaranteed by the Gold Fields company for a commission of ½ per cent., convertible into shares at £3 up to December 31, 1908, and redeemable at par by annual drawings commencing October 1, 1910, or by market purchases when under par; the other £300,000 in 5 per cent. second debentures, convertible into shares at 2¾ up to March 31, 1909. The 1,353,170 of issued shares will be paid to each company for its assets in the following proportions:—To the South Geldenhuis Deep, 367,000; South Rose Deep, 128,575; Rand Victoria Mines, 630,000; and Rand Victoria East, 227,595 shares. It is proposed to carry on the development of the property through the Clement, Rudd, and Milner shafts, and it is estimated by Mr. H. H. Webb, consulting engineer to the Consolidated Gold Fields, that there should be sufficient development within two to two and a-half years to start the mill of 400 stamps; but the plant will be laid out with a view to increase the mill eventually to 600 stamps. The estimated cost of a 400-stamp plant, of development, &c., will be £1,105,000, but to this must be added fixed charges and ordinary administration expenses. As the funds of the South Geldenhuis Deep and of the South Rose Deep are exhausted, whence will all this money be obtained, without coming on the shareholders or the public? Easily, say the directors. The Rand Victoria Mines and the Rand Victoria East have between them £850,000, with a little from the other two, and there are shares held valued at £200,000, in all £1,050,000, or nearly all the estimated requirement. Should more be wanted there are the 396,830 shares in reserve, and these can be peddled out as wanted, perhaps at a fat premium, who knows? Anyway, it is neat workmanship to create these extra shares to provide for possible emergencies, especially as all of us may be richer by and bye than now. Why amalgamation? Because it will enable the companies combined to work more economically than separate. A laudable ambition surely, but it is a pity it was not nurtured before the companies were individually floated, so much would have been saved thereby. And yet, precious though economy now is in the eyes of the magicians, we might never have heard of this fusion had it been easy or possible to get money out of the public by the old ways. The South Geldenhuis Deep and the South Rose Deep are hard up, the other two have large portions of their capitals unspent; what more natural than the thought—let us mix 'em and even up the riches. As regards the important matter of mine "life," this is estimated at 38 to 39 years with 400 stamps, and at 26 to 27 years with 600 stamps, and it is claimed that the scheme will save the four companies £1,379,000. That is to say, labour will cost less; administration charges will be reduced; and development expenses curtailed. For the four companies working separately 800 stamps were to be erected, so there will be the saving of the cost of 200 stamps. The special advantage to the Rand Victoria Mines and the Rand Victoria East is that they will dispose of their properties to a company that may be producing within two and a-half years, whereas if they had to sink their own shafts it would take about six years to reach the crushing stage. But what the eventual profits will be who shall guess? They will have to be huge to pay the interest on the debenture debt and dividends on the colossal capital. Meetings to consider the scheme are to be held in the board-room of the Consolidated Gold Fields Company, Johannesburg, on November 16. So the directors give shareholders ample time for meditation. But why not hold the meetings in London? The bulk of the shares are held in England, as the directors recognise by giving all the details here before they are published in Johannesburg. Why, then, avoid facing the proprietors here? Are the boards and potentates afraid? Do the directors fear too formidable opposition on this side?

American Business Notes.

People here were disposed to welcome the return of the New York Associated Banks for the week ended Saturday last as a sign that the worst of the tension was over, but there has been no evidence in support of this view provided by subsequent facts. Money has been nearly as dear on the New York market as it was when the agony of apprehension among the credit abusers there seems at its height. Current rates for call loans fluctuate in a fitful way on Wall Street, but most people have had to pay from 7 to 10 per cent. all this week for them, and, worst of all, the rate on time money has been 8 per cent. or more. Not only

so, but commercial interests are being severely punished by having to pay 6 to 7 per cent. for their accommodation. Many small traders, we fear, are borrowing on more onerous rates still, and the New York money market continues to be pulled upon by the western banks. Last week's Associated Banks' return shows this, in spite of an increase of $8,025,000 in the stock of specie, that increase being much less than the value of the gold ordered and on the way—gold which the United States Treasury makes immediately available by deposits made by it pending the arrival of the metal. Deposits none the less showed a decrease of $8,727,000, and loans were down $15,314,000 in spite of the increase in specie, but by skilful manipulation of this kind, which really expresses the strained condition of the market more than anything else, the deficit of about $6,600,000 shown the week before in the legal reserve gave place to a surplus of $3,537,000, or about £708,000. Much more gold we fear will have to be provided before the New York Money market is again comfortable, and many untoward events may happen there before the end of the year. San Francisco is no longer sending gold east, but drawing it away again, $500,000 having gone thither from New York on Wednesday.

Meanwhile new issues of capital are either being prepared for or actually thrown on the market because the railroads cannot do without the money. The New York Central is going to issue nearly $30,000,000 of the stock recently authorised. It will be offered at par to stockholders to the extent of 20 per cent. of their present holdings. The C.C.C. and St. Louis road is also about to issue another $10,000,000 of stock for extensions and improvements, and a rumour was current early in the week that the Great Northern Railway was about to put $100,000,000 of additional stock on the market in order to finance its extensions and to pay for its holdings in Chicago, Burlington, and Quincy stock. Outside the railroad market it is reported that Messrs. Kuhn, Loeb, and Co. have agreed to purchase $20,000,000 of San Domingo 5 per cent. sinking fund gold bonds, provided the United States administers the Customs of the Republic. This is called a debt adjustment loan. And if the Steel Trust really decides to buy up the mineral lands of the various railroad corporations, a financial operation of the most gigantic description will come into view.

The disclosures regarding the looting of the Real Estate Trust Company, of Philadelphia, continue to be so sensational that they throw the pillaging of the Milwaukee Avenue institution, of Chicago, into the shade, and induce the belief that the whole story is not yet told. It leaked out a few days after the report of the suicide of the president of the company that there had not been a full meeting of the board of directors for two years and a-half, during which time the president was falsifying the accounts by a bogus loan system until he had exhausted all its resources. Several of the directors are stated to have had knowledge of what was going on, and two of them to have been directly implicated. The treasurer and real estate officer of the company gave important evidence during the inquiry, and one of the directors acknowledged that the directors had made a practice of borrowing the company's money to advance their own enterprises. A depositor who had placed $3,500 to his account only three hours before the failure was announced threatened criminal proceedings against the directors, and one man fired at one of the officials on learning what had happened.

A large amount of the money stolen by Hipple, the president of the Real Estate Trust Company, belonged to the Presbyterian body in Philadelphia, apropos of which the New York *Evening Post* says:—

> The "grief" of Philadelphia Presbyterians over the thieving of their late co-religionist, Mr. Hipple, seems to be partly personal—that it was their money he stole, and in part on moral and public grounds—he was such a pious man. He was so scrupulous in the performance of his religious duties. Even in minutiæ like abstention from tobacco and the Sunday newspaper, he was such a model to the young. "Why," says one inconsolable Presbyterian, "it's enough to break down faith in human nature!" But faith in human nature ought to go with some knowledge of it and no fact of it is better established than that the most consumate swindler is apt to cloak himself in religious pretence. That is the final touch of imposture. To a really hard-headed man of the world, the fact that Hipple, for every fresh act of (as it now appears) hypocritical religiosity, was getting a fresh deposit of Presbyterian money, would be enough to arouse suspicion and put him on his guard. Faith in human nature is a fine thing, and regular attendance at church is excellent; but in the banking business we cannot get on without inspection that inspects and direction that directs.

Until the inquiry is completed the details cannot be known, but so far as it has gone they are sufficient to show that this latest affair will rank among the notable swindles of American finance. How many other institutions of the kind are in a similar condition is a matter for speculation, but it is safe to say that public confidence in American financial concerns will not long survive if there should be a few more exposures of the same sort.

There was considerable sensation in New York on September 1, when the morning papers came out with a letter from Bishop McCabe, of the Methodist Episcopal Church, to Mr. Parker, chairman of the International Policyholders' Committee. In this letter, which was given out from the executive office of the Mutual Life Company, Bishop McCabe, who is a member of the Policyholders' Committee, severely criticises the conduct of the committee's affairs by Mr. Untermyer, and expresses confidence in the present management of the Mutual and the New York Life. The letter, before being despatched through the post, was submitted to Mr. Peabody, the president of the Mutual Life, and was approved by him. When communicated with on the subject by the organising secretary, and asked to be present at the Policyholders' Committee meeting on September 6, at New York, Bishop McCabe replied that he could not comply with the request as he had to preside at the conference of his church in a town in Ohio, on September 5. He, at the same time, advises the policyholders to approve the administration tickets of both companies, and says they are made up of "high-class, able, honest, upright men. Take the administration tickets and go through them. What a galaxy of notable men—men of honour and manhood, ability, and energy to do the right."

The retort to the extraordinary action of the Bishop on the part of the organising manager of the Policyholders' Committee is trenchant enough. It points out, in the first instance, that the Bishop has not attended to the business of the committee as a member, and in criticising its work has done so without the knowledge necessary to give it effect. It also shows that numbers of the men he recommends to the favour of the policyholders are among those under whom the looting of the funds of the two companies went on; that all the three vice-presidents of the New York Life are part of the old régime; that the business of the New York Life is directed from the office of J. P. Morgan and Co., and that Mr. Perkins is in command through one of his brothers, who is a vice-president; and that the members of the Fowler and Truesdale whitewashing committees of the New York and Mutual are trying to re-elect themselves. It then winds up by saying that if the Truesdale Committee will produce the suppressed schedules referred to in their report, but which it has been impossible to secure, showing the interest in the subsidiary banks and trust companies of members of the old administration who are seeking re-election, and their connection with the companies and the profits they have made, Bishop McCabe will be very much surprised; and there will be still more interesting reading for the instruction of anybody who, in his innocence and credulity, has been misled by the officials of the companies, who are struggling to hold on to this property with a desperation which can only be understood by those who know what would follow a change in the management. As it stands the quarrel is very pretty and gives expectation of interesting developments.

A Washington despatch of September 1 says that the Comptroller of the Currency had announced the

chartering of 33 new National Banks during the month of August, with aggregate capital of $1,900,000, making the number of banks now in existence in the United States 6,162, with $839,804,775 capital. Bonds to the amount of $526,944,030 were deposited as security for circulation to the extent of $524,439,160. The aggregate outstanding circulation is $569,852,303, which includes $45,413,143 for which lawful money has been deposited with the Treasurer of the United States by banks in liquidation, others reducing their circulation, and on account of insolvent National Banks.

The United States Government bonds on deposit on August 31 in the Treasury to secure circulating notes and public deposits aggregated $636,372,655. Of this amount $546,595,700 was in 2 per cent. consols of 1930, and $5,272,325 in State, city and railroad bonds. These last are worth making a note of, as though the amount is relatively small, it is the beginning of the issuing of currency on other than United States securities; what was urged some three years ago, and called "asset currency." There was also on deposit $26,507,580 of the recent 2 per cent. Panama Canal loan.

In the month of August last there were coined at the United States mint 978,000 half-dollars and 4,200,000 10-cent pieces, making the total value of the silver coinage turned out $909,000. The gold coins minted were in eagles and double eagles, valued at $8,300,000, and the minor coinage consisted of 8,010,000 one-cent pieces, all valued at $9,369,100. 200,000 gold 5-peso pieces were struck for the Mexican Government, and 30,000 silver peso pieces for the Philippines.

The next session of the Canadian Parliament, in November, will, it is reported from Ottawa, be occupied with the tariff question. The measure which it is proposed to lay before it is said to be in a very forward state, and will, among other things, deal with the surtax on German goods, which will be made less inflexible in order to open the way for a commercial agreement with Germany. It is also stated that steps may be taken leading to a reciprocity treaty with the United States.

The way in which the Japanese are stretching out for trade is attracting a good deal of attention in the United States. It is thought that Argentina and Brazil may before long supplant Australia in supplying Japan with foodstuffs, for the Japanese Government has granted a subsidy to a Japanese steamship line to South America. The emigration of Japanese to South America is also to be encouraged, especially to Brazil, where a Japanese bank is to be established.

A parcel post agreement has been entered into between the United States and Denmark to take effect on October 1. It provides for the exchange and transmission through the post offices of each country of parcels not to exceed four pounds six ounces in weight, and not more than three feet six inches in length and six feet in length and girth combined. The value is limited to $50, and the rate in the United States will be 12 cents for each pound or fraction of a pound. Parcels post mail for Denmark will be made up in New York.

The looting of the Milwaukee Avenue Bank in Chicago and of the Real Estate Trust in Philadelphia has brought another branch of business into existence. The American Bonding Company, of Baltimore, has notified its agents everywhere in the United States that in future it will guarantee bank deposits. The bonds will be limited to amounts not exceeding $5,000, though exceptions may be made. The rate is to be one-fourth of 1 per cent. of the amount of deposit, with a minimum premium of $5. An interesting feature in the conditions is a clause providing that the company may at any time, by giving five days' notice, cancel the bond and relieve itself of all liability. There is something of the heads I win, tails you lose in this arrangement, as in the event of the deposit guaranteeing company coming into knowledge that a bank or other deposit institution was shaky, it might get out of its liability and leave the depositors in the lurch. For some years past surety companies have been insuring State and city deposits, but this is the first time the advantage has been offered the general public.

A bank in Baltimore, which has inaugurated a 24-hour business day, has also adopted the Bertillon system as a means of identifying its depositors. The explanation of this is that, as there will be three sets of clerks, identification of customers will be difficult. The tellers will always have the description cards at hand, and when a depositor whose face is unfamiliar presents a cheque it will be easy to identify him by referring to the card or file.

A transaction between the Federal Government and the Standard Oil or National City Bank of New York throws a singular light on some American methods for which it seems difficult to find any legitimate explanation. In 1899 the Federal Government put up the old Custom house in New York for sale, and it was purchased by the Standard Oil Bank for $3,265,000. No deed was given to the bank by the Government for the reason that there still remains due by the bank the sum of $50,000 of the purchase-money. As Federal property all over the United States is exempt from taxation of any kind, the Standard Oil Bank, under the peculiar conditions of its tenure, pays no municipal taxes, the Federal Government being still the legal owner of the property. An attempt was made by the New York corporation to collect taxes on it, but unsuccessfully, and Congress, to which the matter was referred, took no action. When, in addition to this privileged position as regards the city, it is considered that a large part of the purchase-money remains in the bank as a deposit without interest, the situation is unique, and in any other country would appear to be impossible.

It has been decided by the State assessors of the State of New York that policies issued by life insurance companies in the State to non-residents are not taxable under the inheritance law. The question came up in the case of an inhabitant of Pennsylvania who died with no property in the State except life insurance policies for $370,000 and a mortgage on property in the State for $36,000, and after submission of the matter to the regular legal authorities, it was declared that the policies were exempt.

A Boston policyholder has sued the Equitable Life for refusing to give him an accounting of the accumulations on a policy on the semi-tontine plan for $25,000 on which he alleges he has paid all premiums and met all requirements of the company. The tontine dividend period expired on June 9 of the present year, but the company has refused to account with him, and has offered him a small sum in settlement, which is much less than he believes to be due.

The Attorney-General of the State of New York has given an opinion of great importance regarding the status of foreign insurance companies doing business in the State under the new insurance law. Unlike the State companies, foreign companies may issue both participating and non-participating policies, and are not required to conform to the standard policy forms prescribed for domestic companies. The opinion, however, is confined to those foreign life insurance corporations which already have licences to do business in the State, and may apply for renewals of the same. The case of any new applicant for a licence will be considered when presented.

The formation of a new trust company in New York to be called the New Netherlands Trust Company was announced on September 5. The incorporators are all well-known New York business and banking men, including Mr. Geo. W. Perkins, of J. P. Morgan and Co., and are practically the same who are identified with the Bankers' Trust Company. It is stated, however, that the new company will have no connection with the Bankers' Trust.

A preliminary report of the Burlington Railroad Company, according to a Chicago despatch, shows a decrease in nett earnings of $960,754, although the gross

earnings had increased $8,250,528 in the year ended June 30 last. The decrease is explained by the large expenditures for betterments and new equipment.

The president of the First National Bank of Chicago has notified all the employees of that institution that it is their duty henceforth to report at once any suspicions they may have of irregularities in the bank, and that neglect to do so will lay them open to charges of guilty knowledge in the event of any being discovered. The president of the Continental National Bank, also of Chicago, has issued a similar notification to his subordinates. The president of the first-named bank has also informed his employees that in the case of suspicions being entertained against any one connected with the bank except himself, the report is to be made to him; if against the president to the directors. This is the result of the discovery that several minor officials of the Milwaukee Avenue Bank knew of the irregularities that were going on, but said nothing. The whole thing carries many curious suggestions regarding business morals in the United States.

The annual report of the Chicago and North-Western Railroad Company, issued September 6, shows the largest earnings on record. The gross earnings amounted to $63,481,577, and the nett to $21,265,302, being an increase over the previous year of $7,736,302 and $4,169,338 in each respectively. The sum of $6,000,000 was taken from earnings for additions and improvements, and $8,316,639 was allotted to dividends. Bonds to the amount of $3,880,000 were retired and $4,880,000 of new were issued.

The shrinkage in American trade with China and Japan is beginning to attract a good deal of attention from the Press. From a comparison of the trade of the first seven months of the present year with that for the same period of last year, it appears that the shipments to China have fallen from $37,181,220 to $20,612,191, and to Japan from $36,800,468 to $18,774,726. On the other hand, the sales to Corea for the same period rose from $234,165 to $875,238, and to Asiatic Russia from $254,083 to $1,617,741. In some quarters there seems to be a certain degree of regret at the eager support given the Japanese financially from the United States, there being a growing conviction that it was only helping the Japanese to conquer the market of Manchuria and China for themselves. The Chinese boycott of American goods is, of course, largely responsible for the diminution of the trade with China.

The Realty Trust Company of Memphis, Tennessee, has failed with assets slightly over liabilities. The company's capital was $100,000. On September 7 the Secretary of the Treasury, Mr. Shaw, issued a circular letter to all national banks holding Government deposits that he expects public money in depositary banks to be used in the communities where it is deposited, and not loaned through brokers and other agents in New York for speculative purposes. Public deposits, he says, are made to aid legitimate business, and depositary city banks are expected to loan money at regular rates or not at all, and they must not be tempted to act as agents instead of correspondents for other depositary banks in making call loans at high rates. Mr. Shaw concludes what may be called a paternal letter by saying:—

> If you have more money than your community can appropriately absorb please return it to the Treasury, for it can be promptly placed where it will do much good. This does not apply to banks with large reserves regularly on deposit with city correspondents.

Others whose money is being handled in wild-cat speculation in New York and in American speculative enterprises generally may find it advantageous to act on Mr. Shaw's lines. One New York paper, which passes as the organ of Mr. J. P. Morgan, considers it "a usurpation of power which stands alone in the literature of our national banking system," and regards it as a curious state of affairs when the Secretary of the Treasury deems it expedient to declare what shall be done with public funds deposited in national banks, and what shall not be done. It concludes by saying, "Meantime New York rests easily upon its oars in anticipation of ample gold coming from the other side of the Atlantic."

Passing Events.

The following circular has been addressed to the shareholders by the directors of Waring and Gillow, Limited, and is well calculated to reassure them. They do well to take no notice of the ever-impudent and *impudique* Horatio:—

> 164-180, Oxford Street, London, W.
> September 17, 1906.
>
> Sir (or Madam),—The attention of my directors has been drawn to certain malicious and unfounded attacks which have been made upon the financial position of this company.
>
> I am therefore instructed to state to those who are interested in the company that its funds are not merely ample to meet its liabilities, but that its financial resources exceed its requirements many times over, and there is no justification whatever for the libellous statements that have been made.
>
> The volume of trade in the new premises is eminently satisfactory and far surpasses my directors' expectations.
>
> As you have probably seen from the newspapers, proceedings have already been commenced against the proprietors and City editor of one of the London morning newspapers for libel.
>
> With reference to the attacks which have been made by the editor of a recently started weekly paper, my directors are advised that, having regard to his financial position, proceedings against him would be useless, and they have consequently been advised to treat these attacks with contempt.
>
> My directors trust that this statement will have the effect of reassuring the debenture and shareholders as to the true position of the company.
>
> I am, yours faithfully,
> Joseph Ritson, Secretary.

According to a report from the Governor of Ceylon to the Secretary of State the year 1905 was a prosperous one for the island, the aggregate value of the imports and exports, omitting specie, being Rs.22,40,78,800, an increase of Rs.42,34,200 over the total for 1904, and of 3½ million rupees over that of any previous year. The quantity of tea exported was 170,183,572 lbs., against 157,929,342 lbs., the average value being 35 cents per lb., compared with 36 cents in 1904 and 39 cents in 1903. Of the above 112,000,000 lbs. went to the United Kingdom, or 7.7 million in excess of 1904, 11.2 millions to Russia, an increase of .6 million, 9.25 millions to New South Wales, a decrease of .12, eight millions to Victoria, 6.4 millions to Canada, five millions to the United States, and four millions to New Zealand. The total value of the tea shipped in the 12 months was Rs. 5,95,64,245 against Rs.5,68,54,563 and the gross Customs revenue has shown a steady increase in the past decade. Precious stones are annually disposed of by direct export and to passing travellers to the extent of at least Rs.30,00,000, and the gross amount of exports may be taken roughly at a value of Rs.65,01,000.

A favourable report has been written by the expert commissioned by the Association of Cotton Growers to make experiments in cotton culture in Korea. Six places were selected for the experiments, five in South Chul-la province and one in North Chul-la province. Despite the fact that owing to the excessive rainfall of 1905 the cotton crops throughout the country did not average more than 60 or 70 per cent. of a normal season, the results of the experiments at Mokpo were exceedingly promising, the crop being more than double that of previous cotton crops in the same locality. Upland cotton seems admirably adapted to the conditions of climate and soil in the country. Unlike that of Japan, the weather is dry, thus ensuring a safe crop. Also the crop of the upland cotton is considerably heavier than that of the native plant, being in some cases more than double. Not only does it give a greater percentage of ginned cotton, but the fibre is longer and finer, and it is, therefore, much the superior plant. With regard to the cost the expert considers that after deducting all expenses there should be a clear profit of £2 2s. 8d.

The report for the year 1905 gives some interesting facts and figures concerning the position of British

trade with China. In the last decade the import trade of China has increased by more than 100 per cent. Last year the value of this trade amounted to 461,194,532 taels (a tael being equal to about 3s. of our money), whilst the re-export trade was worth 14,093,741 taels, leaving a nett import from foreign countries of 447,100,791 taels. These figures show a considerable increase over those of the preceding year, when the total imports amounted to 357,444,663 taels, and the re-exports to 13,384,055 taels, or, nett, 344,060,608 taels. From Great Britain the imports were 86,472,343 taels, compared with 57,220,955 taels, an increase of 29,251,388 taels. The most striking advance was in the case of the United States, the value being 76,916,838 taels against 29,180,946 taels. From Japan goods to the value of 61,315,248 taels were imported compared with 50,164,056 taels in 1904; from Hong Kong 148,071,198 taels; from France 3,811,634 taels; from Germany 14,846,075 taels; and from Australia and New Zealand 1,538,747 taels. Imports of silk goods declined by 70,845 taels, but the quantity of metal goods received was greatly in excess of previous years.

A German consular report publishes some interesting statistics of the industrial output of Chile in the year 1905. Out of 22 nitrate companies, with an aggregate capital of £16,320,000, works representing £4,454,000 of capital were in active operation. A large number of new works were erected and equipped with the most modern plant. Total exports in 1905-06 amounted to 39,000,000 Spanish centners against a world's consumption of 35,500,000 in 1905. In this year the price averaged 7s. 8d. per centner f.o.b., compared with 7s. 5d. in 1904. With regard to the copper production, as more than 50 per cent. of the world's copper ores contain less than 4 per cent. of copper, while in Chile ores containing from 6 to 8 per cent. only are worked, the advance in the price of copper is expected to lead to a marked increase in production, and several new companies have already been floated. Exports of gold amounted to 23.3 million dollars. The Chilian coal supplies resemble lignite or brown coal, and a large importation is carried on of British and Australian coal, no less than 329,000 tons being shipped from Cardiff.

Recently there has been an upward movement in that limited group of companies known as the Victoria Deep Leads group, and many readers may have been curious as to the cause of this. Especially have they seen Loddon Valleys go up, without any apparent justification. It is merely a market device, emanating from the inner ring, because it is declared that the company may, after all these years, enter the "wash" at any time. But even when the wash is worked no one can tell what profits can be earned, and it would be advisable for the prudent to wait actual, not conjectural, results. Twice in the course of its career has this company been compelled to increase its capital. In the first instance the directors made an issue of £30,000 in 6 per cent. first mortgage debentures, and on the second occasion they increased the share capital from £160,000 to £240,000, the 80,000 new shares being offered to the shareholders at par. A year or two back it was anticipated that the process of gold winning would be commenced at the beginning of 1905, but we are now nearing the end of 1906, and there may be many more disappointments in store. Anyway, enthusiasm would be quite out of place.

There is a movement afoot in Argentina for reform in the mining laws of the Republic. The Minister of Agriculture has presented to Congress a Bill, the principal object of which is to give greater security to the rights acquired by the authorisations granted by the Government to search for minerals in certain areas of land and to exploit them. The existing law requires that the mines for which a concession has been obtained shall be worked continuously, in default of which the rights acquired are considered to have been abandoned and a new concession may be granted to any other person who may claim it by a "denunciation," as it is termed, of the existence of minerals which are not being exploited. In the new Bill it is proposed that a high tax should be imposed upon the mining licence, in order to guarantee to the holder of the licence his property in the mine, whether he works it or not. It is pointed out by the Minister that the extent to which work must be carried on in order to protect the ownership cannot be defined equitably, inasmuch as a mine may not be productive, although in full exploitation, in which case it is impossible to decide beforehand whether the proprietors will continue to work the mine in the expectation of better results, or whether it will be abandoned as useless.

The Foreign Office has just issued the report of our Consul at Yokohama on the trade of his district in 1905. There was again a considerable increase in the business of the port, even though the exports exhibited a falling off. The total of the trade done amounted to £34,127,000 compared with £31,242,000 in 1904, an advance of £2,885,000, equal to 9¼ per cent. Imports aggregated £19,265,000, or £5,370,000 more, the exports falling from £17,356,000 to £14,862,000. It is explained that the imports were swollen in order to replace losses and war consumption, whilst exports were diminished by the restrictions on commerce in the early part of the year until the seas had been cleared of the enemy. Furthermore, the failure of the rice crop had an appreciable effect upon them. Looking at all the contributory circumstances, the Consul is of the opinion that the general trade showing is far from an indication of bad commercial conditions. In the imports the chief increases were in cotton, woollen and metal goods. The United States accounts for £12,544,000 of the total trade of Yokohama, the British Empire coming second with £10,622,000, France third with £2,816,000, and Germany fourth with £2,404,000, whilst our share of the import trade is double that of any other country.

Surely the *Pall Mall Gazette* is making altogether too much of that loan of £3,000,000 which the Deutsche Bank is said to have arranged to bestow upon the Government of Peru. This it represents as a crushing defeat to the Peruvian Corporation, which will henceforth be out of it in the work of developing Peruvian industries and minerals. We have no particular admiration for the Peruvian Corporation, but hardly think this inference warranted by the facts, and rather feel disposed to extend a measure of sympathy to the Deutsche Bank on its bargain. Peru is no doubt one of the richest territories on earth, but it is not conspicuous for the good faith of its rulers, and our experience as lenders to the successive Governments who have honoured the Republic by helping to consume its wealth does not lead us to infer that the Deutsche Bank is going to grow fat over this loan of £3,000,000, or any other sums it may be disposed to advance. And meanwhile the Peruvian Corporation possesses many assets of value which will continue to yield it revenue even should the £3,000,000 become £30,000,000 in course of years. Indeed, the spending of German money in Peru must indirectly benefit the Corporation, although doubtless it has now less chance than ever of obtaining payment of that annuity of £80,000 per annum, part of the contract under which it was brought into existence, and Peru's old debts effusively wiped off the slate.

There is one streak of sanity disclosed in the news that the Argentine Government is going to spend £6,500,000 in the course of the next eight years in building land forts and providing floating batteries along the River Plate, as also additions to the fleet. The shipbuilding contracts will, Reuter says, contain an annulment clause to come into force if the Argentine Minister for Foreign Affairs succeeds in inducing the other South American Republics to consent to the limitation of armaments. We hope he will succeed in this effort. What does Argentina want with forts, floating batteries, cruisers, and such like adjuncts of mediæval barbarism? The Finance Minister does not seem to have been able to answer that question, and so he has resigned.

That typhoon at Hong Kong appears to be one of the most appalling in the known history of the place, and the loss to shipping interests as well as to the humble Chinese must be cruel. It is said that over 5,000 lives have been lost, and the loss of shipping, lighters, and native vessels has been enormous. On the island the observatory is blamed for not having warned the people of the approach of the storm. Its forecast promised moderate winds, but half an hour after the gun signal the storm was at its height. It is the attribute of typhoons, however, to come without warning, like thunderstorms. How much our British marine insurance companies will lose by the disaster has not yet been estimated, and exaggerations are current, the total losses being put at about £2,000,000. It may be £500,000. The Canadian Pacific Railway Company may suffer some loss by damage to one of its liners stranded, and some harm has also been done to French and German merchant shipping, as well as to a British sloop of war and two French torpedo boats. One coaling tug and four steamboats have foundered, but may be recovered. Thirteen coaling lighters are missing, and the roofs of nearly all dock-yard buildings suffered. Altogether a horrible experience.

There is every probability that the proposals circulated by Messrs. Baring Brothers last week and printed in the last issue of this Review for the conversion of the cedula debt created by the Provincial Mortgage Bank of Buenos Ayres will be accepted. The more we look at them the more disposed are we to recommend acceptance, and Señor Irigoyen, the Governor of the Province, is probably right in saying that the offer embodies the utmost the province can provide. He says the sterling charge to be imposed by the conversion bonds to be given in exchange for the cedulas will involve an addition to the tax on the valuation of property, and that the province has really no money to spare, because of the demands made upon it in all directions for what may be called additional guarantees to progressive civilisation. This appears to be the mind of the principal jobbers in the market, who met in the middle of the week and decided to accept, and the same view prevailed at Mr. Sharrer's meeting on Thursday. Payment in full both for bonds and overdue coupons would have been better, but it cannot be had, and all things considered cedula holders may be thankful.

It looks like annexation of Cuba by the United States, and we are very sorry that it should be so. That the islanders would immediately develop a capacity for constitutional government there was no reason to believe. The humdrum Anglo-Saxon way of gaining an end by a popular vote is not understood in any of the Latin Republics of America, and the Cubans during their long misery under the alien rule of Spain did not get an opportunity to acquire healthy political sentiments. At the same time, we did hope that no attempt would be made to stir up opposition to bloodshedding point, and that good counsel would be given to President Palma, so as, if possible, to induce him to avoid that logical method of carrying the triumph of victory to the utmost limit of nepotism and selfishness, and to avoid driving the opposition to take up arms. We fear the United States machinations have been behind the recent disturbances, and the readiness with which Mr. Roosevelt and his Cabinet have made preparations to occupy the island does not look well, especially after what happened to Colombia.

Our French banker friend does not think we shall have a panic, and that is comforting. But he also says there is no stock to speak of in the market, none worth mentioning borrowed on there or among the banks except Yankees, but we differ from him there. The fact that a purchase of £300,000 Consols could not be made without driving the price up 30s. proves nothing, because most of the floating stock is held on borrowed money at prices so high that holders cannot afford to sell. They dare not face the loss. It is the same with the "gilt-edged" group as a whole, and as for the Kaffir Circus—well, the less said the better.

That ghastly disaster to the Scotch express on the Great Northern Railway at Grantham, whereby 12 people have lost their lives and 17 been more or less hurt, would seem to have been caused by the engine-driver's sudden loss of reason. So far as is known, everything was in order on the train and on the line. The signals were against the driver, and he was so accustomed to stop at Grantham that he might almost have done his duty mechanically, even if asleep. A sane man could not have made a mistake of the kind, and it is a relief to know that everything was in order, that the dead are alone to blame. Only on one point is there a doubt. Why did the train turn on to the curve of the Nottingham branch line? If the points at the junction had not been misplaced, the express might have run on for some distance in safety, giving time either for the driver to recover his senses or for the fireman to master him and shut off steam.

Critical Index To New Investments.

Mabira Forest (Uganda) Rubber Co., Limited.

An agreement has been entered into between the Crown Agents for the Colonies, acting for the Government of the Uganda Protectorate, and the Uganda and East Africa Exploration Syndicate, for granting a lease to the syndicate of the Mabira Forest, on the west bank of the Victoria Nile. This forest, which has an area of about 150 square miles, is estimated to contain nearly 2,000,000 indigenous rubber-yielding trees in patches forming well-defined natural plantations, and the lease gives the right to collect rubber from existing trees and vines, to plant and transplant rubber trees, to fell and export timber, and to obtain, cultivate, and export other forest produce. The present company has been formed to take over the lease, and has a capital of £120,000 in £1 shares, of which 93,998 were offered for subscription and 25,000 go to the vendor syndicate in part payment of the purchase price. The total price asked is £33,000, the balance of £8,000 being payable in cash, and in addition the syndicate takes £7,000 in cash for underwriting commission, but in return it pays all preliminary expenses, which are estimated at £10,000. It is calculated that from 1,000,000 to 1,500,000 of the trees are of an age and size suitable for immediate tapping, and that a yield of ½ lb. per tree may be confidently anticipated in the near future. Samples of the rubber have been valued by two of the leading firms of London brokers at 5s. 6d. and 5s. 7d. per lb., but Dr. Cuthbert Christy, who carried out the survey of the forest, bases his estimate on a price of 4s. per lb. Labour is said to be cheap and plentiful, five rupees per month, with food, being a fair average maximum wage all round, and Dr. Christy, therefore, concludes that he is justified in putting the probable profits at £80,000 per annum from rubber alone. The venture, like all new things, is naturally speculative, but it is not overburdened with promoters' profits, and would seem to have a fair chance of success.

Kutais Mining and Timber Concessions, Limited.

The prospectus of this company has been advertised this week for information only, so the official intimation put it, and not for the purpose of inviting subscriptions for any portion of the capital. This is £150,000 in £1 shares, the company having acquired a lease of the Tehalis Nita Forest and mineral property, situate in the Government of Kutais, Trans-Caucasus. The property has an area of about 80,000 acres, at an annual rent of approximately £2,500, and 5 per cent. of the crude minerals raised, for a period of 30 years, with the right of renewal for a similar period on the same terms. Various reports have been made upon the property, and these are mostly of a favourable character. In addition to forests the estate contains petroleum, silver-lead, manganese, iron and coal, and mineral waters. In the first instance the directors have decided to construct a mono-rail from the estate to the Trans-Caucasian Railway, a distance of 13 miles, which is to serve the company's purposes for the time being.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended September 14, $3,662, increase $393.

Argentine North Eastern.—Traffic receipts for week ended August 17, $20,410, increase $1,805; aggregate from January 1, $641,952, increase $62,179.

Assam Bengal.—Traffic receipts for week ended August 11, Rs. 72,303, increase Rs. 12,071; aggregate from July 1, Rs. 4,27,293, increase Rs. 65,459.

Canadian Northern Railway.—Traffic receipts for week ending September 14, $148,100, increase $69,900; total from July 1, $1,491,000, increase $586,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 18, Rs. 19,879, decrease Rs. 3,434.

Quebec Central Railway.—Traffic receipts for the 2nd week of September, $18,044, increase $3,274; aggregate from January 1, $655,008, increase $94,880.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 18, Rs. 18,225, increase Rs. 8,842.

White Pass and Yukon Railway.—Traffic receipts for the week ended September 7 amounted to $51,840.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending September 15, £1,284, increase £5; aggregate from July 1, £12,886, decrease £13.

Cockermouth and Keswick Railway.—Receipts for week ending September 15, £980, increase £55; aggregate from July 1, £12,097 increase £635.

East London Railway.—Traffic receipts for June, £4,017, decrease £197.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 15, £370, increase £10; aggregate from July 1, £3,379, increase £155.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending September 12, £1,070, increase £308; aggregate from January 1, £31,043, increase £5,746.

Blessington and Poulaphouca.—Traffic receipts for week ending September 12, £28, decrease £8; aggregate from July 1, £405, increase £50.

Bristol Tramways and Carriage.—Traffic receipts for week ending September 14, £5,580, increase £620; aggregate from July 1, £61,660, increase £2,566.

British Electric Traction.—Receipts of all the Associated Companies for the week ending September 7, £32,698, increase £1,764, total increase from January 1, £117,242; 439¾ miles, against 430½

Burnley Corporation.—Traffic receipts for week ending September 15, £1,195, increase £51; aggregate from July 1, £13,861, increase £1,194.

Dublin and Blessington.—Traffic receipts for week ending September 12, £160, decrease £20; aggregate from July 1, £1,987, increase £17.

Dublin and Lucan.—Traffic receipts for week ending September 14, £142, increase £5; aggregate from July 1, £1,609, decrease £52.

Dublin United.—Traffic receipts for week ending September 14, £5,368, increase £457; aggregate from July 1, £64,356, increase £3,588.

Edinburgh and District.—Traffic receipts for week ending September 15, £4,896, decrease £463; aggregate from January 1, 1906, £184,461, increase £4,626.

Hastings and District.—Traffic receipts for week ending September 13, £1,279.

Isle of Thanet.—Traffic receipts for week ending September 15, £1,292, increase £226; aggregate from October 1, £30,646, decrease £59.

London County Council.—Traffic receipts for week ending September 8, £26,574, increase £11,544; aggregate from April 1, £610,997, increase £260,359. Miles 97½ against 51¼.

London General Omnibus.—Traffic receipts for week ending September 15, £22,902, decrease £610; aggregate from July 1, £260,468, decrease £7,108.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending September 15, £3,853, increase £2,473.

London Road Car.—Traffic receipts for week ending September 15, £7,595, decrease £1; aggregate from July 1, £89,254, increase £1,290.

London United.—Traffic receipts for week ending September 14, £7,242, increase £1,235; aggregate from January 1, £234,745, increase £16,551.

Rossendale Valley.—Traffic receipts for week ending September 7, £239, increase £37; aggregate from July 1 £2,076, increase £39.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 16, £841, decrease £35; aggregate from January 1, £31,008.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 16, £15,410, increase £2,327; aggregate from January 1, £548,907, increase £60,809.

Barcelona.—Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for July, $38,523, increase $3,600. Nett earnings from July 1 to July 31, $48,059, increase $7,669.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending September 9, £3,841, decrease £89; aggregate from January 1, £128,934, increase £6,403.

Buenos Ayres Electric.—Traffic receipts for week ending August 11, £1,443, increase £176; aggregate from January 1, £43,462, increase £7,401.

Buenos Ayres Grand National.—Traffic receipts for month of August, $293,700.

Calcutta.—Traffic receipts for week ending September 15, Rs. 46,278, increase Rs. 2,047; aggregate from July 1, Rs. 4,84,713, increase Rs. 14,272.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,708, decrease £222. Total from January 1, £35,223, increase £11,310.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3½ per cent. on September 13.)

Norfolk House, Friday Evening.

It is always difficult to avoid exaggeration in estimating Money Market probabilities when people's minds are excited by fear. We should therefore like to eschew sensationalism in dealing with the gold exports now terrorising the London Money Market. But the gold withdrawals are only symptoms of the universal credit congestion by which banking is everywhere afflicted, so that if we could see a reduction in the blown-out accounts which speculators are carrying in New York and London, in Berlin and Paris, we should cease to be alarmed about gold. But, then, were not the speculative positions everywhere dangerously over-stretched we should not have these abnormal gold exports and the consequent fright. Up to the present, however, the Bank of England has not lost more than it can stand—only some £5,000,000 altogether on balance, principally for New York, within the past three weeks. If, therefore, no more, or only another £1,000,000 or so were to go, we might trust to escape a 5 per cent. Bank rate. But more must go, not only to New York but to Egypt, to South America, possibly to Berlin and perhaps to the Far East, and we have only the supply of virgin gold from the mines to rely upon to mitigate the strain or replenish the Bank's stock.

We have never had great faith in help from France. It was said this week that the Bank of France was ready to part with the American eagles in its possession at 4 per mille premium, but we have seen no evidence yet that any of this gold has been taken, and New York yesterday paid the Bank of England 78s. 1d. per oz. for the bar gold sold by it, the first transaction of the kind at the Bank for the last half-dozen years. This price was the full equivalent value of sovereigns, and United States banks have also been picking up sovereigns in Australia at 1 per cent. premium, a price much above the usual. They are even alleged to be getting gold from Buenos Ayres, would appear to be raking the world for it rather than apply to the Bank of France. But the tales may be all Yankee bluff to quiet our fears while our treasure is rifled, and we cannot but fear that several millions more of the Bank's stock will go before we have rest from our fears. That means we must have a 5 per cent. Bank rate.

One curious symptom of the worried state of people's minds has cropped up several times of late in the City columns of the *Times* and the *Tribune*. The money article writers in these two papers have been hinting, not obscurely either, that one if not two London banks whose conductors habitually do a large business in accepting foreign drafts have been giving undue, even unpatriotic, facilities to the Yankees to pull away our gold, and the managing director of the London City and Midland Bank in particular appears to be regarded as a bold, bad man in thus sinning. We cannot believe the censure warranted, because no bank manager in his senses, let alone the astute Mr. Holden, would commit the credit of his bank to any dangerous extent in backing mere "kites," accommodation paper. If our bill-accepting banks have been the mediæ selected by the New York banks through which the gold has been for the most part acquired, it is to be presumed that they have not lent their names without excellent security. If they had this security there is nothing to be said. Legitimate business has got to be done, even if it involves the exhaustion of our gold reserve, and if one banker will not do it another can easily be found in these days of cut-throat rivalry.

"But Mr. Holden," the managing director of the London City and Midland Bank, "is in New York, looking into things, which must surely mean that he had gone far enough into this Yankee whirlpool of gambling to be anxious about the consequences." Possibly. We shall not presume to judge him, knowing only the current gossip, "but bills to the amount of many millions sterling have been drawn by the Standard Oil and other Yankee banks and discounted here, in anticipation of the proceeds of harvests ungathered or only just gathered and not yet sold." Well, supposing it is so, if the bills are not excessive in amount, and if meanwhile the acceptors have had adequate security lodged with them as cover, they could not refuse business. It is no doubt embarrassing, and no such business can ever be conducted without running more or less dangerous risks, but there is nothing wrong in it, and it may possibly turn out all right. All depends upon the capacity of New York to pay the debts in this and other ways contracted at maturity.

All the week money has been dear, because of the poverty of the market, a poverty accentuated by the collection of the revenue, always heaviest towards the end of a quarter, when the Exchequer has to accumulate money for the dividends. So 4 per cent. has been a common rate for call money, and bankers have charged 3¾ per cent. on seven day loans, the same rate at which the India Council continues to lend and renew

for a month. At the Bank a heavy discount business has been done all the week, and until to-day it charged the market no more than 4 per cent., although the little it did in seven day loans was at 4½ per cent. This morning, however, the demand of the market was so heavy that after doing the bulk of the paper offered at 4 per cent. the Bank decided to take nothing more from the market under 4½ per cent., and at the same time advanced its rate for seven day loans to 5 per cent. It will still take bills from its own customers at the official minimum, but the intermediary—the credit jobber or bill broker—cannot now rediscount under 4½ per cent., and the Bank, we believe, has been discriminating and will increasingly discriminate against American finance paper, throwing out all but a comparatively small proportion of such paper in the parcels offered to it. In its fright at this decision the discount market raised its rate for two and three months' bank bills to 4⅞—4½ per cent. Most people interpret this action on the part of the Governor of the Bank as a sign that a 5 per cent. rate is certain next week; others with whom we are inclined to agree think it rather means an effort on the Bank's part to avoid a 5 per cent. rate. But it all turns on gold. If considerable further withdrawals of gold for export take place between now and next Wednesday we do not see how a 5 per cent. rate is to be avoided, particularly as the 4½ per cent. now charged to the market for discounting its bills will not fend off the pressure for advances certain to come upon the Bank with severity in the last week of the quarter.

No gold left the Bank to-day, and it is again said that the Bank of France is relieving us of the Egyptian demand for the present. New York, however, continues ravenously to lay hold of every ounce available, and picked up to-day between £20,000 and £30,000 worth which the open market held at 77s. 11¼d. per oz., an advance of a farthing on the previous price of 77s. 11½d. and three farthings above the price at which about £300,000 was picked up last Monday. Next Monday about £500,000 altogether will be available. By the by, the Customs returns show that Petersburg did after all get that £1,082,000 bought in mystery some weeks ago.

Next week's calls on new issues aggregate nearly £1,500,000, of which £1,114,000 is payable next Wednesday upon Canadian Pacific new ordinary stock. On Tuesday £217,000 is due on Bristol Corporation 3½ per cent. stock, and on Monday £240,000 falls to be paid, £165,000 of it on the Brazilian Lloyd bonds and the other £75,000 on Lovell and Christmas preference shares.

The Bank return principally shows the effect of the revenue collection, which has diminished other deposits by £1,590,000, although there was an increase of £23,000 in the banking reserve arising entirely from a return of notes from the active circulation. In spite of a good business done at the Bank, other securities rose by only £358,000, so the presumption is that earlier borrowings ran off or that some special advances made by the Bank to private clients have been paid off. Probably, however, the Bank has taken up Japanese money to the tune of between £3,000,000 and £4,000,000, in order to keep the open market tight in spite of the enormous amount of new credit it has been compelled to create by rediscounting bills.

SILVER.

Dealings in bars have not been on a very large scale, and what there was in the early part of the week was mainly due to an attempt to secure profits. Prices did not drop below 31 5/16d. per oz. for spot and 31 5/16d. per oz. for delivery two months forward, and on the "bears" buying back they rallied to 31½d. and 31⅝d. per oz. At these figures the market became somewhat uncertain, and it looked for a time as if the next move would be downwards, but an unexpected inquiry came in from the bazaars, sending quotations up another 1/16d. To-day, however, weakness again supervened, and the close was that fraction below the best.

BANK OF ENGLAND.

Stock Market Notes and Comments.

It must be puzzling to many people to account for the remarkable disturbance produced by these gold exports. Why should prices of securities fall when an event of this kind occurs, and apprehension increase until the imagination pictures things to be much worse than they are? It is difficult to explain the causes of the depression in people's spirits and in the prices of stocks and shares, but some attempt to do so has to be made from time to time, and in making it we must always give prominence to the fact that the developments of credit and the engagements credit generators have entered into are at the present time excessive upon all financial markets. It is when people are committed in all directions much beyond their means, or beyond the solid, or free, resources of the money

markets, that the gold agony threatens every now and then to become acute. Gold is the ultimate instrument for liquidating all debts, not only on individual markets, but between nations, and when credit has multiplied these debts beyond the available absorbing power or marketable assets of communities, or beyond the revenue-yielding capacity of enterprises called into existence by the aid of banking credit, then anything which seems to threaten a shortage in the supply of gold at once excites alarm, it may be excessive alarm. Every debtor begins to dread lest he should be the one compelled to find the gold, lest his paper expedients to avoid paying should become useless. This in a few words is the position now. There is a plague of credit congestion raging, the source of the malaise everywhere apparent.

In our own case an increasing congestion of credit has existed upon both money and stock markets ever since the first year of the South African war. The securities created so lavishly in order to provide the means with which to wage that war have never been effectively disposed of to what we call the ultimate investor. They float about in the Money Market still, or are lodged by unwilling holders in banks and in the strong boxes of discount companies and financiers of all degrees, producing an unwholesome distension of credit in the market, and acting as a continual source of uneasiness because of the depreciation in prices nonvendability brings about. We are haunted by the ever-recurring danger of forced liquidation. To these domestic entanglements our market has added enormous commitments on behalf of Japan, and quite recently an embarrassing little obligation to Russia—little compared with the formidable mass of its other liabilities—whilst, to crown all, San Francisco has called upon us to pay losses amounting to perhaps £8,000,000.

Abroad exactly the same complications have not arisen, but we know very well that France is threatened with almost unbearable loss through its investment in Russian securities. And German markets are not by any means free from the same danger, while as to the United States, everything there is credit, from the "dollar bill" upwards, and in spite of a rapid multiplication of banks and consequent expansion in the paper money, the whole fabric of prosperity is at frequent intervals threatened with collapse. The farmer gets "a bit o' land" and borrows the money to pay for it, he borrows the money also to raise his crops, and the factor borrows in order to buy these. The manufacturer borrows to build and furnish his factory, and the large producers, the great trusts, and great carriers, all lean on credit at every step of their progress. Goods are bought and sold on credit from first to last, railroads expand their systems and improve their appliances on credit, credit is utilised to its uttermost stretch in the building of cities and in the making, transporting, and retailing of every commodity produced. To a point all this may be good and necessary, but our contention this long while back has been that the point of safety, of prudent trading has long been passed, and when we add to the dangers arising from excesses in what may be called the ordinary channels of production and consumption, the unexampled temerity of financiers in New York and all the other great centres of population throughout the Union in creating new securities and manipulating their prices, many of them being not yet placed with the investing public, we get a position which is in the highest degree ominous. Because it is so we have this abnormal and unnatural demand of American banks upon our stock of gold. There is a wide gulf to be filled up between the real value of every description of marketable property in the United States, and the nominal or inflated value to which it has been raised by an unbridled use of instruments and devices of credit, and this gulf gold alone is able to fill. So credit is finally used to procure the metal, and the play is played boldly to the end.

At the same time that we have these symptoms of undue distension of credit, of congestion in the paper security markets, we have an enlarged world commerce to provide for. Every nation is producing more, buying and selling more than it did a few years ago. We are not alone in having an expanding trade. A similar exhibit is made by all our colonies, by every country throughout the globe aspiring to be civilised, and this larger business demands, in the language of the railway manager, more rolling-stock to carry it on. Banking credit is but the rolling-stock of commerce, and gold is the basis of that credit. The more trade expands the more credit is required to move products from producer to consumer, and the more credit is drawn upon or stretched, the greater becomes the hunger for the steadying gold which forms the universally accepted instrument in liquidating debts of every description.

Much more should be said, and we feel the effort to explain the existing nervous condition of our stock markets here made is anything but complete or adequate, but we only recall facts and symptoms of this description in order to set people thinking, and to induce those who reflect to persist in their caution. The present is a time in which to avoid new commitments as much as possible, and those who may feel that they have overloaded themselves with obligations to an extent that may cripple them, or that involve, with money rates at their present or probable heights, inconvenient, possibly unendurable, losses, should while there is yet time do their utmost, even at some sacrifice, to narrow down their accounts, so that if a credit disturbance does occur they may be able to outride the storm. We are not predicting that a crisis is coming, although we fear it; all we wish to impress upon thoughtful readers is the fact that upon all money markets the elements conducive to a great credit subsidence are in evidence. Thanks to the rapidity with which one market can get help from another to carry its burden, the danger of old-fashioned local panics is much less than it was before the days of ocean telegraphy and rapid steam communication between continents. Now and again we have been saved by the rapidity with which banking capital can be brought from all parts of the world to sustain an overloaded market, but the peculiarity of the present credit strain is just its universality. The hunger for gold to buttress the toppling fabrics of credit is well nigh insatiable, and far exceeds the almost unprecedented supply of new metal pouring almost daily into the bullion market. Hence, if a crisis should occur as outcome of the present anxiety and unrest it promises to be incalculably more hurtful and far-reaching than any modern civilisation has ever before encountered. We ardently hope, therefore, that no banking breakdown, no overwhelming financial insolvency, will take place, but undeniably the situation is most critical, and the man who plays the gambler's game on any market at the present time is courting ruin with his eyes open.

A fear of labour and its demands again haunts the Home Railway market and helps dearer banking capital in depressing prices there. Is it a well-grounded fear? Perhaps, and yet is it not thinkable that working staffs, well paid and never called upon to endure excessive hours of labour might be more beneficial in the long run than hurtful to the railway proprietor? And is it not true that the blight of excessive and continuous capital expenditure must be far more permanently hurtful to the owners of ordinary stocks than anything labour could possibly attempt?

The Week's Stock Markets.

This has been another week of insignificant business and dragging prices with markets still suffering from fears of heavy demands on our stock of gold from various quarters. The rise in the Imperial Bank of Germany to 5 per cent. on Tuesday had been expected as the natural sequence to the advance here last week, but none the less it had a depressing influence, which was accentuated by the talk of the end of the quarter credit requirements in Berlin being unprecedentedly large. On the other hand, it was asserted that New

York had got all the gold needed, and that little more need be dreaded from that quarter, but this confidence was rudely dispelled on Wednesday by the statement that at least £4,000,000 more would be required to finance the cotton crop and by rumours of large amounts having been engaged. The possibility of a further rise in our Bank rate on Thursday then became the chief topic of discussion, and until the matter was definitely settled any improvement in business was impossible. A slight recovery did take place on Wednesday afternoon, when it was found that only £75,000 in eagles had been secured, but it was not until well on in the following day that the cheerfulness became real.

Trustee securities have been droopy all week, and one reason put forward for the heaviness was that insurance companies had been selling in order to meet bills drawn upon them in connection with the San Francisco losses. Elsewhere, however, it was said that the Prudential had come to the help of the fire companies with a big loan for the purpose of preventing such realisations, and it is more likely that the depression is due to the condition of the money market, and to the reluctance of the public to touch anything at present. Consols showed a disposition to harden at first, and crept up to 86 9/16 for cash and 89 11/16 for the account, but did not hold these figures long and fell back to 86 5/16. Prices recovered a trifle again just before the end, but they were still down on the week, together with most other British Funds. Selling of Bank of Ireland stock was again very persistent, in spite of the denial of the story that the head office was to be taken for a Parliament House when Home Rule is granted, and the price is down another £15. A few Domestic Corporation issues followed the lead of Government stocks, but Liverpool 3 per cents. were exceptionally higher, and amongst Colonial Government securities Canada 3 per cent. and sundry South African and Australian things lost ½ to 1.

In the Foreign Bond market Japanese things have been depressed on a little selling prompted by talk of the issue of a £25,000,000 conversion loan in the near future, although the Japanese are too shrewd in matters financial to attempt anything of the sort while market conditions remain in their present unfavourable predicament. Russian stocks continue difficult to deal in, but they, too, have gone back on balance, and other Continental loans were likewise disposed to recede. Amongst South American loans Brazilians have been noticeably flat, owing, it was said, to differences between the Government and the Rothschilds, but the selling never became very pronounced.

The Home Railway market has been the flattest of all. Satisfactory traffic returns were ignored, as dealers have conjured up all sorts of dreadful things which are to happen as the result of labour troubles, and an unimportant strike in the Midland yards at Derby was seized upon as proof that such troubles were upon us. There has been no great rush to sell, but jobbers are so reluctant to put stocks on their books at the moment that it does not require much pressure to send prices tumbling. North-Western and Midland deferred, however, were offered pretty freely, and fell sharply, dragging other "heavy" stocks down with them, while Great Northern deferred, and "A" stocks suffered severely in consequence of the terrible disaster at Grantham. These all show serious declines on the week, while District fell 2 on the continued agitation against the alterations in the fares, but losses of 1½ to 2 were only too numerous throughout the list, and the weakness spread to prior charge securities.

Wall Street has made great play with Reading shares on a variety of rumours, amongst others being stories of the purchase of Baltimore shares, of the acquisition of Reading shares by the Lake Shore Company, and of an increase in the dividend. Yet another version of the last tale was that stockholders were to receive rights worth 80 per cent. on the transfer of the coal lands, but this was not generally believed, and the theory most generally accepted was that the rise was due to the "bears" having been caught. The air has been full of rumours of mergers in other directions also, and combinations of the Pennsylvania and Atchison and of the New York Central and Milwaukee were mentioned as likely to follow on the heels of a Union Pacific and Baltimore deal which was said to be in progress. On Wednesday heavy selling of Reading upset the market, and it was asserted that one large operator who was interested in various pools had sold out against his colleagues. Milwaukee were bought on the annual report, which the cables say was good, but it finished decidedly lower on the week. Atchison, Chesapeake, Norfolk, Southern, and Union Pacific were also down by substantial amounts, but New York Central showed very little change, thanks to the support given in view of the announcement that the company intends to issue $29,839,500 stock at par, which would give stockholders about 20 per cent. of their holdings. Readings, in spite of their set-back, still show a considerable gain on the week, and Baltimore were also up several dollars, while Southern Pacific were fractionally better.

Amongst colonial railways Canadian Pacific shares were well supported at first on an increase of $326,000 in the traffic return, but the firmness was not maintained, and the nett result of the movements of the week was a small loss. Grand Trunk stocks have been more or less idle, and as the traffic figures were well below market expectations prices dwindled, but with the exception of the third preference, which fell 1½, the declines were trifling. Of South African lines Mashonaland debentures dropped ½, but Rhodesia Railways first mortgage debentures put on that fraction.

Argentine railways have attracted very little attention, and even the fine display made by the Buenos Ayres and Rosario Company when declaring its interim dividends did not prevent the price from slipping back. Cordoba Central first debenture stock was a notable exception to the general run of things, being marked up 4, but the gain was not the result of any substantial amount of business. Cuban things have been steady, and United Railways of the Havana ordinary stock even improved 2, in spite of the continuance of the revolution. Leopoldina ordinary hardened on anticipation of a bumper coffee crop, and Central Uruguay Northern Extension shares were for a time the subject of a lively gamble on talk of an important gold discovery in the district served by the line. The enthusiasm, however, died down very quickly, and they closed idle, with a modest advance of 10s. only. Antofagasta preferred and deferred ordinary stocks rose 2 and 9 respectively without anything transpiring to account for the improvement. The Mexican traffic was regarded as excellent, and it was prophesied that we were on the eve of a "boom" in these stocks, but it fizzled out before it was well started, and they ended weak, the ordinary being ¼ lower, while the first preference, although £1 up, was well below the best.

It cannot be said that there is any indication of public interest in the Miscellaneous section, but prices have remained wonderfully steady considering the extreme paucity of business. Breweries were, if anything, disposed to slip back, Guinness ordinary stock being marked down 10 and Smith, Garrett ordinary 1, while one or two others in the home list were fractionally lower. Allsopp 4½ and 4 per cent. debenture stocks, however, put on £1 each. Bieckert's ordinary relapsed 5, and Ohlsson's Cape ordinary shares were also easier, but American Breweries generally hardened. Amongst Industrials Associated Portland Cement gave way in response to the somewhat dismal outlook for the company, but most other things were steady to firm. Nitrate shares were nearly all better to the extent of 5s. or 10s. and Russian Oils also put on a small fraction as a rule. Gordon Hotels ordinary gained ¾ and Hotel Cecil preferred were also higher, but Savoy Hotel 5 per cent. debentures declined 1. Waring and Gillow shares showed a marked recovery on the reassuring statement issued by the directors. Textiles were mostly left alone, but both Coats and

English Sewing Cotton finished a trifle higher. Drury Lane Theatre rose $\frac{1}{16}$ on the resumption of dividend payments, but Palace shares went back on the announcement that no distribution would be made. A majority of the London Electric Light companies' shares fell from $\frac{1}{4}$ to $\frac{1}{2}$, but Gas Light and Coke and South Suburban Gas ordinary stocks, on the other hand, were distinctly harder. Imperial Continental Gas, however, fell $1\frac{1}{2}$. Insurance shares were idle, but Liverpool and London and Globe rose, while Commercial Union shares lost $\frac{1}{2}$. Peruvian Corporation issues have been weak, in spite of some support from Germany, and some apprehension was expressed regarding the effect on the company's position of the German loan, which had been approved by the Chamber of Deputies. Later news, however, would seem to indicate that the loan may not after all go through, as the Government had so altered the terms upon which it was offered that the lenders refused to accept them. Pekin Syndicate shares were attacked by the "bears" and driven down to $10\frac{1}{4}$, and it was said that an ex-employee of the company was spreading adverse reports about the company on the Continent. Sufficient support was forthcoming, however, to bring about a rally, and the price picked up again to $11\frac{1}{4}$ or thereabouts. Several Australian Land companies' issues were decidedly higher, but Egyptian Land things were out of favour, and less has also been heard of Hudson's Bay shares than of late. Amongst Iron and Coal companies, Dunderland Iron Ore preferred shares and debenture stock were knocked down, after the appearance of the annual report, and Pease and Partners ordinary slipped back $\frac{1}{2}$, but Consett Iron gained that amount.

The gamble in Anglo-American deferred stock has been less strenuous, and dealings ended in a modest improvement of $\frac{1}{4}$, while Gramophones, which were also a recent favourite, have gone back 2s. 6d. In Traction things London General Omnibus advanced 2, but London Motor Omnibus shares were a trifle lower and B.E.T. preference dropped $\frac{1}{8}$.

Stock markets are fairly serene, but a little disturbed this afternoon by the action of the Bank in raising its rates to the outside market. A good business, however, of the small investment kind was done in Home Railway stocks, and speculators are also going after Mexican Railway ordinary and thinking of picking up Grand Trunk ordinary stocks. Brazilian bonds, which have been flat for days on the exchange, recovered this afternoon, and there was some revival also in the Kaffir Circus, where "bears" are closing in anticipation of Monday's carry over.

Tenders for the Rs. 1,00,00,000 Council drafts on India on Wednesday reached a total of Rs. 5,12,10,000 in bills and Rs. 1,35,00,000 in telegraphic transfers and of these Rs. 79,14,000 were accepted in bills and Rs. 20,86,000 in transfers, applications at 1s. $4\frac{1}{16}$d. and 1s. 4 3-32d. respectively receiving about 15 per cent. Next week another Rs. 1,00,00,000 will be offered.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: Greek Guar. 1, to 86-88. **Fall:** $2\frac{3}{4}$ p.c. 1905 $\frac{1}{4}$, to 92$\frac{1}{2}$-92$\frac{3}{4}$, Exchequer Bonds $2\frac{1}{2}$ p.c. $\frac{1}{4}$, to 97$\frac{7}{8}$-97$\frac{15}{16}$, Bank of Ireland 15, to 300-315, India 3 p.c. Account $\frac{1}{2}$, to 92-92$\frac{1}{2}$, do. $2\frac{1}{2}$ p.c. Account $\frac{1}{4}$, to 76$\frac{1}{2}$-77$\frac{1}{2}$.

CORPORATION STOCKS.—Rise: Liverpool 3 p.c. 1, to 89-92. **Fall:** Metropolitan 3 p.c. $\frac{1}{2}$, to 92$\frac{1}{2}$-93$\frac{1}{4}$, Birmingham 3 p.c. 1, to 89-91, do. (1902) 1, to 89-91, do. $2\frac{1}{2}$ p.c. 1, to 75-77, Edinburgh 1, to 90-92.

COLONIAL AND FOREIGN. — Rise: Cape Town 4 p.c. Debs. 1, to 101-103. **Fall:** Rio de Janeiro 5 p.c. $\frac{1}{2}$, to 93-94, Rosario 6 p.c. Bonds 1, to 61-63.

COLONIAL GOVT. STOCKS.—Fall: New Zealand 4 p.c. Debs. $\frac{1}{2}$, to 102$\frac{1}{2}$-103$\frac{1}{2}$, Nova Scotia 1, to 94-96, Canada 3 p.c. Reg. 1, to 97-99, Cape $3\frac{1}{2}$ p.c. $\frac{1}{2}$, to 96$\frac{1}{2}$-97$\frac{1}{2}$, do. 3 p.c. $\frac{1}{2}$, to 82$\frac{1}{2}$-83$\frac{1}{2}$, Natal $3\frac{1}{2}$ p.c. $\frac{1}{2}$, to 97-98, New South Wales $3\frac{1}{2}$ p.c. 1, to 99$\frac{1}{2}$-100$\frac{1}{2}$, do. 1918 $\frac{1}{2}$, to 98$\frac{1}{2}$-99$\frac{1}{2}$, do. 3 p.c. 1, to 85-87, New Zealand 4 p.c. $\frac{1}{2}$, to 107-108, do. $3\frac{1}{2}$ p.c. $\frac{1}{2}$, to 99$\frac{1}{2}$-100$\frac{1}{2}$, do. 3 p.c. $\frac{1}{2}$, to 88$\frac{1}{2}$-89$\frac{1}{2}$, Queensland 1924 $\frac{1}{2}$, to 105$\frac{1}{2}$-106$\frac{1}{2}$, Victoria $3\frac{1}{2}$ p.c. $\frac{1}{2}$, to 99$\frac{1}{2}$-100$\frac{1}{2}$, do. 1923 $\frac{1}{2}$, to 99$\frac{1}{2}$-100$\frac{1}{2}$, do. $3\frac{1}{2}$ p.c. $\frac{1}{2}$, to 99-100, W. Australia 3 p.c. $\frac{1}{2}$, to 87$\frac{1}{2}$-88$\frac{1}{2}$, do. 1916-36 $\frac{1}{2}$, to 87$\frac{1}{2}$-88$\frac{1}{2}$, do. 1927 $\frac{1}{2}$, to 87$\frac{1}{2}$-88$\frac{1}{2}$.

FOREIGN GOVT. SECURITIES.—Rise: Bulgarian (1892) $\frac{1}{2}$, to 100$\frac{1}{2}$-101$\frac{1}{2}$, Cuba 1, to 103-104, Japan 5 p.c. $\frac{1}{2}$, to 102$\frac{1}{2}$-102$\frac{3}{4}$, do. 1901-1902 $\frac{1}{2}$, to 101$\frac{1}{2}$-101$\frac{3}{4}$, do. $4\frac{1}{2}$ p.c. $\frac{1}{2}$, to 95$\frac{3}{4}$-96$\frac{1}{4}$, Uruguay 5 p.c. Bds. $\frac{1}{2}$, to 94$\frac{1}{2}$-95$\frac{1}{2}$. **Fall:** Argentine $3\frac{1}{2}$ p.c. External $\frac{1}{2}$, to 79-80, Brazilian 1883 1, to 91-93, do. 1879 1, to 90-92, do. 1888 1, to 93-95, do. West of Minas Rly. 1, to 98$\frac{1}{2}$-99$\frac{1}{2}$, do. 1895 1, to 97$\frac{1}{2}$-98$\frac{1}{2}$, do. Fndng. 1, to 104$\frac{1}{2}$-105$\frac{1}{2}$, do. 4 p.c. Bds. $1\frac{1}{2}$, to 86-87, do. 1903 1, to 99-100, Chinese 1894 $\frac{1}{2}$, to 100$\frac{1}{2}$-101$\frac{1}{2}$, Costa Rica "A" 1, to 48-50, do. "B" 1, to 38-40, Greek Rentes $\frac{1}{2}$, to 41$\frac{1}{2}$-42, Guatemala $\frac{1}{2}$, to 35$\frac{1}{2}$-36$\frac{1}{2}$, Japan 4 p.c. $\frac{1}{2}$, to 89$\frac{1}{2}$-90, Russian Ser. II. $\frac{1}{2}$, to 71$\frac{1}{2}$-72$\frac{1}{2}$, do. Ser. III. 2, to 68-72, do. (Ivins'k). $\frac{1}{2}$, to 68-72, Spanish $\frac{1}{2}$, to 95$\frac{5}{8}$-95$\frac{7}{8}$, Uruguay $3\frac{1}{2}$ p.c. $1\frac{3}{4}$, to 68-69, Venezuela 3 p.c. Db. $\frac{1}{2}$, to 48$\frac{1}{2}$-49.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Highland Railway Company.

Gross receipts from all sources for the six months ended July 31 were £255,231 or an increase of £3,206, while working expenses came to £720 less at £139,201, and the proportion of expenses to revenue was consequently only 55.45 per cent. compared with 56.36 per cent. a year ago. Of the improvement in receipts £942 came from passengers, the increase being practically all in third-class traffic, goods and minerals gave an additional £3,018, and live stock and miscellaneous items were respectively £243 and £453 up, but parcels, horses, &c., showed a decrease of £1,450. The saving in working expenses was due mainly to reduced outlay on maintenance of way and locomotive power, which took £1,357 and £902 less, and to compensation charges, being considerably lighter at £1,000 against £2,510.

General charges, too, were slightly smaller, but carriage and wagon repairs took £1,724 more, and traffic expenses rose by £1,432. After providing £4,521 for rates and taxes, or an increase of £454, setting aside £275 for superannuation fund and writing off £972 for costs in connection with the proposed amalgamation with the Great North of Scotland, there was a balance of £107,036 compared with £104,815. The amount brought forward was much the same as a year ago at £3,804, making a total of £115,840, of which debenture interest and other charges absorbed £46,301, and £1,000 was again transferred to bridge renewal account, leaving £68,539 or £1,851 more to be dealt with, and as preference charges were unaltered, the dividend on the ordinary stock is maintained at the rate of 1½ per cent. per annum, and the sum carried to the new account is raised to £3,870. Capital expenditure for the half-year was £7,292, of which £1,047 was for difference in cost of relaying seven miles with heavier rails, £1,500 was on the new hotel at Dornock, and £2,212 on new foot bridges. This leaves the debit balance at £125,182, and it is estimated that £16,326 will be spent during the current six months and £20,313 in subsequent half-years. Dividends are payable on October 11.

Chicago and North-Western Railway.

In its year ended June 30 last this railroad earned gross $63,482,000 at a cost of $42,216,000, or 66.50 per cent. of the receipts. The nett income, allowing for $1,029,000 received from Omaha stock and other items, reached $22,871,000, and after meeting the debt interest of $7,845,000, together with dividends of 8 per cent. on the preferred and 7 per cent. on the common stock besides providing $225,500 for sinking fund, the directors were able to set aside $6,000,000 for capital purposes, the purchase of real estate and railroad construction, &c., still leaving $2,317,000 of a surplus on the year's business. This is surely excellent, and in addition $368,000 came in from the company's lands. No wonder therefore that its balance-sheet is in a manner bursting with wealth. Yet capital expenditure does creep up and last year amounted to upwards of $9,444,000 of which however $6,133,000 all told was provided from revenue or sinking fund and only $3,311,000 for the present charged to the capital account. Altogether additions amounting to $26,877,000 were made during the year to the company's stock, but apparently none of it has yet been sold to the public, and in fact the directors claim to have $10,813,000 of its own bonds in the Treasury besides $2,338,000 of its stock. Altogether, including the cash in hand and other available assets, it had on June 30 $37,119,000 available against current liabilities of nearly $9,351,000. The position is thus in many ways enviable, and in spite of the increase in the capital there appears to be a long season of prosperity ahead if we can believe the figures, but that is always the point of doubt in regard to these American railways. When they appear to be most flourishing they ought often to be most suspected. At the same time there does not appear to be any forcing of the revenue here or pinching in the current expenditure so far as the figures enable us to judge. A slight increase is shown in the rate per passenger per mile earned, but the freight rate per ton per mile has fallen from 0.92 cents to 0.89 of a cent, or to the figure of four years ago. Earnings per freight train mile, however, have gone up because the train loan has been increased to 262.60 tons, the highest in the company's history. Why, however, are shareholders asked to double the share capital by raising it to $200,000,000? Is there a design to ultimately capitalise the money now so ostentatiously withdrawn from the nett revenue to pay for betterments, the elevating of the lines in towns, the building of new stations, doubling of the track and so on? We should not be at all surprised, although the position now looks so strong as to render any immediate further issues of capital unnecessary. Why, however, should the company now display $16,836,000 of cash in hand against only $6,602,000 a year back? Is much of the road-bed in a more or less indifferent condition, or is the work of doubling the line in a wholesale fashion becoming an urgent necessity? The total length of road worked by this powerful company was on June 30 last about 7,454 miles, and of this only 862 miles possessed "second, third and fourth main tracks." This does not mean that such a length of line was double because the third and fourth tracks may amount to a half or third of the total mileage of duplications. There were also, however, 2,687 miles of sidings, so that some considerable progress towards doubling has doubtless been made. Nevertheless the work will have to be taken in hand soon on a large scale if the business continues to grow as it has done in recent years, and we may be quite sure that with this company as others of the same description great prosperity means sooner or later great increases in capital outlay.

Norfolk and Western Railway.

Distinguished above all lines in the United States except perhaps the Chesapeake this road contrives to haul enormous loads by its trains. Last year, for example, the average train load rose to 579 tons against only 489 tons three years before, and yet the company did not seem to be able to earn much more per train mile than the Chicago and North-Western; presumably therefore its traffic is for the most part of a poor revenue yielding quality. This indeed is shown by the fact that the average rate per ton per mile was only 0.484 cents as against 0.89 cents on the North-Western. Last year to June 30 the gross earnings of the Norfolk company amounted to $28,488,000 procured at an expense of $17,800,000 in working expenses and taxes or 62.48 per cent. of the gross receipts. The nett income, including $165,000 from unspecified sources, was consequently brought out at $10,853,000, and after meeting bond interest and car trust charges, and paying a dividend on the common stock of 4 per cent., raised to that figure from 3 per cent. paid in each of the three preceding years, the company was able to devote $700,000 more to betterments and new equipments at a total of $2,950,000. Even then there was a surplus of $760,000 left to carry forward. So the position here also looks satisfactory, and yet more money is being poured into the property, no less than three new series of equipment trust certificates of $1,000,000 each having been issued during the year, while the total capital outlay amounted to about $7,200,000, including $1,274,000 advanced to small surrounding companies for construction purposes. The company's own outlay for construction, equipment and betterments for the year came to $5,926,000, of which $2,623,000 was paid out of revenue. Most of the new money has been spent upon the second track including tunneling, that having involved an expenditure of more than $2,609,000 during the year, and another $1,167,000 was spent in providing new sidings and yards, work of this kind all indicating the imperfect character of the road construction. What the weight of the old rails is we are not told, but over 82 miles of the main line were re-laid last year with 85 lb. steel rails, and we should consider these light in this country, especially where enormous loads are carried demanding locomotives of great power and weight. Probably many of the railway accidents in the United States, with the accounts of which we are so frequently harrowed, are due more to the imperfect and weak condition of the permanent way than to the absence of double lines. The company's traffic, however, continues to expand and its management will doubtless be able to bring the lines into excellent physical condition before many years are over if nothing occurs meanwhile to interrupt the stimulating glow of credit-born and fed prosperity. Meanwhile the directors propose to increase the common stock of the company to a round $100,000,000 by getting power to issue another $34,000,000 in the form of convertible bonds.

Royal Bank of Ireland.

The best that can be said of this bank is that the business it conducts is of a steady, jog-trot order, yielding much about the same return year after year. For the 12 months to August 31, for instance, the gross income amounted to £92,095 or an increase of £330 over 1904-5, which in turn was about £300 above that of the preceding year. A saving of £448 at £30,580 in the expenditure was more than swallowed up by interest charges on deposit receipts, &c., which took an extra £513 at £23,142, so that the nett profits including £13,742 or £109 more brought in showed an increase of only £373 at £52,115. The customary dividend of 12 per cent. for the year is again paid out of this, and as on this occasion there is no need for a gratuity of £1,000 to the relatives of any employee such as was granted last year, an additional £500 at £1,500 is put to superannuation fund and the balance carried forward is raised by £873 to £14,615. Deposit and current accounts have risen by £87,119 to £1,956,275, and of this increase £67,630 has gone to the item of bankers' balances at call and cash in hand making it £216,868, while bills discounted and advances to customers are £21,123 higher at £1,390,499. Investments remain at £902,615 consisting of £450,000 in Local Loans, Consols and Government stock valued at £415,062, or an average of just under 92¼ per cent., and £487,553 in miscellaneous securities. The reserve fund is again untouched and stands at £200,000 against a paid-up capital of £300,000, but the superannuation fund is now £30,820.

Bank of Africa, Limited.

Gross profits of this bank continue to dwindle, and for the half-year ended June 30 showed a further decrease of £5,037 at £160,732. Expenses, at the same time, were only reduced by a trifle of £488 to £107,767, and with £387 less at £20,161 brought in, the nett balance was £4,936 down at £73,126. The dividend paid, therefore, is again cut down from 11 per cent. to 10 per cent., or the same as was paid for the preceding six months, but £3,000 is as usual put to pension fund, leaving £20,126 or £64 more to be carried forward. Liabilities on deposits, current accounts, &c., are down £1,090,560 at £6,776,258 and notes in circulation have fallen by £39,825 to £300,787, but bills payable show a small increase of £9,415 at £493,227. Against these cash on hand, money at call and short notice, &c., is £307,375 lower at £1,809,413, cash, bills, &c., in transit £152,570 down at £151,889 and investments have been increased by £19,958 to £1,113,845. Loans on security, temporary advances, &c., are also very much reduced at £3,330,508, bills receivable come to £353,104 less at £1,232,552 and bills discounted to £58,008 less at £1,076,283.

Delhi and London Bank, Limited.

A further modest improvement of £1,332 to £23,472 was shown in the gross profits for the half-year to June 30, while expenses only rose by £126 to £14,265. As the balance brought in was £373 larger at £4,509, it follows that the amount available for distribution was £1,579 up at £13,716, and after paying the usual dividend at the rate of 4 per cent. per annum, £2,000 is written off doubtful accounts, or double the sum provided a year ago, and £4,964 or £579 more is carried forward. Current and deposit accounts, &c., have fallen by £37,330 to £1,312,826, and bills payable are £3,869 down at £1,242, but the bank has managed to pay off £3,000 of its borrowings on security of its investments, reducing them to £77,000. On the other hand, £9,134 has been added to these investments, making a total of £161,263, of which £75,003 is in Government securities and £86,260 in other securities including bills purchased. Cash in hand and at bankers is £15,082 up at £202,852, but loans and bills under discount are £86,145 smaller at £1,363,787. The

bank does not seem to be making very much headway with its provision for losses on various irregular accounts included amongst the assets. For a long time past the auditors' certificate has made special reference to these, and has quoted the opinion of the directors as to the amount required to wipe out the deficit. Up to the present the sum has been uniformly stated at £17,000 each half-year, but it is now brought down to £16,000—a figure which is still large enough to require considerable explanation.

Industrial Bank of Japan, Ltd.

Before another report of this interesting bank is issued we hope its English will be revised. For instance we are not quite sure what to make of the statement that a first dividend at the rate of 5 per cent. per annum is recommended out of profits and then a second dividend at the rate of 2 per cent. Is this second dividend a bonus, or what? Altogether the profits of the year including 10,898 yen brought forward came to 521,073 yen. To pay the two dividends mentioned requires altogether about 366,000 yen; 73,800 yen is transferred to reserve against losses and 16,200 yen to the dividend equalisation reserve. Besides this 15,000 yen goes to provide additional remuneration to the officials and after all 49,773 yen remains to be carried forward. The bank appears to have received nearly twice as much for interest as it paid and as far as we can judge is worked at a moderate expenditure. It earned about 108,000 yen in commissions and paid 44,435 yen. Its paid-up capital is 13,750,000 yen and its total obligations, including 17,642,502 yen due on deposits, amounts to 27,464,000 yen. Among its assets 12,417,000 yen in Treasury Bills is a conspicuous item. It has further 19,864,735 yen out on loan, 3,803,900 yen invested in national, and 3,445,526 yen in local loan bonds and it holds 2,166,960 yen in debentures.

Dick, Kerr, and Co., Limited.

During the 12 months ended June 30 this company was fully employed on important contracts both at home and abroad, and its manufacturing departments were kept busy, but it still suffered severely from the keen competition in all its branches. Nett profits consequently showed only a trifling increase of £1,347 at £86,354, and were still substantially below the bumper years of 1901-2 and 1902-3. Debenture interest, however, required £1,488 less at £13,065, and the directors do not consider it necessary to transfer more than £15,000 to the special reserve for extensions of manufactories, replacements or special depreciation of machinery, &c., against £23,389 set aside a year ago. Then the preference dividend is met, and after giving the ordinary shares their usual 10 per cent., the amount added to the balance brought forward is £11,224 larger at £13,689, making a total of £56,077 to be carried to the new account. Beyond the sum of £5,000 which was written off tools, &c., out of the new special reserve, there is no mention of any specific allowance for depreciation having been made, but capital expenditure, including goodwill and patents, is £3,644 down at £584,418, and we have the auditors' word for it that the plant and machinery has been amply depreciated. The position seems satisfactory enough, as in addition to the reserve of £150,000 accumulated in accordance with the trust deed securing the debenture stock, there are the two special reserves of £16,000 and £50,000 to put against this outlay. With so much important work in hand, it is not surprising to find that the amount due to the company under contracts has risen by no less than £173,674 to £669,131, while stocks and works in progress are £5,651 higher at £136,249. This extension of the business naturally means a greater employment of funds, and in addition to an increase of £99,692 to £432,979 in liabilities to sundry creditors, investments have been reduced by £44,337 to £65,017 and cash is £24,219 down at £66,391. A small advance of £7,507 to £59,741 in sundry debtors is accompanied by a decrease of £7,355 to £5,625 in bills receivable, and is unimportant.

Dunderland Iron Ore Company.

Progress in opening up the mines and completing the plant in Norway continued through the financial year ending March 31, but we do not gather that it proceeded at a very rapid pace. The first deposit opened up is the Urtvand and this is said to be capable of supplying the whole output required for some considerable time. Of the three main processes necessary for the conversion of the crude ore into briquettes, two are in working order—viz., crushing and grinding and magnetic separation. The third process, that of briquetting, is not yet completed. Various delays have occurred in perfecting this portion of the plant, but the difficulties are being gradually overcome. Indeed, a small output of briquettes is being produced, and it is the hope of the directors that it will increase. The first consignment has been sent to the Consett Iron Company for trial. It is, however, no surprise to learn that more money is wanted, although the capital is so huge. Of the £500,000 6 per cent. debenture stock authorised and created £400,000 has been issued. Of this amount £300,000 has been sold and £100,000 utilised as collateral security for temporary loans, of which the company has not yet fully availed itself. So the directors now contemplate offering for public subscription, at an early date, the balance of stock at present unsold in order to repay the loans and provide further working capital. This may readily be taken up, but we would not care to say the proceeds will be sufficient to bring the company to the profit-earning state, for that at best may be some distance off and the utility of the processes remains unproved. Administrative and other expenditure in the year amounted to £52,988 against £1,172 received from interest, and this raises the capitalised deficit to £91,679, to be wiped off out of future profits. The temporary loans appear at £14,200 and, of course, the directors are depending upon the results of the contemplated debenture issue to put the company on its legs for a time. The undertaking must still be regarded as a very speculative one, and there is no foretelling when the interest will be earned on the £1,000,000 6 per cent. cumulative preference shares. The 200,000 £5 ordinary shares are still in the hands of the vendors and likely to remain there. The arrears of preference interest are now considerable, no less than £105,000, equivalent to 10s. 6d. per share, calculating from July 1st, 1904, to March 31 last.

Premier Cycle Co., Limited.

The year ended July 31 was a more prosperous one for this company than its predecessor, but the directors, in fair weather as in foul, keep their counsel and leave the figures to tell their own tale. With the help of an extra £40 at £54 from transfer fees and £2,102 profit earned by an unnamed subsidiary company the gross profits were £19,523 larger at £89,226. Concurrently with this increase a saving of no less than £8,432 at £44,446 was effected in general expenses, and after providing £6,946 or £3,300 less for repairs and depreciation and meeting debenture interest and directors' fees a nett profit of £32,421 was brought out compared with £996 a year ago. Adding £3,072 brought forward, the disposable balance was £36,081, but the directors prefer not to distribute much of this, and pay the preference dividend for the eighteen months to August 31, 1904, only, leaving two years still in arrears, and carry forward £22,018. Depreciation has been allowed on the freehold lands and works to the extent of £1,145, bringing the value down to £37,631, but against £2,777 written off plant, &c., £1,314 was spent, leaving the item at £26,522, against which there is a trifling reserve of £3,143 represented by a deposit with the company's bankers. Liabilities to sundry creditors are light enough at £27,089 compared with the £69,259 to come in from sundry debtors, and cash and bills, exclusive of the deposit above mentioned, are £11,734 up at £31,532, while stocks show an increase of £8,878 at £59,596.

A. Vedrine and Company.

This motor body building business of A. Vedrine et Cie., of Paris, was floated as an English company in the spring of 1905, and the first report and accounts are now issued, covering nineteen months from October 1, 1904, to April 30 last. Profit on trading amounted to £14,374 after allowing £1,716 for depreciation of works, &c., a figure much below the profit per annum given in the prospectus for the year to September 30, 1904, though it exceeds that earned in the twelve months preceding. Transfer fees gave £41 and interest £73, making a total credit of £14,488. Administration expenses absorbed £2,719, so the nett profit was £11,769. Out of this the proportion of the nett profit from October 1, 1904, to the date of the formation of the company, £4,791, is carried to the reserve account, to be appropriated in reduction of the item of £5,358 formation expenses. The balance of £6,978 is carried forward. It appears that during the above period the company had to contend with the "disastrous" strike in this business generally throughout France, so that many orders in hand had to be cancelled. Now, however, the company is executing some very large orders, including 817 taximetre motor-carriages, 530 of which are for London and the remainder for France. To provide for the extension of the business the directors have purchased a freehold property in Rouen, the total cost of the works being approximately £12,000. In addition a sum of £6,327 has been spent in labour-saving plant, &c., at the company's premises in Paris. Bills payable are heavy at £20,460 and £6,181 is owing to creditors, whilst cash is only £2,435, bills receivable £9,451 and debtors £13,005. The allowance for depreciation is very tiny, whilst the auditors draw attention to the fact that no provision has been made for possible bad debts.

Denny, Mott and Dickson, Limited.

Although this well-known business of timber merchants only started its career as a public company in February last, the whole of the profits for the 12 months ended March 31, less the stipulated payments for interest to the vendors and preliminary expenses, are handed over. Full details of these profits are not given in the report just issued, but we should imagine that the promises made in the prospectus have been amply fulfilled, as after providing for all charges a credit balance of £20,313 is left. This, however, is not available for immediate distribution, but must be treated as a reserve fund, which may be applied if necessary in the future to the equalisation of dividends. In arriving at the nett profits the directors state that they have been stringently careful to see that the stock-in-trade was soundly valued, and all assets not readily realisable treated with radical safety. The current year, therefore, started under favourable auspices, and although its first half-year's working does not end until September 30, the directors feel that they are justified in paying an interim dividend on the preferred ordinary shares for the period. An interim distribution could also have been made on the ordinary shares with safety, but a strict reading of the prospectus in their opinion precludes such payment until the preferred ordinary shares have received a minimum dividend of 6 per cent. for the full year. In arriving at this decision the directors have in some measure been influenced by the fact that they and their friends hold all the ordinary shares and are consequently the only ones affected by the postponement. The balance-sheet is a good one, liabilities to sundry creditors, including deposits and a loan from the bankers, amounting to £134,555, while £60,664 is owing on bills payable, against which stocks are valued at £218,984, sundry debtors come to £174,588, and in addition the company holds £52,589 in bills receivable and £37,193 in cash.

THEATRE ROYAL, DRURY LANE, LTD.

The position disclosed in the report for the year ended June 30 is a much less melancholy one than was the case of a year ago when a whole series of adverse circumstances had afflicted the company. Profits in respect of productions and refreshments showed a substantial recovery of £17,974 at £26,066 and although miscellaneous receipts were a trifle lower at £510 and the amount brought forward was only £89 against £17,641 the disposable balance was £410 up at £26,665. Rents, rates, insurance, &c., cost £189 more at £9,947 and repairs and depreciation of furniture, costumes, &c., took about the same at £2,833 but the directors, having taken the bull by the horns and written off the greater part of the cost of the alterations ordered by the L.C.C. out of reserve, had no such drain on their revenue on this occasion. The nett profits consequently were £2,812 higher at £6,452, and after providing £572 for income-tax and writing off £792 for alterations and improvements the company re-enters the dividend-paying list with a distribution of 5 per cent. During the year £2,128 was spent on a new heating and ventilating apparatus, bringing the outlay on the property up to £104,414, but of this the ultimate repayment of £100,000 has been provided for by leasehold redemption policies effected with the Alliance and Norwich Union Insurance offices. After deducting £2,278 for renewals and depreciation the item of furniture, tools, chattels and effects is £1,771 down at £5,198 and the value of costumes, scenery, &c., on company's productions is put down at £7,500 or £500 more while expenditure on prospective plays and tours comes to £1,528 against £2,360. Sundry creditors have risen by £980 to £12,177, but £5,000 of the bank loan has been repaid leaving £18,000 outstanding, and in addition to the customary deposit of £6,550 on account of rent the cash in hand is £1,893 up at £2,200.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

There is little or nothing to say this week about mining markets, for they have been what is commonly described as featureless. From beginning to the close the Kaffir Circus has been in a state of depression, not solely the reflection of the uncertainty and anxiety in the Money market. This is one of the contributory causes to the depression, but the main cause is the absence of public business. Gamblers have no public to feed on and are too skin and bone to find much nourishment in themselves, hence the "weeps." Prices keep falling, some attributing the recession to untiring "bear" attacks, others to forced liquidation, and both causes operate. No news of a cheering character comes from any source; at least, not news that makes the slightest impression on the public, who are as indifferent to "record" outputs as to good dividends. Gold Fields have been particularly weak, because, says gossip, the directors will have a very poor report to issue. As a rule, the annual report is not published until November, but this year it seems to be expected earlier. What foundation there may be for this conjecture we know not, except that it is difficult to imagine how this bucket-shop concern could have prospered during a period of darkness such as the Kaffir Circus has lived in. Thus there may be solid foundation for the rumour aforesaid. During the whole of the present account prices have been almost invariably depressed, but as the settlement commences with the opening of the coming week an effort may be made temporarily to lift them for the benefit of those known to be in difficulties. Otherwise it is not easy to see how the trouble can be much longer covered up.

The Rhodesian market is equally unhappy. Here also prices have been falling, with little or no intermission. The mad gambling in Tanganyikas has quite subsided, and the quotation is gradually settling down to a lower and more reasonable level, with Zambesi Explorings sympathising. Bankets have simultaneously lost their mercurial quality and are dull in company with the allied specialities of this group; whilst the little burst in Northern Coppers seems to have ended suddenly.

In the diamond section De Beers have been conspicuously to the fore, exhibiting unusually sustained strength. This is declared to be based on sanguine estimates of the forthcoming dividend; also on active buying from Paris. On the other hand, Premier diamond are still the object of "bear" attacks and are appreciably lower. Jagersfontein have been steady and firm.

West Africans are lifeless, and there has not been one important movement in the West Australian list; in fact, in the entire Australasian group. Amongst Mexicans Esperanzas have sharply recovered on the report for August, the official reassuring statement and the distribution for the past quarter, referred to in a separate note. Coppers, especially Rio Tintos and Anacondas, have been consistently good, but Spasskys have slumped on all kinds of rumours, vague for the most part.

VAN RYN GOLD MINES ESTATE.—Considerable progress was made by this Albu company in the quarter ending June 30, when the 160 stamps crushed 66,590 tons for a yield of 27,074 ozs. The profit was £44,594, equal to nearly 13s. 4¾d. per ton, and exceeded that for the preceding quarter by £10,780, an admirable accomplishment. This was the effect of an improvement of 1s. 11d. per ton in the yield, and a decrease of 1s. 1d. per ton in the working costs, so the profit benefited by as much as 3s. per ton. Further pleasing news states that a new leader of considerable value has been discovered in No. 5 mine. This is situated approximately midway between the main reef and main reef leader, and has been termed the upper portion of the main reef. Up to the end of June 3,014 ft. had been driven, risen and sunk on this new body, and its average value on an assumed stoping width of 48 ins. is 18.7 dwts. per ton. So far it has been proved from the 1st to the 5th levels in this section of the mine. This may turn out to be an exceptionally important discovery for this company, for should the width and value be maintained it may greatly increase future profits and dividends. During the three months only 3,113 tons of this ore were extracted.

NEW GOCH GOLD MINES.—During the quarter ended June 30 this Albu company made some progress towards that dividend which has hitherto been so tantalisingly elusive. The mill crushed 54,328 tons for a yield of 19,944 ozs. Revenue amounted to £84,483, equal to 31s. 1.21d. per ton, whilst working costs absorbed £68,097, an average of 25s. per ton, leaving a working profit of £16,386, an improvement of £4,378 over the preceding quarter. After meeting interest on loans and debentures and debenture redemption premiums the nett profit was £3,647. The yield of the ore increased by 2s. 3d. per ton, but, on the other hand, the working costs were greater by 1s. 3d. per ton, thus offering a striking contrast to the experience of the Van Ryn Company, of the same group. It is explained, however, that this increase is due to temporary causes, and that a reduction in operating expenses is expected in the next few months.

ROODEPOORT UNITED MAIN REEF.—Several months ago the directors announced that the 40 stamps of the new mill would have to be hung up indefinitely owing to the shortage of labour, and for a like reason they could not see their way to pay a dividend for the second half of last year. According to the last quarterly report, the position in this respect has not altered very much for the better. In the three months the revenue totalled £57,248, but the working expenditure was as much as £42,663, equivalent to the very high figure of nearly 30s. per ton, leaving a profit of £14,585, which exceeded that for the previous quarter by £2,342. It is far from pleasing to note an increase of 1s. 1d. in the working costs, attributed to the outlay entailed in training the newly-arrived Chinese. The directors have since announced that the 40 stamps started on the 20th inst.

GLOBE AND PHŒNIX GOLD MINING COMPANY.—In accordance with custom, the directors of the Globe and Phœnix—one of the two or three Rhodesian mining companies paying dividends—issue an interim report for the half-year to June 30. In the six months 37,613 tons were crushed and 24,400 tons treated by cyanide. It sounds a little disquieting that the extraction in bullion from the mill was less than in the corresponding six months of last year—9.21 dwts. per ton against 10.95 dwts.—but the effect of this is modified by a reduction in the working costs. These averaged £1 8s. 5d. per ton, inclusive of 5s. per ton for development redemption, but the directors have now sanctioned a reduction to 4s. per ton, which is deemed to be justified by the lower cost of development. A slimes plant and two grinding pans are being erected, and it is considered that these should increase the profitable extraction and the tonnage milled. Owing to the reduction in the working costs ore as low as 6 dwts. in value is now payable, so it is included in the reserves, which at the end of June totalled 124,312 tons, of an average value of 11.7 dwts. per ton, compared with 85,920 tons, with 14 dwts. at the end of 1905. In the Globe mine the crosscuts at a depth of 1,585 ft. have passed the calculated position of the reef, but have not intersected it. The directors have instructed Mr. Piper to consult Dr. Corstorphine to report on the mine; he has completed the inspection, but has not yet reported. On July 5 an interim dividend of 1s. per share was paid in respect of the current year, and this is now supplemented with a further distribution of a like amount.

NEW DE KAAP (1906), LIMITED.—A report has been drawn up for submission to the statutory meeting on the 25th inst. This reconstructed company was registered on June 26 last, with a nominal capital of £240,000 in 960,000 shares of 5s. each. The total number of shares allotted is 322,825, out of which 322,818 have been allotted credited with 4s. 6d. per share paid up thereon; 3d. per share has been paid up, and the balance of 3d. is payable later. Total cash received up to the date of the report is £4,050, and payments are £3,544; whilst the preliminary expenses are estimated at £1,000, exclusive of any duties in South Africa.

ESPERANZA, LIMITED.—Doubtless holders of Esperanza shares have been greatly perplexed by the steady fall in the price ever since the day when an important discovery was announced in the district. In sending out the general manager's report for August the directors add a statement which must be accepted as somewhat reassuring. They say shareholders have called their attention to adverse rumours regarding the mine, rumours entirely without foundation. The lowest developments of the rich ore body continue to open up high grade ore, while in the territory north of the fault the San Rafael vein is opening up in a most encouraging manner on the seventh level. Is it the "bears" who have been busy lately? Possibly. Anyway, there has been a sharp and appreciable recovery. The results for August are exceptionally good, the profit of £109,000 odd exceeding that for July by £25,000. The directors follow up their statement by the declaration of an interim dividend of 6d. per share, and an interim bonus of 10s. per share for the past quarter, which compares with 6d. and 5s. respectively for the two previous quarters.

EL ORO MINING AND RAILWAY COMPANY.—A substantial improvement is shown in this company's financial results for the year ending June 30 last. In the year 1903-4 the directors re-

duced dividends and suspended them in the following year in order to pay for the new mill and general equipment out of profits, which is preferable to an increase of capital, and shareholders should reap the benefit of this policy in the future. In fact, they already feel the benefit, for in the past year the bullion recovered realised £461,502 against £322,030 and the total income advanced from £379,178 to £539,451. Distributions are resumed and aggregated 2s. 6d. per share for the year, requiring £135,000 out of the nett profit of £204,757 compared with £122,810, leaving the considerable balance of £58,130 to carry forward. The whole of the expenditure on the electric power plant, new mill, and general improvements has been written off out of profits. In the average cost per ton there was a reduction of 81.14, while the gross value extracted improved from 73.80 per cent. to 84.93 per cent., and prospects altogether look brighter.

Brownhill Collieries.—A most welcome improvement is shown in this company's results for the financial year ended June 30, the trading profit advancing by nearly £20,000—from £23,037 to £42,785. As £4,489 was brought forward, the total credit is raised to £47,275. No dividend has been paid on the ordinary shares since the distribution of 5 per cent. in 1901-02, and subsequently even the preference interest was not earned. The surplus now admits of 6 per cent. being paid on the preference capital, against 3 per cent. in each of the two preceding years, so the interest is now one year in default. The better prospects for the coal trade have become more marked lately, the directors assure us, especially for small coal, and should this improvement be maintained they hope soon to wipe off these arrears, amounting to £9,975. From the collieries the output was 851,167 tons against 810,023 tons. An opportunity having presented itself to acquire the Manor of Amble, including about 2,276 acres of coal royalty, the surface of Togston Low Hall farm and also other freeholds, with miners' cottages, brickworks, &c., the directors considered it in the best interests of the company to purchase them, thus becoming their own royalty owners for this property, and making an annual saving of over £1,000, as well as preventing claims for damaged land. The purchase price is £67,115; the sum of £22,000 has been paid on account, and arrangements have been made to borrow the balance. Mr. Merivale, the colliery manager, reports that in his opinion the coal in these properties will last about 50 years at the present rate of extraction. Acting upon his advice the directors have decided to put down a borehole in the hope of finding the celebrated Shilbottle seam of house coal, for, should it be found, it will greatly increase the value of the property. The directors are assisting the Warkworth Harbour Commissioners to improve the harbour and increase the shipping facilities to enable larger steamers to load there. A workman's institute is being erected at Radcliffe, the cost being shared equally by the workmen and the company. This will, it is hoped, help to maintain the friendly relations now existing between the company and their employees. As the export tax on coal will be abolished on November 1, the directors anticipate that it will improve the prices of coal for exportation. Debts and cash are more than double the current liabilities. Expenditure on capital account amounted to £22,510, and before dividends are paid on the ordinary shares the directors should try to replenish the reserve fund. We cannot trace how much has been allowed for wastage, the auditors merely observing that depreciation has been written off the various ships and office furniture, and that all renewals of the colliery plant have been charged to revenue. On the other hand, depreciation has not been written off purchase accounts of the leases, minerals, &c., except in so far as the profits added annually to the sinking fund are set against these assets. This fund amounts to £62,370, applied in purchasing debenture stock, whilst the reserve is only £1,319.

Golden Blocks (Taitapu).—Only now have the directors of this New Zealand company issued their report for 1905, in which year the crushings amounted to 2,029 tons, yielding 2,314 ozs. of gold, equal to as high an average as 1 oz. 3 dwts. per ton. This gave a profit of £4,956, in which is included £2,532 received for the 651 ozs. of gold held in hand by the former manager. Two dividends of 6d. per share each were paid in June and December, 1905, leaving, with the balance brought in, £2,384, which is carried forward. Latest reports from the mine declare that the position has greatly improved, and further development work is being vigorously pushed forward. Prospecting under the company's option on the Taitapu estate has been carried on, but so far without success. The manager is of opinion that it would be desirable to obtain an extension to the south of Block 3, and with this object the directors are negotiating with the Taitapu company.

TRADE AND PRODUCE.

Wheat.—Quotations in London were, on the whole, well maintained during the week though buyers were apathetic and trade requirements small. Reports from the provinces show that the new season's wheat is generally threshing out well, the yield exceeding expectations. Farmers' deliveries last week totalled 89,745 qrs. at an average price of 25s. 11d. compared with 78,579 qrs. averaging 25s. 9d. in the corresponding week of last year; imports into the United Kingdom were 495,950 qrs. of wheat and 103,766 qrs. of flour as against 664,860 qrs. and 80,633 qrs. respectively in the same week twelve months ago. In the States spot and future quotations were firm and higher at the end of last week on encouraging foreign cables and buying orders only to weaken on the market learning that the expert's estimates of spring wheat favoured large deliveries. Later the tone recovered a little until Bradstreet's estimates, which put the quantity of wheat in sight east of the Rockies at 48,282,000 bushels compared with 45,086,000 last week and 21,529,000 last year, brought out profit-taking sales, and weakened prices.

Wool.—Allowing for 30,000 bales sent direct to manufacturing centres, but adding in 19,000 bales of old stock, the total of bales available for the fifth series of colonial wool auctions commencing on the 25th inst. will be 90,000 or 15,000 bales more than were offered during the corresponding series last year. The sales will close on Thursday, October 4, which will allow nine selling days with average daily offerings of 10,000 bales. During the sales some 5,000 bales of Falkland and Punta Arenas will be auctioned. In addition to the colonial wool sales the East Indian auction will also open on September 25 and last four days, 25,450 bales being on hand for sale. The manufacturing end of the trade continues brisk, the mills in and round Leeds being particularly busy, repeat orders for winter fabrics having been relieved by many of the wholesale clothing manufactories which point to a healthy tone in this branch. Foreign and colonial trade is likewise good. At Leicester the demand for home-grown produce of the finest descriptions shows signs of improving. Transactions are more numerous and on a larger scale, and while prices are not appreciably higher users seem more willing to buy in advance of their actual requirements when they can obtain suitable terms. A larger volume of business is also passing in the yarn market and there are more contracts offering for speedy delivery at full rates.

Linen.—Business in Irish yarns has again been of a substantial nature and a fair improvement on last week's. Values maintain a strong rising tendency, quotable advances having been marked in several departments. Line weft in the range numbers and line warps in all numbers and qualities have attracted the most attention. A slight improvement also seems to have taken place in many branches of the manufacturing end and at any rate the tone of the market continues strong and healthy, while manufacturers generally are in a comfortable position as regards forward orders those for fresh lines being well up to average proportions. Prices remain as stiff as they well can be and there is hardly any doubt that buyers will have to face a further advance. Brown power-loom bleaching cloths have rather more than maintained their position; inquiries are increasing and should business result from them a fair volume of trade should pass. Unions of all kinds are likewise doing well and this branch will, it is thought, prove brisk throughout the autumn. With regard to the other departments there is nothing new to report. All are fairly steady at present, some on current business and others such as dress linens on the expectation of busy times in the immediate future. Foreign and colonial trade has on the whole been good and nearly all markets are buying well up to their average demand.

Cotton (from our Manchester correspondent).—The general feeling of our market during the past week has been healthy in most sections. The tone throughout has been steady, and the under-current is encouraging to sellers of both cloth and yarn. No particular pressure for fresh business has shown itself, and buyers for the most part have had to pay full rates for anything wanted. The decline in the stock of raw American cotton in Liverpool is helping to maintain a strong feeling in this market. Lower prices are not looked forward to for some little time, and shippers of cloth who have assortments to make have been more disposed to enter the market. In cloth for India odd sales are reported in shirtings and dhooties, and the general advices from our dependency are promising. The development of business for China shows very little improvement. Here and there odd sales have occurred in special makes, but staple cloths are only in small demand. Rather discouraging advices have recently come forward from Shanghai. For the Levant and Egypt an encouraging demand has shown itself, and in a variety of cloths sellers have met with numerous small orders. The South American markets are not particularly active at the moment, but offers are reported here and there for printing cloths. T-cloths and Mexicans continue very steady, owing to engagements, with a fair business coming round. Burnley goods move rather slowly in the commoner descriptions, but the well known makes are fairly well held. Glossop goods continue firm at late rates. In coloured woven goods and sateens a fairly steady business is reported, and producers are fairly well off for orders. In the home trade houses considerable activity is showing itself, but drapers, it is said, are looking for lower prices. In flannelettes, however, a good business is being done, and there are indications of a very satisfactory season in velveteens. Cops made from American cotton for home consumption remain very strong, and pressure for delivery is still a marked feature. Early delivery is not easily obtained in any counts or qualities. Users find quotations for distant months hardening. Certain numbers of weft have gained strength. In shipping bundles a fair amount of business has been offering, but at prices which spinners have not been willing to accept. Gassed yarns continue healthy, and in good demand. Bolton spinnings do not move very quickly, but a moderate trade has transpired in the finer numbers of the better qualities.

In New York cotton opened with a steady tendency and went higher on encouraging cables on the news of a storm in the Atlantic States and support from Wall Street. Subsequently prices declined on bearish estimates. After a momentary rally prices again receded and the close is barely steady at a few points lower.

Coal.—Trade continues in a steady condition in pretty well all its branches. In the Sheffield collieries house coals are now increasingly active, and from Hull exports in steams continue heavy, especially for the Baltic ports. North of England transactions, compared with those of the summer months, may be regarded perhaps as duller, but the business of the earlier part of the year was abnormally good, and it can still be re-

garded as satisfactory; shipments are active, and prices continue high. Welsh trade shows no new feature, nor any change in quotations of either anthracite or steams.

COPPER.—Prices steadily hardened during this week in sympathy with the extremely bullish American advices and the high rates asked for refined copper. Speculative support was also prominent as there are no signs of any improvement in the situation but rather the reverse. Producers' stocks are down to the lowest point seen for many a long day, and those in dealers' hands have likewise been drawn on heavily of late since consumers, in view of the grave condition of the market, have been more disposed to cover future requirements even at the present high rates lest worse befall them later. As illustrative of the tension now existing even the increase of 495 tons in the visible supply revealed by the fortnightly return had no effect on prices, and when it is remembered that a good deal of Government and railway work has yet to be given out before the year ends, the future looks far from promising for consumers. Towards the close of the week the market has been slightly less active, but the price is fairly steady at £88 for cash and three months.

TIN.—A drop in the Eastern quotations and heavy realisations here imparted considerable weakness to London prices at the beginning of the week. The market, however, is almost entirely professional and a resumption of buying for forward delivery quickly restored a firm tone in spite of sundry heavy selling offers. After exhibiting weakness in the past day or two a decline of 5s. was soon recovered and subsequent dealings left the market firm at £184 cash and £182 15s. three months.

IRON AND STEEL.—Business continues brisk in the iron and steel markets. All branches are doing well and prospects are as hopeful as ever. Reports from abroad are very favourable, German works being unusually busy. A most optimistic view is taken of the immediate and near future, and many confidently believe that 1907 will be more active than 1906, with a higher level of prices. Speculation in Cleveland warrants has been a little quieter and the price has gone back about 8d. to 54s. 3d. Consumers are purchasing East Coast hematite pig-iron more freely than for some weeks past and it is not deemed likely that prices will be easier. Favourable reports also come from producers of finished iron and steel, and works except in very few cases are running to their full capacity. A similar satisfactory condition of things prevails in Scotland.

TEA.—Further heavy supplies of Indian teas have again weakened the market for medium sorts, but good and fine kinds have been well enough supported, and common teas, says Messrs. Gow, Wilson, and Stanton's circular, showed a somewhat firmer market, especially those of whole leaf, which are suitable for export, these now finding an important outlet in foreign markets at the present temptingly low prices. 46,998 packages were offered, of which 41,379 packages were sold on garden account, averaging 7.61d. against 39,172 packages sold in the same week of last year, averaging 8.43d. Ceylon has shown a gradual reduction of supplies during the last few weeks, and this, together with an improvement in quality, has resulted in better competition and a dearer market. 21,626 packages were offered this week, of which good and medium teas were frequently ½d. dearer; other grades fully steady, and the commonest descriptions easier to sell. 7.21d. was the average obtained for the week, against 7.41 in 1905. Java had a small auction of 1,859 packages, at about last week's rates; mediums occasionally a little weaker.

SUGAR.—Speculators for a rise, says Mr. Czarnikow, experienced a decided check this week, through the intervention of the United States Government in Cuban affairs, and also on account of more favourable weather on the Continent. May was pushed up to M. 20.80 in Hamburg and 10s. 3¾d. here, owing to the spread of the revolution and rumours of further purchases for America; three days later it sold at M. 19.25, our market declining only to 9s. 8¼d, after which there was a recovery to 9s. 10d., followed by sales to-day at 9s. 2¾d., 9s. 6d., and 9s 5¼d.; and the movement was not based on Cuba alone, but on the large American purchases in Europe, estimated at over 150,000 tons. The world's visible supplies on August 31st were only 40,000 tons more than last year, though for Europe alone they were still 335,000 tons ahead. This European excess may be reduced by 120,000 or 150,000 tons in the present month, lowering the world's supplies on October 1st below last year's, with a production considerably less, except in India, and in some smaller Cane countries. The Cuban yield is still uncertain, but as to beet, even if the late rains have undoubtedly been beneficial, the final outturn depends on the weather during the next six weeks; a cold, wet October might destroy many hopes, and the crop in France, for instance, is not yet considered good, though much better than last week. We shall undoubtedly have diminishing deliveries next season, for the simple reason that there would not be sufficient supplies, and, as pointed out before, the following year larger supplies may be required again, for which provision must be made by increased sowings at reasonable prices. If small crops are always grown, even at low values, we must pay remunerative prices to induce larger sowings, which take away land from other products. Whether 9s. 3d. is therefore a dangerous level with present prospects we leave everybody to judge for himself. During the decline refiners were able to sell very little, but bought moderately, the last prices being 9s. 3¾d. to 9s. 4½d. for 88 per cent. Tate's cubes moved from 20s. 1½d. to 19s. 10½d.

CHINESE IMPERIAL GOVERNMENT 5 PER CENT. GOLD LOAN OF 1896 FOR £16,000,000.—The coupons due October 1 next will be paid on and after that date at the offices of the Hongkong and Shanghai Banking Corporation, 31, Lombard Street, E.C.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and September 15, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 15, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Sept. 16, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369
		10,451,487	7,430,278
REVENUE.

Treasury, September 18, 1906.

An interesting and elaborate historical pageant, arranged and conducted by Mr. C. J. Ross, chairman of the local Chamber of Commerce, is to be the distinguishing feature of the Exeter Carnival of the 3rd prox. The 700th anniversary of the first incorporation of the "Ever Faithful City" will be commemorated by a series of 10 tableaux depicting the principal events in its history, which have occurred since 1206, including the memorable visits of Henry VII., Charles II., William III., George III., and Queen Victoria—the last in 1856—just half a century ago. The spectacle will doubtless attract visitors from all parts of England.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Buenos Ayres and Rosario.—Interim for the half-year ended June 30, on the consolidated ordinary stock of 2½ per cent., being at the rate of 5 per cent. per annum. After providing for the preference there will remain (including £30,850 brought forward) £345,645 to be carried forward.

Bilbao River and Cantabrian.—Interim and bonus on the ordinary and preference shares amounting to 6s. per share for the half-year to June 30.

East Indian.—£1 os. 9d. per cent. on the deferred annuity capital and the deferred annuity capital class "D," in addition to the guaranteed interest of £2 per cent. for the half-year.

MINES.

Esperanza.—Interim of 6d. per share, and an additional interim of 10s. per share for the quarter ending Sept. 30.

Ferreira Deep.—Interim of 17½ per cent. for the half-year ending Sept. 30.

Libiola Copper.—Interim of 1s. per share.

"O.K." Copper Mines Development Syndicate.—(No. 8) 6d. per share.

Penn-Wyoming Copper.—For the three months ended Sept. 15, at the rate of 6 per cent. per annum.

Pusing Lama Tin.—Interim of 1s. per share, payable Sept. 26.

MISCELLANEOUS.

Armstrong, Whitworth and Co.—At the rate of 20 per cent. per annum for the past half-year, carrying forward £103,869.

African Steam Ship.—Interim of 6s. a share for the six months ended June 30.

American Investment Trust.—Interim for the half-year ending Sept. 15 at the rate of 5 per annum on the preferred and deferred stocks, payable Sept. 29.

Ben Evans and Co.—Interim at the rate of 7 per cent. per annum on the ordinary shares for the half-year ended Aug. 31.

Burnley Paper Works.—Ten per cent. for the year ended Aug. 31, carrying forward £10,300.

British American Land.—Interim of 12s. 6d. per share on the "A."

Birmingham Small Arms.—Final of 5 per cent. and a bonus of 5s. per share on the ordinary shares, making 15 per cent. for the year ended July 31.

Barrenechea Nitrate.—Interim of 25 per cent. for the 12 months ending Sept. 30, payable Oct. 1.

Buxton Lime Firms.—Final of 2½ per cent., making 4½ per cent. for the year ended June 30.

Chicago Junction Railways and Union Stock Yards.—Two per cent. on the common stock for the three months ending Sept. 30, payable in New York on Oct. 1 and in London a few days later.

A. Darracq (1905).—On the preferred ordinary shares at the rate of 7 per cent. per annum for the half-year ending Sept. 30, and a further at the rate of 3 per cent. per annum in accordance with the right conferred by reason of the payment of 10 per cent. per annum on the ordinary shares.

Direct West India Cable.—Final of 3 per cent., making 6 per cent. for the year ended June 30, carrying forward a balance of £1,313.

Direct Spanish Telegraph.—Interim at the rate of 4 per cent. per annum on the ordinary shares for the half-year ended June 30.

Dundee (Natal) Coal.—2½ per cent.

D. H. Evans.—Interim for the half-year ended August 19 of 5 per cent. on the ordinary shares and £2 per share on the founders' shares.

D. H. Evans and Co. Founders' Shares.—Interim of 8d. per share, payable on October 24.

Dimbula Valley (Ceylon) Tea.—Interim of 4 per cent. on the ordinary shares.

Drake and Mount (1902).—Interim on the ordinary shares at the rate of 5 per cent. per annum for the half-year ending Sept. 30.

Eastern Telegraph.—Usual interim of 1¾ per cent. on the ordinary stock for the quarter ended June 30.

Eastern Extension Australasia and China Telegraph.—Interim for the quarter ended June 30 of 2s. 6d. per share.

Foreign, American, and General Investments Trust.—Interim at the rate of 5 per cent. per annum on the deferred stock.

Glasgow District Subway.—1 per cent. per annum on the ordinary shares for the half-year ended July 31 last, carrying forward £1,222.

Glamorgan Coal.—Interim of 7 per cent. on account of arrears on the 7 per cent. cumulative preference shares.

Henry Tomlinson.—Interim at the rate of 10 per cent. per annum on the ordinary shares for the half-year ended June 30.

Halifax and Bermudas Cable.—2½ per cent., making 5 per cent. for the year ended June 30, carrying forward £774.

H. Holdron.—Interim at the rate of 6 per cent. per annum for the half-year ended August 31.

John Barker.—Interim for the six months ended August 19 of 5⅓ per cent. per annum on the cumulative preference share capital, being 2s. 9d. per each old preference, 2s. 1d. per each new preference, 8d. per share on old ordinary shares, and 7d. per share on the new.

John Milligen.—Interim at the rate of 10 per cent. per annum for the past half-year.

John K. Wilson.—At the rate of 3 per cent. per annum on the ordinary shares for the past year.

J. Mandleberg.—Interim on the ordinary shares at the rate of 8½ per cent. per annum for the half-year ended June 19.

Nigerian Mahogany and Trading.—Interim on the deferred ordinary shares at the rate of 6 per cent. per annum for the period ended March 31.

Nicholsons.—Interim on the ordinary shares at the rate of 6 per cent. per annum for the half-year ended Aug. 12.

Pryce Jones.—Interim on the ordinary shares at the rate of 5 per cent. per annum for the half-year ended July 31.

Primitiva Gas and Electric Lighting of Buenos Ayres.—Interim on the ordinary shares at the rate of 5 per cent. per annum for the half-year ended June 30.

River Plate Trust Loan and Agency.—Interim at the rate of 13⅓ per cent. per annum on the "A" and 3 per cent. per annum on the "B" shares for the half-year ended June 30.

San Patricio Nitrate.—Interim of 7½ per cent. (being 1s. 6d. per share) for the twelve months ending Oct. 31.

San Paulo Railway.—For the half-year ended June 30, on the ordinary stock 5 per cent., being at the rate of 10 per cent. per annum, together with a bonus of 1 per cent., carrying forward £66,930 subject to audit.

Samuel Marsden.—4 per cent. on the ordinary shares for the year ended June 30, carrying forward £1,350.

Sao Paulo Tramway, Light and Power.—Quarterly of 2 per cent. on the capital stock.

Tarapaca Waterworks.—An interim of 3½ per cent., on account of the current year.

Thomas Heiton.—Final of 2½ per cent., making 4 per cent. for the year ended July 31, carrying forward £3,799.

T. R. Roberts.—Interim at the rate of 5 per cent. per annum on the ordinary shares.

Thos. W. Ward.—After placing £20,000 to reserve, 7½ per cent. on the ordinary shares, making 10 per cent. for the year ended June 30, carrying forward £15,395.

Wright and Co., Middlesbrough.—Interim at the rate of 7½ per cent. on the ordinary shares for the half-year ended Aug 31.

Zapiga Nitrate.—Interim of 5 per cent. for the twelve months ending Dec. 31.

MINING RETURNS.

Ankobra (Taquah and Abosso) Development.—110 ozs. of gold; the No. 2, 102 ozs. gold; total for month, 212 ozs. gold, valued at £850.

Brilliant Central.—Crushed 1,460 tons, value £3,850.

British Broken Hill.—2,579 tons crude ore produced 371 tons concentrates, containing 241 tons lead and 10,388 ozs. silver.

Croydon Consols.—Queen Central, 310 tons for £1,626; Ruby, 113 tons for £1,647; Marshall's Queen, 346 tons for £1,214.

Chinese Engineering.—Output, 17,500 tons; sales, 15,000 tons; consumption, 1,050 tons.

El Oro.—Crushed 22,231 tons of ore, producing $190,454, less working and development expenses $111,233, $79,221; profit from railway, $8,734; total profit, £16,891; $3,244 was expended on permanent improvements.

Esperanza.—Mill Crushed 15,257 tons of dry ore; shipped to smelter, 8,628 tons of dry ore; real value of bullion produced, $154,064; concentrates, $79,500; ore shipped to smelter, $634,252.

Indarama, Butterfly Mine.—Milled 1,200 tons, yielding 313 ozs.; cyanided 1,200 tons, yielding 179 ozs.; total, 492 ozs.; profit, £430.

Inverness Coal.—Return, 26,304 tons; increase, 12,701.

Kelantan Gold Dredging.—99 ozs. gold.

Komata Reefs.—Crushed 1,650 tons; bullion, £3,650.

Mount Lyell.—Treated 31,410 tons of ore, in addition 890 tons purchased ore and metal-bearing fluxes; convertors produced 654 tons blister copper containing copper 647 tons, silver 51,684 ozs.; gold 1,857 ozs.

North Broken Hill.—Treated 2,100 tons of crude ore, producing 390 tons of concentrates, containing 276 tons 18 cwts. lead and 6,279 ozs. of silver.

Ouro Preto.—6,128 tons of ore, 2,229 ozs.

Palmarejo and Mexican.—Zapote—Crushed 1,918 tons, treated 1,500 tons, producing $39,140.

Raub Australian.—Crushed 880 ozs. of gold from 6,570 tons of ore.

Stratton's Independence.—Net profit for August £2,061 from 1,506 tons.

NEXT WEEK'S MEETINGS.

Monday, September 24.

Barry Port and Gwendreath Valley Railway.—5, Gray's Inn Square, 3 p.m.

Burnley Paper Works.—Burnley, 11 a.m.

Marsden (Samuel).—Manchester, 2.30 p.m.

Tuesday, September 25.

Dorking Gas.—Dorking, 3 p.m.

Ottoman Railway from Smyrna to Aidin.—Winchester House noon.

Yorkshire Electric Power.—Leeds, 2.45 p.m.

Wednesday, September 26.

British Gas Light.—11, George Yard, noon.

Davidson and Sons.—Aberdeen, 12.15 p.m.

Denny, Mott, and Dickson.—Cannon Street Hotel, 2 p.m.

Highland Railway.—Inverness, 1 p.m.

Royal Bank of Ireland.—Dublin, 1 p.m.

Thursday, September 27.

Dick, Kerr.—Cannon Street Hotel, noon.

Pearson and Knowles Coal and Iron.—Warrington, noon.

Friday, September 28.

Dunderland Iron Ore.—Cannon Street Hotel, 12.30 p.m.

Glasgow District Subway.—Glasgow, 12.15 p.m.

Lanarkshire and Ayrshire Railway.—Glasgow, 2.30 p.m.

Murchison Proprietary (Transvaal).—Winchester House, noon.

Scottish Widows' Fund Life Association.—Edinburgh, 2 p.m.

Theatre Royal, Drury Lane.—Drury Lane, noon.

COMPANY MEETINGS.

THE CALEDONIAN RAILWAY COMPANY.

HALF-YEARLY MEETINGS OF SHAREHOLDERS.

The half-yearly meeting of the shareholders of the Caledonian Railway Company was held on Tuesday, 18th inst., in Merchants' Hall, Glasgow. Sir James King, the chairman, presided, and there was a large attendance.

TRIBUTE TO LATE CHAIRMAN.

The Chairman said:—You have all received copies of the report, and I presume that you will, as usual, take it as read. (Applause.) Before proceeding to examine the account, I should like to express, on behalf of my colleagues and myself, our deep regret at the death of our late chairman, Sir James Thompson, a regret in which, I am sure, you all share. (Applause.) Sir James Thompson entered the service of the company at a very early age, rising by industry and ability to the position of general manager, the duties of which important office he discharged with marked success for many years. As a director and, for the last five years of his life, chairman of the company, his zeal for its prosperity never flagged, and by his removal you have lost the services of an able and experienced administrator, whose whole life was devoted to the promotion of Caledonian interests. (Applause.) As you will have noticed in the report, Colonel John M. Denny has been elected to the vacant seat at the board, an appointment which, I am confident, will meet with your entire approval. (Applause.)

THE CAPITAL ACCOUNT.

Turning now to the accounts, and comparing them with the corresponding half-year, you will observe that a transfer of capital powers to the amount of £1,427,120 has been made from the capital authorised and created to the stock and share capital created, owing to the issue of the 4 per cent. convertible preference stock 1906 last March. That this issue was appreciated by the shareholders is shown by the fact that they took up £1,222,832 of it—an unusually large proportion. £10,000 has been added to the existing debenture stock during the half-year, and the capitalised amount of feu-duties has increased from £494,002 to £503,003. The receipts on capital account show an increase during the half-year of £1,349,276, the proceeds of the issue of new stock and of the sale of the £10,000 debenture stock just mentioned. £515,105 has been expended on capital account during the half-year, which exceeds the estimate by £177,105. This excess is almost entirely accounted for by the fulfilment of our statutory obligation to pay £150,000 to the Callander and Oban Company, which had not been taken into account in framing the estimate, as the date when payment of the money would be required was uncertain. It appears from the return of working stock that we have renewed 13 engines during the half-year, and have added seven to our stock, whilst there have been 23 renewals of carriages and 28 additions to the stock, wagons showing 664 renewals and 74 additions.

GRANGEMOUTH DOCK.

The estimate of further expenditure on capital account for the current half-year amounts to £383,000. The principal items which go to make up this sum are £64,000 for Grangemouth Dock, £51,000 for Glasgow Central Station extension, £22,000 for the Grahamston lines in connection with the new dock, £30,000 for Buchanan Street Station improvements, £60,000 for the railway which is being constructed to give the company access to the new dock in process of construction at Clydebank, and £50,000 for working stock. The directors visited Grangemouth about a fortnight ago, and were assured by the engineer and contractor that the lock gates, giving direct access to the new dock, would be ready to open for the passage of ships on the 8th of next month; otherwise the dock is now ready for use, and, indeed, ships have been loading in it for some time past, although they have only been able to obtain access to it by passing up the Carron and through the old docks. The new lock will give to the old docks, as well as to the new one, a direct access to the Forth, instead of the old tortuous and shallow approach by the Carron, which involved an endless and costly work of dredging to cope with the constant silting up of the river. The length of the new entrance lock is 625 ft., and its width 80 ft., and the new dock embraces nearly 1½ miles of deep water quays, with most ample width of ground behind them, served by railway sidings in all directions, while every provision has been made for an increase of quays in the future. In addition, there is a timber pond of ample size. All the relative coal hoists, loading appliances, and equipment generally are of the most modern and efficient description, and we trust that the facilities offered to shipowners will be largely taken advantage of.

PROPOSED NEW ORDER.

You will observe from the accounts that our unissued debentures and stock are not adequate to meet our further capital expenditure. This is due to the fact that in conducting a large railway undertaking it is found necessary from time to time to carry out various works which, taken separately, are not sufficiently important to form the subject of a special application to Parliament, and yet are urgently required. Besides the outlay thus incurred in recent years, important additions have been made during the same period to the rolling stock, for the purpose of accommodating the increasing traffic, and this also is a charge against capital. Our practice in the past has been to make statutory provision at intervals, longer or shorter, for expenditure of this description. The last occasion on which we made such provision was in the Caledonian Railway Act, 1901, and it will be necessary to promote a Provisional Order next session to provide for the exceptional expenditure of the last five years. The Order will be submitted to you for sanction at a Wharncliffe meeting in due course, but I have thought it right to give you this information to-day. I need scarcely assure you that we have not the most remote intention of bringing forward any scheme of extension. (Hear, hear.) We are on friendly terms with our neighbours, and we shall find ample scope for all our energies in striving to develop the resources of our railway system, and in endeavouring to carry on each branch of the service with the utmost economy compatible with efficiency. (Applause.)

REVENUE ACCOUNT.

Turning now to the revenue account, and taking the receipts, you will find increases under every head, except mileage and demurrage, which is down £652. Passengers are up £8,328, parcels £872, merchandise £19,319, minerals £12,131, rents of property, less charges, £4,880, and Forth and Clyde Navigation receipts £5,328, the total increase in revenue from all sources being £52,111. There is an increase of 403,182 in the number of passengers carried, the first-class being down 22,727, and the third-class up to 425,909. The money received for first-class passengers was £1,220 less, and for third-class passengers £9,167 more than for the corresponding period. The average receipts per passenger were 7.28d., against 7.34d., a scarcely appreciable decline. Season tickets have increased by 3,493 in numbers and by £381 in money, but the average rate per ticket has declined from £1 19s. 10d. to £1 15s. 8¼d. There has been an increase of 517,058 tons carried, but the receipts per ton for merchandise have decreased 1½d., and for minerals ¼d. The receipts per train mile, however, for merchandise and minerals have decreased by about ¾d. compared with those of the corresponding period. The improvement under this head has been very marked during the last few years, the earnings now being nearly 1s. better per train mile than they were five years ago.

INCREASED EXPENDITURE.

The expenditure side of the account shows a total increase of £42,609. Maintenance of way, works, and stations is up £6,188, which is accounted for partly by about 22 miles of additional line having been opened since this time last year, which, of course, has necessitated an increased maintenance staff and more materials, and partly by more relaying. Locomotive power shows an increase of £23,221, caused by additional engines having been in steam throughout the half-year, and by the increased price of fuel, which cost £14,038 more than it did during the corresponding period. Water and gas are up £624, and oil, tallow, and other stores £913, also owing to increased consumption and higher prices. As regards repairs and renewals of engines, £3,159 more was spent on them, both wages and materials being up. Repairs and renewals of carriages and wagons show a decrease of £6,010; although more wagons were repaired, the cost per wagon was rather less, and the repairs to carriages were fewer in number. The increase in traffic charges is £7,934, of which more than half is in wages, due to the opening of new lines, and the running of additional trains, and also to additional porterage at the shipping ports, rendered necessary by increased traffic. General charges are up £4,341, principally under the head of insurance, the contribution to the company's insurance fund being larger by £3,149, owing to the unfortunate fire which occurred recently at the St. Rollox shops. The damage done is being rapidly made good, the cost being met out of the company's fire insurance fund, and with the additional precautions against fire which are being taken in the rebuilding, and the subdivision of risks, the possibility of a fire of importance in future will be greatly lessened. Premiums to servants show no change, while law and arbitration charges are down £416.

ADDITIONAL COMPENSATION.

Compensation shows an increase of £8,557, due to a series of accidents on the line, which, although none of them fortunately had very serious results, have caused the directors much anxiety and regret. (Hear, hear.) We have received £5,419 more remuneration for working other lines, but rates and taxes are up £1,844, owing to the average rate per £1 having risen from 3s. 3d. to 3s. 6d. This is an expenditure over which, I am sorry to say, we have little or no control; but whenever we see any prospect of obtaining a reduction by appealing we endeavour to get it. The increase in Forth and Clyde navigation expenses of £2,538 is accounted for by the manning of the machinery, &c., in connection with the new dock at Grangemouth. The percentage of working expenses over the whole railway system to receipts works out at 54.72 as against 53.90 at the corresponding period, an increase of nearly ¾ per cent. This growth of expenditure is to be regretted, and the subject has been receiving the serious attention of the board. The result is that there is a balance of £1,035,861 to bring down to net revenue account, on the credit side of which dividends on shares held by the company show a decrease of £1,630, whilst on the debit side feu-duties and ground annuals are £282 and interest on debenture stock £200 more respectively; general interest account is up £6,019, entirely due to causes wholly unconnected with the half-year; but, on the other hand, interest on temporary loans is down £2,444, and interest on banking balances £602.

THE RESERVE FUND.

You will notice that £10,000 has been put to the reserve fund for bridge renewals, displacements, and contingencies. In this

account by far the largest item is due to the displacement of property not worn out, but rendered useless by the extension and rearrangement of the Glasgow Central Station. We propose for the future to place £10,000 regularly each half-year to this reserve fund, instead of, as hitherto, crediting sums of various amounts to it from time to time. The auditors approve of this proposal, which, I think, will commend itself to you as for the benefit of the company. The nett balance available for ordinary dividend is £357,527, which is sufficient to pay a dividend at the rate of 3¾ per cent. per annum on the ordinary stock, carrying forward £11,291.

Sir C. Bine Renshaw, Bart., seconded.

PROSPECTS OF THE COMPANY.

Mr. Bosher, Sheffield, said that as one of the large deferred shareholders he must confess that when he received the report he was very considerably disappointed at not seeing a slight increase in the dividend for the half-year—(hear, hear)—as was the case with the Glasgow and South-Western Company and several of the English railway companies. But when he looked into the report and endeavoured to dissect it he saw that this was one of those cases where the board could be absolutely exonerated from blame. He felt sure that the board had done during the past half-year their best in the interests of the company. He felt convinced that they were now at a kind of part-way of the ways. He believed that they had now reached the time when most of the extraordinary expenditure that had been up till now unremunerative would soon begin to yield a return to the shareholders. He proceeded to refer to the services of the late Sir James Thompson to the company, and moved that a vote of condolence should be conveyed from the meeting to Lady Thompson and her family.

The Chairman said that any such expression of condolence with Lady Thompson and her family would meet with the entire approval and sympathy of the directors, who had already endeavoured to give expression to the sense of loss which they and the company had sustained by the death of Sir James Thompson.

The suggestion of Mr. Bosher was agreed to.

Mr. Hugh Mayberry said that, as they were aware, he had made reference at last meeting to several matters, and he wished to say that he did not desire to follow up at the present meeting the line of inquiry he had then indicated. He wished to say, however, that during the last seven years the capital of the company had increased by 9½ millions, and on that sum he did not think the company was earning 1 per cent. Without pursuing the subject further, he desired to express satisfaction that the chair of the company should be occupied by Sir James King at a time when severe financial retrenchment and reform were most essential in the interests of the company. The directors would be ably supported by Mr. Millar, the general manager, and he looked forward to the company once more taking its place among the foremost railway companies in the kingdom.

IMPROVEMENTS WANTED.

Mr. Charles Wilson asked when the improvements at Stirling Station were likely to be completed. (Appiause.)

The Chairman said he was glad the question had been asked. They had delayed the improvements perhaps too long. That was partly on account of the magnitude of the undertaking, and partly in consequence of the difficulties that attended it. But he might say now that their plans for the renewal and rearrangement of Stirling Station were complete, and that they intended at a very early period to carry them out. Authority to do that would be included in the Provisional Order to which he had referred.

Sir Andrew Mure, Edinburgh, called attention to the increase in the amount paid in rates and taxes, and asked what was being done to obtain a reduction.

The Chairman replied it had been hoped the Railway Association might take up the matter. If that had been done some good might have resulted, but there was not unanimity between the different railways, and it was felt it could only be carried out by Act of Parliament. The burden pressed very heavily upon them. Within the past five years the rates in Glasgow, so far as this railway was concerned, had increased from £30,000 to £40,000. On the other hand, the system of valuation did not work so unfairly for them as it did in England—(hear, hear)—and as long as that was the case and their English friends were quiescent, it would be difficult for the Scottish companies to make any very strong movement. The amount was dependent upon the traffic receipts, but they did not hope for a redress by a diminution in that item.

The resolution was adopted.

The retiring directors—Mr. Hugh Brown, Colonel John M. Denny, Mr. J. Hamilton Houldsworth, Lord Newlands, and Mr. William Younger—were re-elected.

On the motion of Mr. Bosher, a cordial vote of thanks was passed to the board and to the chief executive officers for their services during the past half-year, after which the meeting separated.

Answers to Correspondents.

MITHRA.—The gentleman's name is new to us, and we can learn nothing about him. It is a fair inference, therefore, that he had better be left to play with his own money. The tips given in the circular sent look foolhardy at the best in present circumstances.

W. C. W. G.—We are very doubtful as to the strength of the company. It has launched out into a huge business, and is just as likely to spoil the horn as to make the spoon. The debentures, however, ought to be well enough secured, and even the preference might be held for the present without over much risk.

ROBERT LOVE.—The stock is one of the best of its class, and we think you should keep it in preference to the alternative you suggest, which would simply mean changing the nature of your risk. It may be that the price may go back under the influences named, but you need not be alarmed at that.

W. G.—(1) As the company forms part of an important chain, of which another link is now nearing completion, the preferred shares should be a fair enough lock up. (2) These, too, might be worth picking up in view of the benefits likely to accrue from the proposed amalgamation mentioned by us two or three weeks ago. (3) The preference dividend will probably be capitalised in the usual fashion, and if that is done the improving business of the company should give the ordinary shares a chance if you are prepared to wait several years. Your questions only refer to three securities, and we therefore hold 1s. to your credit.

ALPHA.—You might do well enough in buying a little more of this stock presently, but there is no immediate hurry.

W. H. E.—There is very little inducement to hold the stock you have, and the suggested alternative might help you to recoup some of your loss. A rise is predicted in it this autumn, so you should act soon.

J. L.—The chances of this company being able to live up to its prospectus promises seem so slender that we are disposed to advise you to cut your loss if you can get the price you mention.

X. Y. Z.—It is impossible to say, in the absence of official data, how much ore is in sight, nor can we estimate possible future dividends. Probably the directors cannot make such calculations yet, seeing that the profit earning stage has not been reached. It is likewise impossible to estimate the lives of such mines as these.

F. C. C.—We are reluctant to say sell, but must confess that, apart from all questions of labour trouble, we fear the price will go lower still, owing to the generally unsatisfactory condition of the market.

T. C. W.—(1) The decline is due more to the generally unsatisfactory condition of the market than to weakness inherent in the security, and we should be disposed to hold for a recovery. (2) You might keep what you have of these shares, but do not buy more. The latest news seems to indicate a slight improvement in the company's prospects. (3) So far from expecting a recovery, we are afraid the downward movement will continue for some time. The market is thoroughly out of heart and the public seems to have lost its taste for this class of security.

RHODESIAN MINING RETURNS.

Rhodesia keeps company with the Rand in establishing "records" month by month, and those who benefit from them may rejoice. During August this marvellous gold field turned out 50,127 ozs. against 48,485 ozs. for July, an increase of 1,642 ozs.; but if we compare it with the output for the corresponding month of 1905, the advance measures 14,362 ozs. Nevertheless we cannot feel hopeful that shareholders will find their pockets any the fuller, for such an increase will make but slight perceptible difference to the fortunes of the individual companies.

A Statement, of which the Advertisement as follows is an extract, is issued by the Company to existing Shareholders only, and not for the purpose of obtaining applications for any portion of its Capital, the total issued amount of which has already been subscribed.

TROITZK GOLDFIELDS

Limited.

NOMINAL CAPITAL - £600,000,

In Shares of £1 each.

Of these, 500,000 Shares, credited with 14s. paid up on each Share, have been issued to the Siberian Proprietary Mines, Limited, the Vendors, in payment for the options acquired over the Properties referred to below.

The payment in full of these 500,000 Shares will provide £150,000 for the purchase of the property and for working capital.

The remaining 100,000 Shares are held in reserve, and provision will be made thereout for further developments and plant.

The Preobragensk and Alexandrovsk Gold Mines are situated in the north-western part of the Kotchkar Gold Field in the Orenburg province of south-eastern European Russia.

The Preobragensk Mine has been worked by the present owners for about 4½ years, and the Alexandrovsk by the present owner for 25 years.

The combined area of these Mines is about two square miles. The property is held by the owners on perpetual lease from the Government, and there are certain royalties payable thereout to several persons.

The Preobragensk Mine is stated by the owners to have produced 8,000 ounces of gold per annum, and the Alexandrovsk Mine an average of 5,000 ounces of gold per annum, making together a gross revenue of about £45,000 per annum. This has been obtained with the very imperfect system of working in vogue. The present profits are said to be about £25,000 per annum from the two mines.

It is the Company's intention to undertake the development and exploitation of the numerous valuable reefs already being worked, simultaneously with a more systematic prospecting of the whole property.

The result of the sampling done by the Engineers agrees very closely with the records given of the crushings by the owners, the sampling giving an average of 8 dwts. 19 grs., and that given by the owners as the average yield for the past five years, 9 dwts.

There are eight shafts on the two mines already sunk on the lodes varying in depth from 304 feet to 425 feet, which are well constructed, substantially timbered and perpendicular, and will eventually become useful for deeper working.

The present intention is to develop to the extent that will warrant the rection of 150 to 200 stamps to crush about 225,000 tons per annum. On account of the size of the veins this may be considered a conservative estimate. Taking into consideration the very favourable working conditions it is estimated that the average yield of gold, after allowing for loss in extraction, will be 7½ dwts., giving a return of 30s. per ton. As regards the working costs, these are, with the present primitive methods of working, about 11s. per ton, but Messrs. John Taylor & Sons, who have reported on the property, estimate that they would amount to about 16s. per ton. This is probably, however, too high an estimate, having regard to the experience of the present owners, and there is every reason to believe that even with a more expensive staff the working costs would not exceed 12s. per ton.

Upon this basis the profit per ton would be about 18s., or £202,500 per annum, allowing for 300 working days in the year.

In the deepest parts of the mines the veins appear to be of a very strong and satisfactory nature, and give every indication of continuance with depth.

There are many other lodes of importance in addition to those enumerated, such as the Nicolski Lode, which is about 2,100 feet south of the Alexandrovsk Lode. Work has been given to tributors on this lode, who have obtained by washing the first time 10 ozs. 5 dwts. from 700 poods of ore, and the second time 14 ozs. 10 dwts. from 1,000 poods, thus giving an average yield of 19 dwts. per ton.

The property is equipped with two milling plants, one capable of treating 50 tons of ore per day, and the other 40 tons. There are also two cyanide plants, together capable of treating over 600 tons of tailings per day, and a chlorination plant of a capacity of 3 tons per day for treating concentrates.

There are about 400 men employed at present on the Preobragensk and Alexandrovsk Mines.

Both these mines are old-established, regular producers and profit yielders, and the ore bodies are found to be of remarkable regularity.

Subjoined is a list of the Directors, Auditors, Solicitors and Officers of the Company.

DIRECTORS.

THE HON. ARTHUR STANLEY, M.P., 33, St. James's Square, S.W., *Chairman.*
THE RT. HON. EARL HOWE, Curzon House, Mayfair, W.

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 456. SATURDAY, SEPTEMBER 29, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

China and Indian Opium.

As was to be expected most of our newspapers of the Jingo persuasion sneered and mocked at the decree of the Chinese Government ordering the abolition of the use of opium within the empire at the end of 10 years. Chinese officialdom has often expressed its detestation of the use of this drug, we are told, but nothing practical has come of the hostility. Instead of declining, the opium habit has spread until the inland production of the drug has reached alarming proportions. Great tracts of the land of China are cropped in the poppy. It is, therefore, insolently inferred that the Government of Peking does not mean what it says, and only puts out these proclamations for appearance sake, or for purposes of "squeeze." This view is, perhaps, all very well for those who maintain the Indian opium system, but it is not in accordance with the facts. If the use of this pernicious drug has permeated all classes of the people of China, is this not in some measure, if not entirely, due to the action of the British Government in forcing the Indian product upon China? We have had at least one opium war with that empire, and in the old lawless days armed gunboats belonging to the British merchants in Canton and Hong Kong used to fight the Chinese Revenue junks, part of whose business it was to enforce the edicts, and land the drug by force of arms. We have always believed that the more enlightened amongst Chinese statesmen have been genuinely hostile to this immoral and degrading traffic, and believe now that the edict issued the other day assigning a limit of 10 years to the trade in opium has been dictated by a politic and patriotic feeling of alarm lest the population of China should be debased and ruined by the use of this noxious compound. That in the marshy and alluvial districts of the Yang-tsze and Hoang Ho valleys laudanum, or opium in some form, may be a necessity at certain seasons to people of semi-aquatic habits may no doubt be true, but the drug could be supplied medicinally to all in need of it without at the same time being made available for the whole nation as a means of debauch, of moral and physical degeneration.

The real question, therefore, we have to ask ourselves is—what assistance are we going to render to China in bringing about this reform? Will we stop the Indian exports of opium to China; enter into a compact with the Peking Government to gradually diminish the supply of Indian opium so that it shall wholly cease at the latest when the 10 years are up? If not it ill becomes us to jeer at the efforts of Chinese statesmen to bring about reform within the empire while we make the production and sale of the poisonous narcotic a great State industry in India. Mr. Morley had some of his good words to dispense when dealing with this nasty subject; will he now supplement these words by deeds, and insist that the Simla bureaucracy shall so re-order the finances of India as to be in a position to dispense with the revenue drawn from this obnoxious drug? In the past 10 years the average nett receipts of the Indian exchequer from the sale of opium almost wholly to China was almost £3,500,000 per annum, taking the rupee at the conventional 15 to the £. In former years the revenue was much larger. It has been diminished by the rapid increase in the domestic cultivation of the poppy and

consequent output of native opium in China. The halfway house has, therefore, been reached through competition, and it ought not to be difficult for the Indian Government to prepare itself now to dispense altogether with support from a trade which, from first to last, has been surrounded by many repulsive features. For example, the Government of India might cut down the expenditure upon the army, which has risen of late years to a perfectly intolerable height. Over the 10 years ended with March 31, 1904, the average annual expenditure upon the army in India has been about £18,500,000, but it was upwards of £20,000,000 in the last-named year, and unless a check be put upon the demented spirit of military aggression which seems to possess the rulers of India it will soon be higher still, a blight and a source of endless privations to a poor and overburdened people. Why should we maintain a native army of 150,000 men, or of half that number? Does not the existence of this army compel us to make the British garrison also larger? If our native army were abolished or reduced and converted into a military police, easily saving thereby £10,000,000 per annum, would India be any less easily governed, any less safe from assault from without? We think not, and if the native army were swept away or reorganised, and reduced to a compact striking force of at the outside 50,000, the British garrison of 70,000 men or more might likewise be cut down to at most 50,000 men, with great benefit to the Indian exchequer and to the British race. Few people realise what an enormous waste of white lives results from the present military organisation in India. The total loss per thousand of white troops in India through death and invaliding is never less than 30 per thousand per annum, and often exceeds 50. In fact, the average for 1904 was 45.83, for 1902 51.68, and for 1898 59.50 per thousand. Try to imagine what this means for those who remain above ground or in the peninsula to the end of their terms of service. It means lowered physique, the undermining or destruction of the vital forces of the great majority. Here is a way, then, by which the Indian exchequer might easily be relieved of quite £10,000,000, perhaps more, per annum of its present excessive burden, and even were but £5,000,000 swept away the Simla Government might dispense completely with the opium revenue and still, on the basis of existing taxation, show a large surplus. What, then, is Mr. Morley going to do in these directions? A keen, dry mind like his cannot possibly endorse the militarism now rampant in the councils of the Governor-General. There is no logical ground upon which the maintenance of a large native standing army in India can be justified. It is a source of weakness to us. It is slowly but surely bringing us into the position of the Roman Empire, which came to depend not upon its own citizens for the maintenance, defence, and expansion of the Imperial dominions, but upon the barbarian from without, the mercenary soldier who revenged himself in the end by wiping the Western Empire of Rome out of existence. How many hundreds of thousands of natives are there in India to-day trained to the use of murder tools in the ranks of our native army? Clear a rotten and rot-producing system away, and there need be no difficulty in proving to China that we are indeed unselfishly her friend by helping her Government to put down the opium traffic.

The Booksellers' War.

"So all day long the noise of battle rolls among the bookshops by the ancient Row." The battle is joined, the Publishers' Association having thrown down the gauntlet to the *Times* Book Club, and it promises to be a very pretty fight while it lasts. In the main our sympathies are with the publishers. They have with great assiduity and patience succeeded in restoring something like prosperity to the bookselling trade by the system of publishing books at nett prices, but, as explained last week, the American gentlemen who conduct the operations of the *Times* Book Club have threatened to break down this carefully fenced-in system by giving discounts on such nett books almost immediately after publication. Their terms seem to vary now and then, but it may generally be stated that 20 per cent. discount is given to buyers at the *Times* book store on the published price of a book one month after its appearance. If the book is not published at a nett price the discount rises from 25 per cent. upon a new copy to 35 per cent. one month after issue, 50 per cent. three months after, and 70 per cent. at the end of six months' circulation. On nett books the discount begins at 20 per cent., in three months rises to 33⅓ per cent. in Class "C," and then at the end of six months or so to 50 per cent. in Class "D." There does not seem to be anything to hinder a subscriber from keeping a new book until Class "D" is reached, and then paying for it at the reduced price. Were this method of trading to prevail there would be an end of nett books altogether, and the retail bookseller throughout the country would once more see his profits in large measure swept away. Both publishers and booksellers, in fact, would be driven back into the old system of threepence in the shilling discount on the published price of every new book, or on "rieving and rending" more barbaric still. And the last state of the trade would be worse than the first. Seeing this danger staring them in the face, the Publishers' Association has, after much discussion, resolved to sell no nett books to the retailer except on condition that no cut shall take place in the price until six months after issue. There are other stipulations with reference to the handling of surplus stock, and so on which need not detain us, this being the essential point, and the penalty for infringing this rule will be a refusal to supply the book to the trade buyer, i.e., to the *Times* Book Club, at less than the full published price.

To this ukase of the publishers the *Times* Book Club has commenced to issue a series of most ingenious replies, constituting a war blast of defiance. We are quite captivated by the skill with which the case for the book consumer is presented in these American advertisements; so great is the adroitness shown in laying hold of the essential weakness of the publisher's position. The habit still prevails in the trade of issuing books at too high prices. The publishers' excuse for doing this is sought, and no doubt found to some measure in the apathy of the English public towards the acquisition of books. We are not a book-buying public yet, never have been. The attitude of even the average monied man towards books is not inaptly illustrated by the old story—a very chestnut, we admit—of the Glasgow iron master who had been told that his new mansion would not be complete without a library. Acting on the suggestion he went to a bookseller and gave a wholesale order—so many shelves to fill so many cwt. of vols. The bookseller, seeing the liberality of the buyer, ventured to hint that the books might be bound in Russia. "Boond in Russia!" said the man of money, "what for no boond in Glesca?" From his point of view the question was appropriate and fully expressive of his ignorant indifference. At the same time there is a growing habit amongst the people of laying out money in a casual way on cheap books, as is proved by the success of sixpenny editions, and of those cheap reprints into which publishers have rushed with series that vie with each other in beauty of get up and in the quality of paper and print supplied for a small price. Surely in this fact and symptom there ought to be encouragement to the publishers to try a better way than coercion in dealing with this raid of the American monopolist, who, while striving himself to destroy an honourable trade for his own ends, flings back the charge of monopoly at the alarmed publisher. "You are endeavouring to put a ring fence round your trade," Messrs. Hooper and Jackson, in substance, say, "and to prevent the public from getting your wares at prices in accordance with the worth of the article offered." In their second advertisement, which appeared in Wednesday's *Times*, they deftly argue thus:—"Lockhart's 'Life of Scott,' in an unabridged

edition, has been published at 3s. 6d. nett. It is a famous biography of a famous man, one of the classics of English literature, and it runs to about 875,000 words. Two biographies recently published—Lord Randolph Churchill and Elizabeth Montagu—run, as we estimate, to 240,800 words each, and they are published at 36s. nett each. That is to say, when you purchase Lockhart's 'Life of Scott,' you obtain 20,800 words for a penny, whereas if you buy a recent biography you obtain less than 560 words for a penny—and the most fervent admirer of Mr. Winston Churchill will not claim that his book is 40 times more valuable than Lockhart's." And the proof that the public roughly agrees with this view is found in the offer made by this same Book Club of Mr. Winston Churchill's life of his father at 6s. a copy within a month or two of publication. In other words, the book fell dead from the press, and the *Times* Book Club people wisely disposed of their stock, or tried to, at once by cutting the price while there was a chance of finding buyers. It is an ingenious argument, and all very pat, if we leave out of sight the legitimate difference between old books and new.

While not forgetting the author we must, however, confess that from one point of view we entirely, as modest book buyers, sympathise with the *Times* Book Club, and doing so believe that the right policy for the publishers to follow, and for authors to acquiesce in, is to lower the initial prices at which new books are issued. Publishers are often merely tempted to give too much for copyrights by the chance of recoupment through a limited sale of a book at a high price. The MS. of Randolph Churchill's life was never worth £2,000 to any publisher, but it was a good gamble. Ephemera like nine hundred and ninety-nine out of every thousand novels poured from the press ought to be issued in paper covers at half-a-crown, and the author made to wait for results instead of as now often drawing his fee or royalty before the book is written. A considerable step in the right direction was made when the great libraries of Mudie and Smith declined to buy any more three-volume novels nominally issued at £1 11s. 6d. That brought the 6s. novel on the field, but its day also seems now nearly over, and we lean to the opinion that the publisher who will boldly step out and offer his new novels in paper covers at a price which will tempt the multitude of readers to buy at once will do more to revivify this branch of the bookselling trade than any amount of nett price restrictions. And we should extend this reform in all directions. If the Life of Lord Randolph Churchill had been issued at three half-crowns it would probably have been selling at the full price in a slow way down to the present hour, in spite of political rancour, because Lord Randolph Churchill was a picturesque, if not a pre-eminent, figure in later Victorian politics. It is so with multitudes of other books, many of which continually pass through our hands, thanks to the facilities offered by the *Times* Book Club to readers, facilities the value of which we have never hesitated to proclaim, our hostility being excited by the methods and our doubts by the liberality of the offers made, the expense of conducting the business, and the absence of any visible sign of profit. We examine these books, and sometimes would buy were the prices not prohibitive. How the conflict between a dare-all alien adventurer over old-fashioned habits, between the democratic book buyer and the dignified publisher will end we do not know, but the fight seems to be going to be keen. If the publishers adhere in a body loyally to each other, and to the resolutions come to and made public in the last issue of the publishers' circular, they must make it impossible for the *Times* Book Club to continue business on its present lines. And possibly Messrs. Hooper and Jackson might not particularly regret to have a pretext furnished to them for admitting defeat; but be that as it may it is obvious that they cannot continue to sell nett books at 20 per cent. discount a month after publication if they have to pay full retail price for these books to the publisher. How many "rats" are there in the trade though? Much may depend on that, and after all books are manufactured to sell, if not in the staid old world any then at Dutch auction.

Motor Buses, Cabs, and Rickshas.

We give below a third instalment of our motor 'bus investigation, from which it will be seen that the public response was of the meagre kind characteristic of all the other companies into whose cases we have conducted inquiry. We shall give the subject a rest for a few weeks now, but it is so interesting and instructive that in due time further lists will be overhauled and any striking features noted. The Stock Exchange is now eagerly awaiting the first report of the London Motor Omnibus Company, probably the best concern of the type so far floated, but which has attained an unenviable notoriety in connection with the Handcross disaster.

Provincial Motor 'Bus and Traction Company.

This company saw the light in February last, and was promoted by the British Motor 'Bus Trust, which previously had the handling of the London Motor Omnibus, owners of the Vanguard service, a company about to become involved in important litigation owing to its refusal to admit liability for the Handcross disaster; the London and District Motor 'Bus Company, proprietors of the "Arrow" service, and the Motor 'Bus Company, only a few of whose vehicles we have seen on the streets. The capital was fixed at £305,000, in 300,000 ordinary shares of £1 each, and 100,000 deferred shares of 1s. each. All the latter and £8,500 in cash went to the Motor 'Bus Trust for generally arranging the promotion and flotation of the company, and undertaking to procure subscriptions for 100,000 ordinary shares. This was the minimum on which the company could proceed to allotment, but the entire issue of 300,000 shares was offered for subscription. In examining a list of shareholders it is very difficult to discover where public subscriptions leave off and underwriters' allotments begin, but in a rough way we should say that at the outside the ordinary investor applied for 40,000 shares, say 13 per cent. of the total offered, leaving the underwriters to subscribe £60,000 and £200,000 for which no applications were received. In this company our old friends Alfred and Arthur du Cros crop up again, and as the British Motor 'Bus Trust had to put in for £31,307, it may earn some of its promotion money. This concern, by the way, has the call at par for 18 months of any shares remaining unissued after the general allotment, but we do not suppose it is rushing to exercise the option. Before leaving this company we may note that the Motor Omnibus Construction Company, in which the British Motor Trust is largely interested, has a contract to supply a number of chassis, while the Phodyne Electrical Company will stand in for a portion of the profits made on the sale to the big company of any chassis manufactured by Sir W. G. Armstrong, Whitworth, and Company, for the Motor Omnibus Construction Company. Mr. A. A. C. Swinton, the chairman of the Provincial Motor 'Bus and Traction Company, owns three-fifths of the capital of the Phodyne Company. Decidedly interesting, is it not? Subjoined are details of the first allotment:—

Manchester District Motor Omnibus Company.

The objectionable deferred shares do not form a part of this company's capital, which consists of 300,000 shares of £1 each, £200,000 being offered for subscription at par. A company called the British Transport Syndicate was responsible for the initial steps, receiving £8,500 as its remuneration, and commissions totalling 5 per cent. as consideration for arranging the underwriting of 75,000 shares. One curious feature about the agreements was that the Wolseley Tool and Motor Car Company and John I. Thornycroft and Company, who, between them, contracted to supply 40 motor omnibuses, underwrote 19,250 and 12,000 shares respectively, the equivalent, we take it, of accepting payment for the work done in shares instead of cash. There are many objections to this method of securing business, and we could not help expressing surprise when the great firm of Vickers, who are, we believe, the virtual owners of the Wolseley Company, lately took powers to operate in this way. Two of the directors are interested in the British Transport Syndicate, which was called upon to take up 13,041 shares in order to bring the subscription to the minimum allotment of £75,000. When the preliminary statement of accounts was issued with the statutory report, a total sum of £13,161 had gone in expenses, including £12,250 for formation and other charges, underwriting, &c. Here are a few of the principal shareholders.

Edinburgh and District Motor Omnibus Company.

Very poor success attended this company's appeal to the public. Out of a capital of £200,000 in £1 shares £190,000 was offered for subscription, with £25,000 fixed as the minimum subscription. But investors were so surfeited with motors at the time, or thought so poorly of the company's prospects, that only £28,562 was applied for, and we doubt if the directors were well advised to go to allotment on this slender sum, because by the time the £7,000 or so is paid out for preliminary expenses, besides the five to six thousand shares, the company will find itself a good deal handicapped by want of funds. Some nice profits were worked out on the basis of 150 'buses running each day, and dividends of 18 per cent. were spoken of, but you cannot do much with £20,000 or so, and maybe when the first report is issued the subjoined shareholders will wish they had never subscribed :—

Economic and Financial Notes and Correspondence.

Birmingham Small Arms Co., Limited.

At no time lavish with their information regarding the working of this business, the directors appear to think that their success in obtaining the consent of the shareholders to the formation of a secret reserve justifies them in further curtailing the accounts presented. A profit and loss account is a thing unknown, but those in control have hitherto condescended to set out the trading profits and the income from investments separately, but even that small concession is suppressed in the report for the year ended July 31, and the income from all sources is stated in one lump sum. The accounts are further confused by the transfer of an unnamed amount to the secret reserve which the directors contrived to establish in face of strong opposition, and accurate comparison is therefore rendered impossible. We are told that the Government orders for service rifles, though smaller than in the previous year, have kept the gun department fairly well employed during the past year, while the cycle component business has been well maintained, and the company has shared in the prosperity which has been enjoyed by the cycle trade during the season. As the figures stand, however, there was an apparent decrease of £6,972 in nett profits from all sources at £74,112, and it is therefore

evident that a very tidy slice must have been abstracted before this result was arrived at. With £5,726 more at £7,609 brought in, the amount available was only £1,246 down at £81,721, and after paying the preference dividend and repeating last year's dividend and bonus of 15 per cent. on the ordinary shares, £15,000 is put to reserve against £20,000 a year ago, and the balance carried forward is raised by £3,754 to £11,363. During the year the company purchased from the Government the small arms factory at Sparkbrook, and this transaction probably accounts for the increases of £15,000 to £44,361 in the value of land, £34,818 to £196,858 in buildings and fittings, £53,547 to £262,715 in plant and machinery, and £15,175 to £58,209 in stores and tools, while an advance of £19,331 to £49,188 in the work finished and in progress may, perhaps, be put down to the same source. To meet the outlay on the purchase £50,000 has been borrowed on mortgage, and a deposit of £55,591 with the bankers has been converted into an overdraft of £8,952. Trading balances, too, are rather against the company, as against an increase of £23,972 to £64,773 in liabilities to sundry creditors, the amount due from sundry debtors is only £19,401 up at £59,027 and cash is insignificant at £117. Investments, which are largely on account of the reserve, are still valued at the old figure of £80,150.

Japanese War Finance.

A report full of suggestiveness has been issued by the Finance Department of the Imperial Government of Japan dealing with this subject. The figures it presents are staggering enough to cure us all of militarism for evermore if we could only grasp their meaning. The date to which the report brings the aggregates down to is March 31 last, and the cost of the war up to that time had reached £203,094,262. In other words, within a period of about twenty months during which the war went on the Government of Japan spent or incurred liabilities which exceeded in amount the entire revenue of the country for the nine or ten years immediately preceding the war. How was the money found for such a stupendous outlay by a country so essentially poor as Japan? It was found mainly by the issue of loans in Europe, Exchequer bonds at home, temporary loans raised from the Bank of Japan, doles, gifts, compression of other channels of outgo, &c., &c. From loans alone £159,413,000 was obtained, and less than £22,000,000 was provided by increased taxation. Another £12,800,000 seems to have been drawn from internal resources by cutting down local expenditure and reducing or suspending the outlay on new undertakings. Even so the burden thrown upon the Japanese people by the war debt is terrific, and it will take the country a generation at least to recover from the effects of the strain thus put upon it. That it will recover we have the strongest hope, and already the trade of the Empire is showing healthy expansion. The figures for the first seven months of the current year are before us, and show an increase of upwards of £4,000,000 in the value of the exports, at the same time that imports have declined by about £6,850,000. For the same period of 1905, thanks to the war outlays, imports exceeded exports in value by more than £15,500,000. This year to the same date the excess of export values over import is about £2,800,000. Necessarily this excess must continue and increase so long as Japan remains a heavy debtor of foreign money markets. We therefore accept the remarkable change these totals show as a proof that Japan is adjusting her trade to her circumstances, and at the same time her trade is growing fast. None the less is the burden one well-nigh intolerable for a country the natural and customary level of whose national expenditure is low, and whose resources are in great measure undeveloped. But Manchuria may do much and Korea ought to be substantially revenue yielding before long if its inhabitants can be kept quiet. Nothing in the pamphlet is more interesting than the exhibit made in it of the effect of success in war in improving the credit of the Japanese Government. In 1904 it issued two series of 6 per cent. bonds, and got 93½ per cent. for the one and 90½ for the other, paying on the first series, issued in May, 3½ per cent. and on the second, issued in November, 3¾ per cent. commission to the issuing houses. In 1905 £60,000,000 of 4½ per cent. bonds were issued, half in March, half in July, and 90 per cent. was netted on both, while the commission charged by the issuing banks fell to 3¼ per cent.

Mr. J. B. Robinson on Mine Labour.

Mr. J. B. Robinson, the independent mine magnate, has addressed a lengthy and interesting communication to the Press in order to correct what he characterises as "distorted and extremely misleading" statements concerning his group. In the course of this he lets the public into many secrets, and throws light upon many intrigues and boss ambitions not strange to the readers of this Review. For instance, he confirms our repeated statements that the scarcity of black labour is largely due to the reduction of wages at the end of the war. "Had the natives been fairly dealt with after the war there is no doubt that we should have had a very large supply working in the mines to-day." Doubtless, but the Chamber of Mines never mentions this aspect of the case. "It will probably be recalled that Mr. Robinson offered to pay certain men a bonus of £150,000 if they could secure 100,000 labourers for the mines." Why did this not succeed? Because those who undertook to get the blacks were opposed in every direction. "The result was that the scheme came to nothing, through the selfish and impolitic action of the Chamber of Mines. . . . The foregoing will show what value is to be attached to the statements of the Chamber of Mines when they desire to maintain or carry through a certain policy in connection with the monopoly of labour for the mines." So some six months ago another association was formed, with the object of recruiting natives on the east coast. This is the Transvaal Mines Labour Company, whose operations have been strongly opposed by the Chamber of Mines and the Witwatersrand Association. In consequence of this it was unable to obtain licences, whereupon the Robinson group determined to apply to the Colonial Office to assist them in breaking down the monopoly of the older institutions. So the Portuguese authorities were asked to give the group similar rights and privileges for recruiting. However, the Portuguese authorities would grant but one licence, so "it is quite clear," says Mr. Robinson, "that there are sinister influences at work, and there is a determination that we shall not break up the monopoly of the present labour association and increase the supply of labour to the mines. I feel sure, however, that our appeal to the Imperial Government will not be in vain, and that we shall succeed in removing these restrictions on the recruiting of labour, which are having such a detrimental effect upon the efficient working of the mines." All success to him!

The conclusion of the letter is so valuable that we make room for it here without abridgment:—

As a further illustration of the enmity of the Chamber of Mines and the Witwatersrand Association to the Robinson Group, on account of the position we have taken up to increase the native supply to the mines, and to the experiment with regard to the number of whites which can be employed on them, they are now threatening to enforce the forfeiture of the shares which our group of mines holds in the Witwatersrand Association, and to deprive us of our share of the amount of money which they now hold in reserve, a sum which is estimated to be considerably over £100,000.

The above facts will, I am sure, enlighten the public as to the methods employed by the Chamber of Mines to uphold their monopoly, and to force Chinese upon the country. These methods are on a par with the political cables which are being despatched to some of the daily papers in this country, in which it is represented that Imperialism is in danger of being ousted by the Boers in South Africa. The Boers are now British subjects, and will unite to uphold British interests under the constitution of responsible government which the present Government has so wisely and generously bestowed upon the people of the Transvaal.

What is in danger is the tyrannical rule of a certain section in the Transvaal, who are determined, if possible, to retain

their grip upon the country by stirring up racial strife throughout South Africa, whilst at the same time they are beating the big drum of Imperialism in this country in order to strengthen their position and to secure the object which they have in view—namely, to rule and control South Africa for their own especial benefit.

Willans and Robinson.

Very little comfort, we fear, can be drawn from the report of this company for the half-year ended June 30 last. The accounts, it is true, bring out a nett loss on the two branches of the business—that at Rugby and that at Queen's Ferry near Chester—of only £6,535 against £13,075 in the preceding half-year, the Rugby branch having shown a profit of £4,085 and the Queen's Ferry one a loss of £10,620 in the past half-year. But these are figures of account, and do not exhibit the real position. That is explained candidly enough by the directors, who admit that serious loss will have to be faced, and, in fact, as a preliminary to the necessary reduction in the capital account no less than £92,875 has been carried to suspense account in the past half-year. The directors say it would be premature to attempt to assess the loss until the Queen's Ferry works are actually disposed of, but obviously there are a number of items on the wrong side of the account which might be valued now. The financial position of certain of the electric power companies recently disclosed makes it inevitable, the directors say, that there will be a heavy loss under the head of debtors, and for the same reason the share and debenture stocks held in other companies require to be largely written down. Is there any reason why this step should not be taken now, and how much does the loss amount to? The auditors, Messrs. Cooper Bros. and Co., state that the investments show a depreciation of £5,000 at the date of the balance-sheet, and most of these investments would be considered of a first-class character. What, then, must be the position of securities of embarrassed customers taken in payment for work done? A considerable amount, the report goes on to say, has been expended on patents and experiments, and on development works generally in connection with large gas engines, including considerable losses resulting from the first orders taken. Much of the spare parts of old-pattern Willans engines kept in stock has also become useless, and one way or another we fear the loss that shareholders will have to put up with must go a good way beyond the £93,000 already admitted. Then additional expenditure goes on, so that although £15,854 in gross was written off for depreciation in the half-year, the additions involving new capital expenditure brought down this writing off to less than £9,000 nett, which is quite an insignificant amount upon a share capital of £666,660, not to speak of a debenture debt of £246,404. In the items making up the total sum carried to suspense there is £10,260 deducted from the value of work in progress, £9,428 taken from the value of materials to stock in hand; while debtors, standing at over £174,000 for the two branches of the business, have been provisionally credited with a loss to the extent of over £57,000. Practically all the book value of the shares and debenture stock in other companies, including shares received under contracts, amounting in all to £12,421, has been written off, the nett amount now carried to the balance-sheet being under £400. Including the suspense account, the debit at profit and loss is now £215,340, and we shall be agreeably surprised if a good deal more than this has not to be written off capital before the business can be restored to a healthy position. The auditors point out that though they have been unable to verify the accuracy of all the apportionments between Rugby and Queen's Ferry in other respects the balance-sheet exhibits a true and correct view of the state of the company's affairs as shown in its books. This is no doubt true, and yet it is impossible to avoid the feeling that the whole truth has not been disclosed. Working expenses, apart from current wages in the shops, took £39,566 in the half-year, including the gross amount of £15,853 written off for depreciation, and there does not seem to be anything extravagant in the items shown, although £800 for books, stationery, and printing looks rather a large bill, as well as £966 for travelling, hotel, and unspecified expenses. Is no economy possible, either, in the item of £6,140 for salaries to the superior staff?

American Business Notes.

Thanks to the inpouring of borrowed gold the New York Associated Banks were able to make a much better show last week, and instead of a deficit in the legal reserve brought out a surplus of nearly twice the amount existing at the same date last year. On the week the increase was $7,780,000 in spite of an increase of $17,764,000 in deposits, as yet partly Government money we infer, the gold not having all arrived from abroad, but no matter how the money is obtained the position ought now to be such as to guarantee the New York market from a bank panic until nearer the end of the year. The total reserve, in fact, is now £53,426,000, or £2,261,000 above the 25 per cent. legal minimum, so that the increase on the week is upwards of £1,550,000. There was a gain by the banks of $13,170,000 in specie within the week, and although loans and discounts went up by $7,422,000 the banks had still considerably strengthened their position. The strain will come on again when New York finds it cannot pay its accommodation paper with I.O.U.'s.

The doubt, indeed, is:—How long can this fine show be maintained? It is all a product of credit, credit recklessly created, and for the most part obtained in the London market. The gold paraded is borrowed gold, and the interesting crisis will arrive when this gold has really to be paid for or paid back. Money still remains dear in New York on time loans, and we fear commercial paper is not discountable under 6 per cent. at the best of it anywhere within the Union, notwithstanding all this ingathering of yellow metal. We, however, may be thankful if the position is now such as to weaken the capacity of New York financiers to draw away our gold. The exchange is rising, and if it goes a little further up it will soon put it out of the power of New York bankers to buy gold here. Let us hope it will be so, and that the restrictions put upon the circulation of American finance paper in the London market, as well as the high rates charged to borrowers on American securities, will end the crisis so far as we are concerned.

An American gentleman named the Hon. Jefferson Levy, when leaving New York, indulged in some tall talk about the remarkable strength of American finance which reminds us of another Jefferson whose surname is Brick. He serves, however, a useful purpose in revealing to us the utterly topsy-turvy ideas which prevail in American financial circles about the strength of its money market. The United States, says this Levite, have been financing the world for the past three years, during that period having created a balance of trade in their favour to the extent of £310,000,000. By this we presume Mr. Jefferson Brick—we beg his pardon, Levy—means the nominal or Custom House excess value of United States exports over imports. His countrymen are in the habit of treating that as gain; we regard it as loss; 65 to 70 cents being in reality all that the American trader seems to be able to get back for his dollar. Not in this way have the United States "financed" Europe, not even has the £150,000,000 left to their credit, according to Mr. Levy, after buying back masses of home-printed securities, enabled American financiers to dominate European money markets. If they had been thus strong, why are they floating "kites" by the five millions on the London market in order to get gold? Why have they been obliged to go to Paris to raise loans on raw railroad securities, to hawk their paper on every market into which they could get an entry? But Mr. Jefferson Levy is not content with telling us this, he estimates the total value of this year's crops in the United States

at 1,200 millions sterling. We can only say, with Dominie Sampson—"prodigious," and look round for the buyers.

There seems no end yet to the revelations in the case of tortuous finance, of which Mr. Hipple, the President of the Real Estate Trust, of Philadelphia, was the hero. Forgery was only one of the means by which he kept himself afloat; another was the re-issue of redeemed bonds that ought to have been destroyed; the creation of bogus securities, and the discounting of worthless notes were other methods adopted for raising the wind, while the directors conveniently took it for granted that everything was all right. The full extent of the defalcations and the losses arising from them are still unknown, and it is expected that it will be some time longer before a complete liquidation can be effected.

The American packing houses are working off their stocks of decayed meat, after renovation, on their own people. A New York *Herald* despatch of September 10 reports a case of the poisoning of 10 persons in three different families in a town in Michigan from eating beef which had undergone a process. The investigation which took place traced the meat to one of the large packing houses, but the name was not published. It is of interest in connection with this matter to note that a compromise has been come to between the authorities at Washington and the packers in the case of mixed meats. The packers are released from the obligation of the law that required an accurate description of the contents of a mixed package, and are not now required to state the contents or proportions of meats entering into the composition of the contents. The foreign consumer, however, can always protect himself against such imposition by the simple process of letting such packages alone, and foreign Governments can always prohibit their entry into their countries.

The announcement of the formation of a German-American banking concern in New York, to be known as the "Amerika," created some interest in financial circles there. The new bank will be formed by a partnership between the Darmstädter Bank of Berlin and the banking firm of Ladenburg, Thalmann, and Co., of New York, with which are to be associated certain financial establishments in London and Paris. At first business will be chiefly in the United States and Canada, but it will be extended later to other countries of the Continent, and to large financial transactions between Germany and America.

The declaration of a 7½ per cent. dividend by the Westinghouse Air Brake Company at its last annual meeting at Pittsburg created much sensation in financial circles. The directors first declared the regular dividend of 2½ per cent. for the quarter; then an extra dividend of 2½ per cent. for the same period, followed by a third and special dividend for the same amount, making a total for the quarter of 7½ per cent., being at the rate of 30 per cent. for the year. This unexpected expansion of dividends made quite a flurry on the stock exchanges in different cities, and is believed to have been brought about by the trouble reported to have taken place at a recent meeting of stockholders who had not had an annual meeting for nine years.

The New York *Sun* correspondent at Houghton, Michigan, writing on the copper production of the Lake Superior region, makes a point of the fact that the prediction of an expert connected with the Rothschilds made in 1903, that the ultimate productive capacity of the Superior district copper mines would be reached with an output of 215,000 pounds yearly, has been largely exceeded. Quoting from advance sheets of the *Copper Handbook*, he shows that the production for 1905 compared with 1904 was 229,270,035 as against 208,329,348 pounds of refined copper. An important fact is that the production of the Calumet and Hecla mine increased 20 per cent. in output, thus bringing it from fourth place in 1903 to first place in 1905. This increase has been largely due to great increase in milling facilities, and it is predicted that within a year the Calumet and Hecla will have a stamping capacity of at least 125 millions of pounds of fine copper yearly. The following table gives the distribution of production among the different mines of the district:—

Mine.	Pounds Avoirdupois. 1904.		1905.
Calumet and Hecla	80,341,019	....	95,100,610
Osceola	20,472,429	....	18,938,965
Quincy	18,343,160	....	18,827,557
Tamarack	14,961,885	....	15,824,008
Champion	12,212,954	....	15,707,426
Baltic	12,177,729	....	14,384,684
Trimountain	10,211,230	....	10,476,462

A new turn has been given to the agitation over the coming elections in the Mutual and New York Life offices. A Mr. J. C. Colgate, who holds a policy for $1,500,000 in the Mutual, issued a call on September 10 for a meeting of large policy-holders to resist the action of the Untermyer International Policy-holders' Committee, and act in the interest of the company's administration official ticket. Meantime, Mr. Untermyer sailed for Europe on September 11, and his committee issued the following comment on the action of Mr. Colgate, who is a Wall Street banker:—

> This committee does not expect to get its support in this movement from Wall Street or its affiliations. It requires no stretch of the imagination to understand the brotherhood that exists in and around that locality. The tender solicitude of Mr. Colgate for the administration ticket, including his championship of Messrs. Juilliard, Baker, Davies, and their dozen or more associates, who are responsible for all the scandals and misfortunes of the old company, seems a little premature. . . . The ramifications of the great financial powers that are behind the movement to re-elect the old administration are endless. . . .

The stockholders of the Pullman Company are, it seems, becoming impatient at having a $27,000,000 surplus kept dangling before their eyes and no personal advantage accruing to themselves from it. The stock of the company amounts to $47,000,000, yet, with the enormous surplus, only 8 per cent. dividends are paid. The discontent at this condition of affairs has concentrated, and a call has been sent out to the stockholders to follow the example of those of the American Express and Wells Fargo Express Companies, and meet to appoint a committee to look after their interests. The leader of the movement suggests that nothing less than a 14 or 16 per cent. dividend will satisfy the stockholders, and proposes that the matter shall be brought up at the annual meeting on October 18 next. The President of the Pullman Company, and the most prominent of the directors are J. P. Morgan, William K. Vanderbilt, Fred. W. Vanderbilt, W. Seward Webb, and Norman B. Ream, all well-known men.

Several of the most important of the great American trunk railway lines have announced reductions in their maximum passenger rates. The Pennsylvania began by reducing theirs to 2½ cents per mile, and the Erie line, and the Delaware, Lackawanna, and Western have both followed the example. For the general travelling public on these roads who cannot afford the luxuries of Pullmans, Wagners, and parlour cars, this is an important concession, for practically the so-called first-class ordinary car on most American railways is hardly on a level with the second-class carriages on the best European roads, and the cost per mile is much higher than on the European lines in the countries where the zone system prevails. The cause for this change is probably due to the active agitation now prevailing in the United States for Government control of the railways or public ownership.

A Washington despatch of September 13 says that at the sitting of the Interstate Commerce Commission being held there to hear evidence from railway men and others interested in cotton shipping, the chairman read a letter from one of the most prominent railway presidents in the country declaring that if the Commission made it a general practice to authorise the changing of rates upon less than 30 days' notice, it would result in a revival of the abuses which the new Rate Regulation Act was enacted to correct. The letter insinuated practically that not a few of the schedules put in by certain railways covertly provided for secret rebating in cotton freighting, and if allowed to go through would be put in practice in regard to the export of wheat, flour, and packing-house products, in which case the writer said he would be compelled to go out of the export trade, or to compete against such practices by adopting the same methods. When the reading of the letter had been concluded, the counsel for a number of the Southern railways jumped up, and with much warmth, said: "I think the writer of that belongs to a class of railways that nominally profess entire obedience to the law, and make what profits they do make by secret midnight rebates." The main question was as to the time permitted before a rate could be changed, and the consensus of opinion appeared to be that a shorter period should be allowed, though some speakers had no objection to even a 60 or 90 day notice before a rate could be changed. It would appear that the new law regarding freight regulation and rebates will either have to be remodelled or it will give rise to endless judicial delay before the objections to many of its provisions can be settled in the courts.

Canadian papers contain interesting accounts of the opening of the new smelting works at Trout Lake, near North Bay, on Lake Nipissing, in the province of Ontario. At one time one of the most unpromising districts of that part of Canada, with nothing to look forward to after its woods had been cut down to supply the saw and pulp mills, the country to the north of Lake Nipissing, since the discoveries of cobalt and silver in its rocks in almost incalculable quantities, has sprung into prominence among the mining regions of the world, and its mining shares that were non-existent but a short time ago are now leading features among the kerb securities in the New York market. The smelting works just opened are intended to serve the great mineral region of Lakes Temiscaming and Temagami to the north of the Nipissing district, and are expected to become the seat of one of the great Canadian industries.

New York papers of September 14 contain the announcement of the formation of a great rubber trust, with headquarters in New York, which will give American capitalists substantial control of the crude rubber production of the world, and consequently of the rubber manufacturing industry everywhere. It was partly confirmed that Mr. T. F. Ryan, the head of the Equitable Life of New York, was negotiating with King Leopold of Belgium for the control of the rubber interests of the Congo Free State, and that Colonel Samuel P. Colt, president of the United States Rubber Company, was negotiating for the control of the distribution of rubber supplies in Europe. On his return to New York, on September 13, Colonel Colt stated that Alden, Symington, and Co., of London, the most important crude rubber house in Europe, had been dissolved, and that a new company had been organised to be known as the William Symington Co., Limited, every share of the new company's stock being now owned by the United States company. The capital of the reorganised company is $25,000,000. The nucleus of the trust will be the Continental Rubber Company, of No. 111, Broadway, New York, and the United States Rubber Company. The completion of this ambitious scheme is said to depend on the result of Mr. T. F. Ryan's negotiations with King Leopold. Without the Congo interests, the Ryan, Colt, Rockefeller, Brady combination have $180,000,000 represented in the capital stock of their present companies. The United States Rubber Company is capitalised at $75,000,000; the Continental at $30,000,000; the Rubber Goods Manufacturing Company at $50,000,000; and the new English company at $25,000,000. This last will have its chief office in London, and in addition to its former trade will have charge of the agencies established by Colonel Colt in Antwerp, Hamburg, Havre, and Bordeaux, and in London a year ago for handling the rubber boots and shoes manufactured in the United States. Another important subsidiary concern of the enlarged trust is the new establishment at Detroit, in Michigan, for rubber tyres, with a capital of $5,000,000.

The Corn Products Refining Company, which is the old Glucose Trust reorganised, and in which the Standard Oil interests are dominant, has taken steps to meet the heavy competition in the Middle West, which has been found a serious factor in the situation since the reorganisation last spring. As the Standard Oil never throws good money after bad, it has decided to abandon two plants, one in Chicago and the other in Peoria, Illinois, and keep only one at Wankegan, Illinois, which has been brought up to date, going. To replace the abandoned plants a large establishment is to be erected at South Chicago, which will cover 50 acres of ground, and have a capacity for handling 50,000 bushels of maize daily, and be ready in two years. In addition to these new works another plant will be built in the neighbourhood of Peoria, and the combined works the Standard Oil will then own will, it is believed, be equal to its object of killing the competition of the several independent plants built or projected in the Middle West. It was reported at one time that the Standard Oil would buy these out, but it seems to have been unfounded, it costing less to build new and more modern plants than to buy out old. The new South Chicago plant is estimated to cost $5,000,000.

A suit involving damages said to run into the millions was entered in the United States Circuit Court, in New York, on September 12th, against the United Fruit Company, by the American Banana Company. The suit is based on an alleged violation of the Sherman anti-trust law, in which there is a provision that an injured party can collect triple damages, the amount demanded in the suit being $2,000,000, which, on conviction of the defendant, could become $6,000,000. The plaintiff company alleges that soon after its organisation it purchased a large tract of territory near the disputed frontier between the Costa Rican and Colombian republics. The French President at the time, who was named arbitrator, awarded it to Colombia. Meantime, the company went to work on its plantations, on which it employed a large force of workmen. Some time before the first crop was ready a force of Costa Rican soldiers invaded the plantations and stopped work. Then Costa Rican soldiers seized a shipload of supplies belonging to the American Banana Company. Meantime the fruit in the plantations ripened and rotted, and the plaintiff company is prevented working its plan by the Costa Rican soldiers, who, the American Banana Company says it has positive evidence, are acting under an arrangement between the Costa Rican Government and the United Fruit Company. There are other allegations to the effect that the line of steamers controlled by the United Fruit Company discriminates against the American Banana Company. The case is a novel one, and the result must be interesting.

A hitch has taken place in the sale of the Quebec Southern and South Shore R.R. of Canada to the Delaware and Hudson R.R. Co. through an action taken by the president of the two Canadian companies to set aside the sale made last November to Senator Beique of Montreal, acting for the Delaware and Hudson, for $1,051,000. It is alleged that the sale was irregular and *ultra vires*, and that Senator Beique, being counsel to the receiver of the Quebec Southern, was not a competent bidder. A notarial protest was served on the Registrar at Montreal forbidding the execution of any deed to Senator Beique or his nominee, the Delaware and Hudson R.R. Company.

What may prove sensational proceedings are likely to arise out of the examination by the Health Department of New York of many thousands of samples of drugs, medicines, and chemical compounds in daily use for medical prescriptions and other purposes. After eleven months' work it has been found that 72 per cent. of the drugs sold in the city of New York are adulterated, or in some other way fail to comply with the requirements of the law, and are consequently unlawfully sold. Only 28 per cent. are absolutely or approximately pure, while 56 per cent. are so fraudulently compounded, and so dangerous to life, that the report says they call for the instant and criminal prosecution of the manufacturers and wholesale dealers. Physicians have been complaining for a long time that prescriptions compounded by the chemists fail in nine cases out of ten to produce desired results; but the law is not enforced, is evaded or ignored, while great fortunes are made by manufacturers and wholesale dealers in these adulterated and poisonous compounds.

The Mutual Life is not wanting in friends in its troubles it would seem. A prominent merchant of New York, Mr Henry Siegel, member of the Colgate Committee, which has been formed to defend the Mutual against the Untermyer or International Policyholders' Committee, has come out in the New York *Herald* with a flamboyant appeal to the policyholders to stand by the old management. His reasons are principally that the men whom the Untermyer Committee have named for the new board are untried and inexperienced, which, in the sense that the old board was tried and experienced, is true in a way. There is, however, no lack of ability in the men of the International Committee proposed for the new board; the fundamental requirement is honesty. Cardinal Gibbons, who retired from the International Committee before it began work, has now come out with what is practically a whitewashing letter on behalf of the old gang under which the scandals arose, and while saying that he resigned because, for one reason, he did not understand the insurance business, he at the same time believes the men who mismanaged affairs did what they believed was best in the interests of the company. This meddling in matters they do not understand by religious dignitaries in order to bolster up schemes very often of doubtful propriety and honesty is so common in the United States that it excites no remark, but it is none the less derogatory to their position and hurtful to the public interests in many ways both moral and material. The itching for social influence and power is generally at the bottom of it on the part of the ecclesiastics, while for the business men it is used as a means to bring grist to their mills.

Passing Events.

So the dear old *Spectator* has gone over, bag and baggage, to the blue-funk dread-alls. We are sorry, but not surprised, because the *Spectator* has always been tainted with Anglo-Indian Imperialism of the shivering and shivery kind, and although able occasionally to see that the existence of our irresponsible domination over India might be hurtful to the English race in the long run, it none the less clung always, and clings still, to the belief that England is a country destined by a high and mysterious Providence to ruin itself by Empire. In the old days of Townsend and Hutton the truth was sometimes admitted, and always felt, that the ruling races of the world have invariably perished of their dominancy. Nothing kills a race, sucks the vitals out of it, like Empire. But however true this may be, the *Spectator* holds that England has a licence to kill and annex, a mission to "lead," which means to plunder, and this mission was ever fervidly preached. Worship of the ruling race fetish has now, it seems, landed the good old *Spectator* unreservedly in the ranks of the decadents, amongst those who clamour that our boys and even our girls should be taught the holy art of killing, that the "race" may "rule." What is the *Spectator* afraid of? Who is going to invade us? What does it now wish us to steal? Turkey, or what? Has it been captivated by the bland Secretary of State for War, that unconverted jingo, or is this latest exhibition of its tendencies merely a sign of advancing years?

For some months past the Transvaal Chamber of Mines has reported a steady decline in the number of natives at work, but there is a doubt that the statistics it issues are strictly accurate, for the important reason that the Robinson group have ceased to be members of this institution, and, therefore, no longer make any returns to it of the blacks in their employ. It is highly probable that they give no such statistics to the Chamber, and that being so, the monthly returns are of little or no value. These continual "losses" month by month may be no indication of any falling off at all, and may be published at a time when there might actually be an increase were the Robinson "boys" included. How, then, are we to get the real facts? Either the Chamber must endeavour to give them, by obtaining them from every source, or some other independent body should supply them. The Robinson group could, of course, do what they did some years ago, publish their own returns independently, but they have not done so yet. Again, other individual mines have resigned their membership of the Chamber, and do their own recruiting. This explains the seeming mystery of "record" outputs with reported simultaneous decreases in the native labour supply. May we hope to hear from the Chamber on this important matter? It is likely to become more serious as time goes on, and may unnecessarily upset the nervous, seeing that permission may soon be obtained for independent recruiting in Portuguese East Africa. In that case the returns would be more misleading than ever.

The directors of the Briseis Tin Mines have recently issued a lengthy circular to shareholders in the way of a reply to rumours that the life of the mine is seriously shortened. We had not heard of these rumours, and if any such have been flying about they have had no appreciable effect upon the price of the shares. Anyway, the directors could not have regarded them as very serious, as they have been in no breathless hurry to answer them. For they say it was as long ago as June last that they drew the manager's attention to them. He, in a letter dated some weeks later, July 23, replied to the effect that there was nothing in the state of the mine which should adversely affect the shares. So both the directors and the managers have taken matters very calmly and leisurely, allowing quite three months to go by before making this communication to the shareholders, when the question and answer could be sent and given by cable in a few days. They proceed, however, to say that rumours of a still more serious character have just recently been brought to their notice by shareholders. Surely if they were loud enough for shareholders to hear they should be loud enough to reach the ears of the directors and the Press. This time, on the 17th inst., the directors did cable to the manager, who promptly replied that there was no cause for alarm. On the 19th the directors received a favourable report upon the property from Messrs Lake and Currie. It seems as if a great pother is being made about nothing in particular, and there may actually be some people who would jump to the conclusion that the directors are making an excuse for extensively advertising the property. Not that they are to be blamed for this in these days of trumpet-blowing.

Are we in for a Siberian mining boom? We shall be if promoters can have their way, for these gentlemen have been busy lately in registering Siberian companies of all sorts. We learn that Mr. T. Hamilton-Adams is back from St. Petersburg, where he has been transacting business on behalf of the H. A. Syndicate, Limited, and the Siberian Mines, Limited. The capital of the latter is £100,000 in £1 shares, of which 7,000 will be issued as fully paid in part payment for various groups of mines professed to be purchased, whilst 92,993 will be allotted to the H. A. Syndicate, credited with 15s. paid. All the properties to be taken over are

situated in the province of Orenburg, and the terms of purchase are so arranged that only small monthly sums are to be paid until a full report has been received from Messrs. John Taylor and Sons, whose engineer has just started. Should this report be satisfactory, the company can work the properties at a small annual rental until it has proved them and decided to complete their purchase. The company is not to be so much a mining as a parent concern; in other words, it will be a promoting undertaking. Several well-known influential men will be on the directorate.

According to the recent consular report, the trade of Bangkok, Siam, totalled £9,982,735 in 1905, a decline of £31,406 compared with 1904. In the previous year, however, the value was much above the average. The exports amounted to £5,989,100, three-quarters of which came from rice, the sterling value of which exceeded the previous highest in 1904. There was likewise a substantial increase in the value of teak, but in all the other branches of commerce there were signs of retrogression. In the twelve months the imports came to £3,993,635, the total share of British traders being 79 per cent. of the whole. Cotton goods to the value of £52,587 formed the most important item, being some £27,143 less than the "record" established in 1904. Steel, iron and machinery, at £200,598, declined by £169,794 during the same period. Shipping returns were greater than before, Germany leading and Great Britain taking second place. The northern section of the Northern State Railway was opened in November, and two further sections are at present under construction. It is rumoured that the Siamese Government contemplates the introduction of a gold coinage, the pieces to be of 10 and 20 ticals, whilst there is a likelihood that the duties now levied on imports will be increased.

According to a report from the American Consul-General at Munich, the coal supply from German mines for the three large industrial cities of Germany in the first half of the present year was not equal to the demand. The production increased 8 per cent. from 1905 to 1906 against 12 per cent. from 1904 to 1905, although in the last-mentioned period the trade was affected by a strike of two months' duration. Lack of labour and of cars for the transport of coal are given as the main causes of the short supply. That it is not due to lessened consumption is apparent in the fact that all branches of industries were more than usually active in the six months. In the first quarter the supply was even smaller in quantity than in the corresponding period of last year, which is hypothetically accounted for by the laying in of large stocks by speculators and consumers a year ago against the threatened strike.

A correspondent writing to the *Financial News* gives expression to his sorrow that the mining industry of Western Australia has been for years past in a state of depression. This seems to mystify him and doubtless many others, who do not appear to understand that when gold is once taken out of a mine it cannot be replaced. Many cannot even imagine this; others never trouble to think of it, but have a vague idea that reefs and mines last for ever. Gold does not shed the seed that fructifies, except in the form that buries itself in the pockets of promoters. "Although," says this correspondent, "it is admitted on all sides that the goldfields of Western Australia are among the richest in the world, yet, somehow or other, the majority of its mines, from an investor's point of view, are about the one solitary industry of Australia that is not reaping a share of the great prosperity which that country is passing through at the present moment." This "somehow or other" cause has often been explained in this Review. Half-a-dozen rich mines will not make up for many hundreds of thousands lost by investors in scores of worthless mines. This is the experience not in Western Australia only, but all over the world wherever a gold field has been found and worked. And if no new mines are discovered to take the place of the rich mines that are becoming exhausted, what else can be expected but disappointment and depression? Moreover, Westralia has not yet recovered from the noisome scandals of the past.

Meetings of creditors and shareholders in the Rapid Road Transit Company were held this week at the Board of Trade Offices, Carey Street. This company, which has made so rapid a transit to insolvency, was formed only as recently as November last. The nominal capital was the trifling one of £10,000, and the concern was formed to carry on the business of traction conveyance. It had also run motor-buses, but owing chiefly to breakdowns and repairs a considerable loss was incurred. In May last a receiver was appointed on behalf of the debenture-holders. It was resolved to leave the liquidation in the hands of the Official Receiver. Thus the career of the company has been brief and inglorious, but it has been a good pioneer, for it will soon have many imitators.

Certain capitalists in this country have already sent mining experts to Japan with the object of forming an opinion upon the country's mineral richness. One of the engineers is Mr. R. J. Frecheville, a familiar and eminent name. He was despatched there several months ago, and appears to have completed his investigations, for he has arrived back in San Francisco, where he was interviewed by a representative of the "News Letter." From what he said he would appear to have formed anything but a favourable opinion of Japan's mineral wealth. "Leave Japan alone," is the advice he intends to give to his clients. As a mining country it is of little account, he declares. British or American companies would ruin themselves if they attempted to pay the expenses of mines that are yielding Japan rich returns. In the large mines as well as in the small the conditions are similar—low grade everywhere, but cheap labour and plenty of it. The country is hilly and the mines are worked by running drifts into the hillsides. This saves the cost of pumping, which is very expensive under English methods. "Japan's mines are of great value to Japan, but no good to anyone else."

On the whole, we think policyholders here in American life offices should give their support to the International Committee formed to represent all victims and clients. It is not a perfect committee, but as far as we are able to judge by the record of its proceedings it does wage a square fight against the Standard Oil and other monopolists by whom these life offices have been unscrupulously plundered. If, however, support is given to this committee it will have to be whole-hearted and vigilant, because even the best of men are subject to influences that might subtlely be brought to bear upon them to divert them from the straight path. What is wanted is not only the complete mutualisation of all these companies, but their reorganisation on such a basis as will compel whoever is entrusted with their management to recognise that their position is one of trusteeship. To allow any head of a life company to be mixed up with the financial operations of the gentlemen on Wall Street who are continually toiling in order to subject the industries of their country to their despotic control; to allow the surplus funds of insurance companies to be employed in bolstering prices on Wall Street, in buttressing banks belonging to the magnates which may be overloaded to a dangerous extent; or to permit the moneys of policyholders to be invested in finance trusts, the shares of gambling banks, or the securities created by the "merging," crushing out, and other forestalling efforts of the great financiers, must be ruinous in the long run, however temporarily prosperous it may seem to be. So policyholders here should rally round the International Committee in such force and with such unanimity as will compel it to do its duty no matter how tempted.

The Russian Minister of Finance has been talking to M. Ludovic Naudeau, the famous correspondent of the Paris *Journal*, and naturally he puts the best face on affairs. To listen to him there is no such thing as revolution in Russia, the peasants are not rising all over the country against landowners, and against tax-gatherers or other bureaucrats. Russian trade is pro-

gressing as usual, as if no Odessa lay half in ruins, and the revenue continues to flow in in a manner perfectly satisfactory. "Our Customs revenue," he says, "in 1904, amounted, from January to July, to £13,500,000. In the same period of last year the total fell to £13,000,000, but this year it has risen to £14,200,000, being £1,542,000 above the estimate. As for the taxation returns, they are £10,000,000 greater for the first six months of this year than in the same half of 1905, the total being £104,500,000 against £94,600,000." If this is indeed the truth there need be no fear of an immediate Russian default, and we may be quite sure that no effort will be spared to prevent any, the slightest, hitch in meeting the obligations due abroad on Russia's stupendous debt. It will only be when the revolutionary element gets the upper hand and when Russia from one end to the other is in a state of anarchy—it is fast drifting into this state—that we shall see the real danger of an interruption in the debt payments. Meanwhile exports exceeded imports, and last year the excess amounted to £35,000,000, an excess expected to be maintained in the current year. This is not sufficient to cover all Russian obligations abroad or to help her in floating another loan with which to meet unpaid portions of the cost of the war with Japan, but it is a solid substratum on which to build the hope of further credit operations by-and-by.

The numbers on famine relief works in India fell in the week ended September 15 to 196,000, of which 51,000 were in Bombay and 16,000 in Ajmer and Rajputana. The danger of famine may therefore be considered at an end, and as there has been a general rainfall, causing crops to look thriving, the prospects of an abundant harvest are good everywhere. There can be no better news from India than this.

Evidently the annexationist capitalists, the sugar monopolists and others, in the United States are finding it difficult to work up a decent pretext for intervention in Cuba. Mr. Taft and colleagues are therefore playing to impress the world with their impartiality, their desire to leave the Cubans nominally free. All the healthy opinion of the American people is against this brutal, jingo enterprise, and if in spite of that Cuba is made a part of the Republican monopolist Empire of the United States, it will mark the beginning of unimaginable trouble for it and for the Washington politicians. As the *Manchester Guardian* says, nothing has occurred so far in the island to give the United States Government any right, moral or financial, to send an army there to haul it inside the Union by force. If the betrayal is accomplished, it will be in defiance of all natural rights.

A grandiose scheme of land reform has been made public by M. Stolypin, the Russian Minister of the Interior. Under it 15,000,000 acres of Crown land and about 8,000,000 acres of private lands are to be offered to the peasants for purchase through the intermediary of the peasant banks. Furthermore, an emigration scheme for the settlement of population on about 55,000,000 acres of land in Siberia is outlined. The land is to be sold to the migrating peasants at a nominal price, and by such sops the autocracy hopes to stay the revolution. Will it do so? No, the autocracy is too late, and the people are too hungry.

Critical Index To New Investments.

Trinidad Dock and Engineering Co., Limited.

Formed for the purpose of providing a floating graving dock at Port of Spain, in the Island of Trinidad, West Indies, and of acquiring the foundries there of Messrs. Ellis, Grell, and Co., this undertaking has a share capital of £25,000 in £1 shares, and a debenture debt of three times that amount in 5 per cent. first mortgage debentures. The debentures are redeemable at 105 on December 31, 1932, or may be repaid on six months' notice at any time after 1916, and provision will be made for their amortisation by means of a sinking fund policy effected with the Commercial Union Assurance Company. At present there is no dry dock in the British West Indies, and as the Island of Trinidad possesses a considerable maritime traffic, it is expected that the main earnings of the company will be derived from the vessels in the Trinidad Island trade, which now have to go either to New York or to St. Thomas, in the Danish West Indies, when they require docking, although various other sources of revenue are mentioned, and the hope is expressed that ships of H.M. Navy will frequently use the dock. A contract has been entered into between the Crown Agents for the Colonies and the company, under which the company undertakes to provide a self-docking, floating graving dock, with an overall length of 365 feet, a clear beam of 56 feet, capable of being increased to 65 feet, and with a lifting power of 4,000 tons, and receiving in return a subsidy for 25 years of such a sum as, with the nett revenue for each half-year, shall make up interest at 3 per cent. per annum upon the initial capital outlay of the company, which shall not exceed £100,000. For the years 1901 to 1905 inclusive the profits of Messrs. Ellis, Grell, and Co.'s business averaged £2,250, and an estimate by that firm puts the earnings of the company at £11,400, or with the receipts from the foundries at nearly three times the amount required for the debenture interest, after providing for sinking fund and London expenses, and the directors, therefore, do not expect to need the subsidy. The shares and debentures were issued to the Railway and Works Co., Limited, which has contracted to supply and moor the dock, to supply the necessary workshops, &c., and to carry out all the stipulations of the concession, including the provision of £4,000 in cash for working capital, the first year's premium on the sinking fund policy and interest on the debentures until the subsidy has commenced to accrue, and also to pay all preliminary expenses. Messrs. Chalmers, Guthrie, and Co. having purchased the debentures from the contractors offered them for subscription at the price of 102, and as the prospects of the company being successful seem fair, they were no doubt placed without much difficulty.

ISSUES BY TENDER.

Croydon Gas Company.—Tenders will be received on October 17 for £20,000 "D" stock of this company at a minimum price of 107 per cent. A fixed maximum dividend at the rate of 5 per cent. per annum will be paid out of the profits, and up to that rate the new stock ranks *pari passu* with the £178,400 "B" stock issued, on which the dividends for the past 17 years have been at or over 11 per cent., the last payment being at the rate of 11½ per cent. There are also £51,600 "A" stock and £90,000 "C" stock in existence, paying respectively 14½ per cent. and 10¾ per cent., and on these stocks the dividends are subject to rise or fall from the same causes which govern the dividend on the "B" stock, so that there would seem to be ample security for the present issue.

Answers to Correspondents.

J. C. N.—The following answer to your question appeared in our issue of the 1st, but by an unfortunate slip, which we much regret, it was given under the initials "J. C. S.":—We do not see good reason for selling these shares because the company possesses a good and extensive business, and recent losses will hardly damage its financial position. At the same time, if your holding is a fair one, it would scarcely be wise, perhaps, to increase it.

M. B.—We should be disposed to hold the shares for the present, as the market talks of an increased dividend, and it is quite possible that the gossip may be right. This reply leaves 2s. to your credit.

Southlands.—A highly speculative venture, and one on which you will probably have to wait a considerable time for any return.

Timothy.—A purchase of No. 1 might turn out well as the stock looks reasonably cheap at the price you give, but No. 2 is far above its intrinsic value and should be left alone.

T. A.—The company is one of the best of its kind, and is at present paying big dividends. It is, however, difficult to form any reliable estimate on the points named, partly because these companies are constantly buying new properties. We believe, however, the "life" is about 11 years on the present basis. The industry is for the time being in a flourishing condition, but that seems to have been taken into account by the market, and the shares, in our opinion, are dear at the current quotation.

The *Times* City office has been removed to 15, Copthall Avenue, E.C.

SOUTH AFRICAN MINE RETURNS.

The Transvaal output for August was another "record," quite an admirable achievement, but it has failed to lift the Kaffir Circus out of its despondency. From the mines on the Rand proper the output reached 489,787 ozs., and the outside mines gave 19,328 ozs., making a total of 509,115 ozs., the value of which was £2,162,583. Compared with the previous month's, which was of equal duration, these figures show increases of 17,322 ozs. in weight and of £73,579 in value, while they exceed those for August, 1905, by 80,500 ozs. and £342,000. The output per diem was 16,423 ozs. against 15,864 ozs., an improvement of 560 ozs., despite the fact that there was a nett loss of 749 natives. Some time ago the Transvaal Chamber of Mines used to give the number of Chinese at work. Perhaps it is too much to hope that they will renew this policy and supplement the information with the number of stamps at work.

MINING RETURNS.

Battlefields (Rhodesia).—Crushed 1,105 tons, 868 ozs.; cyanide 720 tons, 547 ozs.

Brilliant Gold.—Stockholm: Crushed 124 tons, result £2 1s. 5d. per ton.

Briseis Tin.—Shipped 15 tons, including 13 tons for New Brothers Home No. 1.

British Broken Hill Proprietary.—2,852 tons crude ore produced 393 tons concentrates containing 259 tons lead and 10,611 ozs. silver.

Broken Hill Proprietary, Block 10.—Treated 11,630 tons crude ore, producing 1,656 tons concentrates, containing 1,026 tons lead and 52,992 ozs. silver.

Broken Hill South Silver.—17,435 tons of crude ore produced 2,721 tons concentrates containing 51,699 ozs. silver and 1,823 tons lead.

Carrington's Lion.—Crushed 229 tons, for £1,100; concentrates, £100.

Chinese Engineering.—Output of coal 19,500 tons, sales 20,000 tons, consumption 1,225 tons.

Day Dawn Block.—1,290 tons treated, value (including concentrates, &c.) of £2,700.

Great Cobar.—15,500 tons of ore, producing 1,017 tons matter, copper 395 tons.

Hyderabad (Deccan).—Output of coal 33,728 tons.

Kelantan.—Recovered 128 ozs.

Messina (Transvaal) Development.—Output 83 tons 7 cwt.

Mills' Day Dawn United.—Crushed 1,746 tons quartz, value, including residues, of £6,400.

Mount Lyell Blocks.—Treated 5,770 tons crude ore for 6r tons 8 cwt. fine copper.

North Broken Hill.—Treated 2,095 tons crude ore, producing 385 tons concentrates containing 271 tons 8½ cwts. lead and 5,775 ozs. silver.

Oroville Dredging.—Gross returns $16,000.

St. John Del Rey.—Gold produce £6,900; yield per ton, ·56 of an ounce troy.

Victoria Proprietary.—Crushed 450 tons, 159 ozs.

Waihi Gold.—Bullion return 27,040 tons of 2,000 lbs. yielding £62,300.

Weardale Lead.—Ore raised 307 tons; pig lead smelted 263 tons; average price obtained for lead sold £17 10s. 6d. per ton net.

Messrs. Roger Cunliffe, Sons, and Co. will remove on October 1 to 28, Clement's-lane, E.C.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended September 21, $4,099, decrease $446.

Argentine North Eastern.—Traffic receipts for week ended August 24, $18,977, increase $1,409; aggregate from January 1, $660,930, increase $63,588.

Assam Bengal.—Traffic receipts for week ended August 18, Rs. 84,267, increase Rs. 24,114; aggregate from July 1, Rs. 5,11,149, increase Rs. 89,161.

Canadian Northern Railway.—Traffic receipts for week ending September 21, $151,200, increase $62,500; total from July 1, $1,642,200, increase $648,900.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 25, Rs. 27,294, decrease Rs. 1,321.

Quebec Central Railway.—Traffic receipts for the 3rd week of September, $18,505, increase $2,166; aggregate from January 1, $673,513, increase $97,046.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 25, Rs. 16,842, increase Rs. 4,187.

White Pass and Yukon Railway.—Traffic receipts for the week ended September 14 amounted to $65,533.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending September 22, £1,222, increase £8; aggregate from July 1, £14,108, decrease £5.

Cockermouth and Keswick Railway.—Receipts for week ending September 22, £998, increase £25; aggregate from July 1, £13,095 increase £660.

East London Railway.—Traffic receipts for July, £4,235, increase £17.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 22, £388, increase £16; aggregate from July 1, £3,767, increase £171.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending September 19, £954, increase £80; aggregate from January 1, £31,997, increase £5,826.

Blessington and Poulaphouca. — Traffic receipts for week ending September 19, £23, decrease £8; aggregate from July 1, £428, increase £41.

Bristol Tramways and Carriage.—Traffic receipts for week ending September 21, £5,166, increase £59; aggregate from July 1, £66,826, increase £2,625.

British Electric Traction.—Receipts of all the Associated Companies for the week ending September 21, £28,865, decrease £1,931; total increase from January 1, £116,627; 430½ miles, against 438½.

Burnley Corporation.—Traffic receipts for week ending September 22, £1,242, increase £57; aggregate from July 1, £15,103, increase £1,251.

Dublin and Blessington.— Traffic receipts for week ending September 19, £172, increase £21; aggregate from July 1, £2,159, increase £38.

Dublin and Lucan.—Traffic receipts for week ending September 21, £137, increase £1; aggregate from July 1, £1,746, decrease £51.

Dublin United.—Traffic receipts for week ending September 21, £5,118, increase £292; aggregate from July 1, £69,473, increase £3,889.

Edinburgh and District. — Traffic receipts for week ending September 22, £5,326, decrease £1,067; aggregate from January 1, 1906, £189,787, increase £3,560.

Hastings and District. — Traffic receipts for week ending September 20, £992.

Isle of Thanet.—Traffic receipts for week ending September 22, £838, increase £45; aggregate from October 1, £31,484, decrease £14.

London County Council.—Traffic receipts for week ending September 15, £26,063, increase £10,785; aggregate from April 1, £637,061, increase £271,145. Miles 98¼ against 51¼.

London General Omnibus.—Traffic receipts for week ending September 22, £21,997, decrease £1,766; aggregate from July 1, £282,465, decrease £8,874.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending September 22, £3,700, increase £2,297.

London Road Car.—Traffic receipts for week ending September 22, £7,169, decrease £615; aggregate from July 1, £96,423, increase £615.

London United.—Traffic receipts for week ending September 21, £6,070, decrease £6; aggregate from January 1, £240,816, increase £16,545.

Rossendale Valley.—Traffic receipts for week ending September 21, £195, decrease £21.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 23, £817, increase £37; aggregate from January 1, £31,825.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 23, £15,534, increase £1,794; aggregate from January 1, £564,441, increase £62,603.

Barcelona. — Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for August, $44,790, increase $6,097. Nett earnings from July 1 to August 31, $102,385, increase $17,835.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending September 9, £3,841, decrease £89; aggregate from January 1, £128,934, increase £6,403.

Buenos Ayres Electric. — Traffic receipts for week ending August 11, £1,443, increase £176; aggregate from January 1, £43,462, increase £7,401.

Buenos Ayres Grand National.—Traffic receipts for month of August, $293,700.

Calcutta. — Traffic receipts for week ending September 22, Rs. 50,528, increase Rs. 5,994; aggregate from July 1, Rs. 5,35,241, increase Rs. 20,266.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,708, decrease £222. Total from January 1, £35,223, increase £11,310.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid. — Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3½ per cent. on September 13.)

Norfolk House, Friday Evening.

We expected to have a period of rest in the Money market when the new month comes in, after hearing that Mr. Shaw, the Secretary to the United States Treasury, had decided to spread amongst the banks $26,000,000 of Government money to help them through the autumn pressure. This would not have been enough to wholly stop the demands for gold on New York account, but it might have enabled the Standard Oil group and other buyers to avoid drafts upon the Bank of England's stock. But this afternoon the whole story is denied, and we are in the dumps again. For there are other demands hanging over the Bank's stock of gold besides the Yankee one at this time of year, and it cannot spare very much, our market as tested by the Bank return being decidedly poorer than it was this time last year. If the present Government had been as heedless of banking interests as the one that preceded it, the squeeze at the end of the present quarter would have been greater than it is, and those who grumble at the Government should take note of the fact that the Bank return shows the public deposits to be some £3,000,000 less on Wednesday than at the corresponding date a year ago. In spite of this smaller accumulation by the Exchequer the debt of the market to the Bank is probably now in the neighbourhood of £9,000,000, allowing for the Japanese money which the Bank borrowed last week. Yet other deposits are at £43,197,000, fully £3,000,000 less than at this time last year, and the banking reserve is down to £23,381,000, a decrease of £1,403,000 on the week.

It is interesting to note how the tone of the discount market varies as the New York Exchange rises or falls. When transfers on New York go up our discount rates go down, and when they sink bill brokers at once quote firmer rates. All this week, however, there has been a scarcity of short credits, and the bill brokers have been so frightened that they have allowed the Bank of England to do most of the discount business. It takes bills up to three months' usance from its own customers at 4 per cent., and early in the week most of its lendings took the form of discounts, but on Wednesday and yesterday the market, on the whole, preferred to raise money by seven-day advances at 5 per cent., hoping to be able to pay off at maturity. And it may be able to do so, although the extent to which it is now in the Bank's debt will contribute to tighten rates up again soon after the Government and other dividends have been paid out. Had all the borrowing been in the form of short loans the market might have been hard up again next week, but the repayments will now run through October, and in smaller stream right on to the year's end. Less disturbance has been caused this week by the monthly balance-sheet preparations than might have been anticipated, and that also is partly thanks to the action of the Treasury, which has paid out money more freely so as to avoid an excessive accumulation of balances on Government account.

Stock Exchange money was very dear, the brokers said, nothing being obtainable under 5 per cent., and borrowers of additional money usually paying 5¼ and even 5½ per cent. We cannot gather that there was any serious effort to discriminate against American securities, but the banks are not particularly anxious to increase their risks in that quarter, and the account in Yankee rails was a little difficult to arrange. The general account, however, passed over comfortably enough, and will continue to do so fortnight by fortnight as long as loans are procurable from the great credit institutions dominating the market or its slaves. A call of upwards of £1,000,000 on new Canadian Pacific Railway shares was paid on Wednesday, and for an hour or two helped to increase the pressure upon the credit supply, sending up call money to 5 and even 5½ per cent. Joint-stock banks lent early in the week at 3¾ per cent. for seven days, but by Wednesday their quotation became 4 to 4¼ per cent., and they have stuck there, the banks doing a good business all this morning at 4¼ per cent. and occasionally 4. But the Shaw legend played the mischief with open market discount rates, making the three months' rate on Bank bills no better than 4⅛ per cent., and causing some daring spirits to quote 3⅞—4 for bills to arrive next week. Very fine mixed parcels of three, four, and six months' bills to arrive were doable this morning at 4 1/16 per cent., a proof of the readiness of credit jobbers to "go a bear" for discount on the slightest provocation.

The price of gold has not been tested in the latter part of the week, and nominally fell to-day to 77s. 11⅛d. per oz. on the Shaw story, people inferring that New York would be but a languid buyer on Monday. As it is there will probably be a struggle for the £825,000 worth then in from South Africa, and we should not wonder to see the price go up again. New York is said to have already made arrangements to take at least a portion, and other buyers are never far off at this season. Gold, however, is going to New York from various quarters, nearly 700,000 sovereigns having been shipped from Sydney, New South Wales, last week. Some has also gone from Paris, and the Bank of France has been losing gold lately at the same time that its note circulation has been going up, as the figures in our summary of its weekly return demonstrate. That Shaw canard, however, has spread the impression that we shall now worry along, for some weeks at least, without a further advance in the Bank rate. Evidently it is not a very safe inference in the circumstances, and credit jobbers must not relax their vigilance lest they be caught napping some fine morning.

Just as we go to press "a denial of the denial" about Shaw's action has come along. "Shaw's millions actually deposited," is the latest tale, and the episode begins to stink.

SILVER.

Some large purchases of silver by speculators sent quotations up to 31¾d. per oz. for cash and 31⅞d. per oz. for delivery two months forward. Calcutta, however, was closed from Tuesday to Thursday, and as the last day was also a holiday in Bombay, little support was forthcoming from that quarter, and the market weakened. Prices did not give way much until the Thursday, when they dropped ¼d. and 3/16d. respectively on very little selling pressure, and with a moderate revival of the demand to-day part of these losses were recovered, leaving the final figures unchanged compared with last Friday's at 31½d. and 1/16d. up at 31 7/16d. Applications for the Rs. 1,00,00,000 India Council drafts on Wednesday amounted to Rs. 4,27,40,000 in bills and Rs. 11,00,000 in telegraphic transfers. Of these Rs. 78,74,000 were accepted in bills and Rs. 21,26,000 in transfers, tenders at 1s. 4 1/16d. and 1s. 4 3-32d. per rupee receiving about 18 per cent. Next week another Rs. 1,00,00,000 will be offered.

Stock Market Notes and Comments.

No improvement can be reported in Stock markets, and none durable is to be expected. The majority of Stock Exchange members still go about grumbling against the present Government, and dreaming that all might be well if we had the blue funk, broken Protectionist party back in power, with its extravagant expenditure, its increased load of taxation, and other comforts. They repeat this kind of aspiration day after day and week after week, and in doing so only strive to hide from themselves the real cause of the mischief. Consols are flat or leaden, home securities of all kinds, after each flutter up, tend to shrink in price because the City is suffering from a well-nigh hopeless congestion of unplaced securities. The ultimate investor has never bought up the debts created by that South African war over which so many went demented. You may try, good friends of the market, to disguise this fact from yourselves by whatever expedient commends itself to you, but fact it remains all the same. How many millions of the various issues of war stock are at present lying in the hands of the underwriters, clogging up our banks and hampering the operations of financiers and middlemen in all directions? Is it £50,000,000 or £100,000,000? Probably nearer the larger amount than the smaller, and all the time it is draining away instead of augmenting the strength of credit generators and wielders. For along with this congestion there is the crippling of financiers of all degrees by the general shrinkage in prices and oppressive interest payments. Times unnumbered we have explained the effects in this direction of locked up positions, stiff contangos, and falling prices. Lower prices curtail the credit creating power of the man who deals in money, and at the same time they more and more absorb and lock up his resources so that he cannot "turn round." A man who has £50,000 or £100,000 tied up in a security which has declined 15 to 20 per cent. clings to that security as long as he is able, rather than throw it on the market, and while he does so he is to the extent of his commitment paralysed and unable to enter on fresh engagements. This in a sentence describes the state of our security-stifled Money market and affords the true reason for the present uneasiness, the rotten condition of market prices all round.

Then we are not going to have a revival soon? No, we may have flutters and spurts, but we cannot have a good, sound, durable revival of market life until this congestion has been dispelled and the markets delivered from their paralysis—their overburden of unmarketed paper. It does not matter whether the situation in the Money market itself clears or not. Were the United States to cease drawing away our gold and were the Bank of England to begin again to accumulate a few millions in the metal, we could only have spasms of activity in the Stock markets, because everybody there, and tens of thousands of people elsewhere, are waiting for a chance to sell possessions acquired, mostly by underwriting, at prices often much higher than those now quoted and frequently unreal enough. We are often told that there is "no stock on the market." "If you wish to buy any large amount of Consols the price is immediately put up against you, and there does not appear to be any stock available until it may have gone up £1 or more." Yes, but it is often equally difficult to sell. Go into the market with £100,000 of Consols to dispose of and see how the jobbers will jib and put the price down before they take the stock off your hands. What does this mean? It means that great volumes of stock are stowed away and held by middlemen on borrowed money, and that the oppression of this hidden burden perfectly clogs the market. Naturally if a buyer comes along the holders of this hidden away mass of stock struggle to get the best price possible so as to reduce the loss on a trifling portion of their lock up. And when they are forced to buy they knock the price down because they have already more of the stock in pawn somewhere than is convenient. The position is exactly the same in many other directions—in the new securities market generally, for example—and when we add to the sterilising effect of this congestion the blows the market has received from various quarters, particularly from the San Francisco fire; the apprehensions excited by the condition of Russia; the hampering influence of the unplaced masses of Japanese stock still held over the market in much the same way as our war loans because the investor has not the means wherewith to absorb it all; dread lest the Yankee gamblers should one day reach an impass that might bring their whole rickety structure tumbling down about our ears; remember also the mass of our banking capital engaged in sustaining that Wall Street structure; and add to it all the knowledge that Russia re-

quires further loans, probably to the extent of nearer £100,000,000 than £50,000,000 in order to liquidate the cost of her war with Japan, it is impossible to believe that busy, healthy stock markets can come back to us this year or for years to come. Often we are inclined to think that a tornado sweeping through the City and clearing away the masses of unmarketable stuff with which it is clogged up would do more to restore a healthy vitality to business in all directions than any amount of "cheap money" and make-believe. "But Hudson's Bay shares are going to 200." Are they? Then now should be a fairly satisfactory time for you to take your profit.

The Week's Stock Markets.

Stock markets continue woefully stagnant, and dealers as yet can see no end to the long period of depression from which they have suffered so long and so patiently. Naturally the monetary outlook has been the principal influence governing markets, and this is still far from being clear, although for a brief time on Tuesday it looked as if the cloud was at last going to be lifted. That was contango day, and preliminary inquiries on Monday revealed that the joint-stock banks had made up their minds to charge 5 per cent. for loans, and this resolution was carried out so far as the continuing of existing advances was concerned, but for any fresh money required the banks charged 5¼ and even 5½ per cent., while other credit dealers asked 5½ per cent. for all they renewed or lent. In spite of these stiff rates the Stock Exchange became much more cheerful, and it was said that support was forthcoming from interests which had been strangers to the markets for months past. The better feeling apparently emanated from a belief in the story that Mr. Secretary Shaw meant to come to the help of the New York banks, and that all danger of further demands on our stock of gold from that quarter was at an end. That the story was an improbable one did not matter, it had the effect of lifting prices a little all round. No confirmation came to hand either of that or of the later report that Mr. Shaw would certainly do something to relieve the strain before Thursday, and then consolation was sought in the direction of the bullion market. Nearly £1,000,000 will be available there next week, and this, it is hoped, will satisfy the New York requirements and prevent further withdrawals from the Bank. In spite of the prevalence of this view markets relapsed into their old depressed mood, partly because the end of the quarter needs caused a sharp return to monetary stringency, and partly because the news from Cuba was disquieting. When, however, the settlement went through on Thursday without a hitch, the atmosphere seemed clearer, and dealers allowed themselves to indulge in the hope that with the release of the October dividends would come a revival of public interest. Previous disappointments in this respect were forgotten or overlooked, and a much more cheerful feeling prevailed. The effect was seen in Consols, which, after fluctuating within very narrow limits all week, hardened and finished ¼ higher for money and ⅛ better for the October account, while other British Funds were also disposed to improve. Bank of England stock was sold with some persistence and dropped 5, but Bank of Ireland stock recovered a good part of its recent loss. Home trustee stocks hardly moved, but amongst Colonial Government things sundry Australasian loans, together with one or two Canadian and Natal issues, showed weakness.

The Foreign bond market has seen a good deal of selling by stale "bulls" of Japanese securities on the news that Mr. Takahashi was leaving New York for London on Saturday instead of waiting until near the end of October as he had intended. This was taken to indicate that negotiations for American help in floating the conversion loan had not been successful, and as the time is considered equally unpropitious for an issue on this side, there was no inducement to support prices. Russian bonds were dull most of the week, but recovered towards the close owing to vigorous buying in Paris on Berlin account, and to the optimistic utterances of the Russian Finance Minister when interviewed by a Parisian journalist. Turkish stocks were flat on rumours of the serious illness of the Sultan, and although they, too, recovered before the close, they were still down on the week, with Unified showing a loss of nearly £1. In the South American group attention was chiefly devoted to Brazilians, which weakened on sales induced by the efforts not only to get the Government to fix the exchange at a high rate, but also to create monopolies in coffee and rubber in order to help planters. The West of Minas Railway loan suffered most, but the 5 per cent. 1895 and Lloyd Brasileiro issues were about £1 lower, and several others fell ½. A good many Argentine dropped ½ to 1 in sympathy, and Chilian 1885 fell 1, but Uruguay 3½ per cents. were decidedly harder. Cuban bonds, curiously enough, improved on the threat of American intervention, although that had been considered sufficient cause for nervousness elsewhere. Contangos ranged from 5½ to 6 per cent. in this section, the higher figure being that charged on Russian and Japanese bonds, and on most Central and South American securities. Except for a decline of 3½ in Turkish Unified and declines of 1 to 1½ in Brazilian issues and a rise of 1¼ in Cuban 5 per cents., movements on the account were hardly worth recording. We may mention, however, that Russian things were fractionally harder and that Japanese 4½ per cents. second series dropped ⅜. Mexican 1904 loan, too, lost ½, and a number of Argentine loans fell ¼ to ½.

In Home Railway stocks the possibility of a strike of boilermakers on the Clyde, involving 10,000 men, had a depressing effect on a market already suffering from nerves, in consequence of the agitation for shorter hours and higher wages. Dealers professed to ignore the speeches of the men's leaders, but that attitude did not prevent the market from being easily influenced by a very moderate amount of selling. Prices consequently dwindled all down the list, the declines affecting Scotch stocks and those of the heavy lines. Advices from Glasgow on Thursday, however, stated that the difficulty in the ship-yards would probably be settled by a compromise, and a rally followed. Business became comparatively brisk in the "heavy" stocks, with the result that the earlier losses were replaced by gains of ½ or so in Great Western, North-Western, and Midland deferred. Elsewhere in the active list the recovery made very little headway, and Caledonian issues in particular were decidedly lower on the week. An attempt was made to arouse interest in Metropolitan, on the theory that the price was down to a level where it offered a fair chance as a speculative lock-up, but there was no response, and the improvement was speedily wiped out, while the Surplus Lands stock finished 1 down. District, however, advanced ½. Prior charge stocks where they moved at all were mostly down, the most notable fall being 3½ in District Extension preference. Except in Lancs and Yorks, where there seems to be a biggish bull acount, the speculative position open has been reduced, and carrying over charges were, if anything, lighter than last time at 5 to 6 per cent., these rates, of course, including stamps and fees. The course of the market during the past fortnight was consistently downwards, and with the solitary exception of a rise of ½ in Lancashire and Yorkshire the changes in the making-up list are adverse. Metropolitan issues were the chief sufferers, the ordinary dropping 3½ and the Surplus Lands stock 2½, but Great Northern deferred lost 3 and the "A" stock 3½ as the result of the accident at Grantham. Hull and Barnsley receded 2¾, North-Western 1¾, North-Eastern 1½, and Midland preferred 1, but the deferred stock of the last-named and Great Western were only ½ lower. South-Western ordinary and deferred fell 2 and 1¼, Brighton issues 1 to 2, Chatham second preference and South-Eastern issues all declined 2, and Furness and Great Central preferred dropped 1. Caledonian ordinary was also 2 down, and the preferred and deferred lost 1 each, and North British ordinary and deferred relapsed ¾ and 1. Amongst Underground things, District fell 1¾, Central

London ordinary and City and South London 1½, and Charing Cross, Euston, and Hampstead, and Great Northern, Piccadilly, debenture stocks were 2½ to 1½ lower.

Canadian Pacific shares have been vigorously supported from Montreal and New York, and the price was lifted to 188 on Thursday, on rumours that the company would declare a cash bonus of $2 at the meeting next week. Grand Trunk stocks, too, were comparatively buoyant for a time, partly because the increase of £17,000 in the weekly traffic return exceeded anticipations and partly because dealers talked of an increase in the nett revenue for August, an increase which grew from £10,000 to £16,000 in a very short space of time. The market quieted down again on Thursday, but the ordinary and third preference nevertheless finished with gains of 1 to 2. These rises did not come in time to help prices at the settlement on Tuesday, and the making-up list shows a decline of ½ in Canadian Pacific shares, while Grand Trunk ordinary and third preference stocks were ⅞ down on the account. Alberta ordinary stock fell 2, Quebec and Lake St. John income bonds 2½, and Qu'Appelle, Long Lake, &c., 6 per cent. bonds 1. Amongst Indian Railways, East Indian deferred annuity "D" lost 1, and the "B" annuities ¾, and Madras 5 per cent. and Scinde "B" annuities were ½ down.

The American Railroad market was distinctly flat on Monday owing to fears regarding the arrangement of the account, and although there was a feeble attempt at a rally when New York opened it was not held. Wall Street looked for help from Mr. Secretary Shaw in time to make contangoing an easier matter, but it was too late in coming to be of any assistance, and operators found themselves faced with very stiff charges for carrying the huge account they are financing on this side. Our market continues to take very little part in the play, and Wall Street is finding it a hard matter to keep things going without outside assistance. The big operators are doing their best to unload at every opportunity, and there has also been a good deal of bear pressure at work forcing quotations down. On Thursday the market was particularly flat, and one reason given for the weakness was the nomination of Mr. Hearst by the Democrats for Governor of New York State. That may have had something to do with it, but other sources of weakness were the exaggerated rumours of a disaster in New Orleans, which was said to have been wiped out by a flood, and selling by small holders who had failed to obtain the necessary money to carry their stocks. Reading were made the object of attack by the bears, but Milwaukee, Louisville, New York Central, Ontario and Union Pacific were also sold freely, and the only exception to the general relapse was a gain of 1¾ in Southern Pacific. Dealers in this section had to pay 6 and 6½ per cent. and in some cases even 7 per cent. for loans to the mid-October settlement, and considerable difficulty was experienced in arranging the account even at these figures. Making-up prices show advances of 3¼ each in Baltimore and Reading and 2 in Southern Pacific common, but the general tendency of the market was downwards, and against these were declines of 5¼ in Union Pacific, 2¾ in Atchison, 2½ in New York Central and 1¾ in Ontario. Erie ordinary and first preference were 1¼ lower and the seconds 2½ down, and Milwaukee, Chesapeake, Illinois Central and Louisville lost 1 to 1½. Great Northern preferred declined 4, and Northern Pacific 2 and Rock Island 1¾.

Argentine Railway stocks have been rather out of fashion of late, and the disposition shown to realise was rather accentuated by reports that the harvest in some parts of the country would be an indifferent one. Even the dividends declared by the Buenos Ayres Western and Entre Rios companies, although quite up to expectations, failed to stimulate any inquiry, and quotations dwindled steadily. A demand sprang up for Antofagasta ordinary and deferred stocks, and they advanced sharply, but the preferred moved in the opposite direction, and amongst Brazilian things San Paulo ordinary and Great Western were both heavy, but Leopoldina was exceptionally ½ harder. United Railways of the Havana ordinary stock also flinched on the news from the island, but Mexican Railway stocks after showing weakness in the beginning of the week on sales before the settlement firmed up on a renewal of the "bull" campaign, and ended ½ to 1 higher. Apart from improvements of 6 in Cordoba Central first preference, and 1¼ each in the income debenture stock of that company and Argentine Transandine preference and 1½ in Cordoba and Rosario 6 per cent. debenture stock, the important changes on the fortnight in the Argentine group were to the bad—Great Western ordinary dropping 2, Buenos Ayres and Pacific ordinary 2½, Buenos Ayres Great Southern 3¾ and Buenos Ayres Western ordinary and Buenos Ayres and Rosario deferred 1. Antofagasta preferred ordinary gained 3 and the deferred 15½, and United Railways of the Havana ordinary put on 2. Leopoldina ordinary was also 2 up, but San Paulo ordinary fell 1 and Paraguay Central debenture stock declined 3. Mexican ordinary was unchanged, but the first preference gained 1¼ and the seconds ½. Money for the account cost 6 to 6½ per cent. here also, or much about the same as on Americans.

In Miscellaneous markets Brewery issues were as a rule heavy, and big losses were recorded in City of London ordinary and preference, Allsopp 3½ per cent. debenture, Guinness preference and Watney, Combe first debentures. Stretton's Derby 4 per cent. debenture stock also gave way sharply, together with Bass preference and Ohlsson's Cape ordinary, but Lloyd and Yorath debenture stock was considerably better, and several American things showed a disposition to improve. London Docks deferred stock was offered pretty freely and fell 2. Amongst Commercial issues Portland Cement shares continued to dwindle, Nobel Dynamite bearer shares, Californian Oilfields and one or two other things were offered. Nitrate shares moved irregularly, London and Salar del Carmen showing substantial gains, while most of the others in this group were 2s. 6d. to 5s. weaker. Of motor manufacturing companies both classes of Daimler shares improved ½, but Darracq ordinary were a trifle lower. Coats and English Sewing Cotton shares all advanced a fraction or two. The most notable event, however, has been the strength of Hudson's Bay shares, in which a large business has gone on, and the price rose to 96½. Pekin Syndicate shares recovered £1, but Peruvian Corporation issues are still out of favour. A good deal of interest was shown in Mexican Central Railway securities, "B" debenture stock and debentures, with the result that they close 3 and 2½ up. Insurance shares have been weak, with losses of 1½ in Commercial Union, 1 in Northern and ½ in Royal and several others. Alliance issues, however, were harder, as well as Union and London Assurance shares. In Tramways British Electric Traction ordinary shares dwindled steadily, and closed with a loss of a full £1. The making-up list shows gains of 4 in Bieckert's Brewery ordinary and 9 in Milwaukee and Chicago stock, against losses of 2 each in Allsopp 4½ and 3½ per cent. debenture stocks and 1½ in Watney, Combe preferred and debenture stocks. Hudson's Bays were 3¼ up, but Pekin Syndicate deferred fell 15 and the ordinary 1.

Mr. Shaw runs the danger of becoming the best-abused man in the Roosevelt Cabinet. Here were we buying everything this morning on the faith of his $26,000,000 generosity to distressed banks in the Union, and to-night the whole story is denied. Consols went up 3/16 and retained 2s. 6d. of the advance to the end; home railways were a few shillings better, foreigners firm; even Kaffirs seemed to harden, and as for United States copper and railway shares, for a little while this morning it seemed as if our professionals could not get enough of them. But the Yankees sold from the first on every opportunity, and to-night after business hours came the intimation that Washington knew nothing of Mr. Shaw's intention to re-

lease all these millions. This alters the whole outlook, and nobody need be surprised if we are all swearing like troopers to-morrow, unless, as is possible enough, the denial is itself denied. Conspicuous among the firm markets this afternoon were Hudson's Bay shares, Canadian Pacific Railway shares, and Russian bonds. These last were firm in Paris, and a considerable option business was done in them here, the more hopeful mood continuing to prevail on the faith of the Finance Minister's declarations. Kaffirs put a good face on with the rest, and then drew a veil over it, finishing sad.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: Irish Land Account ¼, to 87⅞-88⅛, do. (Scrip) ¼, to 62⅝-63¼, Transvaal Acct. ¼, to 98⅛-98⅜, Bank of Ireland 7½, to 310-320, India 3½ p.c. Acct. ¼, to 103-103¼.

CORPORATION STOCKS.—Rise: Metropolitan Water Board "A" 1, to 90-92. **Fall:** Richmond 1, to 84-86, Bristol 3½ p.c. 1, to 103-105, Manchester 1, to 121-123.

COLONIAL AND FOREIGN.—Fall: Cape Town 4 p.c. 1, to 101-103, Christiania 1, to 100-102, Rio de Janeiro 1, to 92-93, Rosario 6 p.c. Stg. Bds. 1, to 60-62, do. Funded 2, to 60-62, Santa Fé Issues 1, to 31-33.

COLONIAL GOVT. STOCKS.—Fall: Canada (Dominion of) 3½ p.c. Bds. ¼, to 100-102, do. 3 p.c. 1938 1, to 96-98, Sierra Leone 1½, to 101-103, British Columbia 1, to 84-86, Canada 3½ p.c. ½, to 100-102, do. 3 p.c. 1, to 96-98, Natal 3½ p.c. ½, to 96½-97½, do. 3½ p.c. 1934 ½, to 96½-97½, New South Wales 3½ p.c. 1918 1, to 97-99, Queensland 4 p.c. 1924 ½, to 105-106, do. 3½ p.c. ½, to 98-100, S. Australia 3½ p.c. 1, to 99-101, Tasmania 3½ p.c. ½, to 99-100, Victoria 3½ p.c. 1, to 98½-99½, do. 1923 1, to 98½-99½, do. 1929 ½, to 98½-99½.

FOREIGN GOVT. SECURITIES.—Rise: Argentine 1886 ¼, to 102-103, Chinese (1894) ½, to 101-102, Cuba ½, to 103-105, Greek Rentes ¼, to 41⅝-42¼, Hungarian ¼, to 94-95, Russian Ser. II. ¼, to 72-73, do. 4 p.c. (1894) 1, to 66-70, do. Scrip. ⅝, to 10⅛-10 dis, Spanish ¼, to 95⅝-96⅛, Uruguay 3½ p.c. Bonds 1⅛, to 69½-70½, Venezuela 3 p.c. ¼, to 48⅝-49½, German ½, to 86-87. **Fall:** Argentine 3½ p.c. 1889 ½, to 78½-79⅝, do. B.A. Water ½, to 100¾-110½, do. 4 p.c. 1897, 1898, 1899, and 1900 issues ½, to 89⅝-90¼, do. Port of B.A. 1, to 102-103, Bahia 1, to 92-93, Brazilian 1889 ½, to 87½-88½, do. West of Minas Rly. 1½, to 97-98, do. 1895 1, to 96-98, do. Funding ½, to 104-105, do. Guar. ⅝, to 85½-86½, do. Loan 1893 1, to 98-99, do Scrip 1, to 82⅝-83¼, Chilian 1, to 91-93, Chinese 1896 ¼, to 103½-104, Dutch Issues 1, to 91-93, Greek Funding 1, to 50-52, do. Rlys. Loan ¼, to 92¾-93¼, Guatemala ⅜, to 35-36, Honduras Issues ¼, to 10-10½, Japan 4 p.c. Loan ½, to 89-89½, do. 6 p.c. ¼, to 103-103½, do. 4½ p.c. ½, to 95¼-95⅝, do. 1905 ⅜, to 87¼-87⅝, Portuguese ¼, to 70½-71, Russian 1822 2, to 90-95, Sao Paulo 1, to 96-98, Siamese ½, to 100½-101½, Dutch Certs. 1, to 75-77, do. 3 p.c. 1½, to 89-91.

HOME RAILWAYS.—Rise: Barry 3, to 200-205, do. Def. 3, to 103-106, Caledonian Def. ⅛, to 1⅝-2⅛, Gt. Nthrn. "A" ¼, to 39-40, Vale of Glamorgan 1, to 101-103. **Fall:** Caledonian Pref. 1½, to 73½-74, East London ¼, to 3¼-4, Glas. and S.-W. Pref. ¼, to 62-63, do. Def. ⅜, to 38-39, Gt. N. of Scot. Pref. 2, to 68-71, do. Def. ⅜, to 23-25, Highland ½, to 42-45, Nth. Cornwall Pref. 1, to 90-93, Nth. London 1, to 87-92, Rhymney Def. 4 p.c. 1, to 89-94, Taff Vale ½, to 77-78, Waterloo and City 2, to 101-104.

Debentures.—Fall: Cambrian "A" 1, to 102-104, Gt. Wstn. 4 p.c. 1, to 121-123, Chatham, Arbtn. 4½ p.c. 1½, to 122-124, District 6 p.c. 1½, to 145-149, Nth. British 3 p.c. 1, to 89-91, Sth. Estrn. 4 p.c. 1, to 113-115, do. 3½ p.c. 2, to 100-102.

Guaranteed—Fall: Gt. Central 3½ p.c. Pref. 1, to 86-88, District 3 p.c. Cons. 1, to 74-76.

Preference.—Rise: Alexandria "B" ½, to 140-142, City and S. Lon. 5 p.c. 1, to 115-118. **Fall:** Furness 4 p.c. ½, to 105-108, Gt. Central, 1881, 1, to 123-125, do., 1889, 1, to 98-100, do., 1891, 1, to 87-89, Gt. Nthrn., 1896, 1, to 85-87, do., 1898, 1, to 84-86, Hull and Barnsley, 1899, 1, to 91-93. Lancs. and Yorks. 4 p.c., 1903, 1, to 113-115, Nth. Wstrn. p.c. 1, to 114-116, Sth Wstrn., 1881, 1, to 114-116, Brighton 2nd 5 p.c. 1, to 139-141, Chatham Arbtn. 4½ p.c. 1, to 87-89, District Extn. 5 p.c. 3½, to 57-61, Nth. British, 1875, 1, to 124-126, do. 1884, 1888, 1890, 1892, 1897, 1901, 1904, 1, to 115-117, Nth. Estrn. 4 p.c. 1, to 114-116, Sth. Estrn. Vested 1, to 110-112, do., 1900, 1, to 106-108, do. 3 p.c. 1, to 81-83.

INDIAN RAILWAYS.—Rise: Sivagunga Zemindary 5 p.c. Bds. 1, to 103-105. **Fall:** Barsi Sbrs. ½, to 11¼-12, do. 4 p.c. Construction ½, to 10½ 11, Bengal and N.W. ½, to 145-148, do. 2nd Pref. 1, to 104-106, Bengal-Nagpur Guar. ½, to 103-106, Delhi Umballa Guar. 3½ p.c. 1, to 149-151, E. Indian "C" ½, to 23⅜-24½, do. "B" ½, to 25-26, do. Guar. 4 p.c. 1, to 123-126, do. "D" ½, to 136-139, do. 3 p.c. Deb. ½, to 89-92, Gt. Indian Guar. 1, to 108-111, Madras 1, to 120-125, do. 4½ p.c. 1, to 112-118, do. 4½ p.c. 1, to 105-111, Scinde, Punjaub "B" ½, to 24½-25⅜, Sth. Behar 1, to 107-110, Sth. Ind. Guar. 3 p.c. 2, to 105-108, Sth. Mahratta 3½ p.c. ½, to 100-103, Nizam's State Stk. 1, to 120-122.

COLONIAL RAILWAYS.—Rise: Emu Bay Db. 1, to 96-98, Mashonaland 1st Dbs. ½, to 93-95. **Fall:** Alberta 2, to 86-89, Beira 4½ p.c. Db. 1, to 54-58, Calgary and Edmonton Db. 1, to 105-107, Canadian-Pacific Db. 1, to 110-112, G. Trunk Pac. 3 p.c. 1st Mt. ½, to 87-89, G. Trunk 1st Pref. ½, to 120-121, do. Gt. W. Db. 1, 130-132, Qu'appelle Long Lake 1, to 100-102, Quebec Cent. ½, to 11-12.

AMERICAN RAILWAYS.—Rise: Alabama N. Orleans ½, to 6½-7, do. Def. 1/16, to 1/16-⅛. **Fall:** Chicago Gt. Westn. ¼, to 18-18½, do. "B" 1, to 27-29, Erie 1st Pref. ½, to 79-80, do 2nd do. 1, to 72-73, Gt. Nthrn (U.S.A.) 3, to 341-344, Mexican Cent. 1, to 21-23, Missouri Kansas Pref. 4 p.c. ½, to 72-73, Wabash "B" Db. 2, to 81-83.

British and Mercantile ½, to 38-39, Northern Assur. 1, to 77-79, Royal ½, to 46½-47½.

IRON, COAL, AND STEEL.—Rise: Dundee 1/16, to ⅝-¾, Dunderland Pref. ¼, to 3½-4, Ebbw Vale (£10 paid) ⅛, to 8⅝-9⅜, Rhymney ⅛, to 2¼-2½, do. New ¼, to 2¼-2½, do. Deb. 1, to 102-104, Thornycroft Pref. 1/16, to ¼-⅜. **Fall:** Brown 1-32, to 1¼-1⅜, do. £1 paid 1/16, to 1⅛-1⅜, Dunderland Deb. 1, to 88-91, Hall Pref. ¼, to 4-4½, Harvey United 1-32, to 27-32—29-32, Measures 1-32, to 27-32—29-32, Moss Bay 1-32, to ⅝-11/16, Scott (Walter) 1/16, to ⅜-⅞, South Durham Deb. 1, to 89-92, Stephenson Pref. ¼, to 4¼-4⅜, United Collieries Debs. 1, to 42-47, Vickers 1-32, to 2 15-32—2 19-32, do. 2nd Deb. 1, to 103-105, Willans and Robinsoa Pref. ¼, to 2⅛-3.

SHIPPING.—Rise: Houlder Deb. 1, to 78-81, New Zealand ¼, to 5⅞-6⅛, P. and O. Def. 1, to 224-229, Royal Ord. Stock 1, to 51-53. **Fall:** Amazon ⅛, to 9⅛-10⅛, Bucknall Deb. 3, to 88-93.

TEA AND COFFEE.—Rise: Amalgamated Pref. ¼, to 6-6½, Consolidated 2nd Pref. ⅛, to 6-7.

TELEGRAPHS, &c.—Rise: Eastern Extension ⅛, to 14½-15, Natl. Telephone Pref. ⅛, to 109½-111½, do. 3½ p.c. Deb. ⅛, to 98½-100½. **Fall:** Anglo-American Pref. ⅛, to 113-114, do. Def. ⅛, to 23⅝-23¾, Gt. Northern 1½, to 36-38, Indo-European 1, to 59-61.

TRAMWAYS, &c.—Rise: British Columbia Def. 2, to 119-122, do. 1st Debs. ⅛, to 104-106, do. Vancouver Debs. 1, to 102-105. **Fall:** Anglo-Argentine (2nd issue) 1/16, to 6 15/16-7⅛, British Electric Traction 1, to 4½-5½, do. Pref. ½, to 8½-9½, Havana Electric 1, to 94-96, Sunderland 2, to 86-91.

WATERWORKS.—Fall: East London, Kent, Lambeth, New River "C" and "D" all 1, to 88-91, Southwark "B" and 1926-7 Staines 1, to 89-92, West Middlesex 1, to 88-91.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Atchison, Topeka and Santa Fe Railway.

An interesting preliminary report has been issued by Mr. Victor Morawetz, chairman of the executive committee of this company. It makes some comparisons with 10 years ago, from which we learn that the increase in the average mileage worked has been 47.85 per cent. in the decade, the total being now 9,527 miles. Gross earnings, however, have risen to $81,344,859 in the year ended June 30 last, which is more by 165.65 per cent., the earnings per mile having risen 79.96 per cent. within the same period of time. But the greatest increase is in nett earnings, which, at $30,777,922 for the past fiscal year, show an increase of 296.92 per cent., nett earnings in 1896-7 having been only $7,754,000. In that year there was no surplus at all after deducting taxes, rentals and fixed charges, whereas in the past year the surplus was $18,260,000, and this great improvement has been obtained with an increase of only 25.94 per cent. in the outstanding capital obligations of the company, which now amount to $491,684,330. The next dividend on the common stock will be fixed and declared next Wednesday, but Mr. Morawetz points out that the policy of the company has been to utilise large slices of the exhibited nett revenue in improving the property. For the last five years, including one year of extraordinary floods, which affected the nett earnings to at least 3 per cent. on the common stock, the nett income that might have been utilised to pay dividends thereon has averaged about 9 per cent. per annum. No such dividend has been paid. Betterments and improvements effected on the existing mileage, together with discount on bonds sold since the reorganisation of the company to June 30 last, have amounted to $43,061,000. During the same period the undivided surplus nett income, after paying all charges and dividends, aggregated $40,132,000 of which $20,146,000 has been charged off in various ways, leaving $19,985,000 at the credit of profit and loss on June 30 last. In the past year it appears that no less than $4,500,000 was charged to income on account of betterments and improvements. This we hope is the final allocation of the money, and that fresh capital will not in future be issued to recoup the company for its present wise economy. After making this provision, paying dividends on the preferred stock, and 4 per cent. on the common stock, besides setting aside $219,000 to the fuel reserve fund, the nett surplus of the year was still $3,227,000, bringing it up to the total above mentioned.

Missouri, Kansas, and Texas Railway.

In its year ended June 30 last this company earned gross $21,159,000 at a cost of $15,415,000 in working expenses. After adding a miscellaneous income of $409,000, there was $6,154,000 of free revenue, out of which $4,501,000 was swept away in bond interest and rentals, and after paying the half-year's dividend on the first preferred stock, the balance left was $1,393,000. The length of road remains at 3,043 miles, and the gross earnings per mile went up by $367 to $6,953 per mile, the nett being larger by $211 per mile or $1,888. Expenses came to 73 per cent. of the gross receipts compared with 75 per cent. the year before. During the 12 months the nett addition of $9,719,000 was made to the debt of the company, the gross issue of new obligations being $13,721,000, from which there has to be deducted $4,002,000 of equipment notes and other floating obligations outstanding and now mostly paid off. The result of this operation has released the company from its floating debt and enabled the directors to declare that dividend at the rate of 2 per cent. on the first preferred stock. The country served by the line is said to be filling up rapidly, and new industries are developing, so that the chairman of the board, Mr. Adrien Joline, in his report, speaks with the customary hopefulness of the future. Here likewise a great deal has to be done to bring the line into proper condition by widening embankments, cutting ditches, ballasting, and so on. The rails on the road also ap-

peared to be light for the most part, but last year about 85½ miles were re-laid with 85 lb. rails, and considerable amounts of fencing were put up.

NEW YORK, ONTARIO AND WESTERN RAILWAY.

This dairyman's road into New York did well enough last year and succeeded in selling $2,000,000 of general mortgage bonds. It also paid a dividend of 2 per cent. upon the common stock, or an increase of ½ per cent. on the distribution of the previous year. Gross earnings rose by nearly 2½ per cent. and working expenses by 3.42 per cent., so that after deducting taxes there was a decrease of 0.41 per cent. in the nett income. It nevertheless amounted to $1,188,000, after deducting fixed charges and rentals, a decrease of $94,000 or 7.32 per cent. The milk traffic is the most remarkable in its increase, and there were also important gains in the passenger traffic, but the freight mileage decreased owing to the strike in the mining district served by the company which lasted from April 1 to May 14. All is now going well, and the current year's business promises to show a substantial improvement if nothing untoward happens. The length of line worked is 546 miles, a decrease of 2 on the previous year, and of this road about 36½ miles are laid with 95 lb. steel rails, but the greater portion of the main line is still shod with 75 and 76 lb. rails, and nearly 100 miles are laid with rails of between 67 and 50 lbs. weight, so the company has much to do yet before it can be up to the standard of modern requirements.

CHICAGO GREAT WESTERN RAILWAY.

This company's earnings improved a little last year to $8,573,000. Working expenses also went up slightly to $6,034,000 or 67.86 per cent. of the gross receipts against 69.44 in the previous year and as much as 73.59 in 1903-4. After deducting rentals and interest paid, there was a balance of $1,740,000, or including the surplus of $213,000 brought forward, $1,953,000, but after paying the 4 per cent. debenture stock interest and 2½ per cent. on the "A" preference stock, the balance is only $625,000. Even so progress would appear to be made by this rather unfortunate concern, and in his detailed report President Stickney shows that gross earnings went up 16.20 per cent., as against an increase of only 13.55 per cent. in working expenses, giving an increase of 22.22 per cent. therefore in the nett earnings. Freight income rose by 17.60 per cent., and the passenger income by 9 per cent., miscellaneous earnings being fully 52 per cent. up. We are not sure, however, that the reduction in the expenses per mile indicates true economy, but the company is undoubtedly spreading itself and laying hold of new sources of business, for though its own mileage has been reduced to 818, it controls 378 miles of the Mason City and 271 miles of the Minnesota and Pacific Railroad, working therefore in all 1,467 miles, whose gross earnings last fiscal year came to $11,148,000, obtained at an expenditure of $9,519,000, leaving $1,629,000 as nett income, of which less than $36,000 was furnished by the Wisconsin road. There is therefore a long way to travel yet before the Chicago Great Western becomes a prosperous company.

BUENOS AYRES WESTERN RAILWAY.

In its year ended June 30 last this company's earnings were the greatest in its history, amounting to £1,780,462 or £266,356 more than in the previous fiscal year. This is equal to an increase of 17.59 per cent. Working expenses, however, went up at a still greater ratio by £209,000 to £940,553, so that the percentage of expenses to receipts rose from 48.33 per cent. in 1904-5 to 52.83 per cent. last year. The nett revenue was, therefore, only £57,496 or 7.35 per cent. more, but, including the balance brought forward, £50,987, and sundry small items of income, its aggregate is £900,978, and the directors are accordingly able to pay a final dividend of 4 per cent. on the ordinary stock, making 7 per cent. for the year, tax free, leaving £103,459 to be carried forward, or more than twice the amount brought in. Not only so, but they have transferred £100,000 to the general reserve fund, £45,000 to the permanent way renewal fund, £10,000 to the staff pension fund and £5,000 to the benevolent fund. Passenger receipts showed an increase of £80,079 or 24.81 per cent., and there was also an increase of £13,755 or 19.3 per cent. in the income from luggage and parcels, of £21,959 or 17.49 per cent. from animals carried, and of £140,878 or 14.74 per cent. from general goods traffic. Expenses went up as the general manager's report shows, principally through an increase of salaries and wages, which increased by £93,157. Coal also cost £29,941 more, and the item general stores and materials increased £46,347. Wages have had to be raised, and the company has had to run more train mileage in order to cope with its business. Because of the increased mileage run the receipts per train mile fell to 11s. 9d. against 12s. 0¾d. in the previous year, while the cost of working has risen to 6s. 2½d. per mile against 5s. 10d. But there can be no doubt about the flourishing condition of the property, and as little of the desirability of that extension which is expected to serve the public through the proposed underground extension into the city of Buenos Ayres from Once station to Molon, a distance of 12½ miles. This will be a costly work, and accordingly the directors propose at the forthcoming general meeting to get power to increase the capital of the company by £3,000,000 to £16,000,000. There is a great deal of work being carried out on various parts of the line for the purpose of improving its efficiency, and proprietors will never object to such expenditure so long as the traffic continues to develop in the manner these accounts show. Last year the capital expenditure is shown in an appended account, Abstract "A.A.," to have amounted to £893,623 on the main line and rolling stock, but the aggregate increase in the capital outlay was £1,360,000, bringing the total at the end of the financial year up to £14,668,694. Of the year's capital expenditure on the main line no less than £270,806 was laid out on land bought and another £72,432 was spent on new sidings and modifications of existing sidings. New stations and improvements to old ones together absorbed over £98,000. No less than 550,763 head of cattle and 4,853,652 sheep were carried during the year, but there was not much increase in the carriage of maize or wool. Of wheat, however, the increase was nearly 70,000 tons at 775,189 tons. The board speak highly of the retiring general manager, Mr. David Simson, and announce that Mr. A. F. Lertora, the traffic superintendent, who has been for thirty years in the railway's service, has been appointed to succeed him.

BUENOS AYRES AND ROSARIO RAILWAY CO., LIMITED.

A very satisfactory story is told in the interim report for the half-year ended June 30 issued by this company, and one which affords substantial proof of the prosperity enjoyed by the Argentine Republic. With an additional 14 miles of line worked the number of passengers increased by 1,130,599, and although the average receipts per passenger were the same at 1s. 10¾d., the receipts from this source rose by £107,528 to £548,908. The goods traffic, too, showed decided improvement, and in spite of a decrease of 60,025 tons in the quantity of linseed carried, the total weight was 524,792 tons larger, and the receipts rose by £204,250 to £1,499,232, while with a reduction of 63,759 in the number of animals carried, due entirely to sheep, the income from live stock traffic came to £10,942 more. Miscellaneous receipts yielded an extra £5,948, so that the gross income from all sources was £340,161 up at £2,319,573. Of this working expenses took £1,233,191, or £240,497 more, the ratio to receipts being 53.16 per cent. against 50.15 per cent. for the corresponding half of 1905, leaving a nett revenue of £1,086,382 compared with £986,718. Adding £14,019 from interest on investments, &c., the disposable balance was £1,100,401, of which debenture stock interest and the Western annuity, &c., required £203,657, and after paying the interim dividends at the fixed rates of 7 per cent. on the preference shares and stock and 5 per cent. on the consolidated ordinary stock, a sum of £345,645, including £30,850 from the previous account, was carried forward. With regard to the outlook the president of the local committee, writing on August 24, seemed very hopeful. Some districts suffered from drought in the early part of the year, but the situation has improved since the general rains, and he does not anticipate any appreciable falling off in the company's traffic. The sugar crop was injured by severe frosts in the Province of Tucuman in June and July, but the tonnage to be carried is expected to be at least equal to last year's. If full advantage is to be taken of the prosperous times it is necessary that labour should be plentiful, and on this point the president states that the number of immigrants arriving in the country during the first half of the current year was very satisfactory, amounting to 91,000. During the same period about 37,000 left leaving a balance of some 54,000 in favour of the country, yet notwithstanding this large influx there is still a shortage of hands for gathering the crops.

ENTRE RIOS RAILWAYS CO., LIMITED.

The gross receipts of this railway for the year ended June 30 last show an increase of £9,609 or 5.07 per cent. at £199,088. Working expenses rose by about £12,723 to £119,160, or to 59.85 per cent. of the receipts against 56.17 per cent. Nett receipts accordingly show a decrease of £3,114 at £79,928, the increase in expenses being due in this case also chiefly to the greater cost of labour. During the year, as mentioned in the intermediate report, $250,000 of 5 per cent. bonds of the Province of Entre Rios, being the first instalment of the total promised subvention of $1,000,000, came to hand and $237,100 were sold for £17,211, and used to pay interest on the 4 per cent. debenture stock during the construction of extensions. All descriptions of traffic except second-class passenger and live stock went up, but the increases were seldom of great importance, and the company had to work harder to earn its money, hence partly the increase of £3,184 in the outlay on permanent way and works, and of upwards of £2,500 in the cost of carriage and wagon maintenance. The entire cost of maintenance per mile of track and sidings went up per mile £68 14s. 3d. The general manager, in his report, says that the promise of the beginning of the year was not fulfilled because inclement weather seriously injured the wheat crop and even the linseed crop. This was somewhat compensated for by fine prices, and there was no general impoverishment. Extensions are being pushed on and during the year under review the capital expenditure was £113,942, making the total to date £4,742,944.

STANDARD BANK OF SOUTH AFRICA, LIMITED.

Opportunities of doing a successful business on a large scale in South Africa have almost entirely disappeared, and under the circumstances a decrease of no more than £6,924 to £425,289 in the gross profits of this bank for the six months ended June 30 must be regarded as satisfactory. Some compensation for the falling off in revenue was afforded by a reduction of £4,030 at £237,841 in expenses, and with £4,726 more at £37,800 brought forward the nett balance after allowing £48,854 for rebate on bills was actually £2,873 larger at £176,402. Out of this the dividend at the reduced rate of 16 per cent. paid a year ago is repeated and £13,000 is again transferred to officers' pension fund, leaving £39,520 to be carried forward. The reserve, of course, has still to be ignored, but as that fund already stands at £1,997,050 against a paid-up capital of £1,548,525, there is no urgent need of its being augmented. A good indication of the state of trade in the South African colonies is given by the current and deposit accounts which show a further shrinkage of nearly £2,000,000 at £19,904,783. Notes in circulation, too,

are £13,797 down at £1,063,852, and bills for collection on account of customers, which figure on both sides of the account, have fallen by £65,012 to £2,911,677, but drafts outstanding and acceptances under credits are £35,783 larger at £1,312,752. On the credit side of the balance-sheet cash and remittances in transit rose by £67,221 and £132,199 to £4,526,793 and £681,236 respectively, and in addition £27,128 was held in native gold. Bills discounted and advances to customers were £723,826 higher at £11,224,091, and bills of exchange purchased dropped £49,381 to £4,443,072. The principal result, however, of the diminished resources of the bank is to be found in the amount of the loans on securities at short notice, which have been reduced from £3,391,953 to the comparatively small figure of £571,234.

Bank of Australasia.

A moderate recovery of £4,751 to £290,129 took place in the profits for the half-year ended April 16, but a large proportion of this was swallowed up by the increase of £3,109 to £152,334 in expenses, and with £17,555 or £604 more brought in the nett balance was only £2,246 up at £155,350. Of this £30,000 is, as usual, put to reserve, making it £1,310,000 against the paid-up capital of £1,600,000, but an extra £2,000 at £12,000 is written off bank premises, and after paying the customary dividend of £2 8s. per share, or at the rate of 12 per cent. per annum, £246 is added to the balance forward, raising it to £17,350. Deposits have gone up by £677,951 to £16,964,281, notes in circulation are £48,511 higher at £543,748, and bills payable and other liabilities have increased by £522,730 to £2,924,503. Against these specie, bullion and cash balances come to £529,967 more at £3,489,964, loans at call and short notice, presumably in the London market, are £335,344 larger at £3,028,344, and bills receivable, &c., £428,125 up at £15,484,095. Investments in British Government securities are unaltered at £967,141, but the holding of Indian and Colonial stocks is £30,085 up at £175,679. Bank premises, after deducting the amount now written off, will stand at £258,659, a figure which seems moderate enough.

Colonial Bank.

Things seem to have changed a little for the better in the West Indies during the past half-year, and the directors' report for the six months to June 30 is rather less doleful reading than usual. The outturn of sugar, it is true, was only moderate, but that was only what was expected, and the decrease in shipments both of sugar and cocoa have been to some extent counterbalanced by a material improvement in prices. Very little reference is made to the growing of cotton which was expected to do so much to rehabilitate the fortunes of the Islands, and although it is said that the cultivation continues to extend, we suspect that the progress made has not yet reached a point for jubilation. The banana crop in Jamaica, however, seems to have been both large and profitable, and something is also being done in the way of tobacco growing in that island which seems to indicate that the people have at last realised that they must rely on their own efforts rather than on any outside help to improve their condition. The result of the half-year's working of the bank was so far satisfactory that gross profits rose by £5,069 to £57,095 at the cost of an increase of no more than £470 to £34,265 in expenses. With a slightly larger balance of £22,839 brought forward, the nett profits were £4,669 up at £45,669, and the directors therefore again pay a dividend at the rate of 7 per cent. per annum, and raise the carry forward to £24,669. Nothing has been added to general reserve for some years, and it remains at £100,000 against a paid-up capital of £600,000, while the special reserve for depreciation of investments also stands at the old figure of £50,000. Current and deposit accounts have fallen off by £46,241 to £1,970,666, and bills payable and other liabilities are also slightly lower at £742,803, but notes in circulation are £4,279 up at £443,955. On the other hand, specie is £25,641 down at £441,280, and investments have been reduced by £65,159 to £981,362 against an increase in cash at London bankers, and call and notice loans of £157,802 to £360,630. Bills receivable, &c., come to £66,132 more at £1,149,651, but bills discounted in the colonies, bills in transit, &c., show a reduction of £66,398 at £744,242, and advances in the colonies are £4,431 lower at £225,927.

Sir W. G. Armstrong, Whitworth, and Co.

An excellent business was done by this company in its year ended June 30 last, the result of which, including £84,034 brought forward, was a nett profit of £607,186. This enables the board to make up the usual dividend on the ordinary shares to 15 per cent. per annum, or 3s. per share, and that together with the dividends on the 4 per cent. preference shares absorbs £503,317, leaving £103,869 to be carried forward, or nearly £20,000 more than was brought in. Besides this £100,000 has been placed to the credit of the fund for the renewal of plant and £40,000 to fire insurance. The actual gross profit of the year rose by £120,595 to £652,640. There was also an increase of £1,080 in the interest received on investments, which interest amounts to over 5½ per cent. on the £660,640 in this way sunk. Depreciation has been allowed for to the extent of £170,203, which is £5,303 less than the amount assigned a year back. Some of the credit items in the balance-sheet look formidable, but that £1,113,474 should be due by debtors is probably a necessary condition of the business carried on. Such a pile of debt, however, when added to £969,690 set against work in progress, stock, materials, stores, &c., implies that the company has to depend very largely upon credit in its current business. Such credit, however, is not obtained by means of current loans from bankers. There is a reserve of £700,000 besides £152,335 set aside as provision for the renewal of plant and £100,000 to the credit of the fire insurance, in addition to the £1,500,000 of 4 per cent. mortgage debentures all utilised in the business. Besides this creditors on current account are owed £533,630, but when the total of the balance-sheet, £7,956,706, is taken into account, this is not so excessive looking an incubus. The directors state that the company has acquired an interest in the undertaking of Messrs. Whitehead and Co., Limited, torpedo manufacturers, and that the balance of the authorised £1,000,000 in 4 per cent. preference shares, amounting to £615,150, was more than fully applied for by existing shareholders when offered to them in March last. The directors add that they have decided to close the company's financial year in future on December 31, so that a report and balance-sheet for the second half of the current year will be issued in order to enable this change to be carried out.

Manchester Liners, Limited.

Judged by earnings, the financial year ended June 30 was the best this company has experienced since 1902. This was accomplished despite the fact that after a brief improvement in freights at the opening of the year business during the remainder of the period was exceedingly depressed. At any rate, the directors lay strong emphasis upon this untoward state of things. Nevertheless some good fortune attended their efforts, with the result that the trading income advanced from £15,515 to £38,179, the total revenue being raised to £38,189 with nearly £10 from transfer fees. Debenture interest required about £550 less at £10,676 and debenture trustees and directors' fees were £250 lower at £1,350, so after providing £858 for writing down debenture issue expenses and £158 for depreciation on office furniture, the nett profit is £26,430 compared with £1,692, including the balance of £1,284 brought in. After neglecting depreciation for two years the directors now admit it to be judicious to make provision for wastage, so propose to take £25,000 out of the profits and carry forward £1,430. This, however, must be regarded as totally insufficient, for the book value of the steamships during the year has increased by nearly £450 to £777,055, and there is no reserve fund beyond £4,148 on account of debentures. Liabilities, however, have been slightly reduced, bills payable from £119,249 to £83,549, against an increase of £33,228 in the amount due to sundry creditors to a total of £57,604. On the other side, sundry debtors are down for £32,923 and cash is only £11,299. Thus the financial position of the company is still deplorable, and if adequate depreciation is to be provided in future years there is little promise of early dividends. The directors are full of hope, however, for notwithstanding the prevailing depression in the freight market they can see encouraging signs owing to special employment arranged for a portion of the fleet, combined with good American and Canadian crop prospects. Two vessels, it may be recalled, have been chartered by the Anglo-Argentine Shipping Company, which was floated in June last.

Santa Fe and Cordova Great Southern Land Co., Limited.

Severe frosts in October and November affected the growing crops and reduced the quantity of wheat below expectations, and a serious drought which commenced in March and lasted to the end of the financial year seemed likely to give cause for anxiety. The company, however, appears to be excellently placed to contend against such drawbacks, mainly through its policy of planting alfalfa on a large scale, which gave it an ample supply of good hay, and it is also fortunate in the possession of an abundant supply of excellent water. Profits on working the estancia for the year ended June 30 were consequently £4,415 larger at £19,643, while sales of land to the extent of $217,370 paper yielded a profit of £8,327 compared with £3,674, and although interest receipts were £968 smaller at £1,666, the total income including £61 from transfer fees showed an increase of £8,149 at £29,697. The nett balance after meeting all charges in Argentina and London was £7,760 up at £24,845, and with £1,585 more at £11,927 brought forward, the directors had £36,772 to deal with against £27,427. Out of this the dividend is again raised to 10 per cent., compared with 7½ per cent. in 1904-5, and 6 per cent. in the preceding year, the amount placed to reserve is doubled at £16,000, and £845 is added to the sum carried forward, making it £12,772. During the year the colonists delivered four more leagues sown with their due proportion of alfalfa, and three leagues were sown in July and August which will be handed over in March next. This will give about 67,000 acres in fine grasses, necessitating a great addition to the live stock in the near future, and the directors announce their intention of buying about 12,000 head as occasion offers, the cost of which and of other capital expenditure for a long time to come will be met out of the issue of £50,000 5 per cent. debentures in August last and the allocations to reserve. The value of the estancia has been further written up by £26,305 to £172,249, owing, no doubt, to the increase in the area under cultivation, and against this the reserve now stands at £20,000. Liabilities to sundry creditors have risen by £16,516 to £21,553, while on the other hand there is no more than £2,593 to come in from sundry debtors, and cash is £16,145 down at £723, but mortgage loans and investments stand at £32,550, or an increase of £28,541.

Denver United Breweries, Limited.

Sales of beer during the year ended June 30 rose by 7,548 barrels against a decrease of 6,276 barrels in the previous 12 months, but the improvement has not apparently been a lasting one, as the sales in July and August show a falling off of 562 barrels. In any case the larger business done has not been reflected in a corresponding increase in earnings, as owing to a trifling increase in manufacturing costs accompanied by a slight reduction in the average selling price, the gross profits in

Denver were only £1,265 up at £53,708. Interest, rent, and transfer fees produced £57 more at £1,140, giving a total of £54,848 compared with £53,526, out of which Denver expenses, including £7,585 or £312 more for bad debts and reserve on book debts, took £16,040, and after meeting London expenses and other charges and writing off an extra £1,352 at £8,617 for depreciations, the nett profits were actually £29 lower at £27,755. To this was added £2,606 brought in, giving a total of £30,361 against £30,276, and as debenture interest required £72 less at £11,598, the directors, although they do not see their way to wipe out any of the six months' arrears outstanding, manage to repeat last year's payment of one year's dividend on the preference shares and add £157 to the carry forward, making it £2,763. Although according to the profit and loss account £6,323 was allowed for depreciation on buildings, plant, machinery, &c., this item has risen by £4,831 to £536,440, and in addition, barrels, kegs, tools, &c., are valued at £15,378 after deducting £2,295 written off, and against these the reserve remains at no more than £20,000, all of which is employed in the business as working capital. Sundry creditors and bills payable are £7,142 up, but still look moderate enough at £26,341, and as book debts, bills receivable, and loans to customers amount to £68,767 or a decrease of £1,971, while a reduction of £5,240 to £25,620 in stocks is offset by an increase of £8,997 to £19,023 in cash, the position would look comfortable enough were it not for the very heavy provision for losses by bad debts considered necessary each year.

ANGLO-BRITISH COLUMBIA PACKING CO., LIMITED.

The salmon packing industry seems to be a most uncertain one in its returns, and this company's career since its incorporation in 1891 has been decidedly chequered. For the first year of its existence it paid 5 per cent. on the ordinary shares, but this was followed by such a drop in profits that in the succeeding year only half the preference dividend could be paid. As some compensation the ordinary dividends for the next three years were at the rate of 10 per cent. per annum, and after another lapse to the conditions of 1893 there was a series of distributions consisting of a 15 per cent., two 10 per cents., an 8 per cent. and a 10 per cent. Then, however, came a run of most decided ill-luck, and the last distribution of profits was in 1903, when the preference dividend was met. Another turn in the wheel of fortune brings the company once more to prosperity, and for the 12 months ended June 30 it is able to show a profit of no less than £71,002 after wiping out the debit balance of £1,175 brought forward. Of this it is deemed advisable to write off £15,000 for depreciation and to set aside £3,500 for income-tax, and after paying up all arrears of preference dividend to date the ordinary shares receive a dividend of 12 per cent. and a bonus of a similar amount, making a total distribution of 24 per cent. Even after this handsome return is made the sum to be carried forward is no less than £28,502, and the directors explain their caution in retaining so large a balance by stating that the pack for the present season proves to be a small and expensive one on which only a moderate profit can be expected, and that this will be followed by two more "off" years. Under these circumstances they are undoubtedly acting prudently in holding so much in hand. In addition to writing off £15,000 out of revenue, the item of capital expenditure is reduced by £1,245 from sales of land, boats, &c., and now stands at £59,630, while stocks are valued at £38,287 against a paid up capital of £100,000. Liabilities to sundry creditors are moderate at £13,410, bills payable come to £2,831, and £13,567 has been borrowed against securities. On the other hand, sundry debtors owe £76,740 and cash comes to £2,534. An investment of £3,066 in the Automatic Can Company of British Columbia (in liquidation), was written off out of revenue before arriving at the nett profits shown above, and if the debts due to the company are all good the balance-sheet indicates a sound position.

RAGLAN CYCLE AND ANTI-FRICTION BALL CO., LIMITED.

The drastic writing down of the capital in 1904-5 left this company in good shape for taking advantage of the improvement in the cycle trade and the results are apparent in the report just issued. For the year ended August 4 the trading profits, including £9 from transfer fees, were £3,003 up at £6,954, and after providing £793 or £22 more for depreciation and meeting debenture interest, directors' fees and income-tax, £4,029 was left compared with £1,107 a year ago. Adding £858 from the previous account the total available for distribution was £4,887, out of which a dividend at the rate of 5 per cent. per annum is paid, £2,057 is put to general reserve, raising that fund to £3,000, and after giving the managers bonuses amounting to £262, a balance of £668 is carried forward. During the 12 months a little further progress was made with the reduction of the debenture debt, bringing the amount outstanding down to £38,400. Liabilities to sundry creditors have only risen by £470 to £3,244 against which sundry debtors owe £4,736 more at £28,134, stocks are £1,133 up at £16,690, and bills receivable show an increase of £1,532 at £7,830, but cash has fallen by £5,318 to £10,521. A small addition of £126 to £13,202 in freehold land and buildings is accompanied by increases of £925 to £10,348 in fixed plant and £892 to £3,414 in loose tools.

Mr. Owen Philipps, M.P., the chairman of the Royal Mail Steam Packet Company, left Buenos Ayres per R.M.S.P. *Amazon* on September 21, and is due at Southampton on October 13 next.

The Union of London and Smiths Bank will open a branch on October 1 at High-street, Kensington (corner of Campden Hill-road).

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

Another dull week opened with the carry-over in the mining market. Owing to dearer money, for the speculative account was not enlarged, contangos were in several instances just a trifle harder than at the mid-monthly settlement, but in some they were a little easier. Gold Fields were again continued at 4-5 per cent., East Rands at only 2-4 per cent., Rand Mines and Randfonteins at 5-6 per cent., and Modderfonteins at 6-7 per cent., whilst the rate on the great bulk of shares was 6½-7½ per cent., compared with 6-7 per cent. In the diamond section De Beers and Jagers were again carried over at 4-5 per cent., and Premiers at 5-7 per cent. The majority of Rhodesian shares were done at 6-7 per cent.; on Tanganyikas the contango was much easier at 6-8 per cent., whilst on Chartered it was about 5 per cent. There were no changes in the West African and Egyptian charges of 6-7 per cent. and 6-8 per cent. respectively. As usual, rates on West Australians were irregular. There were givers of 7 per cent. on Associated, Northern Blocks, Great Boulders, Cosmopolitans, Ivanhoes, Lake Views, and Boulder Perseverance, but Great Fingalls were arranged at 4-6 per cent. against 5-7 per cent., Sons of Gwalia at "even"-2 per cent. and Oroya-Brownhills at 5-7 per cent. On Golden Horseshoes 3-5 per cent. was charged at the opening, but later in the day it hardened to 4-6 per cent. In other sections 6-8 per cent. was the general figure.

The declines on the fortnight were not so heavy as at one time they promised to be. Amongst South Africans Tanganyikas fell 5/8, South African Gold Mines ½, Modderfonteins 7/8, Apex ⅜, Gold Fields and Welgedachts ¾ each, H. E. Proprietary 9-32, Zambesia Exploring 1/8, with several losses from ⅛ to ¼. The principal gains were ⅝ in De Beers deferred and ¼ in the preferred. Premier deferred were likewise ¼ better, and Jagers deferred ⅛ higher, but elsewhere there was no gain worth mentioning. Jungle shares hardly moved during the whole fortnight, and West Australian charges were quite insignificant. On the other hand, the leading copper shares were quite strong, Rio Tintos moving up 2⅛, Anacondas ⅝, and Cape Coppers ⅛.

In these first days of the new account prices have continued to slide downwards. Business is at a standstill, and practically every day something is lost, even if it be no more than 1s. 3d. Gamblers are helpless, what with the indifference of the public and the dearness of money, and altogether the South African market is dreary. There is nothing to say about it, nor about the Rhodesian section, where conditions are identical. Bankets and Tanganyikas are falling with the rest, for the speculators have had a good feed, and are awaiting their chances for the next.

De Beers have been firm on market expectations of a higher dividend than the 10s. paid on the deferred for the past four half-years. It is not clear upon what grounds these estimates are based.

West Africans and Egyptians are as drowsy as ever, and there is scarcely more vigour manifested by West Australians. Now and then a fall or a trifling rise relieves the stagnation, and that is all, for the public are doing nothing and insiders merely look on.

The strongest market of all has been the copper. Here Rio Tintos have advanced rapidly on the steady improvement in the price of the metal, helped by London and Paris buying, but even they reacted a little over the disappointing Anaconda dividend. In the last week or two rumours have been industriously circulated that a greatly increased dividend would be declared by that company's board for the past quarter, and the gamblers put up the price on the strength of it. Instead, however, of it being $2 it is $1½, at the rate of $6, or 24 per cent. per annum, so the price promptly fell.

Indians are better, especially Mysores, which have justly risen on the latest encouraging news from the mine. This has helped other Indian shares, though only slightly. Esperanzas and El Oros, amongst Mexicans, are steady, and Le Rois are fairly good in the British Columbian group.

ANGLO-FRENCH LAND COMPANY OF THE TRANSVAAL.—This company is still stagnating, very little work of any kind, especially of a remunerative sort, being done in the financial year ending May 31. The directors have had orders from individuals to develop the agricultural possibilities of some of the farms, but they were such as could not be entertained. An option to prospect for gold, held jointly with the New Gold Venture Syndicate, over one of the farms has been allowed to lapse, prospecting operations not having disclosed anything sufficiently encouraging to warrant the directors in spending more money on them. The income from interest, rents, &c., totalled £622, and credit is taken for £200 undrawn committee fees provided in the preceding year's accounts. Expenditure amounted to £1,413, so there is a further loss of £591 to be added to the old deficit, raising it to the considerable sum of £12,998. There is still £14,014 in cash, which may enable the company, with thrift, to exist for some years longer; meanwhile it is impossible to see whence profits are to come. Probably Sir George Farrar himself would admit that prospects look dismal.

KLEINFONTEIN DEEP.—Shaft sinking, it appears, was hindered in the past year by labour difficulties, a distressing state of affairs, but the directors are now cherishing the hope that the work will proceed uninterruptedly till the reef series are intersected. At the annual meeting of the company the chairman,

after discussing the position and detailing the work carried out, delivered himself of this moving peroration:—"The financial position is before you, and we hope that the available cash will bring us not only down to the reef in the main shaft, but also permit of our being able to open up on the reef to some extent before the question of the provision of further funds has to be taken into consideration, by which time we hope that the financial hysterics and the economic uncertainty at present hanging over rational mining enterprise on these fields will be lifted." The accounts cover a period of two years up to April 30, so the directors have been in no hysterical hurry to give rational shareholders due enlightenment on the uncertainty overhanging this slowgoing mining enterprise. General expenditure in the two years came to £13,812, the only revenue being the paltry sum of £75 from brokerage, leaving a nett deficit of £25,051, inclusive of that brought forward, now appearing in the balance-sheet. Debtors exceed creditors, and cash is £1,191, but 5s. 6d. per share is still uncalled on 200,000 working capital shares.

Barrett Gold Mining Company.—It is very seldom shareholders in this South African company receive any pleasant news, but the directors are now in a position to tell them that the whole of the adverse balance in the accounts, originally amounting to £15,560, has now been replaced, and is held in the form of first-class investments and cash, so the company is able once more to set aside its profits for division. This struggling company has been in existence 21 years, and during this long period has paid but two small dividends—of 10 per cent. in 1897-98 and 7½ per cent. in the following year on the 10s. shares. Twice has it been reconstructed. Maybe the corner to better fortune has been turned at last, but that remains to be seen.

Sheba Gold Mining Company.—After waiting a long time for signs of an improvement in the affairs of this company, these are now actually visible to shareholders, and even give some promise of a resumption of dividends. This is due largely to the better quality of the ore, the average assay of that sent to the mill from the various workings advancing from 6.59 dwts. per ton to 12 dwts. The total output of gold from all sources was 37,506 ozs. of a value of £147,866, other credits making up the total income to £156,475. As expenditure came to £118,037 the nett profit was £38,438, which enables the directors to wipe out the whole of the previous year's debit and carry forward a credit balance of £23,242. But no allowance is made for depreciation, the directors pleading that there is no necessity for this "as the several plants and machinery already stand at a very low valuation, and everything has been kept up to a good state of efficiency." Current liabilities look heavy at £55,762, but cash is as high as £74,565, and there is gold in transit worth £26,900, so the financial position looks quite comfortable.

Hainault Gold Mine.—A substantial improvement is shown in this company's results for the financial year ending May 31, in which period 54,242 tons of ore were milled for a return of 21,292 ozs. of fine gold. It is gratifying to learn that the treatment costs were reduced by 1s. 6d. per ton. After writing off £14,882 for development and depreciation, the balance at the credit of profit and loss account is £21,180, compared with £9,832, and adding £12,396 from the previous accounts the directors find themselves in possession of a disposable surplus of £33,576, a most unusual experience. So they paid three dividends of 1s. each during the year, making 15 per cent. against 10 per cent. in 1904-05. Since the closing of the books they have declared another 1s. per share, supplemented by a second of like amount this week. It is not clear from the report which of these, if any, is for the past financial year, or for the current year. What alone is clear and beyond doubt is the advance in the profits. As a large amount of development work was done the ore reserves have been substantially increased, and are estimated by the general manager at 241,000 tons of a value of 31s. per ton, which compares with 205,000 tons worth 36s. a year ago. There is not in this very much to boast about. The quantity should be able to keep the mill going for over four years. Such increase in the ore exposed has made it desirable, in the opinion of the directors, to equip the mine with plant capable of treating 7,000 tons of ore per month, at a cost of approximately £20,000. To provide this sum the capital of the company was increased in August from £130,000 to £150,000, the 20,000 extra shares being offered at £1 8s. 6d. The report says the issue was largely over-subscribed.

Great Boulder Perseverance Gold Mining Company.—The directors have declared an interim dividend for the year 1906 of 6d. per share, which compares with a similar distribution a year ago. Accompanying the announcement is a circular giving an estimate of the ore reserves at the end of June. These show a further decline in the grade of the ore, the quantity being 301,329 tons of an average value of 9 dwts. 3 grs. per ton against 336,373 tons with 10 dwts. 4 grs. at the end of December. In addition there were 185,349 tons of probable ore in reserve upon which an approximate value of 6 dwts. per ton has been placed against 140,446 tons and 6 dwts. on hand at December 31. Consequently, as 78,653 tons were treated during the six months 88,512 tons were developed and added to the positive and probable ore reserves in that period. The decline in value is attributed by the manager to an unexpected falling off in the value of the stopes at the 1,180 ft. level of the Perseverance lode, so the directors think there is no sufficient cause or justification for the disquietude aroused in the minds of some shareholders by the fall in the price of the shares. We cannot share this opinion; we think there is justifiable cause in the lower value of the ore, for this makes a material difference on the colossal capital of £1,400,000, mostly water. Probably it is not forgotten that this was one of the companies which were the subjects of an inquiry by a Royal West Australian Commission last year.

Mount Lyell Blocks.—The improvement which occurred in the latter half of 1905 was maintained in the first half of the current year, despite such untoward events as a drought followed by a heavy flood. In all, 32,275 tons of crude ore were treated, returning 367 tons of fine copper, the value of the ore being 1.70 per cent. and the extraction 66.6 per cent., the latter comparing with 68.52 per cent. in the previous half-year. Income from concentrates, &c., totalled £28,913, the working profit was £11,171, interest gave £30, and the net profit was £10,796, after deducting administration expenditure. Adding £5,419 brought in, the disposable balance was £15,675, out of which the directors paid a dividend of 6d. per share in June last. The average price of copper for the half-year was £81 0s. 5d. per ton.

Pekin Syndicate.—It appears that shareholders in the Pekin Syndicate have been somewhat alarmed over the recent decline in the price of the shares, and in order, if possible, to allay their fears the directors have promptly issued a circular giving a few particulars as to the position. These may or may not have the desired effect, but the details are somewhat scanty and more or less vague. First of all the financial position is claimed to be strong, inasmuch as the syndicate holds £774,000 in Chinese Government gold bonds and £180,000 in cash and various investments. As regards the Ja-mei-sen collieries, Honan, the extra pumps have arrived, and are now being put in position, and Mr. A. Reid expects to have No. 1 pit clear down to coal by the end of October. A No. 3 pit has been started, and is now at a depth of 176 ft. In a borehole put down at a point 2,800 ft. south of No. 2 pit, Mr. Reid expects to strike the coal seam at a depth of 900 ft. This would seem to indicate that there has been a fault or slip of some 300 ft. between the borehole and No. 2 pit, probably the origin of the water difficulty. The directors are advised, however, that this should offer no insuperable difficulty to the successful working of coal through the present pits, whilst Mr. Reid considers that once the difficulties of sinking are overcome an output of 2,000 tons a day may be counted on for the full period of 60 years without attempting to cross the fault. As soon as the serious nature of the water difficulty in Honan became apparent the board took steps to send out an expert engineer of great experience to advise with Mr. Reid and report on the whole situation. His report may be looked for before the end of the year. The issue of a permit to begin working coal in Shansi is still delayed, notwithstanding the efforts of the syndicate's agent-general in China, supported by the British Legation. This is attributed to the manifestation of anti-foreign feeling. A recent cable, however, encourages the board to hope that the permit will be issued very shortly. As soon as the coal question is settled the directors propose to go on with iron smelting in Shansi, in which the Chinese Government have a participation. In view of the information now given the directors do not consider it necessary to call a shareholders' meeting for the current year. This is disappointing, for the information is not so satisfying as the directors imagine. Neither is it very reassuring, for it foreshadows no certainty that the coal, when worked, will be found payable, and by the time that is ascertained the present financial resources may be considerably reduced. Looking at the position as favourably as one might, there seems to be some justification for the recent weakness in the shares.

New Kempinkote Gold Field.—For many a year now this Indian company has been vainly seeking success, and the goal looks as far off as ever. Its latest venture has been to acquire an option from the Goldfields of Mysore for two years from July, 1905, over a block of ground lying south of the celebrated Mysore mine. It was proposed to extend the 1,330 ft. level south of McTaggart's shaft, in the Mysore, into this block, and an agreement for carrying out the work was entered into with the Mysore Company. This gave an opportunity of testing the ground at a considerable depth from the surface without going to the expense of shaft-sinking. It appears that so far the lode has been auriferous throughout, and though the quartz has not been of great width it is considered advisable to drive the level some distance further to prove the ground to the south, likewise to test the lode at greater depth by sinking a winze at the point where the quartz appeared to be well defined. Accordingly, instructions were given for the starting of this winze, which is now being sunk in the lode. This is 2 ft. wide, and assays from 3 dwts. 6 grs. to 10 dwts. 11 grs. per ton. This does not look very promising, and the directors apparently hold a similar opinion, for they try to buoy up the hopes of shareholders by remarking that the company still has nearly nine months within which to test further the value of the lode before deciding whether or not to exercise the option; also that the cash resources are more than sufficient to carry out the necessary exploratory work during this period. The accounts cover fifteen months to March 31. In that period the expenditure—which is still capitalised—amounted to £4,219, the only income being £148 from transfer fees. Thus there was a nett deficit of £4,071 to add to the old one of £26,492, raising the total to £30,563, which promises still to grow. Cash makes up to a little under £10,000.

Troitzk Goldfields, Limited.—A lengthy statement has been issued by the directors to shareholders in this Siberian company, not for the purpose, it is explained, of obtaining applications for any portion of the capital, as the issued amount has been subscribed, but to give enlightenment to the ignorant. The nominal capital of the concern is £600,000 in £1 shares, 500,000 of which are credited with 14s. paid up. These have

been issued to the Siberian Proprietary Mines, Limited, the vendors, in payment of the options acquired over the properties. Thus the payment in full of these half-million shares will provide £150,000 for the purchase of the property and for working capital, the remaining 100,000 shares to be held in reserve, out of which provision will be made for further developments and plant. The Preobragensk and Alexandrovsk gold mines are situated in the north-western part of the Kotchkar goldfield in the Orenburg province of south-eastern European Russia, the first-mentioned having been worked for about 4½ years, and the second for 25 years. These mines have a combined area of about two square miles, and are held on perpetual lease from the Government with certain royalties payable thereout to several persons. The Preobragensk mine is stated by the owners to have produced 8,000 ozs. of gold per annum, and the Alexandrovsk an average of 5,000 ozs. yearly, making a combined revenue of about £45,000. This has been obtained with the imperfect system of working in vogue. Present profits are declared to be about £25,000 per annum from both mines, but by increasing the tonnage milled and improving the cyanide process these should be considerably increased. It is the company's intention to undertake the development and exploitation of the numerous reefs already being worked, simultaneously with a more systematic prospecting of the whole property, to an extent that will warrant the erection of 150 to 200 stamps to crush about 225,000 tons per annum. Taking into consideration the favourable working conditions it is estimated that the average yield, after allowing for loss in extraction, will be 7½ dwts., giving a return of 30s. per ton. As regards working costs these are, with the present primitive methods of working, about 11s. per ton, but Messrs. John Taylor and Sons, who have reported on the property, estimate that they would amount to about 16s. per ton. This is considered too high an estimate, having regard to the experience of the present owners, and the directors believe that even with a more expensive staff the working costs will not exceed 12s. per ton. On this basis the profit per ton would be about 18s., or £202,500 per annum.

DOLORES, LIMITED.—It must be admitted that recently some very favourable and encouraging reports have been sent from this company's mine in Mexico, raising high expectations of future possibilities, and these are now confirmed by Mr. J. B. Farish, the consulting engineer. He paid a visit to the mine in June and July, and writes that development work was begun with the starting of the mill, and has been carried on as rapidly as possible. There is still, however, a great deal to do before one can say positively that the company will turn out a success and give the shareholders ample dividends. The Dolores, Limited, is the English company, and the Dolores Mines Company is the American concern, whose capital is practically all held by the first-mentioned. Latest advices from the American company show that over 100 feet are to be driven before the San Francisco vein can be intersected. Mr. Farish considers this one of the most important and interesting points of present development. It appears that accounts have been received from the Dolores Mines Company for the financial year to the end of June, and these show a balance of nett profit of $267,621, say, about £53,524, after providing for all working expenses at the mine and New York charges. After being audited these accounts are to be published in detail with the directors' annual report, and the accounts of Dolores, Limited, for the financial year ending the 30th inst. It may be recalled that just recently there were rumours that an increase in the company's capital was contemplated, but it was promptly denied by the officials, who said, further, that as the outlay on construction, plant, and machinery over and above the working capital had been met by loans, now paid off, or provided for out of profits, the latter will henceforth be available for distribution.

YMIR GOLD MINES.—In a circular to the shareholders, signed by the secretary, the directors have to admit that the results are again very disappointing, the manager offering the explanation that there has been unavoidable delay in the completion of the second means of access to the No. 10 level, which would permit of a better selection of ore. Whilst regretting these poor returns the directors hope for an improvement during September. Both Mr. Gilman Brown and the manager urge the necessity for more rapid development with a view to opening up larger reserves, so that greater facilities may exist for selecting a better grade of ore for the mill. It appears that American capitalists are desirous of interesting themselves in the mine, and will agree on equitable terms to take shares and thus replenish the company's meagre funds. So the directors have intimated their willingness to discuss terms, and an arrangement has been made for a meeting of the interested parties in New York early next month. If the provision of funds can be arranged, Mr. Brown advises that diamond drills should be employed to locate the other large vein which he is still confident exists in the property

LOTHIAN COAL COMPANY.—The profit and loss account for the financial year to May 31 shows a credit of £10,595, raised to £14,232 with £3,637 brought in. After paying the preference dividend, debenture interest, and the fees of the directors there remains a balance of £6,932 to take to the next accounts. Trade, we are told, has been depressed, the average price obtained for coal being less than in the preceding year. The effect of this was partly lessened by economies in working, chiefly by the use of labour-saving appliances. But for an accident at one of the pits, causing a fortnight's suspension of work, and the necessity of working short time at other pits, the profit would have been larger. Nevertheless, the output of coal was greater than in the preceding year. In order to obtain men to develop the output still more it will be necessary to secure additional house accommodation, so the directors are taking an interest in the promotion of a new building company. Nothing has been placed to reserve, the carry forward being raised instead. From the Dean Tavern the profit was £415, partly spent upon the Lothian brass band, a recreation ground, bowling green, new cricket pavilion, and a new cricket pitch. So the directors are not believers in all work and no play.

SHEEPBRIDGE COAL AND IRON COMPANY.—Helped chiefly by the higher prices for pig-iron and bar-iron, this company's profits expanded considerably in the financial year ending June 30, though they were affected by the advance of 5 per cent. in the iron-workers' wages. The directors do not issue a profit and loss account, and we have to take their word for it that the nett profit was £80,259, which was £22,247 in excess of the previous year's. A larger balance was brought in, so the available surplus amounted to £95,789 against £69,309, an increase of £26,480. After setting aside £10,000 towards the cost of new coalfields, the dividend is made up to 10 per cent. against 7½ per cent. paid in the two preceding years, and the goodly balance of £14,082 is left to take forward to the current accounts. As the prices of coal were practically stationary throughout the year, the company did not benefit much from this branch of its business. With regard to the new colliery at Maltby, sinking operations are awaiting the completion of the South Yorkshire Joint Lines railway. It is intended to form a new company, to be called the Maltby Main Colliery Co., Limited, with a capital of £350,000, of which the parent concern will take £200,000. Loans owing to the company total no less than £100,000, and cash amounts to £46,765 against current liabilities of £91,324. Reserve funds will aggregate £130,000, invested in the business. Prospects look fairly promising, especially in the iron branches.

MANICA COPPER DEVELOPMENT COMPANY.—The directors announce that Captain W. M. Cairncross, who was appointed manager in Manicaland on the expiration of the late manager's agreement, has been successful in finding a promising body of copper ore. On August 28 he reported it to be 2 ft. 3 in. wide, assaying 17 per cent.; on the 9th inst. as 91 in. wide, assaying 9 per cent., and on the 17th as 12 ft. wide, with 6 per cent. of copper. It is to be hoped it will not grow less until it quite disappears.

UM RUS GOLD MINES OF EGYPT.—A report has been drawn up for presentation at the statutory meeting. The company was formed on July 5, 1906, with a capital of £180,000 in £1 shares, credited with 15s. paid up. To September 18 the total number of shares allotted was 133,849, and the total cash received was £12,577. In order to augment the reserves of ore and enable the monthly output to be increased to the full capacity of the mill, it has been decided temporarily to suspend milling operations and to push forward the development of the mine as vigorously as possible.

WEST AFRICAN GOLD OUTPUT.—The West African Chamber of Mines announces that the gold return from the colony for the month of August was 16,318 ozs., an increase of 4,338 ozs., bringing the output this year to date to 135,517 ozs., an increase of 31,216 ozs.

MINING IN SELANGOR IN 1905.—According to the annual report for 1905 of the British Resident, the gross output of tin and tin ore last year amounted to 289,867 piculs compared with 300,412 piculs in 1904, a decrease of 10,545 piculs. The respective amounts for the two years were:—

	1904. Piculs.		1905. Piculs.
Block tin	120,151	....	114,686
Tin ore	180,261	....	175,181

The price of tin was on the average a little higher, the comparative figures being:—

	1904. $ c.		1905. $ c.
Highest price	85.74	....	88.50
Lowest price.....	69.50	....	76.12½
Average price	76.55	....	80.87
Range of price.....	15.75	....	12.37½

The value of the metal exported from the State in 1905 was $23,412,558, and $3,195,318 was received as export duty.

MINING IN GUATEMALA.—Mr. H. A. R. Hervey, Chargé d'Affaires of his Majesty's Legation, in his report for 1905, says:—The mining industry, which in times gone by contributed greatly to the wealth of the country, has been allowed to fall into decay, although there are now signs of reviving interest. The church records show that during the 200 years preceding 1820 there were no fewer than 1,332 mines in operation, many of them of fabulous richness. It is a matter of common knowledge that there exists in the Department of Quiché a gold mine of extraordinary productiveness, but the natives jealously guard the secret of its whereabouts, and no exploring party now dares to run the risk of their vengeance by endeavouring to locate it. In Huehuetenango there are vast bodies of silver-lead ores which are practically reef-fluxing, and can be smelted at ordinary fuel heat; these ores are now worked in crude fashion by the Indians, and nearly all the lead consumed in Guatemala comes from this district. Even the surface ores yield from 30 to 60 per cent. Gold is found in several parts of the Republic. Considerable interest has been taken of late in mica, which has been found in large quantities, and experts from the United States have recently been exploring the mica-bearing regions. Titles have recently been given to some zinc mines which are quite close to the northern railway, and as they are said to be rich there should be no difficulty in their exploitation. The principal factors militating against the

satisfactory development of mining enterprise appear to be lack of adequate means of communication and expensive freights. Little encouragement, too, is given by the Government, although the mining laws are sufficiently liberal.

Copper Deposits of Ica and Nazca, Peru.—According to an article in an official publication at Lima the well-known copper deposits in the neighbourhood of Ica were probably worked by the Incas, and it is certain that some metal was extracted from time to time by the Spaniards, but mining proper did not commence until the year 1873. From 1876 to April, 1905, it is estimated that fine copper to the amount of 6,586 tons was produced from ore averaging 25 per cent. of metal. The most active period ceased in 1884, on account of the fall in the price of copper and the war with Chile. From 1899 to 1902, owing to the rise in price, several of the mines were re-opened, but no actual development work was attempted, and in recent years the production has been quite insignificant. Geologically, the Ica Province is composed of a wide band of sedimentary rocks of Tertiary and Quarternary age, parallel with the western Cordillera of the Andes and the coast line, or following a general north-west to south-east trend. The region, with the exception of one pampa to the north and another to the east, is almost completely arid. The peninsula of Paracas itself is composed of carboniferous rocks of Permian age, while the arid coastal region is interrupted by one small sierra and a few isolated mountains composed of labradorites and basalts. Running parallel with the sedimentary band and to the east of it is a narrow band of labradorite diorites and quartz diorites, containing here and there patches of limestone and sandstone. The copper deposits hitherto exposed are confined almost entirely to the north-western portion of the igneous band (diorite) in the neighbourhood of Ica.

The Gold Output of the Ural in 1905.—According to the *Torgovo Promishlennaia Gazeta*, the year 1905 was an unsuccessful period for the gold mining industry of the Ural, even worse than 1904, many mines having to be handed back to the Government and many firms going into liquidation. One of the most important districts on the Ural is the North Ekaterinburg, which produced 42,624 ozs. in 1894 and 38,592 ozs. in 1905, representing a loss in the 12 months of more than £12,000. In the South Ekaterinburg district the output last year was 35,438 ozs., against 41,630 ozs. in 1904, a decrease of 6,192 ozs., due to the smaller number of claims worked by private individuals. At the West Ekaterinburg diggings the production in 1905 amounted to 11,601 ozs., an increase over 1904 of 5,573 ozs. In addition to this there was a yield of 5,573 ozs. of silver. In the South Verchotursky district 16,984 ozs. were obtained in 1905, compared with 11,621 ozs. in 1904. This district is celebrated for its platinum; in fact, in this respect it occupies the premier position in the world. In 1905 the output of platinum amounted to 124,375 ozs., or 182 ozs. less than in 1904. The output of this metal increased at the diggings on the freehold peasant land of the Vissimo-Shaitansky rural district, when it reached 1,742 ozs. in 1905, against 1,022 ozs. in 1904.

CONSULAR TRADE NOTES.

Great things were looked for when, at the instigation of the Japanese, Shasi was made one of the Chinese treaty ports. Situated in the heart of the richest part of the province of Hupeh, and of the business centres of that province second in importance only to Hankow, Shasi is connected by an elaborate system of natural and artificial waterways with all the most important trading points of its own and the neighbouring province of Hunan. Moreover, the surrounding country, thickly populated, is the seat of a considerable cotton and silk industry, and the wide distribution of these products in the markets of the western provinces has earned for Shasi the reputation of being the Manchester of Western China. In addition the district produces tallow of excellent quality, varnish, nut-galls, hides, and indigo, while coal is easily obtainable and labour cheap. Surely, as our Consul, Mr. H. H. Fox, says, an ideal situation for a treaty port, and Japan evidently thought so. Yet, in spite of all these seemingly favourable conditions, the port has completely failed to come up to expectations. Foreign, and particularly British, commerce has never formed any considerable portion of the trade of Shasi, though with the advantages offered a steady if small increase might reasonably have been looked for. But the returns of the Maritime Customs show that, so far as the trade coming under its cognisance is concerned, the reverse has been the case. The record year since the port was opened was 1903, and even then the total value of the foreign mails reached only 2,400,000 taels, and since this there has been a steady fall, until in 1905 the total had dropped to 1,300,000 taels, the average for the last five years being 1,600,000 taels. Compared with the returns for the other Yangtse ports, these figures are meagre in the extreme, only the trade of Yochow, where the conditions are somewhat similar to those at Shasi, being smaller. Strange as it may appear the chief cause of Shasi's failure as a treaty port lies in the very fact that induced the foreign Chambers of Commerce to agitate for it being opened, namely, its geographical position. The very excellence of its inland water communications with Hankow and other trade centres renders Shasi independent of the Yangtse River and steam transport. Or, as, Mr. Fox puts it: "While foreign steamers ring at the front door, trade comes in and goes out at the back." Misled by the quantity of native shipping anchored alongside the river wharves, foreigners expected much from the opening of the port, and it was not till later they found out the mistake they had made in their premises. The commercial importance of Shasi is due rather to its being a port of transhipment than a distributing centre, the trade of Western China being borne to and from Hankow along the Pien-ho, and transhipped into Szechuan junks. These are now gradually making Ichang, the present head of steam navigation on the Yangtse, their starting point and terminus, and as this movement grows so the trade of Shasi will shift further up the river and the port lose much of its former importance, even as a point of transhipment. Another cause that militates against the development of the port is the lack of proper berthing accommodation along the river side, a thing absolutely essential with a 6 to 7-knot current running in summer. The Chinese authorities, however, have constructed a bund along some 1,200 feet of the foreshore, which should do something to remove this want, and may tempt foreign steamship companies to start regular services to the port before Ichang has completely usurped its position. At present, with the exception of the Japanese who run on schedule, the arrival and departure of foreign steamers is of the most casual description. They may arrive a day sooner or later than expected, and then usually at some unearthly hour of the day or night, while their stay in port, no matter when they put in, is seldom more than an hour. Under these circumstances it is not surprising to find that no British merchants have establishments at Shasi, and that Japanese firms, through Chinese representatives, control much of the little foreign trade that is done.

Official trade statistics are things unknown in Damascus, and Mr. Edmunds, our Acting-Consul there, has only his own observation and the experience of local business men to go upon in arriving at the value of the trade done. It seems, however, that during 1905 the exports decreased by some £119,000, a serious fall for a town having, as Damascus has, industrial pretensions. This drop in the outward trade was due mainly to the small Egyptian demand for native textiles, yet in spite of this weavers were apparently fairly busy through the year with local sales. Imports, on the other hand, showed an increase of £88,400, and it would seem, therefore, that no diminution, but rather the contrary, has taken place in the purchasing power of the district. The absence of any official figures makes it impossible to state definitely either the destination or the origin of goods exported or imported, but Mr. Edmunds puts the value of the goods sent over here in 1905 at £37,535 out of a total of £386,000, and our share of the imports at £279,360 out of £872,400, the first being slightly less and the second some £14,000 more than in the previous year.

Mr. McLean, our Consul at Dar-al-Baida, which embraces that half of Morocco served by the ports of Rabat, Dar-al-Baida, Casablanca, Mazagan, Saffi, and Mogador, states in his last report that 1905 was a year of distress for the district. This was entirely due to drought, which completely changed the character of trade and compelled Morocco to become an importer of foodstuffs instead of an exporter. The trade with foreign countries amounted to £2,501,286, a decrease of £245,759 compared with 1904, but £69,987 above the average of the previous years. Our share of the total amounted to £880,313, of which £306,935 represented exports and £573,378 imports, France coming second with £831,673. We, therefore, still do more business with the district than any other country, but our lead is not so marked as in former years. The current year, though promising to be better than 1905, is not expected to prove very satisfavtory for trade, as the rainfall is again below the average, and did not arrive seasonably. This has given very poor results from the seed sown, but though there may be no surplus for export sufficient, it is thought, will be available to supply the home demand. Great things are looked for from the results of the Algeciras Conference, which has unlocked the door of Morocco to European enterprise, and foreshadowed great changes in the financial and general condition of the country.

Angola, though the oldest of the Portuguese possessions on the West Coast of Africa, has remained for more than three centuries practically undeveloped. The small trade done was confined almost exclusively to the seaboard and rivers, and the vast region lying inland, comprising some half-million square miles, has hardly been explored. Now, however, Mr. Mackie, our Consul, states that great changes are pending, as British enterprise has cast its eyes upon the great natural wealth the country is said to contain, and has already taken preliminary steps to exploit it. Surveys are being made for, and construction commenced on, a railway that, when completed, will connect the coast with the Katanga mines in the neighbourhood of Lake Tanganyika, and which are reported to be rich in copper. Already British capitalists have secured extensive mining rights in these districts, and should results fulfil present expectations, the prosperity of Angola will be materially advanced. Even now the section of the railway being built has afforded increased freights to British shipping, and given employment to British workmen. But, speaking generally, a state of trade depression has set in of late years in Angola that has proved disastrous to many firms. Mr. Mackie attributes this depression principally to a lack of barter trade with the natives, who are chary of bringing the produce into Portuguese territory on account of the general feeling of unrest prevailing throughout the hinterland, the depreciation in the market value of some of the principal articles of export, notably coffee, and the heavy cost of transport owing to lack of means of communication. But the real root of the trouble lies in the prohibitive tariff which includes not only import, but export duties, with the result that sundry products have practically disappeared from the list of exports. No improvement, therefore, can be looked for until some relaxation is made in the present fiscal policy, a continuation of which must, if it does not prove the ruin of the colony, retard and hamper its development for years to come.

TRADE AND PRODUCE.

WHEAT.—The London cargo market was quiet all the week, and holders disposed to ask previous rates. Buyers consequently were scarce, and their attitude generally was one of patience, with the result that business was confined within narrow limits. In the provinces the prevalence of dry weather has made threshing general, and offers of new English wheat liberal, since farmers are anxious to turn as much as possible of their produce into money in view of the Michaelmas quarterly payments. Prices, moreover, have shown a decided tendency to move up on account of Continental and American advices, and the unpromising crop outlook in Russia. This week farmers' deliveries amounted to 90,292 qrs. averaging 25s. 9d., as against 95,743 qrs. averaging 26s. 8d., in the corresponding week last year; imports for the week were:—Wheat, 441,023 qrs. against 455,840 qrs. a year ago; and flour, 124,433 qrs. compared with 72,000 qrs. American prices are in their usual state of uncertainty, undergoing daily and even hourly fluctuations on rumours sometimes of the vaguest description, and expert estimates more or less accurate. A renewal of the locust scare in the Argentine and a good cash demand gave for a time a firm tone to the market, strengthened in the early part of the week by bullish advices from the North-West; but the inevitable reaction followed when news came of a large movement from Manitoba. Fresh bear pressure resulted in the loss of nearly the whole of the previous gain, but later news shows another advance, based chiefly on bad crop news from the North-West. Bradstreet's estimate of wheat in sight east of the Rockies is 51,718,000 bushels, against 48,282,000 last week and 25,842,000 last year.

WOOL.—It is early yet to express any opinion as to what effect the colonial wool sales now in progress will have on prices, but so far as it is possible to read the signs the best qualities do not look like selling at a lower level than in July, but rather the contrary. Bradford's attempt to influence the London market, and through it the Australian, seems to have been in vain, and users of good combing merinos and crossbreds have little prospect of buying their material for less than they have paid of late. The mistake the Bradford traders seem to have made is a miscalculation in the date of the arrival of the Australian supply. This they reckoned should show an increase of 200,000 bales, and probably it will, but even so, it can hardly be available for use until the beginning of next year. Meanwhile business in the manufacturing end remains as brisk as ever and at the present rate consumption will likely absorb the whole of this year's crop, which means no prospect of a break in prices until the turn of the year. The only branch that shows any great signs of slackening off is the woollen, and even in this it is future rather than present business that is unpromising, new orders being scarce.

LINEN.—Only a few of the Irish flax markets are open as yet, and *The Linen Market* expresses the pious hope that the earlier samples are not indicative of the quality of the crop as a whole. So far what flax has been offered, though of good length, is sadly deficient in quality, but this may be only isolated specimens and until the majority of the markets open a week hence it is not safe to express an opinion. In yarns a fairly good business has been done, and at prices that show the upward movement has not yet spent itself. The most progress was in weft lines particularly those of good descriptions. What makes the movement more remarkable in these days is the almost entire absence of speculation, everything having been governed by the good old-fashioned principle of supply and demand, and consequently there have been no reactions or violent fluctuations, but steady and ceaseless, though at times almost imperceptible, progress. There was also better movement in nearly all branches of the linen trade, and the aggregate of orders shows a fairly substantial increase on that of a week ago. Some improvement is, in the natural course of events, always looked for about this time of the year, but in the present instance it is rather more pronounced than usual. All business done, needless to say, has been at full prices in sympathy with the advance in yarn quotations. The only department in which things are not quite satisfactory is the damask and housekeeping. Business in it has certainly increased considerably, and for the moment manufacturers are in a distinctly better position than for some time back, but prices still leave something to be desired. The home and foreign trade in bleached and finished linens has made further progress, and it is significant that not only are extreme prices obtained with comparative ease, but buyers are most anxious to secure delivery at the earliest possible date. This applies particularly to the United States, though all markets may be said to share the same feeling.

COTTON (from our Manchester correspondent).—The general tone of our market during the past week has been steady, and on the whole a fair turnover has transpired for piece goods for export. The inquiry all round for cloth is increasing, and although quite a number of the bids cannot be entertained by manufacturers, yet in small lots the trade has been fairly encouraging to sellers. Raw American cotton in Liverpool keeps very steady, the fluctuations from day to day being quite unimportant. The movement forward of the new crop is being watched pretty closely, and it is satisfactory to note that the receipts at the United States ports are larger, and compare favourably with the same time of last year. Advices with regard to the crop are favourable, and Manchester people are looking forward to a large yield. In piece goods for export a steady trade has been done for India, principally in shirtings. Calcutta buyers have shown more activity, quite a number of small orders being placed. Very little change has transpired with regard to China. Staple goods move slowly, and only occasional transactions are mentioned in fancy goods. The smaller markets, on the whole, have provided comparatively more business than the larger consuming markets. For the Levant and Egypt quite a number of small orders have been placed, and it is said odd transactions have occurred which have been of very fair bulk. The South American markets have not been very active, but odd lots are mentioned in printing cloths. The position of manufacturers varies considerably. Those makers of cloth who also spin are now getting pretty deeply engaged, and cannot undertake the delivery which spinners require. Manufacturers who use bought yarn are undoubtedly hampered at the moment by the strong position of American spinners. T-cloths and Mexicans have moved quietly in small lots, manufacturers being firm in quotation. Printing cloths show very little improvement and the commoner kinds still move slowly. Coloured woven goods and sateens present no particular new feature of moment. The home trade houses continue to meet with a healthy demand from the country districts. Waste goods are very deeply engaged, and flannelettes have also moved well. Cops made from American cotton for home consumption well retain their strength, and certain numbers of weft are stronger than a week or two ago. The coarser numbers all round are doing better, and users have experienced considerable difficulty in obtaining adequate supplies. The margin where anything is sold is wide, and satisfactory to spinners. Export yarns have not moved off in large lines, but a miscellaneous trade has transpired for various outlets. Bolton spinnings continue in improved demand, and the turnover in the commoner kinds has been more satisfactory to producers. Quotations on the whole have been steady and well held.

In New York the price of cotton opened some 5 to 10 points lower, and continued to lose strength on bearish private crop advices from India and freer offerings from the south. A sharp recovery followed later on more favourable news, the daily weather reports showing too much rain; likewise on the reports of a severe storm in the Gulf. Some realising did not have much effect, and the close is steady.

COAL.—House coals are to be definitely advanced 1s. per ton to the consumer on Monday next, and the announcement has caused a rush of orders for delivery in time to escape the rise, and even Lancashire trade is more active and in better condition than it has been for some time. The steam trade as yet shows no signs of weakening, and the demand for the Baltic ports and Humber steam fishing fleet is still very large, so much so that, though the shipping season is almost at an end, sellers can obtain an advance of from 3d. to 6d. more than ordinary contract rates. North of England things are not quite so brisk, but exports continue good, and much is hoped for in this direction when the abolition of the coal tax comes into force on November 1. The state of the Welsh market remains quiet and steady with a general tendency to improvement, Monmouthshire and best small steams being the varieties in specially good demand.

COPPER.—Quotations with hardly a check have continued their upward progress, owing to the strong position held in the United States. Producers there declare they are sold out until the end of this year, while some go so far as to say they have disposed of their output up to February. Whether this is actually the case it is impossible to say, since there are no means of ascertaining what secret stories, if any, may be in existence; yet, whether true or not, the present range of prices is a most serious matter to consumers, and may involve the postponement of a considerable quantity of work. Business, speculative as well as legitimate, has already received a check since no one is anxious at the present time to increase commitments, and consequently little has been done this week except to mark up quotations each day. At the close the market is firm at £90 17s. 6d. cash and £90 15s. three months.

TIN.—Business was on the whole active in this metal, and strong advices from the East kept quotations moving up. Sales to realise now and again caused a fractional decline, but with good buying orders fairly plentiful the loss was in every case quickly regained. The high average price at the Banka sales, which was equal to a parity of £188 15s., was strangely enough not sufficient to prevent a temporary fall of 5s. on Wednesday, though like its predecessors it did not last out the day. Later there was a strong upward tendency, but the best prices were not maintained, although they rose to £188 2s. 6d. for cash and £187 10s. three months.

IRON AND STEEL.—The demand for hematite iron continues brisk, and a very good business has been done in forward sales. Spot trading, on the other hand, has been limited, as makers have no iron available for early delivery. Holders can, therefore, show firmness, and are not compelled to force sales, as it is fully expected higher values will be reached before long. As manufacturers have plenty of orders until next spring they can look into the immediate future with confidence. Activity is likewise exhibited in the pig-iron trade, the output of this class of iron going directly into consumption. Business in the heavy steel trade is also expanding, and the output has never been so great as now. The production and deliveries of Cleveland pig-iron have been very large, and prices have been higher than at any time during the past six years. The extra production is being taken up, and there is little need for consumers to draw out of the public warrant stores. Price of Cleveland warrants has fluctuated about 54s. 7d. cash. In Scotland conditions are practically the same as they were a week ago. A good business is being done in all departments, and orders have been coming forward in a fairly satisfactory manner

TEA.—With the season's shipments to the United Kingdom to the middle of September showing an increase of only two million pounds—practically all of which has been re-exported—

matters from the importer's point of view, according to Messrs. W. J. and H. Thompson's circular, are beginning to take a more favourable turn, and for the next few weeks at least there seems no reason to anticipate a cessation of activity. With only 37,883 packages brought forward at this week's auction of Indian, the market became much steadier, and prices showed frequent slight advances, even in the commoner sorts. 35,037 packages were sold on garden account, and averaged 7.64d., against 7.61d. last week and 7.78d. a year ago. The Ceylon market followed suit; the quantity offered was 20,328 packages, the quality showed further improvement, and the result was a generally better tone. Medium and good sorts sold at from ½d. to ¾d. per lb. advance, and common sorts were often quoted ¼d. dearer. The average came to 7.72d., against 7.21d. last week and 7.48d. last year.

Sugar.—Alternate war-like and peaceful rumours from Cuba raised and lowered our market, says Mr. Czarnikow, while America declined all offers of beet, and reduced its quotation from 4 5/8 to 4 7/8 cents (about 9s. 10½d. f.o.b. Hamburg). But it is still above our parity, and the results of the first fields harvested in France and Bohemia did not induce fabricants to hurry sales, so that quotations of May beet remained above 9s. 6d., having moved from 9s. 5d. to 9s. 9d. to 9s. 6¼d. to 9s. 9¼d. to 9s. 8½d. The Continent already complains about wet weather reducing the quality more than it raises the weight; last year we had rain during the first half of September, which is preferable, but with short intervals, the weather was wet, cool, or cold and dull all through September-October. The first factory estimates then were 6,300,000 tons, and the final result 6,950,000 tons, whilst in the year before, Licht's first estimates were 5,120,000 tons, the final result being 4,700,000 tons. This shows how unreliable early estimates are, and that complaints about weather, decreasing polarisation, and about weights of the early drawn roots must be accepted with caution, just as anticipations of unusual richness must be taken *cum grano*. But some idea whether roots are large or small is usually to be gathered, and people who expected almost last year's weight per acre will be certainly disappointed. In France, especially, the area of probably 205,000 hectares, which last year would have given 850,000 tons Raw, and which on average figures should yield about 775,000 tons, is expected to yield only 725,000 tons. In Bohemia some districts seem to have up to 15 per cent. less roots per hectare, and Austrian estimates generally are between 1,200,000 and 1,300,000 tons. Even with a possible speedy pacification in Cuba we shall not have too much sugar next season, and that is why the trade seem to consider 9s. 6d. for May delivery as safe. But beyond this it is the Cuban events which have recently given the stimulus to speculation, and it is fortunate that the crop in that island is still about three months off, otherwise the want of labour and of credit, as well as possible disturbances, might cause more serious fluctuations. The trade have done very little, and as refiners last week sold only a very small part of their make, they bought rather sparingly. Early deliveries, however, continue at a premium both for 88 per cent. and Granulated, which shows that there are no stocks and that stagnation cannot last long. The American market has been in a hesitating mood, and though spot values have fractionally receded, firmness predominates, and there is no pressure to force sales, which under existing conditions is not surprising. Landings in the three ports for the week were 37,000 tons, and meltings 48,000 tons, reducing stocks to 212,000 tons.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Buenos Ayres Western.—Balance of 4 per cent. on the ordinary stock, making 7 per cent. for the year, placing £100,000 to general reserve, and carrying forward £103,459.

Entre Rios.—4½ per cent. on the 5 per cent. first preference stock, placing £7,000 to reserve and renewals, and carrying £6,989 forward.

Isle of Man.—Interim at the rate of 4 per cent. per annum on the ordinary shares for half-year ended June 30.

BANKS.

London and Brazilian.—Interim of 10s. per share for half-year ended July 31, being at the rate of 10 per cent. per annum.

Mercantile of India.—Interim on the "A" and the "B" shares for half-year ended June 30 at the rate of 5 per cent. per annum.

MINES.

Brilliant Extended.—1s., payable October 29.

Consolidated of N.Z.—1s. per share (the eighth), payable 30th prox.

Isle of Man.—Interim of 2s. 6d. per share, equal to 2½ per cent., for half-year ended June 30.

Mount Morgan.—3d. a share for Sept., payable Oct. 1.

New Jagersfontein Mining and Exploration. — For half-year ended Sept. 30 of 2s. 6d. per share, equal to 25 per cent. per annum, on the preference shares, and 6s. per share (interim for year ending March 31, 1907), equal to 60 per cent. per annum, on the deferred shares.

Progress of N.Z.—1s. 6d. per share, payable on the 30th prox.

Pusing Lama Tin.—Seventh interim of 1s. per share.

South Kalgurli.—Final of 2s. per share, making 20 per cent. for year.

Talisman Consolidated.—Fifth at the rate of 1s. per share.

Tronoh.—Interim of 2s. 6d. per share, equal to 12½ per cent.

Zeehan-Montana.—Further interim of 2s. per share.

MISCELLANEOUS.

Alliance and Dublin Gas Consumers.—At the rate of 10½ per cent. per annum on the old, and at the rate of 7½ per cent. on the new shares for half-year ended June 30.

Alliance Trust.—Interim for half-year ended July 31 at the rate of 10 per cent. per annum on the fully-paid A stock and ordinary shares.

Babcock and Wilcox.—Interim of 1s. 7 1-5d. per share on the ordinary shares, being at the same rate of 8 per cent. per annum for half-year ended June 30.

Buenos Ayres (New) Gas.—Interim at the rate of 6 per cent. per annum for six months ended June 30.

Calcutta Electric Supply.—Interim on the paid-up share capital at the rate of 6½ per cent. per annum for half-year ended June 30.

Calcutta Tramways.—Interim of 3s. 6d. per share on the ordinary (old) shares, being at the rate of 7 per cent. per annum for half-year to June 30.

California Oilfields.—Interim of 10 per cent.

Cammell, Laird, and Co.—Interim at the rate of 5 per cent. per annum for half-year to June 30 on both the ordinary and preference shares, payable Oct. 1.

Carreras.—Dividend at the rate of 15 per cent. per annum for past half-year, making 10 per cent. for year, carrying £10,047 forward.

Chadburn's (Ship) Telegraph.—Interim on the ordinary shares at the rate 8 per cent. per annum for half-year ending Sept. 30.

City Offices.—Interim of 3s. per share on the ordinary shares for half-year ended June 30.

Consolidated Water Works of Rosario.—Interim at the rate of 6 per cent. per annum on the ordinary shares, for half-year ended June 30.

Dundalk and Newry Steam Packet.—2s. 6d. per share, being at the rate of 2½ per cent. per annum, for the half-year ended July 31, placing £1,000 to reserve, and carrying £375 forward.

E. Finch and Company.—12½ per cent. for past year, carrying £3,770 forward.

Edison and Swan United Electric Light.—For year ended June 30 at the rate of 4½ per cent. per annum, being 2s. 6d. per share, on the "A" shares partly paid, and 4s. 2d. per share fully paid.

Glenboig Union Fire Clay.—10 per cent., with a bonus of £2 10s., for year ended Aug. 31.

Goldsmiths and Silversmiths.—Interim at the rate of 7½ per cent. per annum on the ordinary shares for six months to July 31.

Hove Electric Lighting.—Interim on the paid up share capital at the rate of 8 per cent. per annum for half-year ended June 30.

James Nelson and Sons.—Interim on the first and second preference shares at the rate of 6 per cent. per annum, for six months ended June 30.

Morley and Lanceley.—Interim at the rate of 6 per cent. on the ordinary shares.

Neuchatel Asphalte.—Interim on the ordinary shares of 3s. per share.

Owen Owen.—Interim for half year ended August 20, at the rate of 8 per cent. per annum on the ordinary shares.

River Plate Gas.—Interim at the rate of 6s. per share for half-year ended June 30.

Salar del Carmen Nitrate.—Interim of 15s. per share.

Scottish Accident Life and General Insurance.—Interim at the rate of 10 per cent. per annum for half-year ended June 30.

Smith and McLean.—8s. per share on the ordinary shares, being at the rate of 4 per cent. per annum, for year ended July 15.

United States and South American Investment Trust.—Interim at the rate of 4 per cent. per annum on the deferred stock, for half-year ending Oct. 4.

Wilkes.—Transferring £1,400 to the general reserve account, 5 per cent. on the ordinary shares for year ended June 30, placing £1,400 to reserve, and carrying £729 forward.

NEXT WEEK'S MEETINGS.

Monday, October 1.

Birmingham Small Arms.—Birmingham.
Egyptian Gold.—Winchester House, noon.
Thomas Salt.—Cannon Street Hotel, 2 p.m.

Tuesday, October 2.

Bank of Scotland.—Edinburgh, 12.30 p.m.
El Oro Mining and Railway.—Winchester House, noon.
Mexico Electric Tramways.—1, London Wall Buildings, noon.

Wednesday, October 3.

Colonial Bank.—13, Bishopsgate Street, 2 p.m.
Delhi and London Bank.—123, Bishopsgate Street, noon.
Raglan Cycle and Anti-Friction Ball.—Coventry, 3 p.m
Willans and Robinson.—Cannon Street Hotel, 2.30 p.m.

Thursday, October 4.

Bank of Australasia.—4, Threadneedle Street, 1 p.m.
Manchester Liners.—Manchester, 3 p.m.
Santa Fé and Cordova Great Southern Land.—River Plate House, noon.
Walker, Harrison, and Garthwaite.—Cannon Street Hotel, 2 p.m.

The Royal Mail Steam Packet Company inform us that, in reply to their cable inquiry, they understand from their office in Buenos Ayres that goods ex their steamers were not damaged.

Prices of Mine and Mining Finance Companies Shares.

LEADERS AND SPECIAL ARTICLES FROM "THE TIMES"

IN EXTENSO.

1. Parliament (when sitting) and Politics.
2. Colonial and Foreign News.
3. Naval and Military matters.
4. Trade, Money, and Stocks.
5. Ecclesiastical and Social Notes.
6. Law and Police. Reviews of Books.
7. Home and Domestic Events.
8. Correspondence. Chess by Special Expert.
9. News Interesting to Every Class of Reader.

And a SERIAL STORY by a popular and well-known Author.

SPECIAL EDITIONS for India and Australasia, for Canada and the United States, and for South Africa, containing, in addition to the above, matter particularly interesting to dwellers in those countries.

The Times issues three Supplements every week, viz.:—

THE FINANCIAL & COMMERCIAL ON MONDAYS;
THE ENGINEERING SUPPLEMENT ON WEDNESDAYS;
THE LITERARY SUPPLEMENT ON FRIDAYS.

Purchasers of THE TIMES WEEKLY EDITION residing abroad can have *any one* of these Supplements as an inset with the Weekly Edition.

MAY BE HAD OF ALL NEWSAGENTS.

ORDER FORM.

THE PUBLISHER

The Times Weekly Edition,

PRINTING HOUSE SQUARE. LONDON, E.C.

Herewith remittance for £ : : Kindly forward regularly THE WEEKLY EDITION of THE TIMES with the _____ Supplement to the following address for _____ Month .

Printed for the Proprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W C., and Published by CLEMENT WILSON, at Norfolk House, Norfolk Street, Strand, W.C.—SEPTEMBER 29, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 457. SATURDAY, OCTOBER 6, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent o the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Grand Trunk Railway.

We should be much better able to estimate the prospects of the Grand Trunk Railway Company and its offshoots and dependencies if the half-yearly report did not maintain a significant silence on many vital matters. When it first became known that the company intended to finance and control a large section of the gigantic Grand Trunk Pacific enterprise a good many people who should know shook their heads and expressed considerable doubt as to the wisdom of the policy pursued. But Canadian affairs have lately become so prosperous, bringing to the railway companies such a fine accession of traffic, that stockholders are apt to forget how greatly the fortunes of the old Grand Trunk Company are bound up with those of the new Grand Trunk Pacific. The Eastern portion of the line is being constructed with moneys obtained under a Canadian Government guarantee, but the Grand Trunk of Canada guarantees the interest on the bonds sold to build what are known as the Prairie and Lake Superior sections, which may be expected to be the most expensive to lay down and the least remunerative when built. In consideration of doing this it receives a large part if not all of the common stock of the new undertaking, but the present position of the Grand Trunk junior stocks does not rouse great hopes that this capital will return anything lavish to the company's coffers. During construction the interest on the above-mentioned mortgage bonds is paid out of capital, but when the sections are completed they must, of course, pay interest out of revenue or the Grand Trunk Company must make good whatever deficiency may arise. If trade and industry in the Dominion continue to legitimately expand and increase, as we hope they will; if crops do not fail, and snowstorms do not become too frequent, we think the prospects are in favour of the new lines earning their bond interest and thus relieving the Grand Trunk of its obligations. But failure to do so may mean heavy inroads on the nett revenues of the guaranteeing company, and it seems a little significant that, after promising to spread the arrears of Michigan taxation which the company was called upon to pay over a considerable period the whole of it was set aside out of the past half-year's income. This looks as though the board is anxious to be prepared for all emergencies. For that they are to be commended rather than blamed, but stockholders may justly complain that despite the burdens they may be called upon to bear the half-yearly report contains no useful reference to the Grand Trunk Pacific enterprise. It merely states that satisfactory progress has been made with the construction of the main line between Portage la Prairie and Edmonton and the Lake Superior branch. The contractors seem to have experienced some difficulty in procuring the necessary labour, but the directors do not anticipate any delay beyond the contemplated time in the completion of the works on these portions of the line. Then follows a highly important pronouncement.

It appears that during the last session of the Dominion Parliament an Act was obtained for the incorporation of the Grand Trunk Pacific Branch Lines Company. This is to be formed for the purpose of constructing the branches contemplated by the Act of Incorporation of the Grand Trunk Pacific and other branches which may be considered necessary. There

is, of course, nothing new in all this, but a further Act authorising the creation of $25,000,000 of debenture stock of the Grand Trunk Pacific for the purpose of providing funds for the equipment of the line may cause some surprise. The line must, of course, be equipped with stations, rolling stock, locomotives, and so forth, but £5,000,000 at, say, 4 per cent. means £200,000 a year, which will have to be found before the mortgage bond interest guaranteed by the Grand Trunk. Add to this another £140,000 or so for the mentioned bond interest, and it becomes clear that the Grand Trunk Pacific must do exceptionally well from the very beginning if the old Grand Trunk is to be relieved of its guarantee obligations. What is the present financial position of the Grand Trunk Pacific? No one seems to know. We have made inquiries amongst Stock Exchange men, and they all profess complete ignorance. Why is no statement of accounts published and included with the Grand Trunk report? We have been carefully through the figures and can get no enlightenment at all. What is the total amount raised at the present moment, and how much has been spent? Are there any floating liabilities in front of the Prairie section and Lake Superior branch bonds? When is it proposed to issue the $25,000,000 for which authority has been obtained? Will the Canadian "boom" be taken advantage of to rush out the issue whether the money can be immediately spent or not? We hope Sir Rivers Wilson will throw light on all these matters at the half-yearly meeting next Thursday, but they ought to have been set out in the report or in a separate statement.

In other ways, however, there will be a pleasant-looking story to tell. Gross receipts of the Grand Trunk proper for the half-year ended June 30 were £3,021,681, or an improvement against the corresponding period of £292,673. By far the greater part of the gain came from freight, which contributed an additional £198,320, but passenger revenue rose by £88,413 and mails and express by £6,033, while there was a trifling drop of £93 in miscellaneous. The number of passengers carried was 4,616,957 or 313,192 more, and each one yielded 43.14d. being a gain of 1.79d. With the freight business, however, the experience was somewhat different. Weight of merchandise and live stock carried advanced over one million tons at an aggregate of 7,598,784 tons, but the average rate per ton fell off 2.61d. to 62.54d. The tons carried one mile reached the stupendous figure of 1,442,477,714, an advance of 187,376,319, but the average rate per ton per mile on the entire freight business was only 0.67 of a cent. compared with 0.69 in the corresponding half-year. Fancy carrying a ton of goods a mile for little more than a farthing! Working expenses, including taxes, came to £2,184,821 or an increase of £261,384, meaning an increase in the ratio of 1.83 per cent. to 72.31 per cent. It would be fairer, however, to make the comparison exclusive of the taxation, because this is abnormally large for the reasons mentioned. Leaving this item out of account, the revenue outlay comes to £2,107,118 or 69.73 per cent. against £1,901,753 or 69.69 per cent., so that receipts and revenue rose in almost equal proportion. For the past half-year the total sum paid in taxes was £77,703, being no less than £56,019 more, and but for this and by dividing up to the hilt the full dividend of 2 per cent. for the half-year could actually have been given to the third preference stockholders. Barring the unforeseen, they are pretty certain to stand in for something substantial for the current six months, and except for the Grand Trunk Pacific uncertainty might perhaps be considered on the full 4 per cent. basis—for the present. Only an extra £19,007 was spent on maintenance of way and structures during the half-year, which seems small considering the greater wear and tear on the road; but maintenance of equipment cost £139,020 more, traffic charges rose £45,820, and general expenses £1,518. "Conducting transportation," as the barbarism is, includes locomotive power, running outlay, and what we should call traffic expenses, but we cannot trace that much more has been paid in wages under this abstract, the principal increase being in fuel. Balance of nett revenue is only £31,290 larger at £836,860, despite the gross gain of £292,673, but other nett revenue items were on a larger scale, so that the disposable credit appears at £944,868 against £907,634. Rents of leased lines £77,603 and interest on debenture stocks and bonds £534,521 were the same or nearly, but while the company was relieved of any deficiency charges in connection with the Detroit Grand Haven, which for the corresponding period was short of £10,415, a new trouble appears in the shape of a Canada Atlantic balance on the wrong side. This company earned gross £189,604 and nett £30,229, the working expenses being £159,375, and as the nett revenue charges come to £60,525 there was £30,296 for the Grand Trunk to make good. The line was taken over a year or so back in order to give the Grand Trunk an entrance into Montreal, and the privilege is now being paid for. Happily the Grand Trunk Western was able to repay £6,221 previously advanced on account of interest and the Detroit Grand Haven produced a surplus of £1,192, so that the fixed charges were reduced to £635,007 against £622,600. Surplus for dividend purposes, therefore, comes to £309,861 or £24,828 more, and with £4,517 brought in the disposable balance is £314,378. This sum provides the half-yearly dividends on the Guaranteed and first and second preference stocks, with a credit carried forward of £16,077.

A considerable addition to the rolling-stock was made during the half-year, but none of it was at the expense of capital. In fact, the actual capital outlay was only £39,845, or, if we take into account the sum of £14,733 for discount and commission on £1,100,000 4 per cent. guaranteed issued in March last, £54,578. Slight progress was made on the Grand Trunk Western line, and curiously enough revenue and expenditure each went up £6,021 to £519,016 and £435,459 respectively, so that the nett balances in each half-year of £83,557 was the same. Nett revenue charges, however, were £82,718 against £76,121, meaning that the surplus for the half-year was only £839 compared with £7,436. There was a much larger balance of £18,244 for the second half of 1905 and £351 was brought forward, all three items added together making a total of £19,434. This will admit of the payment of the full interest on the second mortgage bonds for the year and the repayment to the Grand Trunk of £6,221. The Detroit Grand Haven experience was a good deal better than in the corresponding period. An extra £26,508 gross at £161,279 was earned at an increased cost of £14,304, the total working expenses being £122,284. This left the nett revenue £12,204 larger at £38,995, and as the fixed charges were £37,200 the Grand Trunk receives the surplus £1,192. It is useful to note from the balance-sheet that a special advance of £1,027,397 has been made to the Grand Trunk Pacific, the proceeds probably of one of the Guaranteed stock issues, and over and above this the company has £1,383,200 at bankers and in transit. That seems a lot of money to have lying more or less idle, and we hope the company is not using its improved credit to raise more capital than is actually required.

Another "Times" Book-Club Shocker.

It says much for the marvellous hold the *Times* has upon the advertising public that great displays of publishers' advertisements should be appearing most days in the paper alongside such rhetorical spreads about its book club as that published on Monday last. For audacity in assertion and unscrupulousness in business warfare that logomachy would be very hard to beat. There is an air of confidential frankness about the yarn which, as we have said before, excites an involuntary admiration, but which none the less fails to disguise the stupendous impudence underlying the whole purpose. "We made a new departure," the American gentlemen who dominate the book club affair say—

"and we have not been imitated." We should just think not, for a business conducted on the lines indicated in this spacious advertisement, written in the best patent medicine style, would probably require a free revenue of something approaching £100,000 per annum to meet the deficiency, if half the allegations made in it were approximately true. Most of the advertisement is an exposition of the *Times* methods of "doing business" in cheap books, of giving books away at more or less heavy discounts on the terms we indicated last week, but the essence of it is an unscrupulous and most sophistical attack upon Mudie's Library. That library is not named, but plainly indicated in the phrase, "A circulating library, which certainly ranked first in importance until the *Times* Book Club was established"—the cheek of the fellows—and the attack is made upon its second-hand catalogue just issued. Sixty-eight books are selected as being common to the Mudie catalogue and the *Times* remainder lists, and in bold type it is declared that Mudie's charges £18 14s. 6d. for these books, against the *Times* price of £9 15s. 5d. How can this be done? Mudie's business is honestly and carefully conducted, and in spite of that its shareholders did not receive a dividend for the past year. It cannot, therefore, be charging too much for these or for any of its books measured by any reasonable provision for working profit, and we should like to see a list of these 68 books. Without particulars we are warranted in setting the whole thing down to mere bounce.

The *Times*, never forget, has no subscription list for its library or book club; said club only receives whatever discount the proprietors of the *Times* newspaper may have given it for obtaining subscriptions in order to galvanise its circulation. Yet, on this basis, which must be slender if the *Times* itself is to live, the men who carry on this predatory undertaking profess to be able not only to give second-hand books at little more than half the price they are offered at by Mudie's, but to spend thousands of pounds in "Mother Siegel" and "Little Liver Pill" sort of advertisements in order to spread abroad the knowledge of their pound-foolish, penny-wise generosity. A series of examples are given in that Monday's flare, all showing how remarkably cheap the *Times* books are compared to Mudie's. The compilers of the advertisement, however, are careful to say that their stock might be exhausted, and we should really like to know how many copies of Lord Randolph Churchill's Life, now offered by the *Times* Book Club at 7s., against 16s. 6d., Mudie's price, can still be obtained. Could it send us a dozen of them? Is it true that the *Times* Book Club obtained a supply of this biography in a roundabout way and broke the price to spite Messrs. Macmillan? And is it really "paying in blue paper" already? Stress is laid upon other extraordinary bargains not specified, and we know a lot about those offered by that precious catalogue which the American gentlemen issued in the end of 1904, for it was packed full of the waste rubbish swept out of publishers' cellars, and much of the "literature" thus furbished up for sale was not worth more to anybody than the price of waste paper. As "books" it was not worth that.

The affair is now becoming scandalous, and the marvel to us is that the proprietors of the *Times* have not before now woke up to the injury which is being done to the paper by perfectly unscrupulous business tactics of the description here exhibited. How will they look when the whole flimsy though vexatious and irritating conspiracy breaks down? However much we might like to get books cheap or for next to nothing, it is impossible to believe that unfair business competition of this description can last. No organisation can do profitable business on these lines, as we have from the first insisted. There is not sufficient basis in the circulation of the *Times*, were it five times as great as it probably is, to enable a great trade in new books at second or fourth hand prices to be carried on in this fashion. But what are we to say to the assertion made that the *Times* Book Club "frequently buys very large editions from the publishers at exceptional prices"? To what extent is this true? The publishers ought to investigate and find out. Is the only publisher or copyright owner from which the book club buys such editions the *Times* itself? If not, who are the "rats"? But grant that this statement is true in isolated instances, and there is still not a broad enough foundation on which to build up a cheap book trade of the description this Monday's advertisement sketches out. The thing could not be worked at a living profit even were these Yankee "raiders" to exact a subscription of 10s. 6d. per annum per volume for the use of their library, for more than that fee might be absorbed in providing free carriage back and fore. How much less then can it prosper on the basis of a mere discount from the *Times* subscriptions price, out of which free books, free carriage and dirt-cheap stock, together with rent, salaries and wages, flaming and most costly advertisements and profits, have all to be found? The monster show could not be worked at a reasonable profit even if the *Times* only received a penny per copy of the money paid by each subscriber. But as the organisers of the campaign are said to boast, it may last long enough to make a few publishers bankrupt. A considerable proportion of them are not far off the pit as it is, and if the *Times* Book Club could only succeed in driving them over the edge it might renew its rubbish stock cheap. Is that the ruling idea?

Indian Gold Mines.

Shareholders in the leading Indian gold mining companies have, naturally enough, been greatly concerned over the steady drop in the share quotations, particularly in the price of Champion Reefs. This steady recession has not only alarmed, but perplexed, them, and a great many have not known what to do under the circumstances—whether to hold on in the hope of recovery, or sell out lest worse should come. We sympathise with them. The main cause of the fall in Champion Reef shares is the decline in the quality of the ore, a defect no human skill can remedy. But it is possible that the fall has been overdone, for many holders have cleared out on first impulses, and in doing so may have depressed the market beyond reasonable limits. It is the fate of shareholders in gold mines to be an easy prey to fear. Knowing little of mining usually, they are always ignorant to what degree the fall may be due to "bear" attacks, and often augment the trouble by mere nervous selling. After a time, when holders have recovered their calm, prices begin to recover, slowly it may be, but steadily. This experience has been noticeable in Champion Reef shares. To those who have written us from time to time we have invariably given the advice to hold on, for in nine cases out of ten it is foolish to sell on a falling market. One then generally sells with and not to the "bears." The "bear" may always be depended upon to make the most of his chances. The Champion Reef was, not so many years back, the premier mine on the famous Colar gold field, and one of the steadiest producers of gold the world has ever seen. Now it is, as it were, in disgrace, the most maltreated of the Colar group, but the days of its prosperity need not therefore have gone for ever. The diminished output is not due solely to the falling off in the grade of ore, but also to the deliberate, though prudent, policy of the directors in restricting milling operations, so that crushing should not be continued at the expense of development. How long this policy will be maintained must necessarily depend upon the measure of success that attends the work of development. At the end of the last financial year—September 30, 1905—the ore reserves amounted to 378,900 tons, and there is considerable likelihood that this quantity has been depleted from time to time in order to feed the battery. This is serious enough, but imagination need not make it more serious than it is until the exact facts become known. Experts hold that an improvement will come sooner or later, with the possibility that the mine will do as well as ever it did. They cannot, of course, see into the depths of the

rocks, and their theoretical views are based largely upon the fact that the Mysore mine to the south has reached a much greater depth on the inclination of the lode, and that at the deepest points rich and wide ore chutes are being opened up. Such facts support the opinion that the diminished values in the Champion Reef will be temporary. Anyway, the management is adopting the best policy under the circumstances—vigorously developing the mine in depth, in the hope that it will bring success.

Shareholders are meanwhile receiving smaller dividends, and must continue to receive them. For the year 1905-1906 two interim dividends have so far been paid, totalling 1s. 6d. per share, compared with 2s. 7d. per share for the corresponding period of the previous year. During the six months to the end of June last 96,692 tons of quartz were crushed and 98,953 tons of tailings and slimes were cyanided, for a yield of 87,817 ozs., inclusive of 1,500 ozs. recovered as "scrapings" from the old No. 2 mill. For the first half of 1905 109,295 tons were milled, 80,964 tons cyanided, and 109,814 ozs. recovered, including 2,116 ozs. from "scrapings." The yield per ton crushed has fallen from 21.9 dwts. in January, 1905, to about 17 dwts. This is a big drop, but it hardly justified such a fall as nearly 15s. in the price of the half-crown share, or about £1,500,000 in the aggregate. This experience, however, of the Champion Reef seems to have shaken the faith of shareholders in the other leading companies, if one is to judge from the all-round decline in prices. Mysores have been heavily depressed, though recovering lately, and weakening confidence can only be conjectured as the reason, apart from any "bear" onslaughts. Instead of a falling-off in the returns from this mine in the six months to June 30 they actually increased, the total output from all sources being 101,417 ozs., compared with 101,299 ozs. for the corresponding half of last year, although some 9,000 less tons were crushed, owing to a temporary diminution of the Cauvery electrical power supply. The grade of the ore has improved contemporaneously with hopeful mine developments, rich and wide ore-bodies being encountered in the deeper workings. About a year ago good values were met with in the vicinity of Ribblesdale's shaft, prior to which the deeper workings there were rather disappointing, so in the case of the Mysore we see how a recent falling off was transient. If the condition of the mine gives no justification for the relapse in the price, to what is the depreciation due? There have been rumours that the late Sir Charles Tennant's holdings of Mysores have been gradually liquidated, but no confirmation of the story ever came. Whether a market yarn or not does not much matter, for now the selling is ended, and there has recently been a steady recovery in the price. On the basis of last year's dividend—145 per cent.—the yield is between 11 and 12 per cent., and this payment is likely to be repeated for the current financial year.

The ore from the Nundydroog has, like that from the Champion Reef mine, shown a falling off, though to a much less degree. For the six months to June 30 the total production was 35,138 ozs., compared with 36,174 ozs., a decrease of 1,036 ozs. The quantity of ore milled was 39,650 tons, or 580 tons more, and the average 15.76 dwts. against 16.92 dwts. This is not a serious decline, and the directors have paid the same interim dividend as last year, although £3,000 more is required to pay it, owing to the increase in the capital. Should the aggregate for the year again be 36⅔ per cent., the yield will be well over 13 per cent. on the present price of the share. Recent reports from the mine indicate rather favourable developments, emphasis being laid on the "folds" in the deeper workings from Richards' shaft, where quartz of great size and good value has been and is still being encountered. Kennedy's shaft has reached a depth of 120 ft. below the 2,000 ft. level, and a winze below the 2,000 ft. level north has been sunk 25 ft., where the quartz, though narrow, assays over 1 oz. per ton. In the bottom level from North shaft the quartz is 1 ft. 3 in. wide, assaying 1 oz. 13 dwts., and above this level, in a rise which has been put up 42 ft., the quartz is also 1 ft. 3 ins. wide, assaying 1 oz. 12dwts. Above this in a rise from the 2,000 ft. level north the quartz is 2 ft. wide and carries a value of 1 oz. 2 dwts.

Ooregums have shared in the depreciation, but even in this mine indications are more promising than they have been for quite three years. For the first six months of the present year there was a slight increase in the output and in the value of the ore, though the ore is still of very low grade compared with that of other mines of the field. However, the directors paid an interim dividend on the ordinary of three-halfpence per share, compared with 3d. a year ago, so there is here some justification for the fall in price, though there is more capital participating in the dividend. The mine is filling out its jog-trot career, without anything sensational happening in the way of discoveries, but even here, as in the past, there is the possibility of alighting some day on deposits of richer ore. The Balaghat, on the other hand, is making considerable progress, the year 1905 being the most successful it has ever experienced, and the current year promises to be quite as good.

The following table gives the dividends for the last financial year, the approximate market price of the share and yields :—

	Approx. Price.	Dividend.	Yield.
Mysore	6 15/16	14s. 6d.	11⅜
Champion Reef	16s. 0d.	4s. 0d.	25
Nundydroog	26s. 0d.	3s. 8d.	14⅛
Ooregum Ordinary	15s. 6d.	1s. 3d.	8⅛
" Preference ..	£1	2s. 3d.	11½
Balaghat Ordinary	26s. 6d.	3s. 0d.	11⅜

Economic and Financial Notes and Correspondence.

The Imperial Revenue.

For the quarter ended last Saturday the figures were not so good as those for the first quarter of the present financial year. An excess of £378,726 was, however, realised on the figures of the same quarter last year, and added to the overplus of £1,083,750 accruing in the first quarter, brings the increase in the revenue for the six months up to £1,462,476. These figures apply to the amounts paid into the Exchequer, but if we take in, as we should, the assignments to local taxation, the exhibit becomes better still, last quarter's gross increase being £576,778, which, added to the £1,073,896 additional income of the first quarter, gives a total expansion for the six months of £1,650,674. Altogether up to date the local taxation accounts have been fed to the tune of £4,042,627 out of the Treasury. The total revenue for the six months therefore came to £63,095,352, of which £59,052,725 was retained by the Exchequer. As the figures stand, it would thus appear probable that Mr. Asquith's Budget anticipations will be comfortably exceeded by the time the end of the fiscal year is reached, and yet some of the most important branches of the public income are not doing so well as this summary might lead us to infer. Had it not been for an increase of £930,000 in the receipts from death duties in the past quarter and for increases of £280,000 in the income tax, £110,000 in the Post Office, and £40,000 in the telegraph service, together with £30,000 from Crown lands, the quarter just ended would have shown up rather badly, for Customs gave £711,000 less, and Excise £220,000 less. On the six months, thanks to the large receipts from the first quarter, Customs still show an increase of £7,000 compared with a year ago, but that is not much to set against the expected loss through the abolition of the export duty on coal, which takes effect next month.

Altogether, £500,000 is expected to be lost in the current fiscal year through that remission of the coal

tax, and as £1,000,000 was also knocked off the estimated Customs income by the reduction of the tea duty to 5d. per lb., we may say that at the very worst this branch of the revenue shows up well enough on the six months. It is otherwise with Excise, which showed an increase of £87,000 in the first quarter, all of which has been wiped out and a deficit of £133,000 brought out for the six months. Stamps are also continuing to do poorly, and show a loss of £90,000 in the past quarter, making the total loss £114,000 for the six months. It would thus appear that the most solid branches of the tax revenue are still backward, and we are not sorry. It would be a pity were the Chancellor of the Exchequer to end the year with an embarrassing surplus. The more money he has to play with the less probability is there that we shall see real economy introduced into the public services. From the point of view of the administrative reformer, the best thing that could happen would be a serious shortage at the year's end, compelling the Government to cut down expenditure in various directions where extravagance notoriously prevails. It is, however, too early yet to speculate as to what will be the result six months hence, and the only other observation we need make is to remind Mr. Asquith that the gross revenue of £9,905,893 brought in by the estate and other death duties this year so far is really capital which ought not to be spent as revenue. Yet £2,310,893 of this total has already been paid over to local authorities to be by them spent in ways probably calculated to increase rather than diminish local burdens. And the Chancellor of the Exchequer cannot count upon a run of millionaire estates such as he has enjoyed the shearings from during the first half of the financial year. There might even come a time when, thanks to the depreciation in the prices of public securities, this branch of the nation's income would show an important decline, but the whole of it, whether large or small, ought to be devoted to the redemption of debt.

The Edison and Swan United Electric Light Company.

Perhaps the most remarkable thing about the annual report of this undertaking is that the directors do not propose any further reduction in its capital. Two writings-off, involving nearly £120,000, took place during the years 1904 and 1905, and we should not have been at all surprised if the directors had come before the shareholders with another proposal for reduction. No doubt the position of the business is at last showing signs of improvement, but there can be no excuse for continuing in its present form, the ponderous item of £390,432 representing the cost of establishing the business, goodwill and remaining patents. In the last balance-sheet this account stood at £443,451, but the reduction of capital then put forward and agreed to, amounting to £53,019, brings the figure down to the amount mentioned. Against it there is a reserve fund of £5,000 only, being the contribution from the past year's profits, and it seems impossible that the company can ever solidly re-establish itself until this item is brought more in accordance with the earning capacity of the enterprise. One good point, however, may be noted, and that is that for the first time the shares of the Altrincham Electric Supply, which stand in the balance-sheet at par value, have paid a dividend. We are not told how much, but a beginning has been made, and possibly the chairman will throw more light on the subject at the annual meeting on Thursday next. It is also pleasant to note that this electric supply company has further reduced its indebtedness to the Edison and Swan by the sum of £1,865, but the company is still involved to the extent of £64,982, including debentures £25,000, fully-paid shares taken at par as intimated £23,346, and money lent on current account £16,161. Writings-off during the year have reduced the freehold and leasehold property from £77,102 to £74,968, despite capital additions of £7,440, and there is a moderate reduction of rather more than £5,000 in the stock and plant, which, however, is still very heavy at £232,232. Sundry debtors owe a good deal more at £53,444, investments have been raised quite £4,000 to £18,836, and the cash balance has improved from £5,440 to £9,015. Sundry creditors and other floating liabilities are not quite £3,000 larger at £29,177, and if we could forget the huge intagible item already referred to the financial position might be considered fairly satisfactory. The weakness, however, is rather emphasised by the size of the debenture debt, measured against the share capital. They both stand at almost precisely similar sums, and it is very doubtful, it it came to realisation of the assets, whether the solid property would prove sufficient to make good the fixed indebtedness. The report does not contain any reference to the actual condition of trade during the year to June 30th, but an increase in the nett revenue of nearly £5,000 at a total of £53,710 indicates that business continues to recover. After meeting debenture interest charges for the 12 months £16,730 a reduction of about £2,000 compared with the previous year, depreciation £12,570, which is about £1,000 lower, and providing £1,322 for bad and doubtful debts the nett balance comes out at £23,150. The bad debt charges are less than half those of the preceding financial period, and the balance of nett profit has improved by nearly 100 per cent. Including the credit of £6,835 brought forward the sum at the directors' disposal is £29,985, and besides placing the mentioned £5,000 to reserve they can increase the dividend on the "A" shares from 2½ to 4⅛ per cent. per annum, being from 2s. 6d. to 4s. 2d. per share. The sum carried out is then a good deal increased to £9,007. Within the year the company purchased and cancelled £8,381 of its own debenture stock, resulting in a profit of £1,069, which has been appropriated as a reserve against stock depreciation.

Victorian Mining in 1905.

The mining industry of Victoria did not distinguish itself conspicuously in the year 1905. According to the report of the Department of Mines for that year, it made no progress, but went back a little, despite the ability of the scientists to make lower-grade stuff pay. The actual yield of gold was 810,050 ozs. gross, or 747,166 ozs. fine, representing a value of £3,173,744, a decline of 10,967 ozs. compared with 1904. As, however, the total output since the date of the first discovery to the end of 1905 reaches 68,367,403 ozs. of a value of £273,236,500 this field has played a prominent part in enriching some folks in the world, and may feel not a little proud of its achievement. Having turned out so vast a quantity, is it surprising that the yield now is diminishing as mines become exhausted? Of the several mining districts, Bendigo still holds the first position with an output of 212,465 ozs. Ballarat comes next with 145,331 ozs., then follow Beechworth with 133,587 ozs., Castlemaine with 90,205 ozs., Maryborough with 85,768 ozs., Gippsland with 73,633 ozs. and Ararat and Stawell with 23,651 ozs. The largest increases are those of the Castlemaine and Beechworth districts, with 13,035 ozs. and 11,002 ozs. respectively, the improvement in each instance being due almost entirely to dredging. Of the decreases that of the Bendigo field was the largest, viz., 31,435 ozs., owing mainly to the falling off in the yields from the South New Moon, Clarence United, United Ulster, Great Southern, Garden Gully and Great Northern mines. Although the South New Moon showed a decrease of 11,185 ozs., this mine was again, for the third year in succession, the largest yielder of the lode mines, with a return of 25,334 ozs. from 28,119 tons, thus showing an average of 18 dwts. per ton. The Great Southern Consols was the best producer of the alluvial mines, with an output of 11,019 ozs. from 14,738 fathoms of washdirt. As showing what can be done by efficient management and up-to-date methods in connection with low-grade material, the report calls attention to the following facts: The Stewarts' United Company at Fosterville obtained 474 ozs. from 7,104 tons of quartz, the average per ton being only 1½ dwt.,

equal to about 5s. 4d. per ton. Thus the total value of the gold was £1,896 and the expenditure £1,813, so even on this grade of ore a small profit could be earned.

As cheap crushing is a necessity in dealing with poor stuff, mine-owners and managers are giving increased attention to this, and in some instances are replacing old batteries with up-to-date appliances. The total sum paid in dividends by gold-mining companies during the year was £454,431, which, though about the average of recent years, is a decline of £168,966 compared with the amount distributed in 1904. Bendigo had a decrease of £154,293, but the Castlemaine and Beechworth districts recorded increases owing to the success of the dredging and sluicing companies. Nevertheless, Bendigo comes easily first in the dividend list, with a total of £228,028, contributed by 18 companies, whose paid-up capital amounts to £522,979, and whose dividends to date aggregate £2,070,102. This is equal to £400 for every £100 invested. But these are a mere handful of companies compared with the large number of non-dividend paying concerns. During the year the South New Moon returned £70,400 to its shareholders and the New Moon £45,600.

As regards other minerals, the production of coal was 155,135 tons, valued at £79,035, or 10s. 2d. per ton at the mines. Although the coal mining industry has not regained the position it occupied before the great strike in 1903, the output showed an increase of 33,394 tons over 1904. Nevertheless, this industry is not in a flourishing condition. Owing to a number of causes, amongst which the most important are thinner seams, disturbed and faulted coal measures, insufficient capital and very low prices, the companies and parties at work have hardly made ends meet in the last three years. No dividends have been paid since the early part of 1903, and from present appearances there is no immediate prospect of investors receiving an adequate return on their capital. It is hoped that the labours of the Royal Commission, which has been investigating the conditions for some months past, will bring about an improvement. To the end of 1905 the total output for the colony was 2,514,135 tons, valued at £1,388,269. There were increases in the production of tin ore and antimony, but the output of these is still quite insignificant.

The Railways and Tramways of New South Wales.

These are Government properties, and the report of the Railway Commissioners of the State for the year to June 30 last is, taken altogether, the most cheerful ever presented. On the working of the railways and tramways together there was a surplus for the year of almost £441,000 after meeting all working expenses and paying interest to the amount of £1,671,867 on the capital invested. The railway surplus was £384,980, and that of the tramways £55,960. A year ago the railways showed a deficit of £35,079 after meeting interest on the capital, and the tramways were also short by £1,619 of the amount required for working expenses and interest. The improvement has thus altogether amounted to £477,638 on a comparison of years. And what is most satisfactory of all about the display is that there does not appear to have been any starving of the properties in order to reach this result. The gross earnings of the railways went up by nearly £551,000, only 21.10 per cent. of which went away in working expenses, the proportion of expenses to revenue having been reduced by nearly 5 per cent. to 54.51 per cent. This reduction does not imply that the property has not been maintained, but is, we may assume, the proper consequence of the remarkable expansion in traffic income. Every large branch of the business done by the railways showed an increase, the largest being £169,261 in the revenue from general merchandise, followed by £124,465 more received for the carriage of live-stock, passengers coming third with an increase of £122,436. The slight decreases in grain, flour, &c., and minerals other than coal and coke did very little to diminish the increases in other directions, and there is apparently every probability that the current year will make a still better display. The Commissioners state that £539,700 was spent last working year in the general upkeep of the permanent way and works, and all charged to revenue; also that £90,775 was charged to working expenses for rebuilding and replacing engines, carriages, and wagons, besides £384,465 laid out on the upkeep of the stock. Equally satisfactory is the story of the tramways in and around Sydney, the capital cost of which up to June 30 last was £3,669,000. Extensions were not paid for out of revenue, but in every other respect the property appears to have been carefully looked after, and sundry amounts were charged off capital account to working expenses for wastage of old stock and the cost of sundry changes incident to the conversion of the lines to electric traction. Stated in another way, the nett income from the railways was £4 8s. 6d. per cent. upon the capital of £43,626,000 sunk therein, compared with £3 9s. 3d. per cent. in the previous year and only £2 17s. in 1888. On the tramways the exhibit was still better, last year showing a nett income of £5 1s. 7d. per cent. against £3 10s. 4d. in 1905 and £1 19s. 7d. in 1888. Why 1888 is chosen we cannot say, but presumably it was a low-water mark year. New capital, however, does continue to be spent on these properties, and the outlay on the railways last year from this source aggregated £563,514, of which £99,321 was laid out on new rolling-stock and £84,700 on additions to the lines, besides £14,269 on improvements of grades and curves. Tramways also involved an outlay of £61,040 gross in new capital, of which £21,052 went into extra rolling-stock and £26,618 into additions to the lines, but credits of £38,301 partly offset this total. Probably enough in the present circumstances of the colony capital outlay is necessary, and we can only hope that it may prove remunerative. We, however, do not much like the charging of perishing and perishable appliances to permanent capital account.

The Trade of Brazil in 1905.

An excellent illustration of the untrustworthiness of statistics without the facts relating to them is afforded by the Brazilian trade returns for 1905. Examined without regard to the various influences at play, the figures would convey to an observer who merely studied them the impression that the year had been, if not one of prosperity, at least a decided improvement on its immediate predecessor, when, as a matter of fact, affairs if anything were as bad or even a little worse than in 1904. Mr. Chapman, our Consul-General, states in his report that trade and commerce continued depressed, money scarce, and credits restricted, while numerous failures and fraudulent liquidations were common in business circles. And as if these evils were not enough, the Government increased the tariff and taxation, and flooded the country with money raised on foreign loans, the lavish expenditure of which, while causing activity in certain branches of trade, tended to divert labour from others more remunerative. The average rate of exchange, however, was, for reasons mentioned hereafter, higher than that of the preceding 12 months, and to this is due much of the seeming prosperity. Increased taxation, as a matter of fact, counteracted any effect these higher rates might have had on prices and living expenses since the cost of production inevitably suffered, and with it exports. But although rates of exchange were higher, they were by no means steady, and the erratic fluctuations they underwent only served to breed a distrust that rendered business transactions almost impossible. For this uncertainty in the exchange the Banco da Republica was mainly responsible. Without apparent reason the directors of this institution frequently saw fit to alter the daily rates, and in so doing caused legitimate business to suffer considerable loss by creating a feeling of uncertainty. Officially these manipulations were explained by a desire on the part of the Bank to counteract the machinations of speculators, an explanation which, it is hardly necessary to say, was

somewhat belated, and only tended to foster the distrust of the public whose interests were trifled with in this wanton fashion. What renders the conduct of the Banco da Republica even more incomprehensible was that it was in complete opposition to the declared policy of the Government. The Federal authorities in recent years have endeavoured with some success to reduce the inconvertible paper currency in circulation by cineration, and at the same time maintain their independence of the exchange market by the collection of a percentage of the Customs duties in gold. These methods have enabled them to continue gold payments on the foreign debt, increase their balance in London, and renew their credit and, if judiciously followed, will tend to raise and steady the exchange, benefit legitimate trade, lead to the amortisation of the external loans, and in the end to the conversion of the currency. Already it has borne fruit, for the paper currency in circulation on April 30, 1905, amounted to 668,347,014 milreis, or 120,017,600 milreis less than in 1898, while in the five years since 1901 the average rate of exchange has risen from 11⅛d. to 1s. 3 57-64d.

Both of these improvements, no doubt, give unbounded satisfaction to the Government, but it cannot be shared by manufacturers and merchants. Trade, domestic and foreign, shows everywhere the blight of increased taxation and higher tariffs, and it is here the fallacy underlying the statistics becomes apparent. The complete returns of the imports for 1905 were not published when Mr. Chapman prepared his report in August of this year, but those for the first six months show an increase in sterling value, but a decrease in currency. Much the same thing has taken place in the value of the exports, for which the complete figures are available. Compared with 1904, these show a total of £5,203,946 in sterling, but a decrease of 91,709,107 milreis in currency, and though the total of £44,642,983 is the highest sterling value seen so far, the advance to a large extent is due to the higher rates of exchange at which currency values have been converted. Of the above total coffee and rubber represent some 60 to 80 per cent., since the cost of production restricts the export of those articles which compete with similar goods exported by other countries. For while export products are given in gold values, under present conditions the rise in exchange represents a loss, and not a gain, to the producer since he must defray the cost of production in currency, and with other influences in the shape of heavier State burdens depriving him of any gain the higher rates might give, it follows that his expenses have remained stationary, though his profits have decreased. Imports are severely handicapped by the high tariff duties, the effect of which is to squeeze the home consumer and compel him either to pay an extravagant price or put up with a much inferior article of domestic origin. Yet there are still openings left of which shrewd traders might take advantage. Shrewdness, however, seems no longer a characteristic of the British merchant, who is content to work on the same lines that served his forefathers. Few seem to realise that our system of weights and measures is totally incomprehensible to the majority of foreigners to whom size and quantity must be expressed in grammes and metres in order to be understood. Time and again has this been pointed out by our Consuls all the world over, and yet merchants here go on in their old-fashioned way sending catalogues abroad with weights and measures given in pounds and tons and prices in pence and shillings that for all the good they do they might just as well be thrown in the waste-paper basket at the start. They get there at the finish. But the adoption of the metric system is not the only advice Mr. Chapman gives to British merchants seeking to find trade openings in Brazil, and his other suggestions are well worth consideration. Direct trade under present circumstances is not to be recommended, and the intervention of a resident commission-agent conversant with the local markets becomes therefore a matter of necessity in order to safeguard the interest of the merchant and shipper. Care in the selection of such an agent, it goes without saying, is of the highest importance, and principals here are warned against practising false economy in the matter of commission, since this may lead to the appointment of a firm of inferior standing and loss in consequence. If possible a British firm should be chosen as being more likely to look after the interests of a fellow-countryman. For commercial morality is at a low ebb in Brazil, and cases of bad trading have been known to occur through foreign agents accepting orders for British goods at risks they would not have taken had the articles in question been supplied by a firm of their own nationality.

West Australian Mining in 1905.

The usual bulky Blue-book has just been published, containing the official report on the West Australian mining industry in 1905. It will probably be no surprise to a great many to learn that there was a falling off in the gold production, because this has been foreshadowed by many symptoms for some time past. Still, the output was considerable, the value of the whole being £8,305,654, a decline of £118,572 compared with 1904. This may not seem, on the face of it, especially when set side by side with the millions mentioned, a very serious falling off. It is, however, serious in this way. The great producing mines are being gradually exhausted, and no new mines are being discovered to give a fresh supply of metal. So it is reasonable to expect the decline to continue, unless something very unlooked for should happen in an enrichment of existing mines at depth. Notwithstanding this decrease, shareholders have actually received more money in dividends, the amount distributed aggregating £2,167,639, against £2,050,547. Such is the direct benefit shareholders have received from the all-round reduction in working expenses, which has been the most conspicuous achievement of the past year or two. A determined effort has been made to cut down working costs, and the effort has succeeded admirably, so that to-day working expenses in Westralia, as we have pointed out more than once, compare more than favourably with those on the Rand. It is done with white labour, aided by the most modern machinery, and if it can be done in Western Australia it should be possible on the Witwatersrand. Taking all the minerals of the colony, the total production up to the end of 1905 was valued at £65,012,449, of which £63,170,911 represents the gold value, whilst £13,739,842, or less than 22 per cent. of the gross value, has been dispersed in dividends. The following table shows the quantities and values for 1905 compared with those for 1904:—

Description of Mineral.	1905.		Inc. or Dec. for Year Compared with 1904.	
	Quantity.	Value.	Quantity.	Value.
	Statute Tons.	£		£
*Black tin	1,079	86,840	+ 224	+ 28,023
*Coal	127,364	55,312	— 11,186	— 11,862
*Copper ore	2,389	16,266	— 1,580	— 8,914
*Ironstone	3,213	1,285	+ 1,771	+ 708
*Limestone	9,145	1,220	— 4,252	— 479
†Pig lead	2,730	34,471	— 2,622	— 28,699
†Plumbago ore	..	..	..	— 2
*Tantalite	7	10,515	+ 73	+ 10,515
	Ozs.			
‡Gold	1,955,316	8,305,654	— 27,914	— 118,572
†Silver	359,740	44,278	— 39,446	— 1,634
Total values	..	8,555,841	..	— 130,916

* Raised. † Exported. ‡ Export and Mint.

As regards gold, the largest decrease is in the returns from the East Coolgardie goldfield, which embraces the well-known Hannan's fields, where the best mines are, the decline here being about 5 per cent. The majority of the other fields also show decreases, though some record slight increases. The grade of the ore treated continued to show deterioration, the average value per ton being 58.51 shillings against 66.2 shillings for 1904 and 76.3 shillings for 1903. In East Coolgardie, which gives over half of the gold output, the value per ton of ore treated fell from 77.62

shillings in 1904 to 65.50 shillings, whilst in the Murchison district the drop was equal to 14s. As this diminution has been persistent, there is practically no hope of any improvement now; on the contrary, we should say the yield will further diminish, hence the insistence upon economical working. "Although the returns," says the report, "do not compare favourably with those of the previous year, there is no reason to doubt the soundness of the gold mining industry of the State." This view of the position is quite relative. It may be sound in a certain limited sense, yet be a dead loss to many who have invested their money in it. Since, however, over one and a-half million sterling was paid in dividends by the East Coolgardie mines, it certainly proves that good profits can now be earned from low grade ore, as the result of many improvements in mining methods and machinery. Instead of the number of those employed showing a falling off, there was a small increase—16,848 against 16,832—whilst the area of leases held for gold mining was also fairly maintained. "Considering," the official reporter remarks, "that for some time past, owing to the liberalisation of the mining regulations, it has been possible to acquire and hold prospecting areas on much easier terms than formerly—a concession which has been freely taken advantage of—the fact that the area held under lease has not decreased to any extent is an encouraging one." Several promising finds were reported during the year, but until further development work is done upon them it is impossible to speak with any certainty of their value.

The increase in the price of tin has been the impulse to greater activity in this branch of mining. Both the Greenbushes and Pilbara tinfields show increased outputs, the former of 110 tons, the latter of 115 tons, whilst the number of men engaged rose by 195. What is regarded as a promising discovery of lode tin has been made at a place called Wodginga, on the west branch of the Turner River, in the Pilbara goldfield. In his special report on this locality the Government geologist says the tin lodes are numerous and occupy a considerable area of country, but though the district promises to be an important one, a considerable amount of work must be done before its future is assured.

American Business Notes.

A further increase of strength was shown by the New York Associated Banks' averages for the past week, but only $2,791,000 of the specie imported from Europe was added to the cash reserve. It, however, rose altogether by upwards of $3,900,000, thanks to an increase of $1,136,000 in the legal tenders. This made the legal reserve $2,702,000 larger, and the surplus reserve was $1,224,000 higher, in spite of an increase of $10,808,000 in the deposits. Loans, however, increased by $7,290,000, indicating that the pressure for money continues as severe as ever upon these banks. They are the bond slaves of their debtors, and must find the means to maintain the gamble on Wall Street under pain of bankruptcy. Will much more gold be required to tide over the autumn crisis? Probably a good deal, but it will not be easy to secure, and the crisis will tend to become acute when it has to be paid for.

The Egyptianising of the Republic of St. Domingo by the United States Government, which has been in progress for several months past, appears, according to mail news from New York, to be now an accomplished fact. Senor Velasquez, Minister of Finance and Commerce of St. Domingo and Special Commissioner for the regulation of its financial affairs, who had been in New York for two months, left there on September 19 for St. Domingo, after concluding an arrangement that practically places the Republic in the hands of financiers in New York and under the tutelage of the United States Government. Briefly stated, the situation is as follows: The Dominican Republic, in order to bring its finances, which have fallen into a state of chaos through the transactions of its successive Governments with gutter financiers in Europe, into order, has asked the United States Government to administer its customs and apply the receipts to the service of a loan, to be devoted to paying its "valid and established obligations" on a reasonable basis. This arrangement was made after frequent conferences between Senor Velasquez on behalf of his Government and some New York bankers, and with Mr. Bacon, United States Assistant Secretary of State, and Professor Jacob H. Hollander, of the Johns Hopkins University, who investigated conditions in St. Domingo for President Roosevelt. The results of these conferences were drawn up in a document, which, it is expected, will be incorporated in a treaty between the United States and St. Domingo. The bankers, who are Messrs. Kuhn, Loeb, and Co., of New York, have agreed to purchase on what are said to be favourable terms for the Republic an issue of $20,000,000 of 5 per cent. sinking fund gold bonds, and the Morton Trust, of New York, has engaged to act as fiscal agent for the Republic for the service of the loan and the settlement with its creditors. The scheme of settlement is now being prepared, and as soon as ready will be presented to them for acceptance.

The troubles in Cuba do not appear to interfere in any way with the Americanisation of its resources by financial operations. They seem, on the contrary, to tend rather to urge on the investment of American money, the prospect of annexation being brought so much nearer. On September 19 articles of incorporation of the Cuban-American Sugar Company, with a capital of $12,000,000, were filed in the office of the County Clerk in Jersey City, N.J., U.S.A. The company proposes to go into the cultivation of the sugar cane, the manufacture and refining of sugar, and the carrying on of nearly every other kind of business in Cuba. The capital stock is equally divided between 7 per cent. preferred and ordinary stock. The registered office is at 15, Exchange Place, Jersey City, with the Corporation Trust Company.

Commercially, Cuba is now part of the United States, so that its political independence must soon become a mere shadow. The Cuban Loan of $35,000,000 was taken up by the Speyers, of New York, just as the St. Domingo loan has been by Kuhn, Loeb, and Co., and the Military Vouchers, with which President Palma's Government paid the soldiers of the rebellion against Spain, fell into the hands of American discounters. The banks in Cuba are mainly under American control, and the trunk line of railway that runs from one end of the island to the other is entirely in their hands; half the capital of the entire railway system of Cuba is held in America. Americans practically monopolise the electric transportation of Cuba and control the telephone and telegraph system. The American interest in Cuban sugar represents about 23 per cent. of its production, with about $30,000,000 capital invested, and the import of sugar last year from Cuba was valued at $72,650,000. The sugar plantations owned by Americans range from 10,000 to 175,000 acres in area, and the total area of the plantations of sugar, tobacco, and fruit owned by them is estimated at 4,300,000 acres, with investments of $160,000,000. Of Cuba's exports of tobacco last year, valued at $26,758,000, the United States took $15,300,000 worth, and the investments of American capital in tobacco plantations are put down at $40,000,000. There are also large cattle ranches with some million and a-quarter head of cattle, valued at $40,000,000, of which three-fourths belong to Americans. A curious feature of the present troubles in Cuba is that they are ascribed to British intrigue, because so many of the leaders in the insurrection against President Palma's authority are said to have been living in refuge in British West Indian islands. President Roosevelt is said to have positive proof of the complicity of British West Indian officials in the movements of the rebel leaders and in the shipping of arms for the rebels. Seeing the interest that large

American corporations have in bringing about the early incorporation of Cuba in the Customs zone of the United States, these statements have very much the appearance of a red herring dragged across the trail of the real culprit. That such reports are circulating in the United States is none the less interesting, all the same.

On September 19th Mr. Joseph Ramsey, junior, former President of the Wabash Railroad Company, applied for a charter at Harrisburg, Pennsylvania, for the Keystone Air Line, which is part of his project for a road between Chicago and New York, alluded to some weeks ago. Three local lines, whose combined capital is $450,000, have arranged to construct extensions making connections for the Keystone Air Line.

The Trust Company of America declared, on September 19th, an extra dividend of 2 per cent., in addition to its regular quarterly dividend of 8 per cent. on its capital, payable October 1st, to stockholders on the books September 1st. Since its consolidation in May, 1905, the company had previously paid dividends amounting to $560,000, in addition to increasing its surplus by more than a million dollars. The yearly statement to June 30th showed deposits of over $63,000,000, and total assets of more than $75,000,000.

A despatch from San Francisco states that the Sharon and Parrott estates and California Life Association have decided to combine in a suit against the British insurance companies, which, under cover of their earthquake clauses, are refusing to settle San Francisco losses in full. The companies in question include the Commercial Union, Alliance, Palatine, and Norwich. In addition to these are the Indemnity and Williamsburgh City Companies of the United States, whose policies contain the same provision of exemption from liability for loss caused "by or through" or "directly or indirectly by earthquake."

According to reports from New York, some interesting exposures are expected to be made in a forthcoming suit by a Mr. Thurlow Weed Barnes against the Chinese Railroad Syndicate and the American-Chinese Development Company to recover money alleged by him to be owing for services rendered in obtaining a coal mining concession in China. Mr. Barnes was the negotiator who obtained a railway concession in 1898 from the Chinese Government for a syndicate composed of the late Senator Brice, Thomas F. Ryan now head of the Equitable Life, E. H. Harriman and others, which, contrary to the terms of their concession, they began hawking about Europe instead of carrying it out themselves, and so caused the Chinese Government to revoke it on payment of $6,750,000. For his services in that affair Mr. Barnes claimed $1,000,000, for which he had to sue, and the matter was settled out of Court. The present writ is for $700,000, and besides the members of the American-China Development Company, involves the Carnegie Steel Company, E. J. Berwind, Levi P. Morton, C. A. Griscom and several others, including a dozen leading financiers belonging to the Chinese Railroad Syndicate. The money involved in this suit is alleged to be due for services in connection with a coal mining concession. It is said that the fight will be a bitter one, and that some very interesting details of American high finance are likely to see the light. Mr. Barnes, who had only recently returned from China, said that the Chinese now regarded the United States with the same distrust they did the aggressive countries of Europe.

It was reported in Wall Street on September 24 that the New Brunswick Southern Railroad of Canada, on which the late Russell Sage held a mortgage, was to be sold to the Canadian Pacific Railroad Company. The line runs between St. John and St. Stephen, in the province of New Brunswick, and is 83 miles in length. The company was incorporated in 1902 with a capital of $49,000, and has a bonded debt of $800,000 in 4 per cent. gold bonds, due in 1953.

The Venezuela Asphalt scandals are again the subject of litigation in the American Courts. A hearing is going on in the case of Amzi L. Barber against the General Asphalt Company. The evidence of an Edinburgh lawyer named Kinleyside was taken on September 24 in connection with it. Kinleyside had acted as counsel for a John Gordon Douglas, of Edinburgh, who had become the possessor of large quantities of profitless asphalt stock, and was over in America to try and make some favourable terms in a matter in which Douglas and Barber were interested. Out of the confusion of evidence it seems established that Barber had a scheme to get President Castro to punish the rival New York and Bermudez Company for lending aid to the Matos revolutionary party by having it declared insolvent, and a receiver acceptable to Barber appointed, which would place the control of the company and its products in Barber's hands. In the event of the Venezuelan judges hesitating to carry out the arrangement, it was alleged that President Castro had promised that any so acting should be summarily removed from office. In his evidence Kinleyside stated that he had agreed to help Barber to get the evidence to lay before Castro, showing that the New York and Bermudez Company had provided the funds for the equipment of the *Ban Righ* which was used by the Matos revolutionaries as a war vessel. In return Kinleyside was to have an increased fee and a quantity of Pan-American Company stock which he was to boom in England. After this he learned that Barber's scheme was carried out as planned and Carner, a director of the Pan-American, appointed receiver. Barber then organised, unknown to Kinleyside and Douglas, another company called the A. L. Barber Asphalt Company, to the success of which he devoted all his energies, leaving his Scotch associates in the lurch. The further evidence in this case will be of much interest if only to serve as a warning against having anything to do with men of the stamp of Greene, Barber, Carner and the others, whose names were notorious two years ago in connection with this involved and apparently interminable Venezuelan asphalt business.

A tariff convention has been entered into between the United States and Bulgaria, which gives the United States the benefit of Bulgaria's minimum tariff, and extends to Bulgaria the provisions of Section 3 of the Dingley tariff. The agreement went into operation on September 30, and it is substantially the same as that recently concluded with Spain.

Mr. Paul O. Stensland, the Chicago bank wrecker, who was captured at Tangiers, arrived in New York on Septembr 24, received by a crowd of friends, reporters, and snapshot camera men. To reporters he stated, or is alleged to have stated, that the great culprit in the business was Hering, the cashier, now in prison. Chicago reports, however, do not entirely bear this out, and among other things charged against Stensland is that he was a frequent caller on a lady at a leading hotel in that city, where she occupied apartments at $25 a day. From all accounts the case when it comes off promises to be as sensational as any that have been tried in the United States for a long time, but the supply of dupes in that country is apparently so great that the Stenslands, Hipples, and their tribe need never want for material to work upon.

The foreign trade of the United States for the twelve months ending August 31 was the highest on record. The imports stood at $1,254,399,735, and the exports $1,759,417,898, making a total of $3,013,817,633. The figures for August exceeded those for any preceding August in the history of American commerce.

Much is being made in the United States of the great increase in the manufacturing industry in the Southern States. Capital in manufactures has increased from $967,701,865 to $1,597,513,217 in five years, and the value of factory products in the same time from $1,237,589,667 to $1,787,776,794. The aggregate value of the farm crops is estimated at $1,200,000,000, and the cotton crop and seed at $700,000,000, on which depends the activity of some 90,000,000 spindles, while the production of petroleum is given at 5,000,000 barrels a month, and that of bituminous coal at 6,000,000 tons a month, and about 300,000 tons of pig-iron are

turned out monthly from the Birmingham, Alabama, and other furnaces. The South's contribution to the export trade of the United States is about 40 per cent. of the total, the greater part of it from its own ports. The continuance, however, and increase of this prosperity depends to a very large extent on the negro element in the population, which must certainly fail if, owing to the race war caused by the lynchings of numbers of innocent men as well as of the guilty, the negroes begin to take the advice of their religious and political leaders, and emigrate to the Republic of Liberia, on the West African coast, and help to build up a country for themselves.

Passing Events.

Don Jose Ives Limantour, Mexico's well-known Finance Minister, is at the present moment in Paris, and has been interviewed there by a representative of the *Financial News*. Amongst the questions put to him was one asking him if the Government had obtained interests in certain of the railways, with a view eventually to nationalisation. The answer was in the negative. Senor Limantour emphatically denied that the Government had any such end in view. As it was he himself who effected the deal he should know something about it. Shares were purchased in the Interoceanic Railway Company and the Mexican National with the sole object of excluding the threatened interference of the American trusts. "We have no intention," he added, "of attempting to obtain the control of the companies, for the simple reason that ere long we would be assailed from all sides for the reduction of the tariffs and for other more or less practical reforms." Before an interest was acquired in the Mexican National this company had not paid a dividend, but recently the first preference—entitled to a non-cumulative 4 per cent.—received a first distribution of $1 per share. This may be a mere coincidence, or the effect of the improved state of things in Mexico, or greater energy on the part of the management. It is on this and other performances that gamblers are trying to work up a Mexican railway boom.

A fire has broken out at the Van Ryn Mine, and has caused a considerable amount of damage, the No. 2 shaft above the No. 2 level being destroyed. The cost has not yet been officially estimated, but it appears that the headgear was saved, and that no lives were lost. This is something to be thankful for. As for the cause of the outbreak, it is conjectured to be due to a "coolie candle." At any rate, this is the brief message sent. Not that it is probable the coolie himself was the candle, or a living torch, or even that the candle carried by him was different from that supplied to the white employees. We can only vaguely imagine what really happened—what the Chinaman was doing with the candle, or what the state of his mind was. It is important to know that a coolie—whether through carelessness, design, or ignorance—was the cause of this latest disaster, as he has been the cause of so many others. However, milling operations will not be stopped, and the secretary writes that any reduction in profits caused by this fire is covered by insurance. The Van Ryn Gold Mines Estate is a member of the Albu group of companies, and it was only a fortnight ago that the announcement was made of the discovery of a new leader of considerable value in No. 5 mine. But coolies cannot be employed without running some risks any more than mules.

Registration of joint stock companies in Scotland, despite the dulness of the times, proceeds steadily, 64 new concerns, with an aggregate nominal capital of £2,609,798, having been registered in the third quarter of 1906. This brings the figure to 247 companies, with a total capital of £8,603,365, for the nine months of the present year. Increases are here shown both for the quarter and the three parts of the year, for in 1905 the figures were 58 and £1,088,926 and 216 and £7,084,127 respectively. Twenty-eight of the new companies are represented by the amalgamation or conversion of existing or liquidated firms, the capital sum for which these stand totalling £2,177,698. In the corresponding quarter of last year the conversions and amalgamations numbered 29, with an aggregate capital of £650,907. Are these huddlings together a sign of distress or what?

According to particulars supplied by the Board of Trade's correspondent at Durban in respect to the oversea trade of Natal during the twelve months to June 30, the imports amounted to £9,782,400, compared with £10,193,000 in the previous year, a decline of £410,600, whilst the exports came to £2,954,300, against £2,628,000, an increase of £326,300. Great Britain still holds the leading place, with £6,852,900, or 70 per cent., of the imports, and £2,116,500, or 71 per cent., of the exports. Thus the rest of the world's trade with this little colony is very tiny. The United States ranks second, followed by Germany, Argentina, France, and Sweden, with an average of £444,400 for each country. A curious factor about America and Argentina is that they take practically no exports directly in exchange. Germany, which supplies imports of the value of £616,400, takes £307,100 in exports. How much of the whole goes up country to other "States"?

From the annual report of our Consul at Venice we learn that the total value of our commerce last year was £28,484,700, compared with £29,154,200 in 1904, of which amount £13,930,800 represented dealing with the hinterland, against £14,860,700. Venetian exports totalled £13,215,900, compared with £12,442,500, and the imports £15,268,800, in contrast with £16,711,700. Great Britain, Italy, India, and the United States shared in about equal proportions the imports by sea, whilst the two chief contributors in the exports by sea were Turkey and Italy. Much indirect trade is done across the Continent between Venice and the United Kingdom and other countries. Our Consul believes that Venice has "a brilliant future before her," owing to the rapid increase of all industries in Venetia and Lombardy and to the contemplated improvement in inland navigation. A scheme is in course of arrangement for the more rapid and extensive transhipment of goods between Trieste and Venice for the American market, and at the same time it is proposed to improve the island waterways on the coast, in order to facilitate internal communication. A further project is to render the Po navigable between Venice and Milan for commercial purposes. So Venice looks like going ahead.

Mr. W. J. Loreing, the general manager in Australia of Messrs. Bewick, Moreing, and Co., has just completed a tour of inspection of the various mines managed by this firm, and on the eve of his departure from the colony was interviewed by a newspaper representative. It is not astonishing to learn that he has a strong belief in the future of the Westralian mining industry. But, then, he is hardly disinterested, and cannot base his opinion upon ground more solid than theory. It is a well-known fact that the grade of the ore in the various mines is becoming poorer in depth, that others are being exhausted, and that a few years hence many of the leading properties will be valueless. The question has often been asked, Will new mines be found to take the places of the old? Mr. Loreing really answers such a question in the affirmative, for he considers the deep sinking in progress in various parts of the Kalgoorlie and other fields will lead to new finds. He admits any new bodies of ore that may thus be discovered are likely to be of lower average grade than those worked in shallower ground, but owing to the higher technical mining skill profits will probably be about the same. This, of course, is mere hypothesis, for Mr. Loreing cannot see farther through brick walls than most people. And we may all be considerably older before such anticipated discoveries become facts.

The important announcement was made at the statutory meeting of the South Crofty, Limited—a Cornish mine that has recently discarded the cost book for the limited liability system—that the landlords had agreed to a reduction of royalties. This subject of royalties has been a cause of angry contention for many a year, and some companies have attributed their ruin to the

excessive exactions of landlords. South Crofty shareholders, therefore, are to be congratulated on having obtained so valuable a concession, the chairman describing the fresh terms entered into as very reasonable. Other companies will envy this success, but will be encouraged thereby to agitate with the more zest on their own account. Such action should be a new stimulus and example to other landlords, many of whom may already be willing to emulate it. At the same meeting the announcement was made that the directors had decided to issue monthly progress reports. This has already been commenced in the case of Clitters United. Shareholders will find it a useful innovation, for such reports will enable them to keep in touch with events instead of waiting many months for news. The same plan might be adopted by other companies with advantage.

At the meeting of the Birmingham Small Arms Company, held on Monday, Sir Alfred Newton led another vigorous protest against the formation of the much-discussed secret reserve. Although this question encountered such strong opposition that the Courts were twice applied to before the recommendations of the directors were sanctioned, the chairman of the company, Sir Halliwell Rogers, did not even mention the subject in his speech to the shareholders. A good deal was said about the acquisition of the Sparkbrook Small Arms Factory, which the company thought fit to take over when the attempted flotation as a limited liability concern proved a failure, but never a word about the all-important hidden reserve. In fact, when Sir A. Newton raised the question the chairman went to the length of taking a vote of the shareholders as to whether he should be allowed to speak, but although the majority was against him, Sir Alfred refused to be silenced. He desired the business thoroughly threshed out, as most sensible men do, and moved the appointment of a committee of inquiry, the adoption of the report to meanwhile remain in abeyance. The chairman, however, refused to accept the motion, and his manner at times bordering on the insolent when we remember that he is merely the paid employee of the shareholders. We are getting to a nice state of affairs when chairmen of public companies lay down the dictum that the proprietors have no right to criticise the balance-sheet. As a further protest, the re-election of the retiring directors and auditors was opposed, but after a most exciting discussion the directors prevailed, and can now handle the company's affairs pretty much as they like.

It begins to look as though the Allsopp amalgamation will go through after all. First one and then another section of the parties interested give their consent, and although a goodly minority doubt the wisdom of the proposed fusion, the majority will probably prevail. Already the shareholders and creditors of Thomas Salt and Co., which went into liquidation last January, have given their consent, and since there is nothing to gain by standing out the unsecured creditors have now followed suit. One gentleman, representing the petitioning creditor, wanted the matter further adjourned, in case the Burton Brewery proprietors did not come into line and it might become necessary to ask the Court to direct a compulsory liquidation or a liquidation under voluntary supervision. The great majority, however, desired to see the matter finally disposed of, because if the property got into the hands of the debenture holders there would be nothing for the unsecured creditors, and the resolutions proposed for continuing the liquidation with a view to amalgamation were carried almost unanimously.

Faint rumblings of discontent will no doubt continue to be heard in connection with the Cedulas settlement until the matter has been finally disposed of. The latest complaint comes from Antwerp, where the Defence Committee has issued a statement mildly protesting that the proposed scheme of the Provincial Government does not sufficiently take into account the increased resources, present and future, of the province. The Committee has therefore been instructed to continue negotiations on the basis of the Baring agreement, but with the substitution of a higher rate of interest. These protests, however, can hardly be of much avail, because already, we imagine, the terms lately submitted to the Cedula holders have received sufficient support to guarantee the completion of the scheme.

According to the Buenos Ayres correspondent of the *Financial Times*, the Chamber of Deputies at the end of last month sanctioned the amalgamation of the East Argentine and Argentine North-Eastern Railways on the terms recently laid before and accepted by the stockholders of those companies. The law, however, provides that the Argentine North-Eastern Company shall construct a new line from Goya to San Diego, for which the Government will give a guarantee of 3½ million dollars gold. The tariffs on the amalgamated lines will be those now in force on the North-Eastern system, and it is rather significant that the leading Argentine newspapers are inclined to resent the easy manner in which this fusion has been carried through. The same correspondent thinks that the final amalgamation of the Central Argentine and Rosario Companies, which has been hanging fire for so long, will also be approved during the extraordinary congressional session which has just commenced.

It seems clear from the dividend announcement just made by the weighing machine business of Henry Pooley and Sons that the general internal reorganisation carried through some little time back is being attended with good results. For a long time after the concern was turned into a limited liability company its affairs went so badly that a complete break-up seemed not at all unlikely. But that distinct improvement is now coming about is shown by the fact that the directors can now pay the preference dividend for the current year, as well as the six months' payment which was in arrear, so that all liability to the preference shareholders to date has been discharged. Ordinary shareholders will naturally hope that this is the forerunner of some return to themselves, for which they have waited so patiently, but we hope the directors will not overlook the necessity of strengthening the financial position before being in a hurry to commence the payment of dividends on the ordinary capital.

The current number of the *Weekly Sun* strenuously and with much eloquence gives the lie to the stories of a revolutionary outbreak in Mexico. This denial was published before the interview in Paris between Senor Limantour and a representative of the *Financial News*, when Mexico's able Finance Minister declared the reports to be absolutely unfounded. "It is a little surprising," says the *Weekly Sun*, "that the London Stock Exchange and the British investor should so easily have been frightened by the ridiculous report. The story was so absurd on the face of it that, though presumably it was forwarded by Laffan to all the morning newspaper offices, by only one of them was it printed. The victim in question was the *Morning Post*." From the same source we learn that a committee of American residents in Mexico are now organising a great demonstration of trust in its Government, through the medium of a monster memorial. In this they say all statements of the existence in the country of a strong anti-foreign element are false, and they have no expectation of an uprising against foreigners on September 16 or at any other time.

The extraordinary delay which has occurred in the issue of the first annual report of the London Motor Omnibus Company, owners of the Vanguard Service, has been attributed to the fact that negotiations were proceeding for the amalgamation of this enterprise with several other motor omnibus ventures. The *Tribune* is now responsible for the statement that matters have so far progressed that within a very short time we may be favoured with complete details of the scheme. It is said to include, beside the London Motor Omnibus Company, the London and District Company, which owns the Arrow service, the Motor Omnibus Company and the London and Provincial Motor Omnibus. The basis of amalgamation does not seem to have been quite finally settled, but it is hinted that the capital of the new concern will be about £2,000,000. Not only so,

but this fusion when consummated will probably be the forerunner, so it is said, of a still larger enterprise to include the London General Omnibus Company and Tilling's, Limited. In this case the capital is put down at no less than four millions, but we imagine that a good deal of difficulty will be experienced in arriving at a settlement satisfactory to all these companies. Nor would it be possible to leave the Road-Car Company out of a trust of this kind, because it is already far ahead of the London General Company in the substitution of mechanical for horse-drawn 'buses.

From a circular just issued by the directors of the British Tea-Table Company, it seems reasonably clear that the departure of Mr. John Pearce from the direction of the business has not yet led to a favourable change in its fortunes. Rather the reverse, it seems, as for the first time in its history the company finds itself unable to declare the interim preference dividend. The directors say that although the actual result of the trading for the half-year ended September 30 is not yet available, they know that the course of business does not warrant the payment of this dividend. Complaint is made that the opening half of the financial year is always the poor one, the company's best time being between October and March, and also that the general trading conditions have been peculiarly adverse. In addition to steadily increasing competition, the company has had to face unfavourable buying markets, and it is further said that the great heat of July and August materially affected the receipts. We should have thought that a company providing light refreshments would have benefited from warm weather, leaving the ordinary restaurants to become the greatest sufferers.

Mr. Alfred Parrish, who battled so strenuously on shareholders' behalf when that curious Cape electric tramways deal was in contemplation, has come forward again to assert his rights in connection with another of the Wernher, Beit companies, the Mexico Electric Tramways. An extraordinary general meeting was held on Tuesday last for the purpose of carrying through a slight alteration in the articles of association, but the notice calling the meeting was so vague that Mr. Parrish travelled all the way from Italy to see what the directors were up to. In a sense his journey was in vain because the chairman assured the shareholders that the change was purely a formal matter with the object of permitting a register of the company's shareholders to be kept in Toronto, where most of the shares are held. But the Wernher, Beit people have been guilty of so many discreditable actions that Mr. Parrish's doubts were quite justifiable, and he drew attention to the fact that the recent offer by interested parties to buy the shares at 14s. each was apparently made at the time when the company's position and prospects seemed to justify a much higher figure.

"Creepy" indeed is the description of the *Dreadnought* and its guns given by Mr. F. T. Jane in Tuesday's *Daily Chronicle*. That is the word applied to his article by the *Westminster Gazette*, and it is most apt. According to this naval expert, were the whole of the eight big guns on the *Dreadnought* to be fired at once the shock would kill an unsheltered army in front of the guns without anything else. The blow inflicted upon the vessel itself would be more than twenty times its weight. "On board the ship men will be behind the noise, and sheltered from it by stout steel walls, with ears filled with cotton wool," and even so, "the ears of most will probably run blood." Did a man put his head out of a porthole as the broadside is fired, cotton wool or no cotton wool, "he would instantly be a shapeless corpse." If this description approximates the truth, is anything more needed to demonstrate the madness of the naval construction policy now pursued? Ships of this *Dreadnought* type may be enormously powerful, capable of doing immense damage to an enemy when an enemy comes across their path, but they are certain to be much more destructive to those on board. We hope when the House of Commons meets it will look into this matter and see whether measures cannot be taken to stop the waste of public money on suicidal futilities of this description. For after all this powerful artillery is of small use in making a ship formidable and none at all in rendering her invulnerable. A tiny torpedo will easily send the whole tin kettle to the bottom.

Western Australia ended its financial year on June 30 last with a deficit of £119,000, some of which may have been brought forward, and it is expected that only £3,000 will be knocked off this sum at the end of the current year. No wonder the colony is discontented with its position in the federation, or that some amongst its people should clamour for "separation." Obviously the revenue is not sufficient for its wants, and we are not surprised, for latecomer though it be, it has been the most extravagant of all these settlements in recent years. The estimated income for the current year is £3,592,000 and the expenditure just £3,000 less than this. In the year just closed the nett profit from the railways, goldfields, the water scheme, Fremantle harbour works, and State crushing batteries and smelter was £44,000 after paying expenses and interest, not enough to form a sinking fund for the huge outlay, the cost of these works alone having amounted to £14,800,000 out of a total public debt of £18,058,000. And the yield of gold has been falling off, so that unless new fields or lodes are discovered not many years must elapse before Western Australia will have to depend upon its agricultural and pastoral output just like some of its neighbours. It is encouraging, therefore, to find that last year 17,000,000 lbs. of wool had been exported or 4,000,000 lbs. more than in the previous year. Also the timber trade is flourishing, and was greater over sea than the combined timber exports of all the States of the Commonwealth last year. A vigorous policy of expansion is announced, the Treasurer declaring that the Government proposed to construct goldfield and agricultural railways and to "develop" things generally. More loans are therefore near at hand.

Some very interesting disclosures were made in the Lancashire Chancery Court at Manchester this week about the promotion of a brewery company. A gentleman named Lees appears to have been, shall we say an unconscious agent in this piece of unblushing inflation. In his examination, at any rate, he pleaded a marvellous simplicity. Owning a small brewery called the Greengate Brewery at Middleton Junction, he in 1898 proceeded to buy up another business, agreeing to pay £77,000 for it, and to buy book debts and stock for additional sums, making the aggregate nearly £82,000. This he did without making any examination into the business, and although aware that no proper books were kept. Soon the bargain was apparently turned over to another company called the Whitefield Brewery, and to make a long story short, three concerns seem to have been amalgamated into a company, with a share capital and other obligations amounting to about £215,000, the total paid-up capital of the mingled businesses being at the date of the amalgamation only £33,000, while their liabilities reached £71,000. The whole three breweries would thus appear to have been then bankrupt, and as a natural consequence the new company was forthwith in difficulties. It borrowed £105,000 from the Law Debenture Corporation, Limited, on first mortgage for three years, and in the end Mr. Lees seems to have bought back the whole fabric, whose capitalisation had meanwhile become £281,000, for £115,000. How he made money out of the various deals we cannot imagine, but it is plain enough that the unfortunate shareholders lost all their money. How did the Law Debenture Corporation fare?

The Russian Minister of Finance has quite changed his tune. Last week it was all bright, now it is all gloom. Revenue may flourish, in spite of "pogroms" and massacres, revolts, bombs, military executions, and anarchist and official incitements to murder, but there is a deficit of £15,500,000 to be faced this year, after reckoning the proceeds of the latest loan, which brought the Treasury £67,700,000, and after allowing for "enormous reductions in the expenditure." And borrowing is no longer practicable. Not more than

£2,000,000 could be raised by a domestic loan, and a foreign loan of as many shillings could not be raised on any terms. So the cry is, "Retrench, retrench," and it is a good cry, only what will become then of the army's "loyalty to the Tsar," of the power of the bureaucrat to use the police in harassing and killing the people? The confession should mark the beginning of the end of autocracy, but hydras have so many heads that they take long in slaying. But the deficit will work wonders during the dark winter upon which the racked and torn Empire is now entering. It will mount and mount, if the people would only forswear drink, until in a few months' time its weight must bring the crumbling fabric of Tsardom crashing to the ground.

An excellent display is made by the Hudson's Bay Company in respect of its land sales for the half-year ended September 30 last, but whether they will be found good enough to justify the present price of the company's shares remains to be seen. The cash receipts for farm lands and town lots amounted to £147,600, which is £28,400 more than for the corresponding period of 1905. There was also an increase of £27,700 at £218,600 in those sales arranged on an instalment basis, payment for which is spread over a term of years.

Answers to Correspondents.

Wellington (Letter dated October 2).—(1) The company is still doing well, and the stock should eventually recover from its heavy drop of the past few months. So much depends upon political happenings that the end of the depression may not be seen for a considerable time yet, but as a lock-up the stock has attractions. (2) We fear this company is too overloaded with capital ever to do much good, and severe though your loss would be, it would be better to sell. (3) Not for some time to come, as the undertaking is still in a struggling condition. Still, as you have bought the shares, you might keep them. (4) This stock has very fair prospects, and should improve when the popular fancy turns towards that group again. (5) Your last question is a large order, but you will see from our rules that we cannot answer it in these columns. We, therefore, hold 2s. to your credit for this and for the final question in your other letter, as the same objection applies to it.

Wellington (Letter undated).—(1) In the present condition of the market and on prospects likewise, you ought to hold on a little longer. (2) These shares are somewhat confidently talked to higher prices, so you might stick to them a while. (3) Well, they are a gamble, of course, but a few might be worth picking up if you can get them, but at the moment there is no business doing, and we cannot get reliable quotations. Do not give fancy figures. (4) Please see our answer to the final question in your first letter.

Cropper.—(1) The company has not yet proved that its process is a commercial success, but the directors were very optimistic at the meeting, and you might hold on for the present, but not for long. (2) There is not much scope for improvement in price, but as a 5 per cent. investment the shares look fairly good. You ask two questions, but your remittance covers one only. We have, therefore, debited you with the balance in the meantime.

D. C. H.—(1) You should hold your stock for the present. The talk of labour troubles is, we think, overdone and the market unduly depressed, so that it would be a pity to sell just now. (2) Keep these also. Some disappointment caused by the report sent the price back recently, and although the outlook for the company is none too promising, a recovery from the present low level is almost certain to occur. (3) There is a very remote chance of a material improvement. You may possibly be able to reduce your loss a little by waiting, and you might hold on in the hope of this. But sell on any small rise. The market is too depressed to sell in at the moment.

Olive.—You have certainly got a good profit on the shares named, but we think you should keep a few of them, as the prospects of the company are very good. (1) We do not think there is much chance of immediate profit on these shares, and they do not seem worth buying. (2) These are talked higher, and offer a better chance, but the investment must be considered very speculative. We will answer further by letter.

His Royal Highness the Prince of Wales has sent Sir William Treloar £5 as a donation to his "Crippled Children's Hamper Fund." The fund has for special reasons been opened much earlier than usual this year, and His Majesty the King, as has already been stated, has sent his annual subscription of 10 guineas. The object of the fund is to send a hamper of Christmas fare direct to every crippled child in London who cannot attend the annual Children's Banquet in the Guildhall. On an average 7,000 hampers are thus despatched every Christmas, each containing enough to enable the child to act as host to its family for the day. Subscriptions should be sent to Alderman Sir William Treloar, 69, Ludgate-hill, E.C., who has now kept the scheme going for 13 years.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and September 30, 1906:—

Revenue and Other Receipts.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 30, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Sept. 30, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909

Treasury, October 2, 1906.

The Annual Report of the Buenos Ayres Gt. Southern Railway has reached us too late to be adequately dealt with this week, owing to the early hour at which we are now compelled to go to press in order to catch the morning newspaper trains. But it must be mentioned that the great pressure of traffic and new extensions and improvements has caused the directors to decide to increase the capital by £5,000,000. Of this £3,000,000 will be forthwith allotted to ordinary stock and shareholders in £10 shares of 1910, and will rank *pari passu* with those shares of the same kind already existing. The other 2,000,000 will be in preference shares to be issued when and as required.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3½ per cent. on September 13.)

Norfolk House, Friday Evening.

On reflection we are not sure that we can quite take the view of the discount market about the inaction of the Bank of England. Much depends on whether the New York demand for gold has subsided or not, and upon that point it is really impossible to give a valuable opinion. We shall therefore wait until events give judgment upon the Bank rate question, and meantime point out that however much it may have seemed desirable for the Bank to have raised its minimum discount rate to 5 per cent. the step could not have failed to strain the credit market to an extent that might have proved dangerous. From the point of view of the grave responsibilities involved we are therefore inclined to think that the Bank should be supported in its resolution to stay where it is. A 5 per cent. Bank rate is never a comfortable working standard for bankers' credits, is always hurtful to business throughout the country, but in ordinary times it can be borne for a brief season without producing any marked untoward effects. We had a 5 per cent. rate in the beginning of 1901, and it did not upset the money market, thanks perhaps to the fact that it only remained in force a month and was not effective for half that time. Effectiveness is the real point at issue. Would a 5 per cent. Bank rate have drawn the market up with it in present circumstances? We think not, unless unusual exports of gold had continued. The point had not otherwise been reached at which fear was strong enough to impel the open market to back up the Bank, no matter what its rate might be raised to. We shall therefore wait and hope that the higher rate looked for by the discount market early in the week may yet be avoided, because it would be an oppressive rate upon a market whose solid resources are much more deeply undermined by the long strain of carrying masses of undigested and indigestible securities than they were five and three-quarter years ago.

Not only has the Bank of England abstained from raising its rate, but it has eased things for the bill brokers by renewing its habit of rediscounting for them at its minimum bills of thirty days usance and under. Also it will lend for seven days at 4½ instead of 5 per cent., the rate charged last month when the pressure upon the market was most acute. What the effect of these changes may be we shall not try to estimate, because for the present the open market is not likely to want much of the Bank's money. The dividends were released to-day, and yesterday already short credits were down to 3½ per cent. or less, in spite of the fact that nearly all the seven-day advances due at the Bank were by then repaid. With the dividend money, thanks to the large amount of bills held by the Bank and falling due throughout the rest of this year, the open market should for weeks to come have an abundance of credit at its disposal.

Will gold flow out on balance, though? That is the one question. We think it must. Much more may not go to the United States, although that is by no means a danger to be overlooked, but it will dribble away in other directions, and as the Bank grows weaker the fears of the open market will revive. We need not believe all the stories about large orders on hand for Egypt, huge sums engaged for New York, millions going to South America, and such phantasms of the market rate "bull," but experience warns us that gold is likely to leave the Bank steadily for most of the remainder of this year unless vigorous measures are taken to prevent it. So we may have escaped a 5 per cent. rate only for the moment. In fact, £250,000 in sovereigns left the Bank for Egypt this afternoon, and there is more going to-morrow.

Early in the week money was so much wanted that banks easily got 3¾ and 4 per cent. for both day and seven-day advances, but the rates fell yesterday to 3½ per cent., and to-day to 3¼ per cent. as the best of it for seven-day money. Call loans were never better than 3 per cent., and often only 2½ per cent., thanks to the flush of credit produced by the released Government dividends. Cheap floating money forces discounts down and makes the bill broker seem inconsistent. Yesterday he was clamouring for a 5 per cent. Bank rate, and yet discount rates have inclined to weakness all the time. The brokers were out of it so far as bills up to three months' currency were concerned as long as the Bank was taking such paper for its customers at its minimum, but rates for four and six months' bills, which the brokers still had freedom to deal in, were not really strong at the quotations usually supplied to the Press. Some houses quoted 4⅜-4½ per cent. for such, and business was generally done at 4¼ per cent., with the tendency downward. Yesterday, when the open market may be said to have resumed business, 4⅜ per cent. was almost the best rate it could get on January bills, and we fear the working rate for four and six months' paper was not appreciably better, although 4¼ per cent. was usually quoted as the ostensible minimum. It was rarely possible to get much, if anything, more than 4 per cent. on sixty-day bills, and as the Bank did no discount business itself we must infer this or something less to have been the real working quotation all round. This morning, when the market had recovered its equanimity a little, it illustrated its zeal for 5 per cent. by discounting sixty-day bank bills at 3⅞ per cent., and the rates for next year's maturities were only 4⅛-4¼ per cent. until the reports of heavy gold exports to Egypt frightened it into quoting 4¼ per cent. as

to-morrow's minimum. This is not a satisfactory story, but the market cannot help itself—cheaper money dearer bills always.

The Bank return is unquestionably weak, but not alarmingly so because the banking reserve is still £20,402,000. It shows a decrease of £2,980,000 on the previous week, but unless further drafts upon its stock of gold are made by foreign purchasers the coming weeks may show some recovery, inasmuch as £1,624,000 of the week's decrease was caused by the expansion of the internal circulation that always occurs at the end of a quarter. Other deposits, moreover, have hardly moved, and their total of £43,192,000 is large enough to have tempted the open market to beat down rates if the Bank had gone to 5 per cent. In other words, that rate would not have been effective, which is the best argument against an advance. Other securities increased last week by £1,390,000, and their total was thereby raised only to £34,975,000, which seems by no means an excessive figure, though higher than the total of a year ago, considering all that we have heard about the large business done at the Bank. Probably, however, the aggregate of market borrowings and discountings is not really shown by the figure, because the Bank holds Japanese money to an extent generally estimated at about £4,000,000. Add this to the total of these other securities in order to see what would have happened had it not been available, and we shall find that the market debt would have raised the total to about £39,000,000. The market, in other words, is heavily in debt and poor, in spite of the fair show made by the figures.

Next week's calls on new capital issues amount to nothing worth speaking about. The total is only £265,000, and of that £125,000 is payable next Thursday on the new Antofagasta 4½ per cent. debentures. Another £110,000 is payable on Monday, viz., £50,000 on Oroya Black Range shares and £60,000 on Salinas of Mexico debentures. Nothing at all falls due on Tuesday, and only £28,250 altogether on Wednesday, principally on the British Guiana Irrigation loan.

Silver.

The Indian bazaars have not given very much support to the market for bars this week, but there has been a good deal of speculative buying, chiefly of forward metal, which was believed to be on American account. With only a very limited supply of the metal available, this demand was sufficient to raise prices to 31⅞d. per oz. for cash and 31 13/16d. per oz. for delivery two months forward, or the highest points reached for a number of years, and in spite of some profit-taking the market closes firm at those figures. Applications for the Rs. 1,00,00,000 Council drafts on India on Wednesday reached a total of Rs. 2,45,35,000 in bills and Rs. 99,00,000 in telegraphic transfers. Of these Rs. 71,26,000 were allotted in bills and Rs. 28,74,000 in transfers, tenders at 1s. 4 1/16d. and 1s. 4 3-32d. receiving about 29 per cent. Next week another Rs. 1,00,00,000 will be offered.

BANK OF ENGLAND.

Stock Market Notes and Comments

For a place in which there is said to be nothing going on, the Stock Exchange offers a wonderful variety of fascinating incidents. Its principal characteristic is still the spasmodic and apparently capricious outburst of gambling in a few securities. Play was very vigorous early this week on Wall Street's part in United States Railroad shares. There has also been much doing both in America and here in Canadian Pacific shares, and a few other things like Hudson's Bay shares have been played with in the very gloomiest moments. For all that markets in general are in a rather miserable condition for want of steady trade and because of the extent to which depreciation has already gone. The lower prices ruling in Home Railway stocks and nearly all round the list of the old-fashioned classes of securities is a distressing factor which nothing can remove. There must be liquidation, a clearing out of the congested places before health and buoyancy can return to the markets. This means that prices must go lower; how much lower will depend on circumstances and the price of loanable credit.

We have said this so often that readers must be pretty well tired of it, but they are so reluctant to face the truth, so ready to delude themselves with the notion that everything would be better if we had a change of Government, if money were cheaper, if protective tariffs were imposed, if the Government of Russia were put in order, if strikes did not take place at inopportune moments, if Socialism were not making tremendous headway amongst the working classes, and so forth. Remove all these bugbears, and we should not be made happy for a week on end by steadily advancing prices and active markets. There is no free capital available at present to bring the old life and energy back to the Stock Exchange. Much of the old capital has been lost irretrievably, and the loss has not yet been faced.

Just think of it; the omission of the Bank of England directors to advance their rate on Thursday to 5 per cent. caused the price of Consols to move up 1s. 3d. Had it been merely the apprehension of a 5 per cent. Bank rate which was depressing the gilt-edged markets of all kinds we should have seen a jump of at least 10s., with a rush of people to buy in the belief that, having failed to go up this week, the Bank directors would not need to move next. No, markets are oppressed and over-weighted, so that the mere removal, for a few days even, of fears about a 5 per cent. Bank rate and all its possibilities cannot revive them, animate dealers with courage, give them strength to act with vigour. The fear, besides, is just as great as ever that the 5 per cent. rate is coming, and we really do not see yet how it will be avoided. To gain time is not, unfortunately, to gain strength in present circumstances, because credit is meanwhile eating up more wealth than it calls into existence.

Look, at that Kaffir Circus—no, no, please don't!

The Week's Stock Markets.

The Stock Exchange still continues in a very distressed condition. Practically all the business that comes to it is of the selling order, and the constant accumulation of losses on jobbers' books, coupled with the high charges which are pretty certain to prevail for money during the remainder of this year, is causing dealers to reduce commitments in all directions. The severe depression of the past week was partly caused by anticipations that the Bank rate would be raised to 5 per cent. on Thursday, but when the directors decided that no advance was necessary the favourable response was of a very feeble kind. The Bank return was certainly not of the nature to encourage increased speculation, and although the short loan market is easier for the moment, owing to the disbursement yesterday of the dividends on the funds, carry-over charges at the fortnightly settlement next week are bound to be pretty stiff. The labour troubles in the North are naturally exercising a very adverse influence on the Home Railway market, and on top of the Clyde strike comes a report that the Scottish miners are demanding an increase in wages of 12½ per cent. For a short time the Yankee section marked out a line for itself, but towards the end of the week the disappointment caused by the Atchison dividend had its inevitable effect, and the market closed distinctly weak. The Canadian Pacific bonus was also a decided disappointment to the "bulls," the additional 1 per cent., to be forthcoming in equal instalments in April and October next, being far below the more sanguine anticipations. Some people had looked for 2 per cent. bonus to be paid almost immediately, and some had gone so far as to expect 2½ per cent. The Paris bourse carried through its monthly settlement during the week without any apparent difficulty, but after giving moderate support for a few of the principal favourites in the early days, operators across the Channel showed a disposition to realise, so that the foreign bond market closed rather weak-looking. Monday last was contango day for the monthly Consol settlement, and, as expected, bankers exacted a heavy charge for loans. A few borrowers on stock succeeded in getting all the accommodation they needed at 4½ per cent., but the rate was just as often 4¾ per cent., and some unfortunate speculators for the rise were called upon to pay as much as 5 per cent. In addition, there was a difference against the "bulls" of fully £1, and the weakness in prices is hardly surprising. There was a very slight rally when the opinion began to gain ground that, after all, the Bank rate would not go up, and the improvement was carried a little further when the minimum charge was left at 4 per cent., but quotations are still down on the week. Other British funds naturally followed the lead of the premier security, and on balance the active stocks all show small losses. Home County and Corporation loans were slightly harder in one or two instances, particularly L.C.C. issues, but nothing worth mention happened in the Colonial Inscribed group.

Although business was on a very slender scale the Foreign bond market displayed a little strength during the early part of the week, and on Paris giving slight support the one or two Europeans rallied smartly. Russians showed up best, the absence of further serious news from that country and the statement of the Finance Minister having an influence for good. At one time the new 5 per cent. loan touched 7¾ discount, but the best price could not be maintained, particularly in view of the publication of the full text of a confidential report addressed to the Russian Premier by the Minister of Finance on September 18. This is in striking contrast to M. Kokovtsoff's later utterances, and clearly predicts financial breakdown unless the present methods are drastically altered. What means the reference to "Japanese indemnity"? Spanish sealed bonds had a moderate rise, but when Paris became immersed in its settlement, and no longer lent support, Turkish Unified and Greeks were inclined to react. South American stocks were dull, with particular weakness in Brazilians, the market taking a dislike to what it calls the "Government's coffee gamble." Cedulas eased slightly, and a sharp break occurred in Peruvians on the disappointing traffic statement. The company has been enjoying such excellent increases that the decrease of 40,000 soles for September came as an unpleasant surprise. Prices, however, did not close quite at the worst. Colombians and Venezuelans went down in the Central American division. Fears of internal unrest and anti-foreign agitations had a weakening effect on Chinese bonds, but Japanese met with a little investment support and slightly improved.

In addition to the uncertainty about money the Home Railway market has had to contend against quite a series of adverse circumstances, and the actual commencement of the strike on the Clyde, together with the demands of the Scotch miners for a 12½ per cent. advance in wages and fears of labour troubles elsewhere, proved too much for it. Selling was at no time pronounced, but prices dwindled day after day, because the public shuns the market, and professional support was of the smallest. Scotch stocks naturally were amongst the worst sufferers, and in their case the depression was increased by sales from Glasgow, which were said to be on behalf of a firm in difficulties through the defalcations of a cashier. All the heavy stocks were likewise depressed, while Great Northern deferred at one time fell as low as 40¼, but on Wednesday afternoon there were indications of a more cheerful feeling, which became more pronounced on the following day. Dealers apparently derived some encouragement from the traffic returns, which were on the whole better than had been expected, and began to talk hopefully of a revival of business when the dividends had been disbursed. Final quotations, therefore, although still from 10s. to £1 down on the week, in the majority of cases were well above the worst. Great Northern deferred and "A" stocks were 1⅜ and 1½ lower, North British issues fell 1¼ and 1⅜, and Caledonian ordinary and deferred 1¼ and ⅝, and the only favourable change in the active list was a gain of ¼ in District. The declines were severe in prior charge securities, and quite a number lost anything from £1 to £3, amongst others being District debenture and guaranteed issues, several

Great Central preferences, Chatham preferences, and North British preferences.

The deposit by Mr. Secretary Shaw of $26,000,000 in various banks throughout the country having failed to bring the expected relief to Wall Street, a rumour was started that he would now help by calling in the 4 per cent. Government bonds, redeemable next year before maturity. Its effect on prices, however, was not very marked, as operators were more concerned about the damage done to the cotton crop by the floods, and the market remained easy until the news of a further purchase of bar gold in London stimulated the bulls into activity. Union Pacific and Milwaukee were taken in hand first on talk of a "deal" between the two companies, and Reading were so strongly supported that the "bears" took fright and covered freely, lifting the price several dollars. Fresh rumours were circulated of the ore deal having been concluded, and gave the market additional strength for the time being, but nothing has yet been announced, and the market relapsed into idleness while waiting for a definite statement. Atchison were bought largely in anticipation of the dividend which some dealers were sanguine enough to expect would be on a 6 per cent. basis, and the price was lifted to 112¼. The declaration of a dividend of $2½ for the half-year, or $½ less than had been looked for, was a great disappointment, and heavy selling followed, knocking the price back to 107½. Interest was diverted into a new channel this week when National of Mexico 1st and 2nd preferred stocks were taken in hand, and bid up smartly with the result that they finished 3½ and 2½ higher respectively, carrying Mexican Central up 1 with them.

The August statements of both the Canadian railways were considered satisfactory, the Grand Trunk figures especially being better than had been expected, but with all markets more or less uneasy their publication merely gave the signal for securing profits. Canadian Pacific shares were further depressed by sales before the meeting on the part of those who doubted whether the cash bonus of $2½ out of the proceeds of land sales so freely prophesied would be declared at the meeting on Wednesday. Their scepticism proved to be justified, as the bonus proved to be only 1 per cent., and with an increased pressure to sell the quotation dropped back to 185½, closing weak. Grand Trunk stocks were firm at first on buying described as "good," but the weekly traffic return did not come up to the forecast, and they, too, went back. Amongst minor issues Alberta stock fell 6, and Canada Atlantic first mortgage debentures and Canadian Northern debentures lost ½ to 1.

A good many of the Argentine group of stocks were decidedly lower on the week, owing to realisations by bulls, who were forced out by dear money, and amongst others Argentine Great Western, Buenos Ayres and Pacific, Buenos Ayres and Rosario, and Buenos Ayres Great Southern ordinary and preference lost from 1 to 3. On the other hand, however, Argentine North-Eastern preference and ordinary debenture stocks met with good support, which sent them up from 3 to 4, and East Argentine and Entre Rios things were 1 to 2 higher on the week. Central Uruguay preference improved 2½, Antofagasta deferred and San Paulo ordinary were both 1 up, and Nitrate Railways ordinary shares gained a biggish fraction in sympathy with the rise in the producing company's shares. United Railways of the Havana ordinary stock improved on the political news, but did not keep their advance long, although Western of Havana shares finished £1 higher. Mexican Railway stocks were left alone most of the time, and the preferences dropped ½ to 1½, the seconds losing the larger of these amounts.

Business in the Miscellaneous markets was rather more active than usual, and a considerable number of changes, some of them rather important, were noticeable. Bank shares on the whole were firm, and the issues of several foreign institutions were again higher, but the shares of the Standard Bank of South Africa were weak. A further sensational rise occurred in the ordinary stock of Biekert's Brewery, and speculators are evidently looking for a wonderfully fine annual report, which is due within the next few weeks. Some profit-taking before the close caused a slight reaction, but there is still a considerable nett gain compared with last Friday. Other Brewery issues, however, still moved downward, with particular weakness in Allsopp's, Watney, Combe, and Truman, Hanbury "B" debenture. London Docks deferred fell back to 60, but other issues in this department were unaltered. All Textile shares were decidedly dull on fears that the supposed shortage in the supply of raw cotton and consequent rise in prices will adversely affect these companies' profits for the current year. Portland Cement issues continue very dull. Motor companies' shares were irregular, while a little selling of Russian oil shares caused a slight set-back in the leading issues. Steady buying of Nitrates was noticeable on rumours that a trust company to deal in nitrate shares is to be formed. The necessary purchases would naturally have a favourable effect on quotations, and the rises on the week were in some cases quite substantial. Amongst Catering things Lyons were slightly harder, but British Tea Tables reacted before the issue of the circular mentioned elsewhere. After that came out the preference shares recovered, although it is difficult to find anything reassuring in the directorial statement. Gramophones were subjected to profit-taking after their recent rise, while Sweetmeat Automatics were again better in anticipation of an improved report now nearly due. Spratt's Patent were marked ½ lower. There was again a considerable business in Waring and Gillow securities, but after being accorded slight support selling of the preference shares was resumed, and they closed no better than 4¼. In the Entertainment group "Moss" Empires recovered to par, and Drury Lane Theatre shares met with support on the chairman's statement at the recent meeting and the favourable prospects for the autumn drama just produced. Gordon Hotels were a rather better market, and rose 10s., and the profit statement of the Carlton Hotels had a steadying effect on that company's shares and debentures. A sharp improvement to 97¾ took place in Hudson's Bays, and the best price was maintained almost to the end. Pekin Syndicates, however, were again on offer, and dragged down Shansi and Yangtse Valleys. P. and O. deferred stock advanced in the shipping list, and Anglo "A," after being distinctly firmer, suffered a relapse, and closed well below the best. Iron and Steel shares were particularly depressed by fears that the labour troubles which have broken out in the North will spread to those companies. London Motor Omnibus had a small rise when the news of the projected amalgamation leaked out, and the preference shares of the London United Tramways also hardened, but pronounced weakness was shown by British Electric Traction ordinary £10 shares, which fell to the lowest touched of 4¼.

It is unnecessary to add anything about to-day's stock markets, for they have been quite paralysed by the uncertain outlook in the money market. Consols opened better, and then slid away again on gold export reports partly confirmed. Professionals tried to put up Kaffir shares, and did frighten in the "bears," with the result that the market closed as weak as ever. Business has died away in the Yankee market, and in fact everywhere.

Union of London and Smiths Bank.—Deposits and current accounts on Sept. 26 came to £35,680,253, acceptances and liabilities by endorsement to £4,407,545, and other liabilities to £601,548, while assets consisted of cash in hand and at Bank of England £6,065,838, money at call and short notice £6,910,700, investments including reserve fund £6,345,613, and discounts, loans and other advances £20,281,927.

London and South-Western Bank. — The statement for Sept. shows current accounts and deposits of £13,588,501, other liabilities £320,632, and acceptances and endorsements £9,529, against assets consisting of cash in hand and at Bank of England £1,916,710, money at call and short notice £759,700, British Government and other securities £3,994,570, and bills discounted, loans, &c., £9,201,883.

GAS.—Rise: Tottenham and Edmonton "B" 2½, to 103-105. **Fall:** Gas Light and Coke 3 p.c. Cons. Deb. 1, to 84-86, West Ham 1, to 104-106.

INSURANCE.—Rise: Indemnity Mutual Marine ½, to 10⅜-11½, London Assurance Corp. 1, to 50-52, Marine ½, to 37½-38½, Ocean Acc. and Guar. ½, to 21½-22½, Rock Life Assurance ¼, to 3⅜-4¼, Union Marine ¼, to 8¼-8¾. **Fall:** London Guar. and Acc. ½, to 21-22.

IRON, COAL, AND STEEL.—Rise: Armstrong 1/16, to 2 15/16-3 1/16, do. Pref. ⅛, to 5⅛-5⅜, Bell Pref. ¼, to 12¼-12⅜, Cory ¼, to 7⅞-8¼, Dunderland Pref. ¼, to 3⅜-4¼, Ebbw Vale (£10 pd.) ⅛, to 9-9½, Hornsby Pref. 1, to 99-102, New Sharlston Collieries ⅜, to 14½-15⅛, Stone Pref. ¼, to 10-10½, United States 1⅞, to 48⅛-48⅜, do. Pref. 1, to 110½-111, Workington ⅜, to 3¼-3½. **Fall:** Bengal ⅛, to ⅜-⅝, Dunlop 1/16, to ⅜-⅛, Fairfield Pref. ¼, to 10⅜-11¼, North British Locomotive Pref. ⅛, to 12¼-12½, Pease and Partners ¼, to 12½-13, Richardsons Westgarth Deb., &c., 96-99, Vickers 3-32, to 2⅜-2½, Willans and Robinson Pref. ⅛, to 2-2⅛.

SHIPPING.—Rise: Bucknall Debs. 1, to 89-94, P. and O. Def. 1, to 226-229, West Hartlepool Deb. 1, to 88-91. **Fall:** Union Castle Pref. ⅜, to 9⅜-10¼.

TEA AND COFFEE.—Rise: Amalgamated ¼, to 1¼-2, Assam 1, to 31-33. **Fall:** Empire of India Pref. ¼, to 8¼-8⅜.

TELEGRAPHS AND TELEPHONES.—Rise: Amazon ¼, to 3⅜-4¼, do. Deb. 1, to 88-93, Anglo-American Def. ⅜, to 24-24½, Eastern ½, to 144½-147½, do. Pref. ½, to 90½-92½, Marconi's 1/16, to 1-1¼, Reuter's ⅛, to 7⅜-7⅞, Western ½, to 14⅜-14⅞. **Fall:** Anglo-American Pref. ½, to 112½-113½, Direct United States ¼, to 15⅜-15⅝, Eastern Extension ¼, to 14¼-14⅜, Natl. Telephone 3½ p.c. ½ Deb. ½, to 98-100, do. 4 p.c. Deb. ⅛, to 102-104.

TRAMWAYS AND OMNIBUS.—Rise: Anglo-Argentine ¼, to 7 1/16-7 5/16, do. (2nd issue) ¼, to 7 1/16-7 5/16, do. Pref. 1/16, to 5 13/16-6 1/16, do. Deb. 1, to 139-142, British Columbia Def. 6, to 125-128, London Motor 1/16, to 1¼-1⅜, London United Pref. ¼, to 9-9½, Sao Paulo Debs. ⅛, to 98½-100½. **Fall:** British Electric Traction ⅜, to 3¾-4⅛, do. Pref. ⅛, to 8-9, do. 5 p.c. Deb. 2, to 108-112, do. 2nd Deb. 1½, to 91-94, B. A. and Belgrano ⅛, to 3-3⅛, Calcutta ⅛, to 8-8½, Sao Paulo 2, to 137-139, Yorkshire Deb. 1½, to 91-94.

WATERWORKS.—Rise: Consol. of Rosario ¼, to 10¼-10⅜.

Critical Index To New Investments.

County Council of Somerset.

Stuckey's Banking Co., Limited, and Messrs. Robarts, Lubbock and Co. are authorised to receive applications for 202 Somerset County Council 3½ per cent. debentures of £100 each at par, which are issued to provide funds for educational and isolation hospital purposes. The rateable value of the county is £2,674,357, or excluding the elementary education areas of the boroughs of Bridgwater, Taunton and Yeovil, £2,441,851, and the outstanding debt, after deducting accumulated sinking funds, is £146,647 in addition to balances of £118,844 due on loans contracted by late School Boards. Owing to the present issue consolidating sundry authorised loans for varying periods, a fixed number of debentures will be paid off annually, each debenture bearing upon it the date fixed for redemption, and applicants may select any period from one to 30 years within the number specified on the application form.

Nantes Butter and Refrigerating Co., Limited.

This company acquires a factory containing refrigerating machinery, boiler houses, cold storage chambers, &c., on the Ile Gloriette, in the centre of the town of Nantes, and proposes to carry on a business of importers and merchants of French butter. The property taken over is valued at £40,492, but was purchased by the Nantes Industries, Limited, for £26,500 in cash and £10,500 in shares, and is resold for £27,000 in cash and £12,500 in shares. Of the total capital of £100,000 in £1 shares, 87,500 were offered for subscription and 50,000 of these were underwritten for a commission of 6 per cent. and an overriding commission of 1½ per cent., of which 25,000 were taken firm in France. It is proposed to collect the butter from the farmers and market-places in the neighbourhood and sell it in the English, French and other markets, and it is estimated that with the minimum working capital of £12,500 which would be provided out of the guaranteed shares a trade of 35 tons per week could be done. Statistics of the cost price of butter in the Nantes district for five years show an average for the best quality not exceeding 102s. per cwt., while the present wholesale price in London for the best quality of French butter is about 144s. per cwt. The directors, however, put the probable gross profit at only 20s. per cwt., and on this they bring out an annual nett profit of £23,400, or sufficient to pay a dividend of 20 per cent. and leave about £10,000 for reserves, depreciation, &c., assuming that only the underwritten portion of the capital is taken up. Should the whole capital be subscribed it is claimed that the turnover would be four times as large and the profits would be more than proportionately increased by the relative saving in working costs. Messrs. W. Weddel and Co. are the agents for the United Kingdom, a fact which ensures that the distributing side of the business will receive careful attention, and the venture seems a fair commercial risk.

British Guiana Rubber Corporation, Limited.

Formed with a capital of 60,000 in £1 shares, of which 40,000 were offered for subscription, this company acquires a lease or licence for a period of five years from June 21, 1905, to collect rubber over an area estimated at upwards of 50 square miles of Crown lands, an undertaking by the Government to grant 15 new licences covering this area for a further 50 years, and a lease from the Government for rubber plantations of 4,000 acres of selected land. Mr. G. S. Pit-

cairn, who reported on the property, estimates that there are 75,000 mature rubber trees on the property and speaks definitely of 30,000 being on about one-third of the area which he was able to examine. The company ranks third in the line of purchasers, a Mr. G. T. Lupson having first bought the right to acquire the lease for £6,000 in equal proportions of cash and shares and transferred it to the Morabo Itabo Syndicate, Limited, for an additional £4,000, which in turn hands it over to this company for £7,500 in cash, £15,000 in shares and £25,000 in cash or shares. It is estimated that a yield of 6 lbs. per tree should be collected from the 30,000 trees mentioned at a cost not exceeding 1s. per lb., and taking the selling price at 5s. per lb. a nett profit of £33,000 is looked for in 1907. The directors intend to plant at least 100,000 young rubber saplings of the indigenous Hever Braziliensis variety each year, and a further revenue is expected to be derived from the balata trees, of which an immense number is said to be on the property. These estimates seem to err rather on the side of optimism, and the venture is at best a speculative one.

Victorian Government Loan Conversion.

On July 1, 1907, a 4 per cent. Victorian Government Railway Loan of £4,000,000 issued in 1881 will fall due for redemption. Of this amount we are glad to note that the authorities intend to pay off three-fourths or £3,000,000, and now offer to holders of the remaining one million the privilege of converting into the colonies' 3½ per cent. consolidated stock redeemable between 1929 and 1949 at par. The bonds and stock of the railway loan will be exchangeable for an equal amount of this 3½ per cent. consolidated stock, six months' interest on which will be payable on April 1, 1907. Holders will receive on conversion a payment in cash of £1 7s. 6d. per cent. in adjustment of interest to 4 per cent. up to the date in adjustment of the loan. This sum consists of £1 per cent., being a quarter's interest from July 1 to October 1, 1906, and 7s. 6d. per cent., being the difference of interest between 4 per cent. now payable on the old loan and 3½ per cent., which will be payable on the new for the period from October 1, 1906, till July 1, 1907. The conversion can be effected on or after October 1, 1906, and the option will expire on December 1 of the current year, or so soon before that date as the total of a million has been exchanged.

Land Bank of Egypt.

This bank was founded by Khedivial Decree in 1905 with a capital of £500,000 in 95,000 ordinary and 5,000 founders' shares of £5 each, which has since been increased to £1,000,000 by the creation of 100,000 £5 ordinary shares. In addition the bank has the special privilege of issuing bonds for an amount equal to five times its paid-up capital, on condition that the amount issued can in no case exceed the total of sums due from mortgages, and that a statement of mortgage loans effected and of repayments must be attached to the annual balance-sheets. Up to the present £1,000,000 in 3½ per cent. bonds of 500 francs each have been issued, but a further 90,000 bonds bearing interest at the rate of 4 per cent. per annum are now offered for subscription at the nominal price of 475 francs or £18 17s. 11d. per bond of 500 francs. The actual price, however, works out at rather less, as a full half-year's interest will be paid on January 1, 1907, although the final instalment of £14 17s. 11d. is payable about October 16 to 20. These bonds are only issued to cover advances already made, and not to create a fund from which to make such advances, and as they are secured upon first mortgages, generally for a maximum of 50 per cent. of the value of the properties pledged, upon rural estates in full cultivation or productive town properties in Cairo and Alexandria, they seem a sound enough investment.

Newcastle-upon-Tyne Electric Supply Co., Ltd.

As recently as May last this company raised £156,250 by the issue of 12,500 each of its £5 preference and ordinary shares at a premium for the extension of its business, making the paid-up capital £875,000 out of an authorised total of £1,000,000. In addition there is £250,000 in first mortgage debentures secured upon the whole of the present and future property, and on the uncalled capital for the time being. The capital expenditure on December 31, 1905, however, amounted to £1,192,442, and as extensions are still being made further funds are needed, and £187,500 4½ per cent. second mortgage debentures forming part of £250,000 are offered for subscription at par. These debentures are only for a period expiring on January 1, 1912, to coincide with the due date of the first debentures when a new issue will be made, all of which will be first debentures. Profits during the past 10 years, after deducting interest on debentures and loans, have increased from £3,595 to £61,426, and for the last eight years the dividend on the ordinary shares has been at the rate of 8 per cent. per annum, so that there should be an ample margin of security for the new debentures.

Canadian Northern Quebec Railway Guaranteed Debenture Stock.

This is an interesting issue of £1,000,000 4 per cent. perpetual debenture stock of the Northern Quebec Company, guaranteed unconditionally both as to principal and interest by the Canadian Northern Railway Company. Interest is payable half-yearly on June 30 and December 31, and the first half-year's interest will be paid on June 30 next, but the stock is offered through Messrs. Sperling and Co. at 98 per cent., which may be paid up in full on allotment under 4 per cent. discount or by instalments running until March 6 next. The debenture stock is perpetual and irredeemable, and is secured by a trust deed providing that it can only be issued (1) in exchange for bonds of the amalgamated companies now issued or hereafter to be issued, (2) to pay for a line now under construction or for new lines to an amount not exceeding £4,109 per mile, and (3) to provide for the purchase of the stocks and securities of other companies to an amount not exceeding the cost price thereof. As will be seen from the prospectus, various lines have already been acquired, and holders of part of the bond issues of the Great Northern Railway, of the Chateauguay Northern and the Quebec, New Brunswick and Nova Scotia lines have agreed to exchange their bonds for stock at the prices named in the prospectus. A considerable and important new system of railways is thus in course of formation.

London County Council Bills.

The London County Council is renewing its £2,500,000 of outstanding six months' bills, and tenders for the renewals will be received at the Chief Cashier's Office, Bank of England, next Friday. The bills are of the usual denomination.

Of the four Newnes Magazines for October that have reached us *The Grand* is the most attractive. Its contents are as varied as ever and the fiction and the more serious articles alike of more than usual interest. But *The Strand* is not far behind its fellow magazine with Sir Nigel going on his way amid the stir of battle and the breaking of lances and its other usual features. In *The Wide World* "The Guardians of the Yukon" and "The White Slaves of the Grand Banks" are well worth reading, the latter giving a vivid and by no means pleasant picture of the life of the French fishermen on the far-famed Newfoundland Banks. After looking at the photographs in the article on "Facial Expression and Physical Effort" in *Fry's Magazine*, we have come to the conclusion that athletes generally and runners in particular must be extremely indifferent as to what they look like when pursuing their particular pastime—or is it business nowadays?—for the expressions on the faces given in the illustrations show almost without exception a mental strain that is positively pitiful in its intensity. With the disappearance of the motor articles the *World's Work* has become decidedly more attractive to the general public, and in the October issue the subjects dealt with vary from rubber making from wheat to scent making as a hobby. The comparison made by Mr. James Blount of a mechanic's life in this country and in the States is extremely interesting, though he deals only with the wage-earning side of the question and leaves untouched the wage spending, which is just as important. Other contributions include articles on the new cereal rubber, money making—a description of the mint, and the patent medicine fraud, the growing evil of which is at last beginning to attract attention not only here but in Australia, New Zealand and the States.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The Kaffir Circus is still in a condition of melancholia and it is not worth while dwelling at any length upon its increasing woes. Prices continue to slump irresistibly, the few orders that trickle into the market possessing no resisting power against the ominously sliding avalanche. Gamblers put the blame for this upon everything. Dear money is, of course, one of the bugbears, the direct cause of much forced selling, professionals being unable to carry stock at ruinous rates of interest and margins running off, to say nothing of the ever-increasing differences they have to face. Some will have it that the market is paralysed by the suspense begotten of the coming elections in the Transvaal, as results cannot be foreseen, but it is easy enough to exaggerate the effect of this. It may indispose some of the controlling houses to support the market, but, at the same time, their power of doing this is considerably restricted; they are not as wealthy as they at one time were. The last batch of coolies imported under the existing Labour Ordinance has landed in Africa, and many point to this as a sad fact, in defiance of all experience that coolies have brought no good to the Kaffir market. Further, Glasgow is blamed for depressing this and other markets, but the main cause of the depression is the old one—the indifference of the public, which refuses to take shares off the market at any price. So business is as limp as it can be. The mart is almost deserted, for there is nothing for frequenters—buyers and sellers alike—to do. So keenly sensitive is it to its sorrows that the approach of anyone who has the moody look of a seller sends a shiver round, and prices fall almost mechanically. Paris has been more of a seller than a buyer, mainly in connection with the monthly settlement on the Bourse. Next week brings a settlement here, and it promises to be another woful experience for the "bulls," for the making-up prices are like to show heavy falls, unless a temporary rally should intervene between now and Tuesday.

The principal report issued during the week has come from the directors of the New Modderfontein Company, now a member of the Wernher-Beit group, and it is no wonder the market is disappointed with it. We analyse it at some length in a separate note, and one can only conclude from the facts given that this company's first dividend is still a long way off. And before it can be earned it is highly probable that the inflated capital will have to be further distended by a fresh issue of shares. Cash will be needed greatly to enlarge the capacity of the reduction plant, for the company cannot hope to earn adequate dividends on a nominal capital of £1,200,000 and a market value of between £6,000,000 and £7,000,000. So Modderfonteins have been sold with much haste since the unsatisfactory document made its appearance.

Rhodesians need not detain us, for nothing has happened here of the least consequence. Prices have, in sympathy with Kaffirs, continued to decline, Tanganyikas dropping with the rest.

In the diamond group Premier deferred are still the most prominent share. They have again been very flat throughout the week. This would generate much uneasiness amongst holders were it an unusual experience, but the sensational and violent ups and downs of these shares have been no abnormal occurrences for 12 months past. They are still the playthings of the professional "bulls" and "bears," and he who seeks his peace of mind would be well advised to keep out of this bewildering market, the excitement is too unhealthy for others than hard-headed gamblers.

At one time in the commencement of the week there was a slight spurt in a few West African things, but it was of mere passing interest, of no substance and significance, and this market has quickly settled down into its comatose condition.

West Australians have been nearly as languid. Improvements are shown in Kalgurlis, Golden Horse Shoes, and one or two others, and there are no falls of note. Strange to say, Great Fingalls have not been appreciably affected by the somewhat discouraging circular issued by the directors, referred to below, announcing a large decrease in the quality and quantity of the ore reserves compared with the previous estimate. The profit in sight is equal to about £3 per share. It looks as if a special effort has been made to support the shares, thus to steady the nerves of holders and help to reassure them. True, the directors regard the indications of improvement in depth as encouraging, but the prospects cannot be regarded with other than a feeling of apprehension. Though future profits promise to be materially lower, the life of the mine is likely to be a long one, and it has capable management in its favour.

Copper shares have reacted after exhibiting much strength. Rio Tintos have, as usual, been the most prominent. After jumping up 10s. or £1 at a time, they have relapsed on profit-taking and realisations generally, and this has left its influence on other copper descriptions, though nowhere to any serious extent. Anacondas move independently, more or less as Wall Street wills, and these have been irregular in tendency.

Broken Hill shares have improved on the advance in the price of silver, lead, and zinc, but are inclined to give way on profit-taking. The price of tin has also sharply risen, and Cornish tin shares have benefited slightly. Indian shares are quite firm on the improved outlook for Mysores and other mines.

New Modderfontein Gold Mining Company.—In March last the directors intimated their intention to alter the financial year, which explains how it is the accounts issued this week cover a period of 13 months to June 30. Results show in two or three directions important changes compared with the preceding year, but strict comparison is difficult owing to the extra month's work included. In all 131,088 tons were milled against 111,851 tons, the difference being mainly accounted for by the increased duty per stamp. The grade of the ore milled was slightly higher, partly because of the greater amount of waste rock sorted out, the total value of the gold won being £206,069, or 31s. 5.27d. per ton, against £183,955, or 32s. 10.71d. per ton. Thus there was a decrease of 1s. 5d. per ton in the recovery, which occurred in the cyanide works, where concentration had to be abandoned owing to alterations to the plant. Working costs at 24s. 9.21d. per ton milled showed a reduction of 9.3d. per ton, the gross profit amounting to £43,729, equal to 6s. 8d. per ton. Adding to this sundry revenues, less provision for profits tax, the total nett profit was £48,315, so £52,816 is carried forward in comparison with £4,500 brought in. Thus no dividend is possible yet on the huge capital of £1,200,000. No provision has been made for depreciation since the inception of the company, and the directors now tackle the problem in the easiest fashion imaginable. They had a share premium account of £521,505, and all they do is simply to reduce this book liability to £319,936. So there is no need to touch profits, seeing how willing shareholders have been in the past to help the directors so generously. Will they not thereby receive dividends the sooner if only sufficient profits can be squeezed out of the ore? It is paying for them through the nose, but it greatly eases the task of the directors, who would have had to postpone depreciation indefinitely had there been no premium account to fall on. One thing much in the company's favour is the vigour with which development work has been pushed on, with the result that the ore reserves are computed at 1,005,080 tons, considered payable, with 446,471 tons of unpayable stuff, though there is just a possibility that a fair percentage of the latter may ultimately be treated at a profit. During the year the crushing capacity of the mill was increased from 60 to 100 stamps, and three tube mills have been erected. The directors, however, contemplate an enlargement of the battery at some date in the future, but this will be dictated by the course of events. With 100 stamps, the life of the mine is estimated at 88 years, with 200 stamps and four tube mills at 44 years, and with 300 stamps and five tubes at 29 years. But to enlarge the plant would necessitate an appreciable increase in an already much-watered capital.

Consolidated Main Reef Mines and Estate.—In the past twelve months this parent company made further progress towards its initial dividend, and there is a likelihood that a year hence shareholders will participate in the profits. It has not felt seriously the becried dearth of native labour, for it was able to keep its mill of 120 stamps fully employed during the whole period. The quantity of ore treated was 207,434 tons, the mill yielding 45,928 fine ozs., and the cyanide treatment 29,248 ozs., the whole worth £315,844. After deducting every item of expenditure, including administration costs, the nett profit was £97,457, to which fall to be added £49,334 brought in, £7,530 from claim and stand licences, and £449 freight rebate on gold shipped, making a total surplus of £154,771. Out of this as much as £129,258 goes to make up for capital expenditure in excess of working capital provided, and only £15,264 is carried forward, the balance being absorbed by interest, fees, and other charges. But the profits' tax has not been paid, and is to appear in next year's accounts. As capital expenditure has now almost ceased, there should be no further necessity to appropriate large slices of profits to this purpose, so henceforth these may be available for distribution. At the end of the financial year—June 30—there was a considerable quantity of payable rock in sight, the ore reserves being estimated at 301,300 tons of an assay value of 8.31 dwts. per ton. The company is anything but wealthy in the way of free resources, but liabilities are quite moderate, and cash should be speedily replenished out of current profits.

Great Fingall Consolidated.—A circular has been issued to the shareholders giving the figures of ore reserves in the mine and other facts which are not entirely hopeful. The broken ore in the stopes, the ore blocked out, and the probable ore, shows a total of 677,525 tons averaging 45s. 9d. per ton. Very little ore is estimated at the 12th level, and none below, although recent developments in No. 1 winze from No. 12 level are encouraging. Of the above amount 35,000 tons, averaging 76s. 6d. per ton, are pillars in the upper portion of the mine, and although ultimately recoverable are not at present available. Pursuant to the policy of keeping the output within the average of the available ore reserves the directors have adopted the recommendations of the general managers gradually to reduce the monthly output to between £35,000 and £40,000. Pay values, according to the company's fortnightly reports have proved so extremely low grade, and erratic as to be payable in but a small portion at the 12th level. No. 1 winze, however, sunk from this level, after passing through low values to a depth of 186 ft., entered payable ore averaging about 32s. 6d. per ton. At 200 ft. the cross-cut through the reef showed 34s. per ton for a width of 11 ft. At other places values of 35s. per ton, and 32s. 6d. per ton have been met with. The directors consider that, having regard to the low working costs—about 20s. per ton—these indications of returning values in the line of the main ore chutes are very encouraging. Cash in hand and bullion in transit, after providing for the dividend payable, total £110,000. The above estimates, however, show decreases in the grade and

quantity of the ore, which cannot be regarded as very encouraging symptoms. Still, there is the hope of improvement in depth.

Field's Reward Gold Mine.—Another pathetic appeal is made by the directors to the shareholders to join the reconstruction scheme, but it is to be feared it will fall upon insensible ears. In the circular sent out the secretary says assessment would have been avoided by accepting the offer of a certain syndicate. The appeal runs: "If you do not intend to take up your proportion of the new shares it would certainly have been more advantageous to you for the afore-mentioned syndicate to have found the sum required, even on the terms suggested, as you would then have received a share in respect to one-half the profits, whereas now, if you do not take up your new shares your interest will be forfeited. As a matter of fact the amount required—£6,000—has already been subscribed by the shareholders, but this can be satisfactory to you only if you take up your proportion, and the directors would under the circumstances feel inclined to regret having adopted the policy of assessing the shares were any number of shares excluded from a share in the new undertaking. Please let me know if I am to include your proportion of shares in the allotment, or whether you really wish your interest to lapse." Yet some shareholders, exasperated over past losses, can harden their hearts to pleading such as this!

Kent Coal Concessions.—It is officially announced that on the 27th ult. this company by boring on the Waldershare estate six miles to the north of Dover proved a valuable seam, 3 ft. 4 ins. in thickness, of hard, bright, bituminous coal at a depth of 1,884 ft. This is declared to be almost identical with a previous seam, the analysis of which showed only 3 per cent. ash, 64 per cent. fixed carbon and 33 per cent. volatile matter, "thus ranking with the very best Wallsend or Silkstone." It is the second workable seam proved in this boring, and the company has acquired mineral rights under more than 20,000 acres under the estates of the principal landowners in the neighbourhood. Exploration is being vigorously pushed forward under the guidance of Dr. Boyd Dawkins. Another boring is being put down about three miles to the north. Two collieries have been started and shafts sunk several hundreds of feet. The engineers fully anticipate reaching the first seam of coal in one of these shafts in the early part of next summer, and, from the character of the coal measures, the striking of other seams of equal value and importance at an early date." Subsequently came the news of the striking of a third seam on the same estate, reported to be 4 ft. 6 ins. thick.

Butte Coalition Mines.—The shares of this new Yankee concern have been suddenly and somewhat surreptitiously introduced in the market this week. It may or may not be a mere coincidence that on the day they were first mentioned the *Financial News* published some particulars about the affair. The *News'* story was that some institution here had acquired a substantial interest in the company, and that the shares would be shortly dealt with on the London market, all which was nice and pat. And the shares have been "introduced," but we do not like the manner of the formality. Why could no prospectus, or other authentic document be issued giving full particulars of the company's past record and present doings? According to the *Financial News*, it has had a chequered, though interesting career. The property was originally discovered, many years ago, by Mr. Heinze, but lengthy litigation resulted in the interests of the company which Mr. Heinze had formed—the United States Company—being acquired by parties in New York. The property so bought from the United States Company was taken over by another formed for that purpose, called the Red Metal Mining Company, with a capital of $11,000,000. It was in February last that the Butte Coalition Mines came into existence with a capital of $15,000,000 in 1,000,000 shares of $15 each, in order to hold all the shares of the Red Metal, and to acquire a controlling interest in a company called the Alice Gold and Silver Mining Company. Although the United Copper Mining Company, controlled by Mr. Heinze, produced large quantities of copper prior to the sale, several of the mining claims were shut down for long periods under reciprocal injunctions, pending a decision of the suits before the Courts; hence it is said that the properties now owned by the Butte Coalition Company were never systematically nor economically operated until the litigation was brought to an end. Sufficient time has not yet elapsed to enable this company to get the mines into thorough working or productive condition, but, of course, wonderful results are predicted in the sweet by and bye. In spite of this, a first quarterly dividend of 40 cents per share was declared in August. The price of the share was called $38 to $39, but we do not believe many buyers were found. They are talked up to $50, but there is no reason why they should not be talked to any figure if only the public will be wise enough to leave them in the few hands that possess them.

Lloyds Bank.—The balance-sheet for September shows liabilities consisting of current and deposit accounts £64,646,625, and bills accepted or endorsed £1,120,422, and assets of cash in hand and at Bank of England £10,615,759, cash at call and short notice £5,585,405, bills of exchange £8,187,668, Consols and other investments £12,349,460, and advances to customers and other securities £32,939,355.

Capital and Counties Bank.—Liabilities on September 25 consisted of £32,627,325 on simple contracts and £709,644 on bills, and assets of £5,223,451 cash in hand and at Bank of England, £4,347,967 money at call and short notice, £4,986,114 Consols and other investments, and £19,469,887 bills of exchange, promissory notes and advances to customers.

Company Reports and Balance Sheets.

*** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Chicago, Milwaukee, and St. Paul Railway.

In the year ended June 30 last this company earned gross $55,423,000 against $49,884,000 in the preceding year. Working expenses and taxes took $36,444,000 of this, or 65.76 per cent. of the income, leaving $18,979,000 as nett income exclusive of $258,000 received from other sources. Interest on the debt of the company drew off only $5,914,000, and after setting aside $2,540,000 for the cost of new equipment, there was still a free income of $10,783,000 available for dividend. Of this, $7,546,000 was swept away by dividends of 7 per cent. paid on both the common and preferred stocks, leaving $3,237,000 as a surplus balance. This was smaller by upwards of $1,000,000 than the surplus of the preceding year, but then the company took such a large slice of the revenue to pay for new equipment against nothing at all in any of the three previous years. Apparently its earnings per passenger train mile, as also per freight train mile, were slightly higher than in the preceding year, and the earnings per mile of road rose to $7,962 compared with $7,221 the year before. At the date of the balance-sheet the total capitalisation of the company was $58,184,000 in common stock, $49,654,000 in preferred stock and about $122,000,000 in funded debts. It is engaged in a great enterprise, of which no mention is made in the report—viz., building its Pacific coast extension. The excuse for the silence doubtless is that this enterprise is being carried on under another name, but the Milwaukee is finding the money, and we should like to know how much of its increased gross revenue is due to the carriage of materials, &c., for that extension, how much in other words of the gross income represents capital spent on new works, really by the Milwaukee Company, although nominally by a subsidiary. On the revenue shown the board could easily have paid 12 per cent. on the whole share capital for the past year, but was that revenue all the product of genuine business? The Milwaukee and St. Paul is a prosperous road, one of the best managed in the Western part of the American Union, and therefore there is less harm in asking questions like these. Not only is the Milwaukee Company prosperous, but it has apparently thriftily managed its finances, so that there was a total credit on the income account of $33,790,000 at the end of last year, or, including the $3,508,000 at the credit of the renewal fund and $3,448,000 at the credit of the replacement fund, the aggregate is upwards of $40,000,000 or £8,000,000 of husbanded resources which had gone into the property. Last year there were signs in the accounts of this heavy expenditure upon the Pacific extension in such items as bills payable, and the capital account would have been beginning to look lopsided had it not been that within the year $24,803,000 of new share capital was issued, enabling the directors to pay back to the company drafts made upon its floating balances in order to finance the Pacific Coast extension and for other purposes, but its finances are still pretty heavily burdened by this enterprise, and we can only hope that in time it will prove a remunerative investment.

The Chesapeake and Ohio Railroad Company.

Altogether this road now works 1,827 miles, an increase of 119 miles in the year ended June 30 last. Of that length of road less than 300 miles, whether owned or used jointly, possesses double tracks. The management, however, appears able to carry an enormous amount of traffic on the single line, and last financial year gross receipts, principally from freight, came to $24,603,000, earned at a cost of 62.70 per cent. or $15,440,000. Thus there was a nett income of $9,163,000 or a little over $2,000,000 more than in the preceding year, and after meeting all charges and paying a dividend of 1 per cent. on the common stock there was $1,427,000 left, but out of the expenditure deducted before this result is reached $1,320,000 was assigned to the car trust and $1,534,000 set aside for extraordinary expenditure, the actual interest on the bonds coming to no more than $3,976,000. Complaint is, indeed, made by the stockholders that a larger dividend is not paid, and there was enough revenue last year, on the figures shown, to have comfortably permitted a distribution of a 3 per cent. dividend on the stock with something left over. The management of the Chesapeake and Ohio Company, however, follows the fashion in devoting large sums from revenue to pay for betterments, improvements of various kinds, and is therefore keeping the dividend down. Even so, the capital account goes on increasing, and last year $2,000,000 of 4½ per cent. general mortgage bonds were issued, the total increase in the funded debt for the year being $5,981,000. The Chesapeake and Ohio enjoys the distinction of being the line which hauls the heaviest load per train of any railway in the American Union, the gross average train load for the past year including the company's own freight being no less than 616 tons. In revenue-earning freight, the train load averaged 586 tons as against 579 for the Norfolk and Western. Were it not for this marvellous economy in working the rates of freight earned would not pay, for even in passengers the trains of the Chesapeake and Ohio earned only $1.38 per mile and the freight trains only $2.46 per mile, its earnings on all freight traffic per ton per mile being 15 per cent. smaller than those of the similarly placed Norfolk and Western Company. The heavier train loads of the Chesapeake and Ohio, in other words, only brought in $2.46 per mile, whereas the Norfolk and Western trains, carry-

ing a lighter load, though still an exceptionally heavy one compared with the rest of the country, earned $2.80 per mile. The total capitalisation of the Chesapeake and Ohio is now about $134,000,000, of which $60,530,000 is common stock and $73,651,000 bonds of various descriptions.

Robinson and Cleaver, Limited.

This undertaking makes a fairly satisfactory display for the 12 months ended July 31 last. A recovery of nearly £1,000 at £48,407 took place in the trading profit, so that, with transfer fees and the small balance of £714 brought forward, the total revenue reaches £49,162 compared with £48,228 for the previous financial year. On this occasion the sum provided for lease redemption is only £3,943 against £4,512, but the directors see fit to slightly increase the allowance for depreciation from £3,780 to £4,184. Managing directors' salaries, commission on profits and fees of trustees and auditors absorb a further £5,134, income-tax takes £1,761 and the debenture stock interest requires the usual £7,600. These charges provided and the nett balance remaining is £26,540, so that after meeting the preference dividend the directors increase the distribution on the ordinary shares by ½ per cent. to 3, add another £5,000 to reserve and largely increase the balance forward to £4,541. This large carry forward is due to the fact that on the present occasion nothing has to be provided against preliminary expenses compared with £3,200 a year ago. The financial position, take it altogether, is a fairly satisfactory one. During the period under review the capital additions to properties amounted to £7,559 raising the total cost to £558,580. Against this, however, we have to deduct total provision for leasehold redemption £28,761, leaseholds sold £12,480 and aggregate depreciation to date £22,293, so that the property account now appears at a nett sum of £495,045. Against this the company has a reserve fund, including the £5,000 now added, of £35,000; not a large sum, it is true, but while the directors credit nearly as much to this account as they distribute in ordinary dividend, there cannot be much cause for complaint. Floating liabilities of £43,272 are small for a company of this sort, and on the other side there are sundry debtors of £42,607, stocks-in-trade £156,807 and cash at bankers and in hand £14,256. Investments on account of sinking fund stand at £37,297.

Brett's Stamping Co., Limited.

Up to the present misfortune seems to have followed this company's efforts, and although it has been in existence since 1898 it has not hitherto been able to make any return on its ordinary shares, and only once has it managed to pay the preference dividend in full. The year ended July 31, however, has apparently broken the spell, as with the greater activity in the cycle trade the trading profits rose by £1,123 to £4,206, and after writing off £1,427 or practically the same as a year ago for depreciation, and providing for debenture interest and directors' fees, the nett profits were £1,130 up at £2,161. Adding £540 or £291 more from the previous account the total available was £2,701 against £1,280, out of which the preference dividend of per cent. is paid and the ordinary shareholders are gladdened with a distribution of 3 per cent., and £734 is put to reserve, leaving £302 to be carried forward. During the year a new suction gas engine plant was erected to supplement the existing steam motive power, and it is no doubt due to this that the item of freehold land, buildings, plant, stocks and work in progress, &c., is £869 up at £26,296, after deducting depreciation. Goodwill remains at £19,332, and against this there is only the modest reserve of £1,000, of which only £64 is represented by investments. Trading balances are well in favour of the company, only £1,626 being due to sundry creditors while debtors owe £4,127, and cash and bills are fairly substantial at £2,556. The directors are evidently determined that it will not be their fault if the undertaking does not benefit by the development of the motor industry, as they are making arrangements to increase the stamping plant in order to cope with the growing demand for heavier drop forgings.

Joseph Robinson and Co., Limited.

In their report for the year ended June 30 last the directors of this building business complain that trade throughout the country has been in a very bad state, and they have to confess that the profits in all departments of the business have shown a falling off. Expenses were reduced to a minimum, we are told, but notwithstanding this the trading revenue reached the very slender sum of £3,616. Rather less than thirty shillings came in from transfer fees, indicating that speculators were not exactly rushing after the shares during the year, this addition bringing the total income up to £3,618. A large number of small charges, all fully detailed in the profit and loss account, have to be deducted, and after also providing £1,500 for debenture interest, the balance of nett profit is nearly £1,399. That is a falling off of quite £1,000 against the preceding twelve months. Credit brought forward was £86, making the aggregate for disposal £1,484, from which two dividends of 1 per cent. each are paid, and £184 carried forward. We have no doubt, however, that the financial position does not justify the distribution of any profits to the shareholders. Capital additions in the twelve months were £389, raising the cost of properties and goodwill to £89,327, against which £5,161 had been written off for depreciation up to June, 1905. But nothing is set aside for wastage on the present occasion, and so far the company has not accumulated a penny of reserve. Moreover, there is a small suspense account of £213 connected with the erection of the Venetian Red plant and machinery, which will be written off within the next three years. A trifle of £21 was appropriated against the Mounsey-Heysham lease, leaving the item at the same figure, and as this is to disappear next year we may assume that the property has no present value. Total sum due to creditors amounts to £3,540 against debtors of £4,345, but the cash balance of £408 is not quite sufficient to pay the final dividend. Stock-in-trade, consisting of stores and other materials, loose plant and tools, has a balance-sheet value of £10,091, and against the latter item the allowance for depreciation seems to be just £25.

Alliance and Dublin Consumers' Gas Company.

A further recovery of nearly 11,000,000 cubic feet in the sales of gas took place during the six months to June 30, and the receipts from this source were £4,969 higher at £99,249. Public lighting, too, gave £688 more at £6,744, and rentals of coin and other meters rose by £2,099 to £22,760, but the market for residuals continued in a very depressed state, and receipts fell off by £4,559 to £14,488. Including £359 from rents and transfer fees, the total revenue showed an improvement of £3,187, and as considerable savings were effected in the outgoings nett profits were £7,250 higher at £43,732. For the second half of 1905 £2,840 had to be taken from reserve to make up the regular dividends, and nothing was brought forward, but on this occasion the directors, after providing for interest charges, are able to make the usual distributions at the rate of 10½ per cent. and 7½ per cent. on the respective shares and to carry £1,050 to the new account. During the half-year £73,212 was received from an issue of £50,000 shares at a premium and capital expenditure only amounted to £14,177, so that the debit balance on that account is now down to £23,751. The new issue has in addition put the company in funds, as after repaying the loan of £9,350 from the bank, it has £30,424 cash in hand. Trading balances, however, are still decidedly adverse, liabilities to sundry creditors amounting to £66,158 or an increase of £4,818, and bills payable being £3,771 up at £6,589, while gas and meter rents outstanding have risen by £2,578 to £37,371, and other debtors by £12,535 to £25,183. The several reserve funds have been increased by interest, and now stand at £76,631 against which there are investments of £43,076 and apparently the suspense account of £18,454 for the gasholder at Barrow Street.

Broken Hill Water Supply, Limited, and Reduced.

During the six months ended June 30 the consumption of water amounted to 163,810,280 gallons or 66,387,190 gallons more than in the previous half-year and 68,114,210 gallons over the corresponding period of 1905. Part of this improvement, the engineer states, was due to the fire at the Junction Mine, but the greater portion of it is attributable to an increased consumption by the mines generally, just over one mile of new mains having been laid and 166 services connected. Profits for the half-year were £22,273, and with £24,777 brought in gave an available total of £47,050, out of which two dividends of 6d. per share each have been paid, £7,500 is transferred to the contingency reserve fund and income-tax took £695, leaving £28,856 to be carried forward. Water rights, leases, &c., still stand at their original cost of £25,194, and construction account, filtration plant and buildings also remain at the old figures of £166,773, while plant, mains, &c., after deducting £4,765 for depreciation, stand at £24,107, against which there are the contingency reserve of £53,500, represented by investments and fixed deposits for £53,164, and the fund of £3,379 accumulated out of premiums on reserved shares sold. Trading balances are well in favour of the company, liabilities to sundry creditors being no more than £578, while sundry debtors owe £4,255 and cash is ample at £11,908. In June last the company decided to reduce the capital from £200,000 to £150,000 by a payment to the shareholders of 5s. per share out of reserve and writing down the shares from 20s. to 15s. each, and although the final order has not yet been obtained the necessary petition has been accepted by the Supreme Court, and the directors hope to be able to make the distribution some time this month. The Municipal Council of Broken Hill has asked for the terms on which the company would hand over the whole undertaking, and the directors offered to submit the matter to the shareholders if the Council would agree to pay £23,600 per annum for the 12 unexpired years of the lease, such payment to be guaranteed by the New South Wales Government, but so far no reply has been received.

Antwerp Water Works Company.

For the six months to June 30 the income, including royalty from the Compagnie Electrique Anversoise, amounted to £33,492 compared with £31,505, an increase of £1,987, and as the working expenses were £474 higher at £8,872, the nett revenue rose from £31,505 to £33,492. Thus the profit in Antwerp advanced by £1,513 to £24,620. Income in London came to £172 against £139, and with £6,072 brought forward compared with £4,580 the profits, after meeting London expenses, debenture interest, income-tax, &c., were nearly £3,000 higher at £27,607. So the dividend for the six months is again raised by ½ per cent., this time to 8 per cent. per annum. As the present is an interim report, no balance-sheet is issued, and the directors say nothing as to the operations carried on.

Halifax and Bermudas Cable Co., Limited.

The year ending June 30 was in one respect not so favourable as the preceding period, as the income from messages, subsidies, etc., was £600 lower at £17,633. But interest was a little higher at £1,108, making the total £576 less at £18,741.

Expenditure, however, was reduced to £15,407, so the nett profit advanced by £576 to £3,274 and as the substantial sum of £18,486 was brought in the available balance was £21,760. An interim dividend at the rate of 2½ per cent. has already been paid and will be supplemented by a final distribution of a like amount, making the customary payment of 5 per cent. This will leave £18,010 to carry forward. During the year debentures were paid off to the amount of £8,600, leaving £37,900 outstanding. Liabilities to sundry creditors and for traffic balances amount to £1,707, or £40 less, against which cash is £5,499, £100 is held in bills receivable, £1,553 represents debts, and there are investments that cost £27,406.

Direct West India Cable Co., Limited.

There was again a slight increase of £32 in this company's revenue from messages, subsidies, etc., in the financial year to June 30, whilst interest gave £122 more at £2,459 and including transfer fees the total increase was £20,773 compared with £20,619. As £8,949 was transferred to the trustees' account with the debenture holders against £7,293 the outgoings were heavier, and the nett profit dropped from £4,182 to £3,113. But £35,711 was brought in and after paying the usual dividend of 6 per cent. for the year there will be a credit of £36,125 to carry forward. Debentures were bought and cancelled to the amount of £9,000, reducing the debt to £65,500. Traffic balances against the company are £773 and sundry creditors are owed £307, but the total is appreciably exceeded by the sums to come in, whilst cash has further risen by £3,703 to £16,873. Investments still stand in the books at £60,492, their original cost.

THE LATEST BANK AMALGAMATION.

It is announced that the Birmingham District and Counties Banking Company, Limited, has agreed to buy up the business of the Wakefield and Barnsley Union Bank, Limited, a bank established in 1832, which took over in 1840 the business of Messrs. Beckett, Birks, and Co., of Barnsley, established in 1796. This Wakefield Bank has an issued capital of £500,000 in £50 shares, of which £13 10s. is paid up. Its head office is in Wakefield, and there are two branches and seven sub-branches. In order to effect the purchase the capital of the Birmingham District Bank is to be increased by £2,000,000 nominal to £6,000,000, another 100,000 £20 shares being created for this purpose. The shareholders of the Wakefield Bank will get one and a-half of these new shares for each one of their old shares, fractional parts being dealt with in the usual way. Opportunity is taken in effecting this fusion to change the name of the Birmingham District, &c., Bank to the District and Union Bank, Limited, and doubtless shareholders will appreciate the shorter title. They are summoned to meet on the 16th inst. to confirm the contract. The Wakefield Bank is not a large one, and its business, as well as its dividends, have been dwindling for years. Its shares are of £50 each, £13½ paid up, while the £20 shares of the Birmingham District Bank have only £4 paid up, but the latest market price of the Wakefield Bank share was only 15½, as against 11½ for that of the Birmingham District Bank. For some 18 years, down to 1896, regular 12½ per cent. dividends were paid by the Wakefield Bank, but then a change came, and the rate has gradually diminished until at last it has come to be no better than 8 per cent. Since 1900 the total resources of the bank have shrunk by £353,000 to little more than £1,000,000. Nominally, it has a note circulation of £14,604, but the actual circulation is now under £3,000. As for the Birmingham District Bank, it has progressed by amalgamations in recent years, its latest absorption, until the present transaction was announced, having been the Midland Counties District Bank. We trust its absorptions add to its strength, for if so the shareholders of the Wakefield Bank may well be pleased.

TRADE AND PRODUCE.

Wheat.—Holders of cargoes maintained a firm attitude all the week, and prices tended to harden in consequence. Buyers, however, were on the whole disinclined to come freely on to the market, though towards the middle of the week the demand for certain grades showed a distinct improvement, which passed off later. Quotations for English wheat are stronger, as milling requirements are rather extensive, while the market has been stimulated by the depressed outlook in Russia, and the conviction that the American surplus will prove less than anticipated. Farmers' deliveries this week totalled 83,907 qrs., averaging 25s. 9d. compared with 104,984 qrs. averaging 26s. 9d. a year ago; imports into the United Kingdom amounted to 475,790 qrs. of wheat and 106,500 qrs. of flour, as against 475,700 qrs. and 79,663 qrs. in the same week last year. Nearly all the week a bullish tone prevailed in the American markets on the influence of unfavourable weather reports, cable advices as to the damage done by locusts to the Argentine crop, and decreased grain movements in the North-West. Prices on most days showed a steady gain until large receipts from the grain States and news of better weather created a weak tendency, which was increased by bear pressure and considerable sales to realise. Bradstreet's estimate, which put the quantity of wheat in sight East of the Rockies at 56,967,000 bushels, as against 51,718,000 last week, and 28,894,000 last year, also led inferior holders to sell, and thereby accentuated the weaker tone.

Wool.—Contrary to many pessimistic views held as to the course of the market, "not altogether unconnected with the desires of those interested in a depreciation of the market," to quote Messrs. Jacomb, Son, and Co.'s circular, prices at the fifth series of the colonial sales, which closed on Thursday, fully maintained established values for all descriptions of wools. Competition was keen throughout, and but few of the total 102,000 bales offered were withdrawn. Home trade is estimated to have taken 54,000 bales, the Continent 38,000 and the United States America 2,000, and, as hitherto, crossbreds were the most popular with home buyers, merinos, both fine and medium, with foreign. Already a stronger tone exists in manufacturing centres in consequence of their continued high values, but so far there has not been much material response.

Linen.—Far from being exhausted, the upward movement has advanced more rapidly than ever this week. All existing lists, says the *Linen Market*, have been cancelled, some being replaced by quotations sharply advanced, and some withdrawn altogether for the present. Contracts, as it is, are getting beyond working control; some of them that have been lately placed cannot possibly be carried out till the end of 1907. Prices in the cloth end are not all that could be desired, but much is hoped for in the coming year, which promises to be a record one in regard to linens. The improving tendency of business has been general throughout all branches of brown liners, hand looms, &c., and this week damasks and housekeeping goods have sold more freely at advanced prices. Home and foreign trade in bleached and finished goods also expands with prices always going up, and early delivery everywhere pressed for.

Cotton (from our Manchester correspondent).—Our market during the past week has been upset by the hardening of the raw material in Liverpool. Fluctuations have occurred from hour to hour, but towards the close values are considerably higher than a week ago. Shippers have hardly known what to make of the position of affairs, the raw cotton markets being considerably influenced by reports of storms of flood in the American cotton belt, which are said to have done considerable damage to the growing crop. The reports seem to have been somewhat exaggerated, but the "bulls" have made as much as possible of them, and a good deal of manipulation has shown itself. The crop is undoubtedly late, but the receipts at the United States ports are comparing more favourably with the growth of last year. In piece goods for export there has been no lack of inquiry for several markets. The outlook for India is healthy, and offers for shirtings have again been placed before sellers. Transactions have not been important, but the limits of exporters have been raised, and with more settled conditions no doubt a steady business could be done for our Dependency. China shows some little improvement, more bids being mentioned. For the Levant and Egypt several small lots have changed hands, but the question of delivery is not easily settled. The South American markets have not been active, buyers for the most part holding aloof. In the home trade houses the turnover continues encouraging. Considerable inconvenience is being caused to the wholesale establishments by manufacturers being late in the delivery of goods ordered several months ago. T-cloths and Mexicans are well held, the engagements of manufacturers being extensive. Burnley goods are dull and move slowly. Manufacturers at the moment are not doing at all well, the margin of profit being considerably reduced. Glossop goods continue firm owing to engagements. A steady business has been done in sateens and coloured woven goods. American yarns for home use have well maintained their strength, quotations being raised to fully meet the advance in the raw material. Users have not been anxious to operate freely, but certain manufacturers have had to enter the market in order to obtain adequate supplies in the future. There is still great scarcity in certain numbers of weft, such as 36's to 42's. Looms, it is said, are stopped in some districts owing to the scarcity of weft. Ring yarns and beams are well sold, and difficult to be obtained for early delivery. The coarser numbers in weft continue to move off better. In export yarns the turnover has not been large, but a fair miscellaneous trade has transpired. Glasgow buyers have been in the market for 40's mule. Cops for the Continent moved off fairly well at the beginning of the week. Egyptian yarns have decidedly improved in demand. The better qualities are now strong in position, and the commoner kinds are doing much better. Producers in this section are much better situated than a few weeks ago, and quotations are more firmly adhered to.

In New York cotton opened firm from 20 to 30 points higher, and further improved on reports of heavy damage by the recent storm, and a scare amongst the shorts, who hastened to cover. Realising on an expected bearish monthly Government crop report forced prices lower, but only temporarily, a bullish ginners' report rallying the market. Irregularity intervened, and the market closes steady, with a very firm tendency.

Coal.—Trade throughout the country continues fairly active, without exhibiting any feature of special interest. The advance of 1s. per ton in house coals has steadied both pits and markets. Shipping trade generally is being affected by the approaching abolition of the tax, and foreign buyers are inclined to hold off until the end of the month, but Customs authorities have facilitated business as much as possible by announcing that cargoes shipped this month will not be taxed, provided the vessel does not leave the port when the coal is taken on board before midnight, October 31. Coal-owners in the North are looking forward to a busy autumn season, and their prices show an all-round improvement. Welsh trade this week has been quieter, owing to delay in arrival of tunnage, which, when it comes, is expected to make things brisker. Prices in Cardiff and Swansea exchange are unaltered.

Copper.—What will happen in this market it is absolutely impossible to say, though there seems but little prospect of a break in prices yet awhile. Consumption shows no signs of diminishing, and all the American users have bought so largely for January-February and March delivery next year that the European trade may find very little copper left when they begin buying for the same deliveries. Meanwhile prices still continue to rise, spot and three months both touching £93 2s. 6d. on Wednesday. A break followed, but it was not of long duration, for there was no real weakness in the market, and with sellers withdrawing, quotations were quickly bid to almost their previous level. Prices are now £93 cash, and £92 17s. 6d. three months.

Tin.—It has been an exciting week in this metal, and though quotations have occasionally fluctuated, their tendency has been upward. Eastern advices have all along been firm, but the climax was reached on Tuesday when an advance of £5 compared with the Friday's prices was cabled over. The market here naturally responded to this, and quotations quickly ran up, only to ease off a little later on sales to realise. But these and subsequent fluctuations of brief duration had no real effect on the tone of the market, which closed at £195 cash and £194 three months.

Iron and Steel.—Firmness continues the condition of the hematite market, and manufacturers are still doing a very large business. Should the present great demand continue, a famine is threatened in pig-iron, for the supply cannot be appreciably increased under existing conditions of output. As regards the Cleveland iron market, the effect of the labour troubles has been minimised by other favourable circumstances, especially by the heavy demand from Germany and the United States. German consumers in particular are buying freely, and larger deliveries still are looked for. The warrant market has been very steady, and prices have shown but slight changes. Business in warrants is much in the hands of speculators. Connal's reported that on September 30 they held 598,955 tons of Cleveland pig-iron, showing a decrease during the month of 13,668 tons. No hematite is now held. Trade is improving in manufactured iron and steel. In Scotland the outlook is less satisfactory than it has been, owing to the strike on the Clyde. But a moderate business has been done in hematite pig-iron, and there is scarcely any change in the finished iron and steel departments.

Tea.—Again a moderate quantity of Indian tea was offered this week, 35,944 packages, and this, concurrently with an improvement in trade, says Messrs. Gow, Wilson, and Stanton's weekly circular, has had the effect of entirely transforming the position of the market. Medium and common teas showed an advance of ¼d. to ⅓d. per lb., while the better grades frequently went ½d.-1d. per lb. higher, and the average for this week on 33,295 packages sold on garden account came to 7.78d., against 7.64d. last week. Common teas in Ceylon also showed a slight advance, and medium kinds, especially those suitable for export, improved further still. 20,664 packages were offered, and the average obtained was 8.27d. against 7.72d. last week and 7.56d. last year. The same thing occurred in Javas; lower grades showed a rise of fully ½d., better teas ½d. to 1d. This week 2,263 packages were offered, and from January 1st to end of September 98,295 packages sold on garden account averaged 5.77d. against 88,492 packages sold averaging 5.58d. in 1905.

Sugar.—American intervention in Cuba caused more speculation last week, says Mr. Czarnikow, as long as it seemed uncertain what action the Revolutionaries would take, and prices for May advanced from 9s. 8½d. to 9s. 10d. on Saturday. But on receipt of advices that the American occupation had been on the whole favourably received in the island, and owing to beneficial rains in Western Europe, realisations predominated, depressing May to 9s. 5d. The trade demand continued slow, as usual during declining markets, and, with the exception of one or two days, was unsatisfactory, refiners buying beet very moderately for immediate wants only at 10s. down to 9s. 7½d. Prompt sugars are as yet scarce, but on balance October-December declined 4d., and May only 3½d. The premiums are still too small for holding sugar over, but with a large quantity going to America, and refiners everywhere requiring raw sugar, prompt deliveries are likely to be readily saleable for some time to come.

The market to-day is less influenced by America, which is not now a buyer, than by crop reports, which, even with warm rains, are not very good. Fabricants would rather have a rich root than a large inferior one, as the latter increases the cost of production more than the larger quantity reduces it, therefore complaints about rain are apt to get exaggerated, as we have seen last year. As long as high temperature favours growth, the effect on total production may be less damaging than we are led to believe, if the weather clears up in time. But this year the larger quantity of roots is not there, and in France especially, where short sowings are 22 per cent., the short weight per acre seems to be 10 to 15 per cent., with slightly better quality, therefore fabricants are concerned about their cost of producing 650,000 instead of 970,000 tons refined, with dearer labour, dearer coal, dearer bags, &c., and would rather buy than sell. Elsewhere the difference against last year's sowings and yields is not so great; some districts in Central Germany expect the same weight, whilst the Eastern provinces are slowly recovering, but the statistical outlook for the next 18 months, as explained before, does not warrant a much lower level, and holders seem content to sell slowly.

American markets have been dull, doubtless influenced by fluctuations on this side. The landings in the three ports for the week were 22,000 tons, smeltings 48 tons, reducing stocks to 186,000 tons.

MINING RETURNS.

Balaghat Gold,—4,550 tons, 3,562 ozs.; 4,004 tons tailings (cyanide), 394 ozs.; total 3,956 ozs.

Barrett Gold.—410 ozs. gold, value £1,500.

Brilliant and St. George United.—Treated 2,353 tons, total value, including residues, of £7,750.

British Broken Hill Proprietary.—2,427 tons crude ore produced 348 tons concentrates, containing 219 tons lead and 9,048 ozs. silver.

Champion Reef Gold.—15,461 tons, 9,307 ozs.; 19,459 tons tailings (cyanide) 2,263 ozs.; scalings from Plat Old Mill, 324 ozs.; total, 11,894 ozs.

Chinese Engineering.—19,500 tons; sales, 16,500 tons; consumption, 1,225 tons.

Coromandel Gold.—1,040 tons, 335 ozs.

Golden Pole.—Crushed 1,180 short tons, 639 ozs.; 1,160 tons sands, 219 ozs.; 355 tons slimes, 45 ozs.; 6 tons concentrates, 17 ozs.; total yield, 920 ozs.

Hutti (Nizam's) Gold.—905 ozs. from 2,150 tons crushed; tailings, 268 ozs. from 2,000 tons; total, 1,173 ozs.

Kalgurli.—Treated 10,903 short tons, 7,829 ozs.

Kamfersdam.—Diamonds recovered, 2,460 carats; 4,164 loads blue ground on floors.

Kelantan Gold (No. 1).—Recovered 164 ozs.

Koffyfontein.—Recovered 2,500 carats diamonds.

Lace Diamond.—Loads blue ground washed, 16,648, yielding 2,069 carats equal to 12·43 carats per 100 loads; loads of blue ground floored, 45,294, making 970,427 loads on the floors.

Le Roi No. 2.—Shipped, 2,100 tons; the nett receipts are $33,903 (£7,065), being payment for 2,422 tons shipped and $645, being payment for 43 tons concentrates shipped.

Lloyd Copper.—Production 135 tons.

Mitterberg Copper.—Output 58·26 tons finished copper.

Mysore Gold.—15,950 tons, 15,161 ozs.; tailings (cyanide), 12,775 tons, 1,897 ozs.; total, 17,058 ozs.

Mysore West and Mysore-Wynaad Gold.—Crushed 2,100 tons, 343 ozs.; cyanided 2,496 tons, 144 standard ozs.

New Hillgrove Proprietary.—Crushed 140 tons, 4,42 ozs. of bullion, and 2 2 tons of concentrates, value £22; tailings, residues, 21 grains per ton.

New Ravenswood.—Crushed 1.248 tons, value £3,118; concentrates, 152 tons, value £880; tailings, £870.

North Broken Hill (No Liability).—Treated 2,000 tons crude ore, producing 355 tons concentrates, containing 249 tons lead and 5,396 ozs. silver.

Nundydroog.—6,900 tons, 5,393 ozs.; 7,020 tons tailings, 715 ozs.

"O.K." Copper.—Treated 1,404 tons crude ore, producing 152 tons fine copper.

Ooregum Gold.—10,258 tons, 4,668 ozs.; 9,116 tons tailings (cyanide), 959 ozs.; total, 5,627 ozs.

Otto's Kopje Diamond.—Recovered from débris 80 carats, realised £64.

Premier (Transvaal) Diamond.—Washed mine ground 348,765 loads; overburden, 58,210 loads, yielding 106,212 carats; percentage without over burden, 30.

Roberts Victor Diamonds.—4,294 loads washed, yielding 2,862 carats, equal to 66·6 carats per 100 loads.

Sheba Gold.—Output 4,355 ozs.

St. John Del Rey.—Gold produce, £22,600; yield per ton ·56 of an oz. troy.

Sulphide.—2,572 tons ore milled, producing 495 tons leady concentrates, also 3,012 tons middlings, and 7,071 tons tailings treated, producing respectively 1,170 and 2,630 tons zinc concentrates, 840 tons leady concentrates, 313 tons residues, and 4,218 tons purchased ores smelted, yielding 1,442 tons lead, containing 109,940 ozs. silver and 9,661 ozs. gold; also treated 312 tons zinc concentrates, producing 74 tons spelter.

Tasmania.—Cyanide, 240 ozs. from 1,608 tons; chlorination, 188 ozs., 196 tons.

Transvaal Gold Mining Estates.—Crushed 8,295 tons, 2,312 ozs. Central cyanide 3,840 tons, 1,040 ozs.; Central slimes, 2,560 tons, 500 ozs. Kameel's cyanide 1,250 tons, 178 ozs.; Kameel's slimes 730 tons, 109 ozs. Old slimes, 600 tons, 152 ozs. From Elandsdrift: Treated 312 tons, 90 ozs. Total, 4,381 ozs.

Wankie Rhodesia.—Output 8,473 tons. Sales 5,939 tons.

There is a very able and interesting article on "The Prospects of Iron and Steel Investments," by Sir Charles McLaren, M.P., in this month's issue of the *Financial Review of Reviews*. He shows that while it is true that we have no longer a monopoly as manufacturers for the world, our trade still flourishes and expands, and points out that the London market is ignorant of many of the securities created by prosperous and solid iron and steel businesses. It knows a few like Bolckow Vaughan, Armstrong Whitworth, Vickers, John Brown and Co., Cammell Laird, Palmers, and Guest, Keen and Nettlefolds, but is ignorant of "many other equally prosperous concerns," dealings in whose shares "are entirely confined to the Stock Exchanges of Manchester, Glasgow, Sheffield, Newcastle, Birmingham, and Cardiff." This is quite true, and the London market has become narrow-minded in becoming "international." As a "tip," Sir Charles winds up by telling us that shares in new collieries in South Yokohama or North Derbyshire "ought to be carefully noted" as worth picking up. Altogether a good article. We are less well pleased with another devoted to a plea for wider powers of investment to trustees, believing, as we do, that the whole principle underlying the system of classified and legal "trustee investments" is vicious. But the number as a whole is really very useful, although we fear the wit or humour in the article "Is Ancestor Worship Conducive to Sound Investment?" will not be obvious to every reader.

COMPANY MEETING.

HAINAULT GOLD MINE, LIMITED.

The annual meeting of the Hainault Gold Mine, Limited, was held on Wednesday at Glasgow, Mr. W. D. Gillies, chairman, presiding.

The Chairman said the report contained so full particulars of the work of the company for the year that there was little or nothing left for him to add. The tonnage crushed had been 54,242 tons, against 31,209 tons for the previous year, while the gold recovered was 21,292 ozs., against 14,651 ozs. They would notice that the ore reserves had been increased from 205,000 tons to 241,000 tons, but the estimated value had been reduced from 36s. to 31s. The profit earned had been £21,180, against £9,831. The ore reserves were only estimated down to the 650 ft. level, as at the date of the report (May 31 last) little or no development work had been done at the 750 ft. level. Since then, however, the 750 ft. level had opened in quite a satisfactory way, giving encouraging indications of better results than the higher levels. That they regarded as most important, and when they resumed sinking the main shaft, which he hoped would be shortly, they were fairly confident that they would discover good values at greater depth. (Applause.) It must not be forgotten in looking at the prospects of the mine that 750 ft. was a comparatively shallow depth when it was remembered that neighbouring mines were getting high values at 1,900 ft. With regard to the reduction in the estimated value of the ore reserves, the general manager had reported: "The development values given are all on the conservative side, and do not allow for the lode stuff being sorted out. When this is sorted out properly there should be a marked appreciation in values." He also said his reduction in valuation was "due to the fact that, with the exception of the 750 ft. level, all the ore opened up has been under last year's average, but the reduction in costs per ton when the additions to the plant are in good working order will more than compensate for the reduction in the value of the ore." There appeared to have been some considerable discussion on the field as to whether the estimated mine values of the residues on the various mines were correct, and Mr. Moss sent them valuations by two of the very best independent assayers on the field, who valued the residues at .05 dwt. or just over 1 gr. per ton more than his figures. With the increased profits consequent on the increased plant, not only would they be in a position to pay larger dividends, but they hoped to do some development on other parts of the property. (Applause.) It might have been noticed in recent monthly returns that while the tonnage had been very much higher than the estimate the gold realised had been proportionately lower. That was to be explained by the fact that the oxidised ore met with had been of low grade and the old battery of light stamps which had done excellent work and served its time, would not crush the sulphide ore. Part of the new scheme of plant extension was to replace these old stamps with heavy ones, so that when the new plant was running the general manager would not be confined to the treatment only of the low-grade oxidised ore. (Applause.) Notwithstanding the fact that expenses in the past had compared favourably with other mines, not only in West Australia, but elsewhere, Mr. Moss was very confident that he would be able to reduce them to 18s. per ton, which would cover all costs. It was intended with the new plant to crush 7,000 tons per month, and he thought they might take that as a conservative estimate, as Mr. Moss had improved over the previous estimates given by him by as much as 20 per cent. The engine and boiler they had just purchased were powerful enough to deal with 9,000 tons monthly. Yesterday they received a cable, but full particulars, to which the general manager referred in his letter, would not be to hand for some days yet. The cable was as follows:—"Have sent full particulars by mail, September 8. Development of mine continues to open up ore. September returns indicate improvements. Erection of all machinery is being vigorously pushed. In reference to my letter dated August 25, forty stamp mill will crush over 7,000 tons." In conclusion the Chairman said they might look upon prospects with considerable confidence, and if values improved in depth, as it was hoped and believed they would, they should all have reason to be satisfied with their investment. He concluded by formally moving the adoption of the report and accounts.

The motion was put after a little discussion, and declared carried unanimously.

Mr. Slater was re-elected a director, and in compliance with a suggestion from influential shareholders, Mr. Charles Bennett Jessop was added to the board.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Buenos Ayres Great Southern.—Balance of 4 per cent. on the ordinary stock, making 7 per cent. for year ended June 30, carrying forward £198,829.

Central Uruguay of Monte Video.—Balance of 3 per cent. upon the ordinary stock, making 5 per cent. for year, carrying forward £18,492.

Central Uruguay Eastern Extension.—Balance of 5s. on the ordinary shares, making 8s. 6d. per share for year, carrying forward £2,168.

Central Uruguay Northern Extension.—Balance of 4s. on the share capital, making 8s. per share for year, carrying forward £1,043.

Nitrate.—Interim on the ordinary unconverted shares and the preferred converted ordinary shares at the rate of 3½ per cent.—*i.e.*, 7s. per share.

Rio Claro Sao Paulo.—Interim for six months to 30th ult. of 13¾ per cent. per annum.

BANKS.

Bank of Adelaide.—Interim for half-year at the rate of 8 per cent. per annum.

Bank of Scotland.—At the rate of 15 per cent. per annum for past half-year.

INSURANCE.

King Insurance Company.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

Union Assurance Society.—Interim of 7s. 6d. per share.

MINES.

Gopeng Tin.—1s. 3d. per share on account of the profits for the present year.

Ivanhoe Gold.—Second quarterly interim in respect of 1906 of 5s. per share, payable Oct. 25.

New Gopeng.—1s. per share on account of the profits for the current year.

Sons of Gwalia.—Interim quarterly (No. 13) at the rate of 1s. per share.

MISCELLANEOUS.

Alliance Tea of Ceylon.—Interim of 3 per cent.

Argentine Land and Investment.—2½ per cent. (2s. per share) on the 5 per cent. preference shares, payable on Oct. 26.

Burroughes and Watts.—At the rate of 8 per cent. on the ordinary shares for year ended June 30.

Cape Town and District Gas Light and Coke.—Interim of 4 per cent.

City of Santos Improvements.—Interim of 2½ per cent. for 1906 on the ordinary share capital.

Cuba Submarine Telegraph.—On the ordinary shares at the rate of 5 per cent. per annum for half-year to June 30.

Dickins and Jones.—Interim on the ordinary shares for half-year ended July 20 at the rate of 9 per cent. per annum.

Frederick Gorringe.—Interim for six months ended Aug. 20, at the rate of 5 per cent. per annum on the preference shares, and 6 per cent. per annum on the ordinary shares.

Greenwich Inlaid Linoleum.—Interim on the ordinary shares at the rate of 10 per cent. per annum.

New Paccha and Jazpampa Nitrate.—On the ordinary shares for first half of the current year of 10 per cent. (equal to 20 per cent. per annum); on the preference shares, 4 per cent. and a bonus of 20 per cent. for first half of the current year (together 24 per cent., or equal to 48 per cent. per annum).

Pataling Rubber Estates Syndicate.—Interim of 2s. per share.

Realisation and Debenture of Scotland.—For year to August 31 on preference stock at the rate of 5 per cent. per annum, allocating an additional 2 per cent. to preference stock reserve; ordinary shares, at the rate of 10 per cent. per annum; founders' shares, 6s. per share; the balance of profits (amounting to upwards of £15,000) to the general reserve. The dividends on the ordinary and founders' shares will be paid in two equal portions in Nov., 1906, and May, 1907.

Reuter's Telegram.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

San Jorge Nitrate.—Interim of 2s. per share.

Shaw, Savill, and Albion.—Interim for half-year ended June 30 on the preferred and ordinary shares at the rate of 5 per cent., payable Nov. 1.

Trans-Continental Transportation.—5 per cent. on the preferred shares.

Val de Travers Asphalte Paving.—Interim of 5 per cent. (6d. per share) for six months to June 30, payable 16th inst.

Vulcan Foundry.—6 per cent. for half-year ended June 30, making 10 per cent. for the full year, and a bonus of 4 per cent. for past year.

Yates and Thom.—7 per cent. on the ordinary shares for year ended Aug. 8, placing £2,000 to reserve, and carrying forward £2,386.

NEXT WEEK'S MEETINGS.

Monday, October 8.

Baddow Brewery.—Winchester House, 11.30 a.m.
Rand Victoria Mines.—Cannon Street Hotel, noon.

Tuesday, October 9.

New Kempinkote Gold Field.—Cannon Street Hotel, 1 p.m.
Standard Bank of South Africa.—Cannon Street Hotel, 1 p.m.

Wednesday, October 10.

Buenos Ayres Western.—River Plate House, noon.
Entre Rios Railway.—River Plate House, 2 p.m.
London Ashanti Gold Mining.—Winchester House, noon.
Novello.—160, Wardour Street.
Winchester Gold Mining.—Winchester House, 12.30 p.m.

Thursday, October 11.

Commercial Bank of India.—Cannon Street Hotel, noon.
Edison and Swan United Electric Light.—Winchester House, noon

[*Abridged Prospectus.*]

DOMINION OF CANADA.

THE

CANADIAN NORTHERN RAILWAY

COMPANY AND

CANADIAN NORTHERN QUEBEC

RAILWAY COMPANY.

(Incorporated under Acts of the Parliament of Canada.)

Messrs. SPERLING & CO. are authorised to offer for subscription £1,000,000 4 per Cent. Perpetual Guaranteed Debenture Stock of the Canadian Northern Quebec Railway Company, part of an issue limited as within mentioned. This Stock is guaranteed unconditionally, both as to Principal and Interest, by the Canadian Northern Railway Company.

The Stock bears Interest at the rate of 4 per cent. per annum, payable by warrant, half-yearly, on the 30th June and 31st December in each year.

A full half-year's Interest on the Stock now issued will be paid on 30th June, 1907.

The price of the Issue is £98 per cent., payable as follows:

£5	**per cent.**	**on Application.**
£10	**„**	**on Allotment.**
£15	**„**	**on November 6th.**
£35	**„**	**on January 7th.**
£33	**„**	**on March 6th.**
£98	**per cent.**	

Or the whole may be paid up in full on allotment, or on the date fixed for payment of any instalment under discount at the rate of 4 per cent. per annum. Interest at 5 per cent. per annum will be charged on any instalments in arrear.

The above-mentioned Debenture Stock is perpetual and irredeemable, and is issued and guaranteed under the powers conferred by Acts of the Dominion Parliament.

It is intended that the Canadian Northern Railway System shall be comprised of the lines of three principal railway companies: The Canadian Northern Railway Company, The Canadian Northern Ontario Railway Company, and the Canadian Northern Quebec Railway Company. The Canadian Northern Railway extends from Port Arthur on Lake Superior to Edmonton at the foot of the Rocky Mountains, with a network of branches through the finest wheat-growing area of the North-west, altogether 2,788 miles. The Canadian Northern Ontario Railway has been constructed from Toronto to Parry Sound, a first-class harbour on Georgian Bay, and it is under construction to Sudbury, with a branch to French River on Lake Huron (thence connecting by steamship with Port Arthur), and a line is in course of construction from Hawkesbury to Ottawa, and will be continued to French River Junction, and a line will later be constructed from Ottawa to Toronto. The Canadian Northern Quebec Railway extends from Quebec (where it has valuable terminal and dock facilities for the handling of the largest Atlantic steamships) to Hawkesbury, with connections to Montreal.

As soon as the Ontario line is opened to Ottawa and Toronto, the system will have the most direct route from the great Atlantic Port of Quebec to Ottawa, the capital, and to Toronto, the centre of Canada's great manufacturing cities. On the opening of the line to French River it will also possess an unsurpassed route for the handling of wheat between the North-west of Canada and the great European markets.

The Canadian Northern Quebec Railway Company (hereinafter called the Company) is an amalgamation of three independent Companies, the Great Northern Railway of Canada, the Chateauguay and Northern Railway Company, and the Quebec, New Brunswick and Nova Scotia Railway Company (hereinafter called the amalgamated Companies).

The Stock will be secured by a Trust Deed, which will provide that it may only be issued (1) in exchange for Bonds of the amalgamated Companies, now issued or hereafter to be issued, (2) to pay for line now under construction, and to provide for the construction or acquisition of new lines to an amount not exceeding £4,109 (or $20,000) per mile of line so constructed or acquired, and (3) with the consent of the Trustees for the Stockholders to provide for the purchase of the Securities and Stocks of other companies to an amount not exceeding the cost price thereof.

The Stock will be a specific First Mortgage upon any Securities and Stocks acquired as above mentioned and deposited with the Trustees; and it will also be a first general charge upon the undertaking, property and assets of the Company (other than land and money subsidies), subject only to the Bond issues of the amalgamated Companies, which Bonds will be retired as soon as every Bond of each series has been exchanged for Stock of this issue, and will meanwhile be held by the Trustrees as collateral.

The holders of $1,514,500, part of $5,462 000 Great Northern Railway of Canada 4 per Cent. Bonds, have agreed to exchange their Bonds for Stock of this issue at the rate of £97 of Stock for every $500 Bond. The holders of $1,440,000 (all) Chateauguay Northern 5 per Cent. First Mortgage Bonds, and of $2,000,000 (all) Quebec, New Brunswick and Nova Scotia 4 per Cent. First Mortgage Gold Bonds have also agreed to exchange their Bonds for Stock at the rate of £205 5s. 6d. of Stock for each $1,000 Bond.

By arrangement with those Bondholders who have agreed to exchange their Bonds as above mentioned, the Stock required to carry out the exchanges is now offered for subscription.

The Stock will be registered on a register kept in England at the London Offices of the Company, Bond Court House, Bond Court, Walbrook, London, E.C., and will be transferable in sums of £1 sterling, or multiples thereof, by instrument in writing in the usual common form.

Allottees will be entitled, if they so desire, on payment of the instalments payable on application and allotment, to exchange their Allotment Letters for Provisional Scrip Certificates to bearer, and after such exchange, the bearers of such Scrip Certificates will be the only persons recognised by the Company as being entitled to the Stock in respect of which they are issued. All Provisional Scrip Certificates must be surrendered for registration on or before 15th April, 1907.

The Subscription List will open on Monday, the 8th day of October, 1906, and will be closed on or before Thursday, the 11th day of October, 1906, at 4 p.m.

It is intended to apply in due course to the London Stock Exchange for an official quotation.

Full Prospectuses (upon the terms of which applications will alone be received) and Forms of Application can be obtained at the Company's Offices, at the Offices of Messrs. Sperling and Co., Bond Court House, Walbrook, E.C., or the Bank of Scotland, or at the Canadian Bank of Commerce and their respective branches.

Dated 5th October, 1906.

NEW ISSUE.

VICTORIAN GOVERNMENT.

Four per Cent. Bonds and Stock maturing 1st July, 1907.

Holders of these Securities are offered until the 1st December, 1906, the RIGHT of CONVERSION into THREE-AND-A-HALF PER CENT. CONSOLIDATED INSCRIBED STOCK, 1929-1949, as from the 1st October, 1906, on the following terms:

For every £100 of the Bonds, with coupons due 1st January and 1st July, 1907, attached, or for every £100 of Stock surrendered on and after the 1st October, and up to the 1st December, 1906, the Victorian Government will issue £100 Three-and-a-Half per Cent. Consolidated Inscribed Stock, dating from the 1st October, 1906, with interest payable half-yearly from that date, and will also pay in cash the sum of £1, being the interest from the 1st July to 1st October, 1906, and a further amount of 7s. 6d. to adjust the difference in Interest for the nine months ending 1st July, 1907, between the old securities and the new Stock.

This offer will remain open until the 1st December, 1906, but as the sum to be converted is limited to £1,000,000, applications will be registered in the order in which they are received, and the list will be closed as soon as the allotted sum is applied for.

The balance of the £4,000,000 not surrendered under these terms will be paid off at maturity.

Full particulars and forms of application can be obtained from the London and Westminster Bank, Limited, Lothbury, London E.C.

J. W. TAVERNER,
Agent-General for Victoria.

London, 1st October, 1906.
